Add these situations to the situations in China and Indonesia, and the danger in the Far East becomes apparent. The strategic consequences are past computing. Burma and Indochina are necessary rice bowls of the Orient. Malayan rubber and tin are among the foundation stones of the British economy. If Japan is denied commerce with Asia she can only survive precariously, if at all, on huge American subsidies. And if the rest of Asia falls into the Soviet grip, the subcontinent of India will also be in immediate peril.

As yet, no comparable Soviet drive has begun in the Middle East. But in this area the attempt at assassination of the Shah of Iran is only the last of a series of disquieting signs.

In recent months there have been many incidents on the Iranian border, and an Azerbaijanian government-in-exile has been set up in Russia. A sustained effort is being made to infiltrate Israel with Communist refugees from eastern Europe. And Communist agents everywhere are redoubling their efforts to capitalize on the dreadful disparity in circumstances between the Arab pashas and the Arab poor.

A full-scale Soviet effort in the Middle East must certainly be expected, if the Soviets score further successes in the Far East. Nor are these dangers which can be safely ignored on the grounds that we must not disperse our efforts. Any such upset in the world balance of power as now threatens will almost surely lead in the end to war.

More knowledgeable about the menaced areas than the State Department, the British have long been seeking desperately to erect defenses. Foreign Minister Ernest Bevin was on the eve of forming India and southeast Asia into another regional grouping like western union when the Dutch attack on Indonesia wrecked his plans. Despite their distracting indignation against western imperialism, the Indian leaders at Delhi are deeply disturbed by the Burmese situation. A commonwealth consultation on the Burmese problem with India participating may soon be held in Ceylon.

The truth is, however, that despite their fine recovery, the British now lack the resources to overcome such dangers as have been described. That is why men on lower levels here are beginning to talk of the organization of fire brigades, led by America and Britain, for both the Middle and Far East.

It is thought that the famous fourth point in President Truman's inaugural address provides the basis for American action, and joint Anglo-American efforts are proposed because of the vital British interests in the areas concerned.

Certainly it is hard to see how these new dangers can be averted except by this kind of manifestation of the Anglo-American partnership. The task of restoring stability in the Far East must be undertaken on a major scale by both, on all three levels—strategic, political, and economic.

In sum, if there is a lesson in London, where one sees beyond the borders of Europe, it is that our job is far from done when Europe has become temporarily stabilized. Indeed, we shall be worse than ostriches if we mistake great local successes, such as Britain's recovery, for decisive turning points in the world struggle. The world struggle is actually broadening and intensifying.

Housing Bill

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. GWINN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by James L. Holton:

REAL ESTATE—HOLDEN MAKES BLISTERING ATTACK ON PUBLIC HOUSING BILL—TERMS ITS NEED "PROPAGANDA"

(By James L. Holton, World-Telegram real estate editor)

Adoption of the vast Federal public housing program now before Congress threatens to jeopardize the national credit and would be a step toward changing the whole pattern of American economic life and government, Thomas S. Holden, president of the F. W. Dodge Corp., told the Senate Banking Committee yesterday in Washington during a hearing (on S. 138).

Moreover, backers of the administration housing bill, Mr. Holden charged, have grossly exaggerated and distorted the actual housing needs of the country to win public and Congressional support for this $21,000,000,000 raid in the Federal Treasury. Mr. Holden cited Government figures to dispute the "propaganda" claims of NHA.

CITES HOUSING RECORD

Mr. Holden made his blistering attack on the proposed General Housing Act of 1949 on behalf of the Commerce and Industry Association of New York, Inc., almost at the same time that William E. Russell, general chairman of the Metropolitan Fair Rent Committee, New York, was urging the House Banking Committee to continue Federal rent controls for another year, but to allow owners a 25 percent mandatory rent increase over June 30, 1947, levels.

Mr. Holden asserted that under private enterprise people in the United States are more adequately housed than is true of any other nation. Also that the two and one-half million housing units produced here since VJ-Day is twice the combined production of homes in 16 western European countries in the same period.

WOULD HIT OUR ECONOMY

But he declared that putting the Government into the housing business here could only lead to vast additional public debt, new demands for controls over business, and eventually, a lower standard of living for all. Public housing and rent control, Mr. Holden asserted, were steps toward nationalizing all industry and business.

The Senate committee was told by Mr. Holden that the cost of this Federal housing

program would be fantastic. "Seemingly innocent provisions in the bill promise housing for all citizens and hold a threat of controls over all business to provide this shelter," he added.

"The supposed need for this legislation is based on propaganda not on facts," Mr. Holden declared.

SAYS BACKERS DISTORT FIGURES

"Support for (it) has been secured through gross exaggeration of the postwar housing shortage and a grossly distorted picture of the housing needs of the country."

Congress by adopting the housing program and other welfare legislation now being urged by Government "planners," Mr. Holden said, will bring on Federal insolvency, and lead us to "some sort of blurred carbon copy of the socialist and semisocialist states of Europe" or a form of "American statism."

Criticizing the slum clearance title in the bill, Mr. Holden said these reclamation projects should be left to local communities under State and municipal redevelopment laws. He charged the slum program was a "convenient" scheme of postwar planners for large-scale Federal spending.

INVITES EXTRAVAGANCE, WASTE

Federal subsidies for slum clearance will "encourage extravagance and waste," as well "as subservience of local governments to the party currently in power nationally," Mr. Holden protested.

Drawing a picture of the terrific cost of the vast housing plans in the bill, Mr. Holden asserted it would end up as a socialistic program, and predicted it would result in virtual extinction of private home building.

"Provisions of decent minimum housing for low-income families is a problem closely related to relief," Mr. Holden urged.

"History and experience show that such matters are more apt to be handled with a minimum of political abuse and economic dislocation by local authorities empowered to administer public housing projects under a system of differential units and subsidies to individual tenants," he concluded.

The Ethics of Advertising

EXTENSION OF REMARKS
OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. EVINS. Mr. Speaker, under leave to extend my remarks I desire to include a speech made recently by Hon. Robert E. Freer, former Chairman of the Federal Trade Commission and now prominent attorney of Washington.

The speech is as follows:

THE ETHICS OF ADVERTISING

(Speech of Robert E. Freer, before the Women's Advertising Club, Hotel Washington, Washington, D. C., February 9, 1949)

P. T. Barnum in the nineteenth century testified to his most complete faith in advertising as the royal road to business, and it has been said that the genesis of industry's wide-scale adoption of advertising was when it simultaneously dawned on many established concerns that if the charlatan and even the swindler could make advertising pay so well, why wouldn't it be a profitable medium for businessmen who kept their promises? The chiselers, they felt, would always be with us but as subjects for control. The price of that control has been a measure or regulation of the whole advertising structure exemplified by Better Business Bureaus, by State Printers' Ink Statutes, by the Food and Drug Laws, and by the Wheeler-Lea amendments to the Federal Trade Commission Act.

The Federal Trade Commission Act and these amendments, among other things, declared the use in interstate commerce of unfair methods of competition and unfair or deceptive acts and practices to be unlawful. Lawyers characterize this kind of language as flexible language. So did Justice Brandeis when he said in an opinion, "Instead of undertaking to define what practices should be deemed unfair * * * the act left the determination to the Commission. Experience with existing laws had taught that definition, being necessarily rigid, would prove embarrassing and, if rigorously applied, might involve great hardship. * * * Furthermore, an enumeration, however comprehensive, of existing methods of unfair competition must necessarily prove incomplete, as with new conditions constantly arising novel unfair methods would be devised and developed."

In its administration of the act the Commission has encountered the new and the novel especially in the field of false advertising. For humor, I recall such a case against an individual marketing what he called Oriental love drops, a perfume guaranteed to make a man irresistible to his lady love; alas, it was not so. Another was against a motion-picture concern in Hollywood for advertising a picture as "an authentic, uncontestable celluloid document"; "the spectacular, sensational, real adventure film made with untold difficulties in the heart of Equatorial Africa," and that a strange new beast, the Tortadillo, had been discovered. The picture had been filmed right around Hollywood; the savage tribes all lived in the vicinity of Los Angeles; and the Tortadillo was a turtle to which had been glued wings, scales and an arresting tail.

Deceptive advertising harms customers and scrupulous business. In one famous case the Court said:

"The customer is prejudiced if, upon giving an order for one thing, he is supplied with something else. In such matters the public is entitled to get what it chooses, though the choice may be dictated by caprice or by fashion or ignorance. Nor is the prejudice only to the customer. Dealers and manufacturers are prejudiced when orders that would have come to them if the lumber had been rightly named, are diverted to others whose methods are less scrupulous. * * * The careless and the unscrupulous must rise to the standards of the scrupulous and the diligent. The Commission was not organized to drag the standards down."

The Government and the advertising industry see eye to eye on the proposition that false or misleading advertisements are harmful both to the consumer and to business. Agreed on the intellectual level of forthright condemnation of outright falsity, differences of opinion sometimes arise on the level of practical application to borderline situations. Words and sentences literally true, may be framed in a confusing setting capable of—if not artfully designed to be—misleading. It is just hard luck—yours and mine and the Federal Trade Commission's and the courts'—that no magic formula can resolve the implications of such loosely written advertising copy.

Many of the artful and unethical are to be found in the ranks of those selling nostrums suggested as safeguards against nonexistent dangers. To them, in the language of the police court, unspent consumer dollars are vagrants, to be forthwith corralled from the prototypes of the terrified gentlemen and agonized ladies whose innards may be depicted in the lurid copy.

No ingenious advertiser or Government expert as yet has invented the precise rule of thumb which will segregate the artful from the true, unvarnished variety of advertisement. The Commission has declined to issue advance opinions as to proposed advertising. Such a course I agree, gradually might evolve into some species of censorship, the attendant evils of which I need not discuss.

On the basis of the Commission's past experience and the known scientific information to which it has access, I believe that we can assume that it regards with suspicion advertising claims of any temporary relief preparation offered to cure the symptoms of, or to stop or end, any disease. Its suspicion extends also to the advertising of any simple emollient cosmetic offered as rejuvenative or restorative of ladies' beauty. On the other hand, without comprehensive investigation the Commission cannot know if there is concealment of material facts or if a twist here and a turn there distorts the truth.

These facts are or should be more readily available to the advertiser. What has been characterized as the addition of subjective values to selling by means of advertising cannot do away with what the Commission regards as the need for relevant truth as a competent guide to use. Whether calculated insertion of a restrictive weasel word here and a contradicting and subtractive phrase there are sufficient, in a given case, to remedy the deceptive ambiguity often presents a troublesome question. The test of unfairness was made elastic so that the Commission might keep pace with new promotional inventions. To evaluate, and to calibrate to the exact degree, the level of improvement to which business morals in general, and advertising in particular have evolved, is not possible. The upward trend though is plain and the Commission's action in resolving such matters should not be expected to run counter thereto or drag your ethical standards down.

In my experience I found myself often confronted with advertising claims which lay in another borderline zone—claims which were true literally when subjected to cold legal scrutiny—but which still were objectionable because of omission or inuendo, which might mislead the average consumer who does not read an advertisement as a legal document. At times the Commission proceeds against claims in this borderline, at other times it refused to take jurisdiction. Part of, but not all, these borderline cases were proper subjects for legal correction. As all such copy disseminates, however, it represents just one more temptation put in the path of others of the border fringe. Through precept and example, and by instilling into the minds of the users and producers of advertising the hard fact that complete candor and good taste in advertising is good business, you are in a position to accomplish as much as, or more than, the Government in discouraging the unethical. The Federal Trade Commission and other Government agencies may swing the big stick relentlessly against the border fringe without accomplishing much more than a segregation of those sinners whose horns are developed beyond the legal limit. This is the field in which your organization may be most effective, not by regulation, but simply by educating the businessmen and the advertising agency to the appreciation of the fact that the cumulative effect of such advertising policies must inevitably be loss of confidence in the product or its maker by the purchasing public. And for those of you who wish to make of your own or your clients' enterprise a lasting business, confidence of the public, more than mere recognition or knowledge of a brand or trade name is a pearl without price.

MISLEADING IMPRESSIONS

Now more about the legality of advertising of the misleading or deluding variety as dis-

tinguished from outright falsity. Here is a concrete example:

"Look 10 to 15 years younger, the way the stars do. Why worry because you have wringles, lines, baggy eyes, double chin, sagging muscles, or other age signs. Be amazed. Send $1."

Nowhere does this advertiser affirmatively state that these hallmarks of experience and wisdom in some, or addiction to the pleasures of the table on the part of others, will disappear. He merely suggests significantly that we dispense with worry, he invites our amazement. None of you, I am sure, will be amazed that, the respondent having admitted, in answer to complaint, that his face cream would not remove or eradicate such facial age signs, the Commission's order ran against representing directly or through inference that it would.

The courts as well as the Commission are sensitive to misleading impressions, as recorded in the following opinion:

"The buying public does not ordinarily carefully study or weigh each word in an advertisement. The ultimate impression upon the mind * * * arises from the sum total of not only what is said, but also of all that is reasonably implied. * * * such representations are made to the public, who, we assume, are not, as a whole, experts in grammatical construction. Their education in parsing a sentence has either been neglected or forgotten. * * * The law is not made for experts but to protect the public—that vast multitude which includes the ignorant, the unthinking, and the credulous, who, in making purchases, do not stop to analyze but too often are governed by appearances and general impressions. * * * Advertisements are intended not 'to be carefully dissected with a dictionary at hand, but rather to produce an impression upon' prospective purchasers."

TRADE PRACTICE CONFERENCES

The Federal Trade Commission's trade practice conferences afford valuable enlightenment on trends in business ethics. In some instances conferences have brought cooperative and simultaneous discontinuance in whole industries of twilight zone practices, in such conferences entire industries meet together under Commission auspices, discuss frankly their trade practices, and undertake to clean up all false and deceptive advertising. The conference procedure recognizes that the average American businessman is no petty pickpocket, to be haled into court at every opportunity. Giving him this chance to cooperate with his competitors and the Commission, with the objective of improving his business "morality" is generally more effective than swinging the big stick. Many industries formerly numbered among the Better Business Bureaus' Augean Stables stand witness to this method of house cleaning. Such conferences result not only in formal rules forbidding practices which are unfair under the law, but also in expressions of policy discouraging practices in the "twilight zone," and encouraging, in the interest of both industry and the consumer, the voluntary adoption of ethical standards considerably above the legal minimum.

The trade-practice conference is an unusually fine method of wholesale enforcement of the legal minima of fairness in many industries, obviating the necessity of many formal enforcement proceedings against individual concerns, and the attendant temporary competitive advantage of the recalcitrant firm over those more high-minded or tractable. But principally the advantage lies in the fact that often more real good can be accomplished on a voluntary basis than in an adverse proceeding, and much higher standards of ethical conduct adopted.

It is a hard and basic truth that a businessman wants his competitors to advertise truthfully. Upon information or belief that one or more of them is nibbling at truth's edges, he may adopt tomorrow at his office desk certain practical compromises with those concepts of truth in advertising, which today he enthusiastically endorses when he hears them expressed at a luncheon of his advertising club. When he shares in making trade practice conference rules for others, he is more apt to see to it that his business lives up to them.

I do not mean to infer that such conferences are always filled with sweetness and light. Often there is at least as much heat as light. I can recall particularly conferences which led to adoption of the trade-practice rules for the rayon industry. In fact the reverberations are still with us. The history of the rayon industry in this country points a good moral for the advertiser, and if any remark I make in this connection can be construed to bear resemblance to any particular advertiser, it is purely coincidental. It is not in the too distant past that the synthetic fibers were considered by the purchasing public to be sleazy substitutes for the real thing. How that impression came to be created may be a matter of debate, but no one ever denied that the best of them were of superior quality to the cheaper natural fibers. As a matter of fact, this was used extensively by opponents of proposals to require accurate descriptions of rayon as an argument to permit continuance of the practices which led to deception of the public.

Justice Holmes once made a statement to the effect that the test of truth is its ability to get itself accepted at the market place. The synthetic fibers have in a few short years demonstrated the truth of their desirable characteristics in the market place, not as substitutes but as what they really are, demonstrating perhaps more dramatically than is usual that the American consumer can be trusted with the real truth if it is given him or her. Thus, a product which was once advertised and labeled as if its marketers were ashamed of it and as if consumers would avoid it if possible now stands solidly on its own feet and commands buyer preference on its own merit. Despite the predictions of many persons that disclosure requirements would seriously injure industry, benefits to the trade actually followed their employment.

It is this characteristic of the public, its ability to handle the truth if furnished with it, that some advertisers seem to overlook. Conditions of modern marketing, where the purchaser may no longer rely upon his senses of touch, taste, or even sight in appraising the wares offered him in such bewildering profusion, make his need for honest information greater than it was even a few years ago. Numerous proposals have been made by consumer groups and others for some authoritative and official source of consumer information.

The popularity of some private bureaus, institutes, and consumer reports suggests some public approval of proposals for an authoritative or official source of consumer information. Advertising should concern itself with supplying such information. If it turns a deaf ear, who knows but that this polite consumer agitation may become a roar for establishment of machinery bypassing advertisers. I believe this is a field in which advertising itself can do much toward satisfying the consumer's great need, not so much for guidance as for enough information to make a wise selection. Now, I don't mean by that that it can be expected that second- or third-rate merchandise would be so described in such bald language in an advertisement for which good money was spent by an advertiser desiring to sell his products. Even the most visionary reformer would hardly expect human nature to change that much. But the advertising business as a whole should be alert to the public search for more honest information than generally is supplied, and, it seems to me, should be seriously concerned with the proposition of being the first to supply it.

A last year's issue of Printers' Ink referred to a poll of wage earner husbands and wives in which three-fourths of the pollees said that advertisements help give better products for the money. At the same time over one-half expressed the opinion that advertisements add to the cost of things. Two-thirds expressed some specific criticism of advertising they had recently noted. The general tenor of some complaints coming to me while I was chairman of the Commission indicates that at least a segment of the public holds either an emotional grudge or an intellectual spite against advertising as an institution. At times their observations bordered on the purple side, especially where the charge was lack of good taste, the regulation of which is certainly no function of the Commission or of any Government agency.

Elaborate aids are now available to test the reactions of the public to copy suspected of transgressing on the side of bad taste or indelicacy. Every program or piece of copy which offends even a few people harms advertising as an institution. Questionable taste and lack of candor harm advertising before they begin to affect sales of the advertised product. It is such an elemental truth that I hesitate to express it, that, however fine and constructive advertising may be as a whole, if any considerable portion of the public loses confidence in it for any reason, whether justified or not, the efforts of the best elements in the business will be wasted.

I have no doubt that advertising standards will be raised in the future as they have been in the past. Only by digging back into media of 10, 20, and 30 and more years ago can the great strides of past advancement be fully appreciated. Of course, the most obvious improvement is the conspicuous decline of the fly-by-night, get-rich-quick type of ad. Some are still with us. Like the poor they, no doubt, always will be with us. Certainly they will be so long as any media will disseminate them, since they have a one-crop harvest which can usually be gotten in the barn before the frost of a legal proceeding descends. And, like the modern farmer, this type of advertiser is a devotee of crop and field rotation. But to me the really impressive improvement is the rise of the informative and truthful type of advertising for established business, those of you who expect to be in the same business tomorrow, next year, and for years to come.

Such changes do not come easily, nor do they come chiefly as the result of Government regulation. As a matter of fact, if advertisers as a whole were no better than the Government required them to be, the situation would indeed be serious. The Food and Drug Administration, the Post Office Department, the Federal Trade Commission, and the Congress, of course, have participated in this change, and many practices which would have been ignored in the 1920's are now clearly within FTC's jurisdiction, either by decision or by amendment of the law. But in this change there is a lag between the minimal legal requirements and the best standards of business itself. By continually raising your standards, you make it possible for Government regulation to protect more fully the public and ethical business from the depredations of the unscrupulous.

And now, in conclusion, and I do wish to conclude promptly, since I am talking about advertising saints and sinners and an evangelist once observed that no souls were saved after the first 20 minutes, I want to express my personal appreciation for your fine work and to wish you every success in the future. This is not an entirely gratuitous and unselfish wish, for as a lawyer aiming to keep clients from straying into trouble I realize

full well that the effectiveness of such work depends in large measure on your support and cooperation in educating the businessman to the realization that the adage "honesty is the best policy" is not just an old saw, but is the cutting edge of really effective copy.

The $25 Poll Tax of the AMA

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting an editorial column by Albert Deutsch, as printed in the New York Post of February 9, 1949:

AMA BACKS DOWN
(By Albert Deutsch)

American doctors can refuse to pay that $25 assessment imposed by the American Medical Association without fear of being thrown out of the organization. That fact is now definitely established, following weeks of uncertainty since the AMA house of delegates secretly voted the tax in the hope of raising $3,500,000 for propaganda against national health insurance.

Dr. Morris Fishbein, AMA factotum, has stated authoritatively the national organization will not enforce sanctions of any kind against members who turn down the assessment.

Many doctors, resentful of the way in which the $25 tax was put across, and unwilling to pay it, have been worried about possible punitive action on the part of the State and local medical societies authorized to collect the tax for the parent organization. These doctors can now rest easy.

The Massachusetts State Medical Society has informed its members that payment of the tax is entirely voluntary, not compulsory. Many physicians in that State had vowed not to pay and to fight any effort to penalize them.

A spokesman for the New York State Medical Society informs me definitely that no action will be taken against any member refusing to pay the assessment. Nonetheless the assessment letter sent to all members last week over the signature of Dr. Leo F. Simpson, president of the New York State Medical Society, was so ambiguously worded that the recipient couldn't tell whether he was being asked or commanded to remit a $25 check.

There is little doubt that the AMA originally intended to make the $25 tax compulsory. Shortly after it was voted Dr. George F. Lull, secretary and general manager of the AMA, told me that, in his opinion, the assessment had the same binding force as regular dues and had to be paid. The AMA apparently changed its mind when disconcerting reports of resentment at the grass roots filtered into Chicago headquarters.

The AMA has sent word out quietly to all State and local affiliates that the $25 propaganda tax must be considered a voluntary matter.

Regardless of Dr. Fishbein's public statements to the effect that only a few medical malcontents are protesting the $25 assessment, the revolt against it is widespread and serious. In a letter to the New York Times the other day Fishbein wrote that only some 20 letters of protest had reached AMA headquarters.

At the time he wrote that letter Fishbein had on his desk a round-robin letter signed by 100 distinguished physicians—most of them conservatives and heads of medical-school departments throughout the country—vigorously protesting the $25 assessment.

The signers of the letter, headed by the great pediatrician, Dr. Edward A. Pack, of Johns Hopkins University, wrote Fishbein that unless the letter was printed in the Journal of the American Medical Association by February 12 it would be released to the general press. The signers of the letter were carefully selected for their conservative reputation to forestall any attempt to smear the protest as the product of "radical agitators."

It is expected that a large proportion of the AMA's 140,000 members, buttressed by the definite knowledge that payment of the assessment is not compulsory, will refrain from helping build up the war chest.

The threat of possible expulsion for nonpayment of the assessment hung heavily over many doctors whose very livelihood depended on their medical society membership.

Now that the punitive threat is lifted, the propaganda war chest is likely to be much lighter than originally expected.

Protest Against Imprisonment of Cardinal Mindszenty and Other Clergymen

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following resolutions adopted by the executive board of the United Rubber, Cork, Linoleum, and Plastic Workers of America, CIO, Local Union No. 261, of Fall River, Mass., urging a diplomatic protest by the Government of the United States to Hungary and all foreign powers which are persecuting religion on false pretenses:

Whereas this executive board being composed of true, loyal Americans, it wishes to go on record, protesting the recent trial of Joseph Cardinal Mindszenty, prince of the church and primate of all Catholics of Hungary;

Whereas the result of this so-called kangaroo trial was known to the prosecutors and the whole Christian world even before said trial took place;

Whereas another foreign government is also persecuting ministers of the Protestant faith;

Whereas these governments being inside the iron curtain, controlled by orders of the Communist Party;

Whereas the ideologies of the Soviet Government toward God and religion are known to the Christian world;

Whereas these arrests and trials have been held in foreign countries where our great, free, independent Government has representation: Therefore be it

Resolved, That this country, through its State Department head, enter a diplomatic protest to Hungary and all foreign powers who are persecuting religion on false pretense; Therefore be it

Resolved, That a protest also be made to the Security Council of the United Nations.

(Introduced by Raymond McGough, president of Local Union No. 261, URWA, CIO, and accepted by the executive board of said local.)

Something for Nothing

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mr. HOPE. Mr. Speaker, under leave to extend my remarks, I submit an editorial article from the February 1949 issue of the Welding Engineer and an editorial on Americanism by Eddie Rickenbacker:

[From the Welding Engineer of February 1949]

SOMETHING FOR NOTHING

Since the very beginning of civilization man has tried to obtain gold from lead. Perpetual motion, another way of saying riches without effort, has been a popular quest too. The end of all such schemes has always been the same—proof that you can't get something for nothing.

History, which is a record of past mistakes, bears out the above conclusion. Every nation which rose to greatness in the past began to decline as soon as it started to adopt socialistic policies. A dictator of Athens replaced thrift and frugality with an elaborate and expensive program of public works. Look what happened to the Athenians of the next generation in their long conflict with Sparta. Rome, too, began to go down as soon as the stern simplicity of the Republic was replaced by the bread and circuses of Roman emperors.

The basic laziness of human beings prompts them to seek an easy road to success. That's why we have so many race tracks, slot machines, punch boards, and give-away radio programs. The political version of the something-for-nothing philosophy is, however, the most dangerous. To strip it of its camouflage verbiage, the idea is simply to take away from the so-called haves and give to the have nots. Neither the demagogues who advocate this unjust social program nor the rapacious multitude who clamor for it bother to think about what will happen when they have run out of something to give.

Utopia is a lovely word, promising peace and plenty for everyone, but it never seems to work out in practice. Committees and bureaus are poor substitutes for the creative powers of free individuals. The more paternal the government, the more stifling an effect it has upon the initiative of its citizens. The rule of the unrestrained majority puts the minority—which in reality may be an unorganized majority—completely at the mercy of the mob. Tumbrils to the guillotine are the next logical step.

England voted for the something-for-nothing plan at the close of the last war. Despite lavish "borrowings"—the Government of England in the past 8 years has received about $48,000,000,000 from freedom-loving America—the British ship of state has been barely kept afloat. The socialistic schemes promoted have made everyone more poor.

The Chancellor of the Exchequer, Sir Stafford Cripps, bragged recently in print about the manner in which incomes have been leveled in England. In 1939 over 11,000 English families had incomes of $20,000 or more a year; in 1948 only 250. Unfortunately, such leveling always means dragging down, never raising up. Incomes of the British lower classes have not been improved; in terms of what money is allowed to buy they are probably worse off than they have ever been.

A government which lowers top salaries to the level of unskilled labor may be popular

with the masses but it offers little scope to the ambitious. Such a political system may not produce grossly overpaid movie stars and Jack Bennys, but it will certainly sacrifice the Henry Fords, Edisons, Westinghouses and others of their type who have helped to make America great.

As far as our own industry is concerned, we cannot do better than quote from the magazine Welding. In discussing the possible nationalization of the iron and steel industry (Mr. Truman would like to have $5,000,000,000 for experiments along this line), this British publication states: "As has happened with the prices of nationalized coal and electricity, we may expect a rise in the price of steel generally. * * * As for welding electrodes, we have already seen what Government aid can do in that direction by allowing the import of expensive foreign brands and depriving our own factories of wire. Under the new regime it may be expected that this state of affairs will be allowed to continue. Highly probable increases in the prices of such wire as may be available will strike a crippling blow at welding, which must remain an economical process if it is to be used at all."

In theory one of your best friends is your Congressman. Have you written to that best friend lately? Better keep him posted as to your thinking on the present trend. We don't want it to happen here.

T. B. JEFFERSON.

GOODS FOR GOODS

Capitalism is a steadily shrinking island of free enterprise surrounded by turbulent and destructive seas of monopoly controlled by economic and political dictators.

These monopolies, in which neither producer nor consumer, employer nor employee, determine the scale, standard, or cost of living, range all the way from the so-called Socialist system now in control in England to enslaving communism as practiced in Russia and other iron-curtain countries.

The whole purpose of business, industry, finance, and agriculture is to produce at costs that provide the greatest volume of goods for the greatest number of people.

Men can fill libraries with books on economics, monetary systems, political sciences, and social reforms. I will not say that this is a waste of time, but I do claim that all the codes which govern and concern the comfort of man can be compressed into these three words, "Goods for goods."

The sooner the world reestablishes this simple fact the sooner we will return to an even keel of political, mental, and economic security.

There is no wealth of any kind outside of products in services and goods. The only riches which enable us to eat and drink, or clothe, shelter, and educate ourselves and our families are the riches that are made through the skills of man in industry or grown through the skills of man on farms.

No government can wave a magic wand and provide things for people who do not produce. No social code, no political vote bait, no creed, can meet the needs of those who do not produce. "Goods for goods" is the controlling law. It cannot be amended nor repealed.

Production, not money, is the master of the world. And I, for one, have never been able to understand why a system such as America's unbeatable policy of productive and shared free enterprise needs so much explanation, so much underscoring, so much selling. Free enterprise should sell itself every day in the world-wide news you read in newspapers, hear on the radio, or see on the news screen.

Capitalism has become a highly misinterpreted word. Capitalism, in the true productive sense, is not a banker under a top hat, a boss in a limousine, or a stockholder on a yacht. Capitalism is a structure of production, and I invite anyone to show where the state ownership of socialism or mass enslavement of communism have provided so much for so many in any land on earth as has capitalism in America.

We in America are free to work where we want to work; free to work at the type of work we want; free to live where we want to live. Try to do that in Russia, and you land in jail.

President and General Manager,
Eastern Air Lines, Inc.

Recovery, Not Relief

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mr. REED of New York. Mr. Speaker, the ECA has from the first been the racket of the few who have sought to keep it so. Now those on the outside of the racketeering ring want to get in and get theirs. The entire swag will be paid for by the taxpayers.

Under leave to extend my remarks in the RECORD I am inserting an article which appeared in the Washington Post, Monday, February 21, 1949, the title of which is "Recovery, Not Relief."

RECOVERY, NOT RELIEF

By far the most important task confronting ECA is to persuade Congress and the American people to recapture and effectuate the vision and meaning of the Marshall plan. A locust crowd of lobbyists is trying to devour whatever sen: the program may contain. They are agents of the coal-mining industry, shipping and marine insurance companies, manufacturers of machine tools, tires, and automobiles, and other producers—all have come to Washington to plead for more generous allotments of ECA dollars to finance shipments of their products or to pay for their services. If these petitioners had their way, ECA funds that otherwise would be available to build up European industries would have to be spent on American automobiles, machinery, and equipment and used to subsidize American shipping. Unless this drive to force ECA to provide larger export outlets for American goods and American services is arrested, the recovery program will soon degenerate into an outright relief program. Participating countries would then be compelled to use ECA allotments to buy products needed to expand their own industries and speed recovery.

It is reported on reliable authority that Administrator Hoffman intends to issue a statement next Monday pointing out that the ECA was established for the express purpose of helping other countries to increase their productive capacity, not to create markets for American goods. A timely warning of this kind is greatly needed, not only to apprise the public of the present threat to the integrity of the ECA but to remind certain Members of Congress that they are endangering the recovery program by sponsoring demands of special interest groups for a larger share of ECA funds. The Washington Post hopes that Mr. Hoffman will register a vigorous protest against the destructive activities of the lobbyists. They have forgotten, if they ever knew, that the purpose of ECA is to foster economic recovery abroad, not to subsidize domestic exporting industries; to wind up Operation Rathole, not to perpetuate it; to put Europe on its feet, not in the American pocket; to promote self-reliance, not chronic mendicancy. It would be scandalous if Congress were to yield to importunings which would justify Russian criticism and encourage those self-complacent Europeans who have been saying all along that the Marshall plan was merely a device to get rid of American surpluses.

Why Americans Have the Best and Cheapest Food in the World

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mr. HOPE. Mr. Speaker, in the Saturday Evening Post for February 5, 1949, there is an advertisement by the Country Gentleman magazine which ought to be of interest to every American.

This advertisement points out that our great industrial production and our high standard of living in this country have been made possible by American farmers and their families. I think every Member of Congress will be interested in reading the text of this advertisement; and, under unanimous consent to extend my remarks, I include the same herewith:

THANK THEM FOR ROARING FACTORIES AS WELL AS ABUNDANT FOOD

We owe thanks to our farmers and their families for much more than the world's best food on our tables.

America's farm families also make possible our great industrial production with widespread employment at good wages.

Not just because most of industry's raw material—65 percent of all new wealth created annually in the Nation—has its origin in the soil.

And not just because farm families, as customers, buy more than a third of our factory output.

But mostly because their bountiful production makes food so abundantly available to all people in America.

We spend relatively little of our earnings for food. Over the long period in which records have been kept by the United States Department of Agriculture, food has taken an average of only 24 percent of our spendable personal income.

Contrast our situation with that of less fortunate countries.

England must export a major share of its industrial production—to pay for food which even in the low-price prewar years took over 35 percent of its people's spendable income.

In France and Italy, the average workingman spends 70 percent of his earnings to feed his family on lowest quality food.

In China and India, where food requires nearly all of the people's energy and income, there is little left to support industrial production of other goods.

Only in America have people been able to eat so well, so inexpensively, and have so much left for purchasing the products of industry that they need and want for good living.

In America, farm families have earned a generous slice of the Nation's prosperity. By farming better, they have made possible better living for themselves and everyone else. The farmer and his family now share a blessing to which they have contributed so much * * * the highest standard of living of any country in the world.

Solvency of Italy

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of February 19, 1949:

ABROAD—ITALY MAY BECOME SOLVENT IN 3 YEARS

(By Anne O'Hare McCormick)

ROME, February 18.—The budget for the fiscal year beginning July 1 will be presented to the Chamber of Deputies before the end of February. This is part of the routine business of every government, but Italian budget makers and members of the ECA mission in Rome talk of it as excitedly as if it were the turning point in a war. In a way it is; one thing the itinerant reporter learns on his rounds these days is that there are all sorts of unreported battles. One is the battle of the budgets and under the ERP it takes on an international character.

The ECA casts a probing eye on the national balance sheets. American experts watching the Italian Ministry of the Budget juggling figures seem highly pleased that a country like Italy, left bankrupt by the war, is able to reduce its deficit from 700,000,000,000 lire to 250,000,000,000 lire in 2 years and expects to strike a balance by the time the Marshall plan aid ends in 1952.

The new Italian budget gives promise that at the present rate of progress the country can become solvent in 3 years. Final estimates are not yet completed, but the figures at hand place the national revenue for the coming year at about 1,000,000,000,000 lire and expenditures at about one thousand three hundred and fifty billions. Something over one hundred billions represents the so-called lira fund, the counterpart for American aid, and is earmarked for capital investment in permanent projects. Therefore it is figured that the real deficit will not be over two hundred and fifty billions as against five hundred billions in the current year and seven hundred and fifty billions last year.

A KEEN-MINDED PROFESSOR

Former Minister of the Budget Luigi Einaudi is now President of the Republic. Italy's leading economist, he is credited with saving the country from the runaway inflation that threatened 2 years ago and with putting it on the road to solvency. Many Italians regret he is no longer where he was to stem the present inflationary movement. In talking to him in the great echoing palace of the Quirinal one suspects the President shares this regret. A handful of royal guards and lackeys remain to provide a modest show of state for the republican successor of departed royalty, but he is still a simple little professor—keen-eyed, keen-minded, interested as ever in the subject to which he has devoted a lifetime of study and thought. His vast house, built to lodge a conclave of cardinals, offers him less comfort than the little villa he occupied last year and his high office gives him less power than he wielded when he was called "economic dictator."

Unless the average income and standard of living are raised—the aim of experiments in land reclamation proposed by the ECA—balancing the budget may add to the stability but not to the prosperity of the country. Against the optimistic picture suggested by the diminishing deficit is the hard fact that the value of the lira is also descending. Obviously there is inflation. Prices are abnormally high and the plight of the middle class, which is being squeezed out of existence all over Europe, is worse here than elsewhere. In part, as Dr. Einaudi and other economists point out, the present inflation is due to the circumstance that Italy has become a creditor country. It has a slight excess of exports over imports. And since credits are in French francs, pounds sterling, and other currencies with which she cannot buy essential materials at prices she can afford to pay, these funds accumulate in the Bank of Italy while lire have to be issued against them. This is only one of a thousand proofs that the currency question lies literally at the heart of economic sickness. Until the circulation system is made to do the world's work normally, no amount of pumping will cure the disease.

PARADOX IN ITALY

Nor can it be forgotten that the figures being debated in the Finance Committee of the Chamber do not take into account the war indemnities to which Italy is liable under the terms of the peace treaty. Another of the crowding paradoxes of our strange times is that Italians are delivering ships and preparing to pay reparations to one victor while their economy is being restored at the expense of another. For if the outlook is brighter than could have been foreseen a year ago even the Communists cannot deny that American aid is the decisive factor in the improvement. All they can say is that it means American domination, and even that automatic cry falls pretty flat in the face of the practically unlimited freedom they and all other citizens enjoy under the most stable and democratic government Italy has known since the First World War.

A shrewd Swiss observer who knows the country well thought that pessimism was the chief danger before last year's elections. Today he thinks it is overoptimism. It is true, as the wise old President observes, as he looks across Rome from the oddly detached and quiet heights of the Quirinal, that an improved budget is only one index of economic health. How far national income can be cut and stretched to satisfy the clamorous demand for necessary services is the real test.

Italy's perpetual handicap is poverty. Under the spell of the sun, abundance of good food in shop windows and restaurants, and cheerful faces of people who have a habit of smiling, the traveler is apt to forget how desperately hard life is for the majority. Italians are resilient, quick to react to any lightening of their lot, cheered by any sign of American optimism.

Their biggest national assets are energy and hope. These are not negligible quantities in the ERP balance.

Veterans Will Pay Large Part of Pensions

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mr. DAVIS of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include this editorial from the Portage (Wis.) Daily Register:

Now that the issue of pensions for veterans is before the Congress, it might be interesting and significant to get the opinions of rank-and-file veterans.

They are not united in favor of such legislation by any means. Many of them insist that in the end they will be forced to pay a large part of the cost themselves, and they wonder if that isn't an example of boot-strap lifting, or trying to make money by taking in your own washing.

One veteran we know who is just getting a start on his career feels that great new financial burdens on the Nation will inevitably be carried by the ambitious young men of today. He favors a system where he has an opportunity to earn his own pension or retirement reserve rather than one in which there is little opportunity for business success, but pensions and benefits from the Government for everybody.

We do believe that there are still some debts due the veterans of World War II. The on-the-job and educational benefits granted under the GI bill have discharged that obligation to some veterans, but others have not been in a position to take advantage of this. Perhaps there should be some form of adjusted compensation for them also.

But every veteran should view the program of pensions for all veterans with some misgivings. For the fact cannot be ignored that a large proportion of the gainfully employed men of the Nation for many years to come will be veterans, and they will be the ones who will have to pay a large part of this pension in one form or another.

High Prices, Small Potatoes

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mr. BOGGS of Delaware. Mr. Speaker, from time to time we have heard in this House many comments concerning the Government's potato program. Apparently this program has never been satisfactorily rationalized for America's housewives.

The Journal-Every Evening, of Wilmington, Del., discusses this problem in an interesting and thought-provoking editorial which I wish to include as part of my remarks at this time:

HIGH PRICES, SMALL POTATOES

The distaff side of the household, who lists among her other manifold duties that of purchasing agent, has been wondering for some time what has happened to the big potatoes she used to find at market. There are some around, we are told, but you have to hunt far afield for them. The general run are the small, knobby kind.

Now, thanks to Senator WILLIAMS and Washington Columnist Mark Sullivan, we have an answer. It is very revealing, and not of the type that housewives will find soothing. It is all tied up with the Government program of price supports of farm produce, and, as Mr. Sullivan explains it, works something like this:

The Department of Agriculture, to keep the price of potatoes up, pays growers $2.92 per hundred pounds for big potatoes. For little potatoes, and inferior grades, the Department pays $1.46. Since the market price for the big potatoes was below the Government price, growers naturally sold their top grade to the Government, and diverted the lower grades to the consumer market. What happened to the big potatoes then? They were diverted to other than normal channels, i. e. for the manufacture of industrial alcohol, starch, and other items. Some of the top-grade potatoes went to feed livestock, accompanied by a stipulation which, accord-

ing to Senator WILLIAMS, "will not allow any of them * * * to be used for human consumption."

To sum it up, the Department's price support program has the effect of making prices higher, and potatoes smaller (for the consumer).

Mr. Sullivan thoughtfully asks (and so do we), "Is price support (in this case) justified in the public interest?"

The Waterline's War

EXTENSION OF REMARKS

OF

HON. HARRY R. SHEPPARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. SHEPPARD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following articles from the Los Angeles Daily News:

[From the Daily News of Los Angeles, Calif., of February 15, 1949]

THE WATERLINES WAR: I

Human values as well as money values in southern California are written in great measure in terms of water. The lifelines that reach from the Colorado River to the homes, farms, and industries of southern California sustain our regional economy.

Expressed in another way, the 5,326,000 acre-feet of Colorado River water in use or authorized for use in southern California cities provide millions of jobs.

But if from an ultimate defici' of the river's water additional quantities are taken away to serve a huge project in thinly settled Arizona, then southern California will suffer.

This is the issue over which today's Arizona-California water war is being fought.

A few days ago southern California won a victory in a major battle of this water war. President Truman's opposition to the proposed central Arizona project was clearly stated in a letter addressed to Secretary of the Interior Krug by Director Frank Pace, Jr., of the United States Budget Bureau. Subsequently the President reaffirmed his stand.

The President's position, as outlined in the Pace letter, is that the Arizona project is "not in accord with his program at this time and that he again recommends that measures be taken to bring about prompt settlement of the water rights controversy."

Thus undoubtedly final solution of a conflict which has persisted for more than 25 years has been brought nearer as the result of the administration's clear-cut rejection of the Arizona scheme. The cartoon on this page by Daily News Artist George Fisher proclaims hope the war soon may be ended.

But southern Californians can't relax in their fight, nevertheless. Until the issue is brought before the United States Supreme Court—which will require action by the Eighty-first Congress authorizing a suit—local residents can't assume they won't be plagued by new water diversion projects.

The Arizona bills still are before Congress. They remain a continuing threat to southern California's water supply.

Essentially the Arizona-California dispute stems from the fact that the two States do not agree on their interpretations of certain provisions contained in the Colorado River compact, the Boulder Canyon project, and related documents.

To get an impartial interpretation—fair to all the people of the Southwest—is the purpose of the proposed Supreme Court suit. Gov. Earl Warren was among the first—if not actually the first—to suggest this means of resolving the controversy.

Arizona, however, has refused this method of adjudication, instead has lobbied for a $738,000,000 Federal appropriation for an all-Arizona project at Bridge Canyon and an aqueduct to transport water to central Arizona through tunnels 80 miles long, bypassing Boulder Dam.

What's wrong with the Arizona scheme is that there just isn't enough water in the lower basin of the Colorado to supply such a project. Any water made available by such a project would have to be taken by depriving Californians of their rights on the river upon which investments of more than $500,000,000 already have been made.

California water interests—notably the Colorado River Association—point out that the sponsors of the central Arizona project are in reality seeking to break down the long-established standards of feasibility set up in reclamation law.

Arizona backers propose extending the repayment period from the present requirement of 50 years to 80 years or more. They also propose that money collected as interest on the power features of the project be diverted to repay the capital cost and subsidize the irrigation features of the project. This would mean a loss to the taxpayers of the United States of approximately $250,000,000. And it would stand in sharp contrast to the Boulder Dam project, which is paying, through power income, 3 percent interest to the Federal Treasury.

In the light of these facts President Truman's thumbs-down on the Arizona business makes a great deal of sense.—R. E. G. H.

[From the Los Angeles (Calif.) Daily News of Wednesday, February 16, 1949]

THE WATERLINES WAR: II

Because the thirsty land of southern California looks first of all to the Colorado River for its life source, all local citizens must protect their rightful share of the river's total available annual average supply of 10,900,000 acre-feet of water.

Water requirements pressed upon the Colorado by the entire Pacific Southwest already exceed the river's long-time average supply. These requirements, as compiled by the United States Bureau of Reclamation, are as follows:

Colorado River water available in lower basin

(Data from U. S. Bureau of Reclamation March 1946 Report. "The Colorado River," App. I, pp. 282–283, except as noted. Lee Ferry is division point between upper and lower basins.)

	Acre-feet
Colorado River average (1897–1943 period) annual virgin or undepleted flow at Lee Ferry	16,270,000
Upper basin allocation by Colorado River Compact	−7,500,000
Lower basin's available supply at Lee Ferry (Estimated long-time average, which would be reduced to 7,500,000 acre-feet as a 10-year average, in severe drought periods)	8,770,000
Net average gain (less river losses) of lower basin tributaries, except Gila River	+400,000
Main stream reservoir losses, Lake Mead, etc (U. S. Bureau of Reclamation estimate, including Davis and Bridge Canyon projects)	−870,000
Lower basin available supply from main Colorado River	8,300,000
Gila River Basin of Arizona net beneficial consumptive use	2,300,000
Probable salvage of natural main stream losses, upper and lower basins	800,000
Lower basin total average available supply	10,900,000

Water requirements

	Acre-feet
Nevada: Contract with United States, plus a possible claim on portion of surplus	800,000
Utah and New Mexico: Portions in lower basin U. S. B. R. estimate, but these States' claims may be greater	138,000
Mexico: Including regulation losses, estimated not less than average of	1,700,000
California: Operating projects, by contracts with the United States	5,362,000
Arizona: Gila Basin present use	2,300,000
Yuma project in Arizona	200,000
Parker Valley Indian lands	300,000
Little Colorado River and other tributaries	90,000
Mojave Valley, etc., on Colorado River	10,000
Gila project (new) from Colorado River	600,000
Total for present and authorized propects	3,500,000
(Does not include 1,200,000 acre-feet annually called for by the proposed central Arizona project)	
Lower basin total for present and authorized projects	11,000,000
Lower basin total average available supply	10,900,000
Deficit indicated on long-time average basis	100,000
(Amount of beneficial consumptive use on the Gila River is in controversy, but this does not affect the main stream deficit because the figure for such beneficial consumptive use, no matter what it may be, appears on both the credit and debit sides of the computatiton)	
The figure of 100,000 is based upon U. S. Bureau of Reclamation records up to 1943. Low flows on the river since that date increase the deficit to	300,000

(Note: Despite the ultimate deficit of from 100,000 to 300,000 acre-feet now confronting operating and authorized projects, the proposed central Arizona project seeks to take another 1,200,000 acre-feet annually.)

The above figures explain why the Arizona scheme is inimical to local interests. These figures support Reclamation Commissioner Straus' contention that further development of the water resources of the Colorado River Basin, particularly large-scale development, is seriously handicapped, if not barred, by lack of determination of the rights of the individual States to utilize the waters of the Colorado River system.

Certainly United States Supreme Court adjudication, as proposed in bills submitted last year at the Eightieth Congress, offers a sensible, peaceful, disinterested way of ending the water war.

California strongly favors Supreme Court disposition of the water dispute. California feels any fair and impartial body will respect its riparian rights. The problem, therefore, is to get the Eighty-first Congress to do what the Eightieth Congress sidestepped doing.

If California should lose its long-standing water rights on the Colorado, a pall would be cast over the whole Southland's future. Actual valuation of property in member cities of the metropolitan water district—cities that depend on the Colorado River for the protection of their property values—is more than $8,750,000,000. Yet this is only one

measure of the immense stake involved in the Arizona-California water controversy. There are other values. For example:

Human values assume even greater significance when the proposed use of the Colorado's limited water is examined. In Arizona only some 4,000 farm families would derive benefits. In California cities, not less than 5,000,000 men, women, and children are, or will be, sustained by the waters of the Colorado.

Consider, also, the cash receipts from farming of the six southern California counties within the service area of Colorado River water:

Cash receipts from farming in the 6 southern California counties within the service area of Colorado River water, 1947

Los Angeles	$198,165,000
Riverside	70,014,000
Orange	77,065,000
San Bernardino	73,115,000
Imperial	87,377,000
San Diego	37,738,000
Total	543,474,000

Source: California Crop and Livestock Reporting Service.

Yet even as valuable as this total farming economy is, it is restricted by lack of water. Only 10 percent of the 25,000,000 acres of land in all southern California, including the six counties listed above, is arable because of lack of water.

Whether, in view of a late dispatch yesterday from the Daily News Washington Bureau, President Truman will remain opposed to the Arizona scheme is a pertinent question. There are signs the President may be backing down.

Thus there's all the more reason for southern California to continue the fight and to press for a peaceful and just solution of the water controversy.—R. E. G. H.

Rail Safety Improvement

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial which appeared in the St. Louis Star-Times on rail safety improvement.

RAIL SAFETY IMPROVEMENT

American railroads are to be commended for an outstanding safety record in 1948. The number of passengers killed in train collisions or derailments was the smallest in 12 years. Fatalities to employees dropped to the lowest level in half a century.

The Interstate Commerce Commission lists 19 passenger deaths in collisions or derailments. There were 34 in 1947. There were 566 fatalities to employees from all types of accidents, compared to 709 the previous year.

As good as it is comparatively, the record does not invite complacence. As long as train collisions occur, there is always the chance that one wreck will take as many passenger lives as were lost in the whole year. This chance can be reduced only by widespread adoption of train-radio communication and other devices that serve when human judgment fails.

The railroads can take pride in their 1948 record. They and the ICC, however, must face the fact that thousands of miles of main-line track still rely on hand signals, flares, and written train orders. These are not enough in a day of mile-a-minute trains.

Film "State Department, File 649" Lauds Government's Unsung Consular Heroes

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mr. KLEIN. Mr. Speaker, Hollywood, from time to time, has done its share in calling attention to governmental activities. There came to my attention recently a motion picture entitled "State Department, File 649," which tells, in interesting manner, how the unsung heroes of the State Department's Consular Service perform their varied functions, sometimes in the face of great danger. I would like to praise Mr. Joseph Bernhard, president of Film Classics, Inc., and of Cinecolor, as well as Mr. B. G. Kranze, vice president and general sales manager, for turning the spotlight of Hollywood's attention upon those in Government service who ofttimes are ignored and neglected.

"State Department, File 649," is a story of a young consulate employee whose exploits are listed, in matter-of-fact manner, in the files of the State Department. Dramatized by Hollywood's writers, the film helps focus attention upon the manner in which our Government and its employees operate in foreign countries.

It is interesting to note that Hollywood, through Film Classics, Inc., and perhaps through other companies, is calling attention to the work performed by Government agencies, not only in the United States, but in other countries. If such films succeed in creating a better understanding of Government operations, I think it is important that these efforts on the part of men like Mr. Bernhard and Mr. Kranze deserve a measure of praise.

Address of Hon. Ralph Harvey, of Indiana

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 22, 1949

Mr. McCULLOCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. RALPH HARVEY, of Indiana, at Lincoln City, Ind., February 12, 1949:

Friends of southern Indiana, you and I are privileged to meet and meditate in a place of eloquent charm. It was near this spot, on the fringe of a river-bottom wilderness, that the immortal Lincoln spent the impressionable days of his poverty-ridden boyhood. It is here now, in the heartland of the Republic he saved, that Americans must keep forever alive and inviolate the rights of freemen, their love of liberty, and their passion for justice.

The few minutes we take now to recall Abraham Lincoln and the story of his life are well invested. His breadth of tolerance, his compassion for the less fortunate, and through every adversity, his strength of soul are ennobling inspirations to us all. It is to the lasting credit of this State and you, the people of this community, that here, enshrined in this memorial to his mother, his greatness will never be forgotten.

You and I have inherited more than the lore of a great man. We, in addition, have inherited the opportunity to preserve those simple virtues that he lived by and the duty to advance those causes that meant more to him than life itself.

Abraham Lincoln is today a symbol—a symbol of goodness that shines majestically against the brooding skies. The brilliance of that goodness cannot be dimmed by the shams of lesser men—their jealousies, greed, or hypocrisy. It is a steady flame, calm and consecrated, burning on into eternity.

Lincoln's origin in Kentucky, his youth in Indiana, and his maturity in Illinois are facts of time and place. In them we Hoosiers share a possessive pride without sentimental illusions. We recognize that in his climb from the crude cradle of the untutored to the pinnacle of his country's leadership, Lincoln became the statesman; by his constancy of character through his Nation's darkest hour of tragedy, he became its savior, and when the mad assassin's bullet cut short his life, the memory of his noble labor carried his name to the heights of immortality.

We who now dwell and toil on the plot of earth young Abraham Lincoln loved so well must share with all the peoples of the world the lessons of liberty he passed along to our own and other generations.

Our reverence today is less for the memory of Lincoln than for the mood and motive of the man. He might have lived at any period and place, for in the small affairs of neighbors or the larger ones of a divided nation, he brought to bear the ageless wisdom of those cardinal virtues—honesty, humility, and the practice of the Golden Rule.

Yet all these assumed new stature and clearer meaning when sustained by the courage, the tenacity, and the unyielding faith of his genius.

Lincoln's mood, in spite of the trials he endured, was serene, patient, and forgiving. Born and bred as the most common of commoners, he so persevered in his devotion to unaffected honesty and natural simplicity that those about him failed to sense his quality. They could not fully realize that a man so tall, so gaunt, and so ungainly could possess such a depth of understanding, such a wealth of human sympathy, and a grace of mind which could and did transcend the petty and the mean.

The motive of Lincoln was love of his fellow men. Within him the thirst for knowledge was exceeded only by a consuming zeal to be of service to all who came his way, whether a neighbor, a client, or as events later demanded, a nation torn by conflicting philosophies of fundamental human rights.

We are hard put, at this stage of our national life, to practice the philosophy of Lincoln. It seems to most of us that the world has come farther and faster in the 140 years since the birth of the Emancipator than in the aeons before that day. Our times, we say, are filled with the complexities of a mechanized age, our country engulfed by challenging problems of vast social significance, and our shrinking world woefully impoverished by the devastation of two great wars.

The backwoods youth who studied a few borrowed books by firelight seems a spirit far removed from one plumbing the incredible secrets of atomic energy. Yet Lincoln knew that for all the wonders they may achieve with hand and brain, men in their natural aspirations remain much the same. The years he spent living here close to nature enriched for him a keen and penetrating grasp of nature's divine miracle—humanity.

When reminded that "the legitimate object of government is to do for a community

of people whatever they need to have done, but cannot do at all, or cannot do so well for themselves in their separate and individual capacity" we are being counseled by the sixteenth President of the United States. But to complete his definition of the object of government, Lincoln added these words:

"In all that people can individually do as well for themselves, government ought not to interfere."

Somewhere between these two basic concepts lies the ideological differences of our two major parties, and while allowing for the occasional errors of our public policies, we cherish America's two-party political system because it, in sum total, has provided us the best government yet devised by a free people.

Neither of two parties, we know beyond question, can ever betray its mission so long as both dedicate their efforts to sustain Lincoln's profound utterance: "That government of the people, by the people, for the people, shall not perish from the earth."

If we would profit by Lincoln's example, we can do no better than stand before the world as a Nation of good will. Our growth as a constitutional sovereignty, our endless contributions to the science of civilization, our institutions founded on freedom, equality, and opportunity mark us a self-ruling people of divergent interests—yes; mixed ancestry—yes; and of varying creeds, but one and united in political purpose—the pursuit of peace, progress, and prosperity for all.

Our country is cooperating with others in the quest for peace. We have volunteered our aid to lands and peoples throughout the free world. We seek trade relations and honorable intercourse with any and all who respect our rights as we respect theirs. We are striving unselfishly, through the town hall of the United Nations, to cooperate with others in attaining that degree of international order and stability which will spare from a devastating war the masses of people in all corners of the globe.

Today, through sheer and stern necessity, we are arming ourselves and lending help to the task of maintaining freedom wherever its existence is threatened. As with Lincoln, the President, we confront a menace not of our own choosing, and like Lincoln, the humble, we seek providential guidance in a crusade to uphold good over evil, right over might, and freedom over tyranny. We are compelled by events to prepare for war, but we are spurred by conviction to pray for peace.

We need not fear that stronger hands than ours will reign over the rest of the world so long as ours are clean. There is for us a moral duty, not alone to those who have given their lives in battle, but to countless millions who live in hope of a better life, to face realistically the enemies of freedom and decency. We are not endeavoring to thrust upon them our way of life, but we stand resolved in our belief that all free peoples should remain free to work out their own salvation. It cannot be successfully argued that we seek abroad a dominion to rule, an empire to covet, or a people to exploit. Instead we encourage all men to emulate the political ideals, the material abundance, and the spiritual strength we have nurtured and multiplied through centuries of free and competitive enterprise.

Within our Union of 48 States, we propose that our people shall determine their destiny by exercising constitutional rights—their guaranteed freedoms of speech, assembly, press, and religion. Theirs, too, must be the right to select public officials, and through them so construe and execute the laws that a maximum of economic opportunity, civil equality, and social justice is assured every citizen.

It is as individuals that we need to clarify our thinking with Lincoln's political philosophy. In current times of stress and pressure, we are tempted to risk those courses that promise profit where there is no production, security where there is no creative force at work. Profit and security, in whatever form they take, are but compensations for those who have earned them through a judicious investment of sweat and skill.

We are beset by earnest folk who would ease our individual responsibilities with schemes of collective welfare. Their proposals warrant sober study, for we have developed an intricate society balanced between the resources of capital and labor.

But we are besieged, too, by the impractical and fuzzy thinkers, the demagogues who would assume our personal obligations if we but surrender our liberties in the bargain. They fill the air with their cry against the unjust, but their subtle schemes to give every man his due include the unfailing device to level off by leveling downward. Somehow they would have us individually poor but collectively rich.

Lincoln, when driven to the extremity of war to save the Nation, looked back upon the experiences and the wisdom of earlier patriots. He found in their lives and teachings the principles that have become the fiber of America.

In order to form a more perfect union and secure the blessings of liberty, our forefathers ordained the Constitution.

We the people, to sustain their faith, now pledge anew our trust in God and resolve to keep this mighty Republic worthy of its heritage—the land of the free and the home of the brave.

Congress: The Safeguard of Liberty

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Tuesday, February 22 (legislative day of Monday, February 21), 1949

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Dictators' First Move Is To Wreck Free Legislatures," from the newspaper Labor for February 19, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DICTATORS' FIRST MOVE IS TO WRECK FREE LEGISLATURES—CANNON, OF MISSOURI, IN A GREAT SPEECH, DEFENDS THE LAWMAKING BRANCH OF GOVERNMENT

"Wherever dictators and usurpers have climbed to power in any country, their first care has been to strike at the representatives of the people in the legislative branch of the government."

Congressman CLARENCE CANNON, of Missouri, Democrat, made that statement in the course of an unusual speech in the House. He was defending the lawmaking branch of government against the cheap, nasty attacks directed against it by the ignorant, the careless, the designing. It was a carefully thought-out speech, marked by flashes of genuine eloquence. It was probably the most worth-while speech of this session of Congress, but, unfortunately, the press had little or no space for it.

So modest is CANNON that most Americans have never heard of him, yet he is one of the influential figures in the House and recognized by all as a leading authority on parliamentary law. He wrote the manual which Congress uses to determine problems of procedure. He knows the lore of all representative bodies which have come and gone in history.

He has been 26 years in the House and heads the Committee on Appropriations, which holds Uncle Sam's purse strings and is probably the most powerful committee of Congress.

CANNON, talking from all this knowledge and experience, said:

"Oliver Cromwell, ending the British Parliament, pointed his sword at the mace lying upon the table of the House of Commons, and cried: 'Take away this bauble.' Out with it went representative government in England.

"Napoleon stalking into the French Chamber of Deputies at the head of his grenadiers, cried: 'Follow me! I am the divinity of the day.' His bayonets drove out the representatives of the people—drove out civil and religious liberties.

"Hitler, seizing the reins of government in Germany, burned the Reichstag building, so Germany's House of Representatives was unable to meet. Free government was destroyed in Germany and put in peril throughout the world.

"Of course, armed interference with the legislative branch of the government would be impossible in America today. But there are other ways of undermining the people's confidence in Congress."

CANNON quoted many of the recent extravagant attacks on Congress—columnists, radio commentators and others, including a newspaper editorial screaming: "The crisis is a challenge to do something before it is too late. It is an alarming situation."

"Too late for what?" CANNON asked. "What is it that is so alarming?"

Turning from the unbridled criticisms of Congress, CANNON praised some sane appraisals.

"Here," he said, "is one by William Green, president of the American Federation of Labor: 'Anything that brings Congress into disrepute weakens the fabric of American democracy.'

"Let me also include a comment from Labor:

" 'We still believe that the best way to streamline Congress is to elect the right kind of men to the House and Senate. They will always find a way to enact desirable legislation'."

Labor has often criticized individual Members of Congress, and will continue to do so. As CANNON said, that is the right and duty of every citizen.

But we agree that attacks upon Congress as an institution are a different and dangerous thing. So long as we have a freely elected Congress there will be liberty throughout the land. When Congress goes, our freedom will go with it.

The Economic Situation of the United States

EXTENSION OF REMARKS
OF
HON. FRANK B. KEEFE
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1949

Mr. KEEFE. Mr. Speaker, today's mail contained a letter from a constituent living at Kiel, Wis. He said:

DEAR MR. KEEFE: Can you give me more data on the present conditions we are experiencing these last 2 months? Why are so many men being laid off. Why is industry cutting down to 32 to 40 hours a week? Why is business way off in all lines. Are we headed for a depression? The average pay check around here is from $28 to $30 a week and the cost of living has not gone down as yet. The average man can't make ends meet. What are the reasons for this condition? Is it the reckless spending on the part of the Government, or what?

Well, I do not profess to know all the answers to the questions in this letter, but a lot of scattered evidence has been piling up indicating that the false prosperity induced by Government wartime spending may be about over. Some prices have turned downward; unemployment is appearing in many parts of the Nation. A note of caution is appearing in most business transactions. The experts deny that the Nation is heading into a depression, but cautiously admit we may be approaching a leveling-off period.

The facts, if you actually want to recognize them, are that the causes of the 1929 depression were never really corrected. It may have been a temporary palliative but was no solution to the problem to have the United States Treasury pour out millions of dollars for leaf raking from 1929 to 1939. Unemployment remained until the United States was converted by Government decree into the arsenal of democracy and then an actual participant in World War II. Under the stimulus of the conflict, men went to work or to war, income was high, enforced savings put paper wealth in people's bank accounts and safety deposit boxes, but the goods produced were principally for waging war, and, as such, were shot away and destroyed. When the war ended we found we had few goods on hand to purchase, a tremendously inflated supply of money, and a great demand for all of the things we had gone without. The result was a scramble for the available supply of goods with plenty of ready cash to bid up the price of the scarce articles. Government contributed to the pressure by competing with the citizenry for food and machinery to give to Europe. It added further to the high cost of continuing taxes at wartime levels. Over the entire picture hangs the burden of the greatest national debt ever accumulated by any nation in the history of the world.

There is a fable about the last straw that broke the camel's back. Could it be that we have piled cost upon cost until many items are out of reach? The inventory statistics show that the store shelves are filled; the pipe lines from the producers are clogged and backing up. Under the circumstances the only recourse the manufacturer has is to reduce production, which means reduce pay rolls and lay off workers.

When job security diminishes consumer spending dwindles. Business slows down and we have a recession. The great danger is that a recession may snowball downhill into a depression.

However there are no responsible sources in Washington even conceding at this time that we may be approaching a recession. The President and his economic advisers have not observed any signs of a deflation period; they have asked the Congress for legislation to halt inflation. They have asked for stand-by price controls; they have asked the Congress for an additional $6,500,000,000 in the form of higher corporate, individual and pay-roll taxes. They are asking for another $5,000,000,000 installment on aid to Europe and have a multibillion scheme in the works to reactivate the arsenal of democracy and furnish armaments to North Atlantic nations. They are proposing a $10,000,000,000 health program, bigger pensions, higher unemployment benefits, a million new homes put up with taxpayers money.

Where will all this lead? Only time will tell. At any rate my good constituent at Kiel appears to be fully justified in his concern. Certainly we must all be on the alert to make sure that the would-be saviors in charge of Government do not "kill us with kindness."

Hoosier! A Word With History All Around It

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Tuesday, February 22 (legislative day of Monday, February 21), 1949

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Hoosier! A Word With History All Around It," from the Washington Times-Herald of Monday, February 21, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOOSIER! A WORD WITH HISTORY ALL AROUND IT

INDIANAPOLIS, February 21.—For 33 years, or ever since the Indiana centennial of 1916, historians, teachers, and research scholars here have been delving into pioneer archives seeking the origin of the distinctive nickname: Hoosier. It is a term of dignity and character, they conclude, and applies to anyone native to Indiana or who is a resident within the State's borders.

Specifically, the scholars have concluded the word Hoosier means: An important caller, and a dignified, self-reliant person.

But reports in the files of the Indiana Historical Society disclose there are three schools of thought concerning the manner in which the word might have been born, perhaps between 1810 to 1830, and got into common usage.

AN IMPORTANT CALLER

There are many claimants for "who's hyer?" said to have been hallooed by a cabin settler to a wayfarer on horseback, or vice versa, during territorial times. The traveler, according to a poem written in 1830 by John Finley, titled "The Hoosier Nest," proved to be an important caller and a fine gentleman. Novelists of Indiana's later golden age of literature, including Lew Wallace, of Ben Hur fame, and Booth Tarkington, liked the idea of "who's hyer?" becoming in time "Hoosier," and meaning important caller or friendly traveler.

The second school gives the word military dignity—from hussar.

It is said Colonel Lehmanowski, a Polish hussar of the Napoleonic wars, appeared so resplendent in his uniform of military braid and decorations during a sojourn across the new State of Indiana that he inspired coonskin-capped riflemen of the frontier militia to glorify themselves as hussars, which they pronounced "Hoosier." The scholars declare that in the war with Mexico and long after the Civil War all parade soldiers in Indiana were called Hoosiers.

The poet, James Whitcomb Riley, believed either of these legends could have been the true source of Indiana's nickname, but in his lyceum recitals he pointed out that much of Indiana's speech, quality talk, and slang stemmed from a southern immigration.

THE THIRD SCHOOL

The third school suspects this southern group of immigrants gave the word "Hoosier" to Indiana, and remarks that it was popularized by riverman Mike Fink from Pittsburgh. He was a man of invincible strength, who picked up the word "husher" and used it often while traveling up and down the Ohio and Mississippi Rivers.

"There is not another like myself in all this country. I'm a hoosher," the keelboatman is said to have remarked with gusto.

"Hoosher" was Mike's pronunciation for "husher" meaning mighty man. Researchers found husher is out of the particular dialect of settlers in the Carolinas and Georgia, who hailed from Cumberland, England. "Husher" means big, important, large, able.

Tracing the word back to England the scholars found it was written "hoozer," and that Mike Fink, the skull cracker and braggart, used the word "hoosher" to proclaim he was the best man in a crowd. When challenged he promptly staged an eye-gouging hard knuckle fist fight. For years his strength, vocabulary, and use of firearms provided fabulous tales for rivermen and settlers throughout southern Indiana.

His skill and gusto gave the word "hoosher" real meaning as it became hoosier and denoted a unique individual of exceptional abilities, the historians declare.

FEW CHALLENGERS

Few dared to say that Mike wasn't a very remarkable fellow, nor did they argue about the prowess of his 100 boatmen. Most rivermen agreed that Mike was something they didn't want to get tangled up with, yet were his friends. Mike roared, boasted, fought, and raced up and down the length of the Ohio and Mississippi Rivers from the close of the American Revolution to 1821. "Then," says an idolatrous historian, "to use the words of Mark Twain, he moved westward with the jug of Empire."

Wandering ahead of the tide of settlers, Mike accompanied a fur-trading expedition up the Missouri River, and met his death at a lonely post near the Yellowstone in the winter of 1822–23.

Do It the American Way

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1949

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial from the Muncie (Ind.) Star, issue of February 17:

DO IT THE AMERICAN WAY

Our European friends are unduly alarmed over the warning by Senator VANDENBERG and Senator CONNALLY that no Atlantic alliance would be acceptable that provided a legal and automatic commitment to go to war without congressional approval. These European nations know what is in the United States Constitution. They know that the State Department cannot commit us to war. But they also know, or should know, that we are not sending them aid under the Marshall plan in order that Russia will be allowed to move in and seize it.

It is certainly possible for the United States to make a strong enough commitment

assuring military support in case of aggression to the nations of the North Atlantic alliance. We made such a pact with the nations of the Western Hemisphere. As a matter of fact, the State Department could make an even more reassuring agreement with these European nations if they followed the suggestions of the proposal written for the United Nations Association by Sumner Welles and Quincy Wright.

This proposal suggests that the North Atlantic alliance be turned into an open regional agreement under the United Nations Charter, article 51. The Muncie Star has been advocating this sort of agreement for more than a year. For an exclusive military alliance is neither in the best traditions of American diplomacy nor the spirit of the UN Charter itself.

The Welles-Wright proposal requires that, if an armed attack occurs on any member of the regional organization or of the United Nations, and if the Security Council is prevented from taking action by a veto, then a two-thirds vote of the General Assembly would decide whether an attack had occurred and direct the use of armed forces against the aggressor. In addition, if time were short, an individual member or group of members of the UN could immediately go to the aid of the nation attacked and ask for approval of the General Assembly later.

Thus the United States could act quickly by itself if Norway were attacked and if Congress approved. Congressional approval would already have been gained if the United States had previously approved the regional arrangement under the UN providing for action by the General Assembly. Nor would the United States be bound to go to war solely because one of the members of the UN group had provoked an attack upon itself which we and other nations disapproved.

Let us do this thing the American way, the democratic way. Let us use the UN for the purposes it was intended to fulfill instead of making an old-fashioned military alliance of the sort that has never before kept the peace.

The Doctors' Lobby

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 22, 1949

Mr. BOLLING. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article from the February 19, 1949, issue of Labor, the railroad labor official weekly. It shows all too well the kind of tactic the American Medical Association uses to defeat compulsory health insurance.

DOCTORS' TRUST BOASTS OF HOW IT BOUGHT SUPPORT OF NEWSPAPERS IN CALIFORNIA

A startling story of how the doctors' lobby put cash on the barrel head to buy support of newspapers for a fight against health insurance came to light this week and from an unexpected source.

A radio commentator—Don Hollenbeck, who pilots the program, CBS Views the Press—told the details the other day.

Hollenbeck obtained a transcript of discussions that were held at a Nation-wide conference of the secretaries and editors of State medical associations. A California delegate at that parley told how the medical association of his State licked a health-insurance plan sponsored by Gov. Earl Warren, Republican.

Here are the direct quotes from the delegate:

"We have 700 newspapers in the State, a great many of them small weeklies. Never before have we been able to get any real support from the newspapers because the answer constantly came back: 'Why should we give the doctors any support when they don't advertise?'

"We now have an answer to that. We went to the California Newspaper Publishers' Association and said: 'Gentlemen, we are going to spend a lot of money with the newspapers. We are going to advertise in every one of the 700 newspapers.'

"Each of the 700 newspapers in the State received a minimum of 100 column inches of advertising in a period of 12 months. We found that the response from editors, in publicity, has been far beyond anything we expected when we started the campaign."

In short, every newspaper in California gave columns of news space to publicity hand-outs smearing Warren's health-insurance bill—in return for the money turned over by the medical association for advertising space.

Advocates of health insurance, on the other hand, were virtually blanked out when it came to getting their side in print, because they couldn't match the slush fund of the medicos.

It's rare, said Hollenbeck, that anyone "so boldly admits that editorial favors—publicity—had been bought with advertising," but there are the facts in black and white.

Who planned this scheme of bribing the press? It was, the commentator explained, a "go-getting" public-relations firm of San Francisco known as Whitaker & Baxter.

That's significant because it's the very firm which the American Medical Association, the national doctors' trust, has hired to conduct the campaign against Federal health insurance, advocated by President Truman and backed by organized labor.

And the AMA is raising a $3,500,000 "war chest"—through a $25 per head assessment on 140,000 members—to finance the drive.

That means the AMA will have millions to spend on newspaper advertising. It's a foregone conclusion that most of the Nation's newspapers will repay the AMA with oodles of free space for publicity smearing health insurance, just as the papers in California did.

So, if from now on you see the press filled with propaganda picturing health insurance as a dire menace to the Nation, you'll know it has been bought and paid for.

There were other important developments on the health-insurance front this week:

Outstanding was the disclosure that 136 physicians, many of them distinguished in the profession, signed a joint letter to the AMA threatening a revolt against the $25 assessment plan. The list was headed by Dr. George Baehr, former president of the New York Academy of Medicine.

The 136 announced they would refuse to pay the levy if the money is "to be used for propaganda and legislative lobbying." They declared they would gladly contribute only if the funds are devoted to formulating a "comprehensive medical-care program" which is "considerate of the needs of the people and fair to the interests of the physicians."

Also, the signers predicted a general grass-roots revolt among doctors if the AMA insists on going ahead with merely a smear campaign. Such a drive, they warned, would "add to the already firmly rooted suspicion that the association's objectives are primarily economic and selfish."

The biggest blow to the AMA's assessment scheme came from the Kings County (Brooklyn) Medical Society, which is one of the largest AMA branches in the Nation. In a referendum the members voted by a majority of 861 to 755 against paying the levy.

Dominican Republic Making Rapid Progress: Housing, Health, and Business Problems Being Solved

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1949

Mr. HAGEN. Mr. Speaker, because of the great interest in the United States in the Dominican Republic, I desire to insert in the CONGRESSIONAL RECORD a very interesting and most enlightening article concerning the work being done in that small nation by its leader, President Trujillo. A feature article, published in the Minneapolis (Minn.) Sunday Tribune for January 2, 1949, and written by Mrs. Virginia Safford, after first-hand observation of activities in that country, describes the new developments and advances being made.

The article follows:

(By Virginia Safford)

Dominican Republic: On his first voyage to the New World, Christopher Columbus fell in love with what is today the Dominican Republic. He wrote to King Ferdinand and Queen Isabella, "There is no finer land than this under heaven." He spent so much time on this one island instead of looking for new lands that when he left Spain on his fourth and last voyage the king and queen ordered him not to stop there. Columbus' bones rest in the cathedral in Ciudad Trujillo, according to his wish. Of course, I visited his tomb in what is the oldest church in the Western Hemisphere, saw the religious jewels and relics.

Talk around the capital is of a new tomb for Columbus, a lighthouse on the high promontory at the mouth of the Ozama River. It will take the form of a mile-long recumbent Christian cross. Each of the 21 Latin-American countries will have a room in the lighthouse and share the $5,000,000 construction cost. It will be stepped up like a pyramid to a height of 100 feet. In the center of the lighthouse will be the crypt holding Columbus' bones. Construction began when ground was broken by atomic energy last May.

You'd look far and wide over the world, yet never find any cleaner city than Ciudad Trujillo, capital of the Dominican Republic. It was practically rebuilt in 1930, after a hurricane destroyed it. Yet enough of the old landmarks remained to retain much of its old Spanish colonial charm. Besides the cathedral, there's the palace of Diego Colon, son of Columbus, who became governor of the island. The new buildings in the capital are amazing. There's the matadora, the dazzling white slaughterhouse built along the shores of the Caribbean and set in a lovely landscaped park. It could be mistaken for a country club.

I did visit the market, and in all my travels have never seen a more orderly place of its kind. Skylights from the arched concrete roof brighten the buildings. On the main floor the displays of fruits and vegetables would rival those of any de luxe grocery store. On the mezzanine floor meat and fish are sold.

While living is not too cheap in the Dominican Republic you can buy avocadoes for 3 cents apiece, and 100 luscious oranges for 45 cents. The best filet of beef—provided you can eat it fresh-killed—costs you only 60 cents a pound. Pork chops come at 32 cents a pound, eggs are 6 cents each. You

doubt if anyone goes hungry in the Dominican Republic that not only feeds itself but exports some foods. Plantains, those large-size bananas, are a main diet staple. Sliced thin and French fried they make wonderful hors d'oeuvres. I've eaten lobster, shrimp, and wonderful fish that came from the local market. Of course, sugar is the money crop. The first sugarcane brought to the Western Hemisphere came with Columbus on his second voyage. The Dominican soil is so rich that cane will grow from the same roots for 10 years or more.

Among the things to impress you about Ciudad Trujillo is the Barrio des los Obreros—or the workingman's housing project. Little by little, one block at a time, Trujillo is clearing out all old houses in the slum areas and in place are being erected small stucco, pastel-colored homes. To date 2,000 have been built. The goal is 10,000. They cost $1,800 to build, are paid for at an $18 monthly rate. In 10 years they belong, without encumbrance, to the owner. As a birthday present to Trujillo, everyone in the city paints his house in October. They're usually in a frantic rush to get the work done because of fall rains.

The country is the flag-flyingest I've ever seen, with the possible exception of Denmark. Everyone has to fly a flag on national holidays, and they come around often. Taking down a flag involves much ceremony. People in the street stand stock still at attention. All traffic stops. Incidentally, there's a traffic cop dressed in neat khaki on almost every corner. He takes the place of the mechanical stop and go sign. You must pay great attention to him. You're not allowed to blow your horn at a corner where a cop is standing. You signal which way you want to go and he gives you the high sign. At night he holds two small flashlights, operating them for red and green signals.

CIUDAD TRUJILLO IS BASEBALL CRAZY

By coincidence I arrived at the time the victorious Dominican Republic team was returning from Puerto Rico, having won the little world series. They declared a national holiday. Plane formations flew so close I thought they'd take the roof off the beautiful Jaragua Hotel. That night the outdoor patio of the Jaragua was crowded with dancers and baseball heroes. Of course, the baseball team never forgets it beat the Brooklyn Dodgers once during last season when the Dodgers were training in the Republic.

Every child between 7 and 14 must attend school. Parents are fined unless they can satisfactorily explain a child's absence. Today the country has sufficient school facilities with 1,700 rural schools and 230 in cities and towns. Along the streets of Ciudad Trujillo you see boys and girls dressed in thin khaki-colored uniforms when school lets out.

Trujillo does not allow slot machines, in order to protect the little fellow. But the national lottery affords an outlet for the gambling instinct. And if that is not enough, there's always the casino at the Jaragua. There, around dice and roulette tables, you'll see the sugar kings and queens of the Republic, as well as the tourists who consider that all a part of a vacation or holiday.

Bob Hope

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1949

Mr. MULTER. Mr. Speaker, following is the citation presented to Bob Hope by Gen. James Doolittle, on February 8, 1949, on behalf of the 52 Association for the most outstanding accomplishment in 1948:

BOB HOPE

Fifty-two weeks a year, every year since the beginning of World War II, the lives of many thousands of the wounded have been made easier because you have taken such great pains to remember. To America's wounded and ill veterans and servicemen in the hospitals, to those stationed at far-flung outposts of democracy, yours has been the voice of the folks. You have known them in their happy childhood, their valiant youth, their responsible maturity. They feel that they have known you all their lives, for you represent all that is good and clean, true and abiding in America. Through the alchemy of your good cheer, there has been created a brighter future for all of them. The 52 Association of the United States is honored to honor you, Bob Hope, for the most outstanding accomplishment in 1948 so that "The wounded shall never be forgotten."

I Speak for Democracy

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. HOPE. Mr. Speaker, there are in Washington this week four high-school students who have been chosen as winners of the Nation-wide Voice of Democracy contest. Each of them has been awarded a trip to Washington and a college scholarship. They are Richard Caves, Bath High School, Everett, Ohio; Charles Kuralt, Central High School, Charlotte, N. C.; George Morgan, Jr., Hutchinson High School, Hutchinson, Kans.; and Kerron Johnson, Wilson High School, St. Paul, Minn. On tomorrow at a luncheon here in Washington, Attorney General Tom C. Clark will present the awards to these young men.

The Voice of Democracy contest is sponsored by the National Association of Broadcasters, the United States Junior Chamber of Commerce, the Radio Manufacturers Association, and endorsed by the United States Office of Education. It began as a feature of National Radio Week last November. First, there were school contests, then community contests, then State contests, and finally four regional contests covering the Northeast, the Southeast, the Southwest, and the Northwest parts of the country. Each of the young men in Washington this week is a winner of the contest in his area. The judges for the national finals were Margaret Culkin Banning, novelist and author; Tom C. Clark, Attorney General of the United States; Dr. Harry Emerson Fosdick, pastor emeritus of Riverside Church, New York City; Mrs. Oveta Culp Hobby, wartime director of the Women's Army Corps, now vice president of the Houston Post, operator of radio station KPRC; Eric Johnston, president of the Motion Picture Association of America, Inc.; Miss Frances Perkins, member of the Civil Service Commission; Glenn E. Snow, Dixie Junior College, St. George, Utah, retiring president of the National Education Association; and James Stewart, motion-picture star.

The fact that 250,000 students in the 48 States, Alaska and the District of Columbia prepared broadcast scripts shows the great interest which the youth of today are taking in government. The subject given each of the contestants was, I Speak for Democracy. I have had the pleasure of reading the 5-minute scripts prepared by the four winners. They are eloquent and moving documents. They show that those who spoke the words knew and lived democracy, that they had an appreciation of the democratic way of life and of those principles and human values upon which it is based. They are worthy to be heard and read by every American and no one can help but be a better citizen from having heard or read them.

One of these splendid young men, George Morgan, Jr., is from my Congressional District. He is 16 years of age and a sophomore in the Hutchinson, (Kans.) High School. He comes from what I like to think is a representative Kansas home. He is an all-around boy. He carried a paper route while his father was overseas during the war. He works during his school vacations and Saturdays. He is on his high school football squad. He sings in the school glee club and a church choir. He flies model airplanes and is greatly interested in aviation mechanics. He teaches a boys' Sunday School class and takes an active part in young people's work in his church. He plans to enter college upon completion of his high-school course.

I am proud of George Morgan, Jr., and I congratulate him and his fine parents on his success as one of the winners in this national contest. I also want to congratulate the National Association of Broadcasters, the United States Junior Chamber of Commerce, the Radio Manufacturers' Association, and the United States Office of Education for sponsoring and carrying out this contest, which I feel has made a great contribution to a better understanding of democracy in this country. Because I believe that every Member of Congress will be interested in reading the script prepared by George Morgan, Jr., I am including the same as a part of my remarks herewith. The scripts prepared by the other winners have been placed in the RECORD by Members of Congress from their home districts.

I SPEAK FOR DEMOCRACY

I speak for democracy. In order to understand more fully the meaning of democracy, I asked my father for a definition, and he said it was a system of government where the people elected representatives to govern them and these representatives derived their powers from the consent of the governed. Why did I believe my father could give me a good definition?

Let me tell you. One morning, February 16, 1943, to be exact, I heard him go out of the house, possibly never to be seen again by the ones he loved. He left a job, friends, a wife, and three children that loved him dearly. He left all of this to defend the very thing I'm talking about—democracy.

Through his letters, I saw a man quite different from the man I had known. I saw a man packed with other men, growing

further and further away from the things he held dear. I saw a man trudging through snow, learning to fight, learning to defend democracy.

Later I saw him standing on a spray-swept deck of a tossing ship, sailing through the black water with an unfriendly sky overhead. He had a pair of binoculars in one hand, a rifle over his shoulder. He stood alone, a silhouette against a warring world. He stood, and still stands for democracy.

Another time I saw him unloading other men into that bloody battle for Okinawa. I saw tracers throwing their tell-tale trails behind them feeling out his ship. Feeling, seeking, trying to snuff out his very life. I saw him bending over a box or table in his small compartment, far below the water line, writing home. I saw him look up as a matter of routine at the public address loudspeaker, to hear the heart-gladdening shout—the war is over. Then a happy, almost incredulous look spread across his tired, weary face. To a far-away sailor, America, democracy, home, loved ones, all beckoned.

But what does democracy mean to American youth—the American youth—who are they? They were the little children of yesterday. Today they are the young men and women who are asking for the family car, running out of their allowances. They are the young people we all know. They will be the America of tomorrow, the democracy of tomorrow—yes, the world of tomorrow. They are you—Mr. and Mrs. America, in miniature.

Now, another question. What does America mean to us and what is democracy doing for us—the young people of today? A current author has said that America means a way of life. That is really what democracy is doing for us—establishing a way of life. None of us would like to think of living without it. How can we maintain this American way of life? By upholding the standards of our forefathers—we alone can keep democracy what it is.

But are we satisfied to maintain it merely as it is? Of course not. But how can we improve it? By deeper appreciation of our privileges, and a more complete fulfillment of our obligations. The things I have presented are important issues concerning this matter of democracy. Our obligation is to forward these ideals in our American way of life and add more to them. A just balance between privileges and obligations form the rock-like core that can and will keep our America truly great in this uncertain world.

This philosophy of life which maintains that each of us must love our neighbors as ourselves, give our lives for our country if need be, not only enjoy our privileges, but also shoulder our obligations, shall inevitably further our cause. Our wonderful American democratic heritage has been handed down to us from past generations.

Let all present-day Americans dedicate themselves to forwarding our cause around the world. A people thus united in this common cause shall forever preserve a way of life that will stand the test of all time.

I plead for democracy.

Social Security

EXTENSION OF REMARKS

OF

HON. M. G. BURNSIDE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1949

Mr. BURNSIDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorial from the Legislature of the State of West Virginia:

CHARLESTON, W. VA., *February 2, 1949.*

Committee substitute for House Concurrent Resolution 6, memoralizing the Congress for the enactment of legislation to extend and liberalize the present Federal social-security law

Whereas the Federal social security program has proved to be of great value to the citizens of this country in both economic and humanitarian sense; and

Whereas the President of the United States has recommended to Congress that the present Federal social-security law be extended and liberalized; and

Whereas by act of the 1947 legislature, Senate bill 351 relating to the acceptance of future Federal legislation by the State of West Virginia permitting State and local public employees to secure coverage under the old-age and survivors insurance provisions of the Social Security Act was enacted into law; and

Whereas it has been ascertained that an extension and liberalization of the provisions of the present Federal social-security law is contemplated by the Eighty-first Congress of the United States: Therefore be it

Resolved by the house of delegates (the senate concurring therein), That we approve the movement to secure an enactment of legislation by the Congress of the United States which will extend and liberalize the benefits of the present Federal social-security program to include States and their political subdivisions and instrumentalities and that we earnestly request our Members of the Senate and House of Representatives to use all honorable means to secure the prompt enactment of such legislation at this session, and that a copy of this resolution be forwarded to the West Virginia Members of the Senate and House of Representatives, and the Speaker of the House of Representatives.

Tax Slash Pays Off

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks, I am inserting the following editorial from the Boston Daily Record of February 21, 1949:

TAX SLASH PAYS OFF

The final argument against President Truman's proposed $4,000,000,000-tax increase—and in favor of another tax reduction—has been provided by the United States Treasury Department.

The Eightieth Congress gave the overburdened taxpayers the first decrease that they have had in years. Social planners and spenders at Washington protested in anguish. They predicted a great decline in Federal revenues and another unbalanced budget.

But they were 100 percent wrong.

Under the reduced tax rates, the Treasury finds that the Government collected in 1948 nearly $3,000,000,000 more than in 1947 under the previous higher rates.

Moreover, the New Deal was given the first balanced budget that it ever had.

This record confirms an economic fact with which all competent tax authorities are familiar but which the New Deal has never acknowledged.

That fact is that the law of diminishing returns operates in governmental finance as it does in all private affairs.

When tax rates exceed a certain level, normal business investment and business transactions either cease to expand or else actually decline, and the Government's share in production—which is expressed in terms of tax returns—contracts correspondingly.

Shortly after the First World War, the late Andrew W. Mellon, as Secretary of the Treasury, recommended tax reductions and predicted that an abandonment of wartime rates would return an increase in peacetime revenue.

This proved to be exactly correct; and, during a period of prosperity and industrial expansion, the national debt was reduced by billions of dollars.

Financial history proves that when taxes consume more than 25 percent of national income, industrial decline sets in.

Investors, having no incentive, quit investing; the volume of production fails to provide necessary increasing employment; and stagnation turns into depression.

With a $41,000,000,000 Federal budget, with several State budgets exceeding a billion dollars each, and with counties and municipalities seeking more money to permit more public spending, this country is at the danger point.

Congress should read the current Treasury report, and the administration's high-tax demands, with these portents in mind.

Nomination of Mon C. Wallgren

EXTENSION OF REMARKS

OF

HON. HARRY P. CAIN

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Tuesday, February 22 (legislative day of Monday, February 21), 1949

Mr. CAIN. Mr. President, I ask unanimous consent to have placed in the Appendix of the RECORD a number of editorial comments which bear on the proposed appointment of Mr. Mon C. Wallgren, of Washington State, to become Chairman of the National Security Resources Board. Because the question of Mr. Wallgren's fitness for this position is of real importance and interest to every American and to every Member of Congress, I would urge that the material submitted be thoughtfully read and considered.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York (N. Y.) Herald Tribune of February 17, 1949]

HELPING AN OLD CRONY

The best thing to be said for Mon Wallgren is that he enjoys the friendship and confidence of President Truman. The Senate Armed Services Committee has been studiously inquiring into Mr. Wallgren's qualifications to be the Chairman of the National Security Resources Board, and apparently finds little specific evidence that the former United States Senator from the State of Washington fits the job. Mr. Wallgren, true enough, served in Congress a dozen years and as a Governor of his State, was long and profitably engaged in private business as a retail jeweler and optometrist, and even gently suggested last spring that he might

be available for the Democratic Vice Presidential nomination. None of this bears against Mr. Wallgren, but an impartial observer would hardly pick him on the demonstrated record as the planning genius and economic mobilizer envisaged under the National Security Act to keep tabs on America's resources against all emergencies.

The post of Chairman of the NSRB carries in theory a tremendous responsibility; so vast, in fact, that the conception is perhaps incapable of achievement in any absolute sense. This is the Board designed to advise the President concerning the coordination of military, industrial, and civilian mobilization. What power the Board actually possesses is still uncertain, apparently a question for Mr. Truman to decide and perhaps depending largely on the Chairman himself.

Mr. Wallgren's qualities, what one can make of them, are largely political and personal. The President remembers him fondly from the days of the Senate War Investigating Committee, and finds him excellent company. These are rather narrow grounds for this $14,000 appointment, but then Mr. Wallgren may be concealing unsuspected abilities. As Senator TYDINGS was saying the other day, Mr. Truman was elected on "practically the same experience qualifications," a statement not to be denied. But the real explanation is obvious. Mr. Wallgren, an old crony out of a job, likes the Washington life, and the President is taking care of him.

[From the Chehalis (Wash.) Daily Advocate of February 18, 1949]

MR. WALLGREN'S APPOINTMENT

Few eyebrows were raised when President Truman announced his appointment of former Gov. Mon C. Wallgren as Chairman of the National Security Resources Board. From the moment Mr. Wallgren began angling for a good spot everybody knew he would get it because of the President's disposition to care for his friends, often at the expense of the Government. And when the announcement came the tendency was to still shrug it off as the job appeared to be one of those routine affairs with a high-sounding title, in spite of its generous salary.

That was before the public was familiar with Mr. Wallgren's potential position. We are now learning, through the revelations of Senator HARRY P. CAIN, and others, that the chairmanship of this Board is one of the powerful jobs in the Nation. The State of Washington, which has expressed its conviction that Wallgren was not qualified to run the State, would never sanction his elevation to a place of such terrific responsibility.

The extent of this responsibility is disclosed by Marquis Childs, the Washington columnist. In his words, the National Security Resources Board, by act of Congress, possesses "the most extraordinary authority to use Federal money in a variety of ways to develop and acquire natural resources and relocate and reorganize industry for the security of the Nation."

For instance, Childs continues, the Board Chairman can authorize a contract to any mining company on the ground that important mineral resources are to be exploited. Then the mining company can get a loan from the RFC for development.

Such powers are granted in order to equip the Nation for a wartime emergency. Extraordinary powers are needed in this event, but when and if we are at war we shall want the power delegated to one who is proven as a top man in the Nation. We believe that, on a list of the top men in the Nation, Wallgren would be so far down the list that he wouldn't be on it.

Senator CAIN challenges Wallgren's fitness for such a position on the ground that he conspicuously lacks the requirement demanded by the assignment he seeks. He has carried his battle to the Senate, claiming that Wallgren is personally obnoxious to him. It should be explained that this term is used in accordance with a Senatorial custom, the practice being that the Senate does not confirm any appointee who is personally obnoxious to any Senator. While there is doubt that Senator CAIN would make progress on that score, he should have plenty of ammunition on the ground that Wallgren is unfit for the job.

It is known by most of the State, if not by the Senate, that Wallgren ran our government in the manner of a politician rather than as a statesman, with the Democratic Party and party leaders receiving a lion's share of the benefits. It is known that he ran it like a closed corporation, keeping the people in the dark as to its operation. His administration was notable for its waste, as shown by his operation of the highway department, the motor fleet, State parks and other divisions, and the general State fund was seriously reduced. He spent a quarter of his time out of the State.

If the voters of Washington had the power of confirmation of this high appointment, Wallgren would be soundly rejected. The Senate, which does have that power, is duty-bound to reject it. Whether they will is a question, because Wallgren's party is in power in the Senate. But on the basis of fitness for office, and for the sake of our future security, we hope the Senate will act positively on Senator CAIN's recommendation.

[From the Bellingham (Wash.) Herald of February 15, 1949]

WALLGREN JOB ENTAILS VAST POWER

Senator HARRY CAIN's opposition to the confirmation by the Senate of President Truman's nomination of Mon C. Wallgren as chairman of the National Security Resources Board has pinpointed the Nation's attention on this important Government agency.

Senator CAIN denied in a statement to a correspondent of the Seattle Post-Intelligencer that he regarded the former Governor of the State as "personally obnoxious"—as he had been quoted by another source as saying. He said that in a personal sense—and he did not know him well in that sense—Wallgren "has always seemed amiable, courteous, and agreeable." But:

"My opposition to him isn't personal, I just don't think he has ability and capacity to serve in this tremendously vital job in a way that the welfare of the Nation, as I see it, demands.

"As I read the job specifications, the Chairman of the Securities Resources Board is one of the two or three most powerful men in the world.

"I just don't think Mr. Wallgren is qualified to run the next war—if there is a next war—or to guide the expenditure of billions involved in building our security."

Light on the functions of the Board is shed by an article for the Wall Street Journal by Ellis Haller. Mr. Haller writes from the national capital:

"A group of Washington newspapermen were talking the other day about the relative importance of Federal agencies in Mr. Truman's new term. Someone asked: 'What will be the most important single Government unit in months ahead?' The almost unanimous answer was 'the National Security Resources Board.' * * *

"As the year goes on, the NSRB will play an increasingly important role in President Truman's 'fair deal' program. Ostensibly, its job is to advise Mr. Truman on how to coordinate military, industrial, and civilian mobilization so the United States will not be caught short in case of emergency. But in these uneasy times its activities have taken on greater significance.

"The plans NSRB is drafting for the Nation's defense will mesh with other economic projects the administration has mapped for the next 4 years. The legislation it is about to propose will stir sharp debate in Congress. The policies it will enunciate can affect the future of many businesses and the course of the national economy.

"In plain terms, this little publicized Board will become overnight the most powerful agency in our Government if we get into war, or if we approach a state of national crisis. In any case, it is a body that business and industrialists take seriously as nonwar military spending soars and as foreign policy planners map United States strategy against the spread of communism.

"NSRB has functioned quietly for nearly a year and a half, seldom making spectacular news. It was created when Congress passed the National Security Act of 1947. This act set up the Board as a permanent civilian agency of the United States Government, responsible only to the President. The Board may, at any time in war or peace, call into play the facilities and resources of any department, agency, or bureau of the Federal Government.

"If Congress declares war, or if the country is plunged into an emergency at a time when Congress can't act, NSRB would shift at once from a planning to an operating set-up. It would establish temporary agencies to control prices, wages, the flow of raw materials, manpower, transportation, and the conversion of production facilities. * * *

"Military men generally favor the NSRB set-up, even though it doesn't give them the upper hand in running the country in case of war. They claim they are willing to accept civilian direction in return for the speed-up that will be possible in industrial mobilization. * * *

"The Budget Bureau has asked an appropriation of $4,000,000 for NSRB for the forthcoming fiscal year. That's an increase of $1,000,000 over the amount NSRB was appropriated for fiscal 1949. Most of the budgeted increase would be spent for hiring more staff members who, in the words of the Budget Bureau, would make further progress in developing resources and requirements data as a basis of planning mobilization of the Nation's resources in the event of war."

Clearly, the general public has slight conception of the importance and power of this little publicized Federal agency.

Senator CAIN deserves credit for bringing the issue into the limelight in connection with President Truman's selection of his Senate crony, former Governor Wallgren, for the vast responsibility the job entails. If the Board chairman, as Senator CAIN says, is "one of the two or three most powerful men in the world," the question of Mr. Wallgren's qualifications is of moment to the entire Nation.

[From the Washington (D. C.) Post of February 15, 1949]

WASHINGTON CALLING

(By Marquis Childs)

SOP TO WALLGREN

A President has many friends. They come trailing out of his past, some loyal, some self-seeking, some just good-time pals.

President Truman has named an old friend out of his freshman days in the Senate to one of the most important offices within his power to give. He has nominated and asked the Senate to confirm Mon C. Wallgren, former Governor of the State of Washington, to be Chairman of the National Security Resources Board at a salary of $14,000 a year.

Because this is a comparatively new agency, the far-reaching extent of the powers of the Chairman and the Board he heads are little understood. But the act passed by Congress creating the Security Resources Board spells

out the most extraordinary authority to use Federal money in a variety of ways to develop and acquire natural resources and relocate and reorganize industry for the security of the Nation.

Take one example of the powers of the Chairman. He can authorize a contract to any mining company or individual miner on the representation that important mineral resources are to be exploited. That mining company or miner can then go to the Reconstruction Finance Corporation and get a loan for the development.

Besides the Chairman, the Board is made up of the Secretaries of State, Treasury, Defense, Interior, Agriculture, Commerce, and Labor. These are all busy, overworked men, and the tendency is to let the Chairman run the Board pretty much as he chooses. It has been said that, next to the President's own job, this is the most important assignment in the Nation.

The future security of the country might well turn on how this assignment is carried out. It is either of the first importance and should be so regarded, or it is worse than nothing, since the mere existence of such a board might give a false sense of accomplishment.

Nothing in Wallgren's past would appear to equip him for this supremely important task. He has been an amiable politician, a good companion on a fishing trip or a party. For part of a term in the Senate he voted with the New Deal.

Wallgren left the Senate to become Governor of Washington. He was defeated for reelection last fall while the rest of the Democratic State ticket was swept into office and Truman carried the State.

During the campaign Wallgren was charged with favoring a clique of Democratic lawyers who were influential in obtaining licenses for so-called private clubs where liquor could be sold by the drink. There were also charges in connection with the sale of a company operating ferry lines across Puget Sound. Wallgren says this was purely politics, and he points out that nothing was proved.

He was considered a liability to Truman in the campaign in Washington. Yet not long after November 2 and his defeat Wallgren flew to Key West, Fla., to be with the President. Truman got him to give a demonstration of his skill as a billiard player for the newspapermen covering the Presidential vacation.

Senator HARRY CAIN, of Washington, a Republican, has said he will do everything in his power to block Wallgren's confirmation. He has even hinted that he would resort to the senatorial prerogative of declaring that Wallgren was personally obnoxious to him. But the precedent is that this applies only when the nominee is to fill an office, such as a judgeship, in the home State of the Senator applying the personally obnoxious label.

The Senate should examine this appointment with the greatest care. There should be hearings and, if necessary, extended hearings.

At the time of the Senate investigation into Howard Hughes' airplane contracts in the summer of 1947 Wallgren's name came up. He was listed as one of those attending gay parties given by Hughes' publicity man, John Meyer. Those parties were charged to the Government as expenses under the cost-plus contract.

Only a part of Meyer's expense accounts were available and the public never heard the whole story. It might be well to open those records to bring out what was held back. Asked by reporters about his presence at the Hughes-Meyer parties in New York, Hollywood, and Palm Springs, Wallgren gave a rather flippant reply, pointing out that both Republicans and Democrats of prominence had enjoyed the lavish hospitality.

This may seem mere trivia not worth recalling, but, measured against the momentousness of the position Wallgren has been named to, it is not trivial. Everything is relevant in the career of the man on whom so much must depend.

[From the Daily Olympian, Olympia, Wash., of February 7, 1949]

ANOTHER CRONY TAKEN CARE OF

Former Gov. Mon Wallgren's singular showing at the polls last November—he was the only Democratic candidate on the State-wide ticket who failed to make the grade—was apparently exactly what the doctor ordered for a man who insisted on going first-class. The picture of Wallgren sweating out the Truman gravy train for the past fortnight has been truly a touching one. It is said that the genial fellow had been growing anxious. Now he can relax as Chairman of the National Security Resources Board and enjoy the $14,000 annual stipend—more than the President thought he was giving his friend.

Washington columnists, along with most of us home folks, had deprecated the supposedly impending appointment of Wallgren to a Cabinet post, thinking him, as the Alsop column put it, "second-rate." As Chairman of the Resources Board he will be called upon to preside over a group containing most of the Cabinet members, who act in a consultative and fact-finding capacity. As American foreign policy drags the country closer toward the threat of war, the National Security Resources Board's functions grow more and more important. At this point America's readiness to mobilize industrially to reestablish her war potential is the strongest deterrent the country can offer Moscow—even stronger than the army of boys we are preparing and the rumored collection of atomic bombs and the experimental planes and missiles. Russian agents will note well what our erstwhile Governor and his new Board are doing.

Let us hope fervently that Wallgren will watch his step: That he will not get too preoccupied with building another private Navy, that he will forget about the opportunity to improve his outside investments, that he will not try to bull his way through situations as he has in the past. This time it is not visiting politicos he has to impress. We feel nervous about seeing the President do this nice thing for his friend, even if the friend learned (as the President said in justifying this appointment) something about stock piling when he was a Senator. It seems certain that Wallgren knows something about spending public funds, though it must be mournfully acknowledged that we see no valuable stock piles that he has left in our State. Especially not of funds.

Let us hope for the best. (The Seattle Argus.)

[From the Spokane (Wash.) Spokesman-Review of February 9, 1949]

WILL MR. WALLGREN RETURN TO US?

Shortly before ex-Gov. Mon C. Wallgren was taken care of by President Truman with a $14,000-a-year job in Washington, D. C., the Spokesman-Review suggested that the defeated Governor might be in line for the managership of the Columbia Valley Authority then being proposed by the President.

The Portland Oregonian now considers also the possibility that Mr. Wallgren may again be in our midst.

"Our guess," writes the Oregonian, "is that the appointment of Mon C. Wallgren, ex-Senator and ex-Governor of Washington, as Chairman of the National Resources Board—a $14,000-a-year post—will not take him out of political circulation for long.

"Governor Wallgren's defeat by a Republican, Arthur Langlie, in a year of national Democratic victory will be forgotten by the public as he serves in his new position, and when the time is ripe he can again claim the loyalty of his friend, President Truman, for appointment to a position more in the public eye. Mr. Wallgren is not one to languish for long in obscurity—and the Resources Board, though important, is not very newsworthy.

"In any event, we think the Northwest is happier that he has been named to this position than it would have been had he been nominated for Secretary of the Interior. There is a speculative report that if Mr. Truman's Columbia Valley Authority is approved, we will have Mr. Wallgren back among us."

As it now stands, the situation suits us completely. If Mr. Wallgren can keep occupied in an orbit that does not include the Pacific Northwest, there will be little repining here.

[From the Centralia (Wash.) Daily Chronicle of February 18, 1949]

SALES VERSUS INCOME TAX

We have been waiting for the hue and cry to start that immediately after he was elected Governor Langlie at once started to work to discover a new means of raising taxes. That is a usual political maneuver regardless of who was to blame for the condition which forced an increase in revenue. But so far we have failed to have heard any such accusation.

The financial condition the State is in was caused by just two factors, the looseness of the fiscal policy of ex-Gov. Mon Wallgren and the passage of initiative No. 172 by the people. And we should not lay all of our troubles to No. 172. The wasteful administration of Wallgren put the State in such a financial condition that no governor nor legislature could carry on and pay all of the increased allowances forced by the passage of the initiative without finding an additional source of revenue.

Arguments against the sales tax include the fact that border cities will lose a considerable amount of their retail business to cities in other States. Vancouver, Wash., is a concrete example. Residents of Vancouver even now go to Portland to trade if they anticipate their purchases will reach any considerable sum. They are thereby able to save $3 on every $100 they spend there. Vancouver businessmen insist that a 5 percent sales tax would more than double this loss of business to our sister State of Oregon.

Those opposed to the State income tax insist that, once a new tax avenue is opened it will never again be closed. This, in spite of the fact that Governor Langlie insists the income tax would be for but 2 years.

The legislature has a real problem on its hands. It can accept the income tax or add a sales tax. It will be criticized for either action. But the increased expense incurred through the liberalized social-security measure must be met. What the final decision will be is yet to be learned.

[From the Centralia (Wash.) Daily Chronicle of February 18, 1949]

CAIN FIGHTING APPOINTMENT

Senator HARRY B. CAIN is to be congratulated on the fight he is making against the Senate confirmation of ex-Governor Wallgren as Chairman of the National Security Resources Board. Wallgren has none of the qualifications which a man should have to fit him for such a position except his friendship with President Truman.

CAIN, before the Senate Armed Services Committee, charged Wallgren with lack of "character, courage, capacity, and knowledge." He insisted the position is one which should be filled by one of the best men the Nation can produce.

Wallgren's qualifications, the Senator stated, consist principally of being a good companion around a pool table or on a

fishing expedition. He also stated he was very capable in the banquet room. Other qualifications, if any, were omitted.

We, who have carefully watched his administration as Governor of our State know he is entirely unfitted for the position to which he was appointed by the President. We know he was wasteful, and that is putting it mildly, of the State's resources while holding the chief executive position. We know he is reputedly the owner of considerable property which he did not possess before he entered politics. We know the voters of the State of Washington retired him at the first opportunity. We believe Senator CAIN is right in fighting the confirmation of his appointment.

If more Senators would take such an interest in the confirmation of appointments, perhaps we might expect better men in high Federal positions.

Address of Hon. Joseph W. Martin, Jr., of Massachusetts

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1949

Mr. ALLEN of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpts from an address by Hon. JOSEPH W. MARTIN, Jr., Republican leader of the House of Representatives, at a Washington's Birthday observance sponsored by the Republican committee of Fairfax County, Va., at Fairfax courthouse, Tuesday evening, February 22, 1949:

I hope the Truman administration is not out of touch with the times on the American business front, as it was when it predicted 8,000,000 unemployed to follow the end of the war.

Today, when unemployment is spreading in industry, the planners in Washington are still tilting their lances at the windmills of inflation. The economic weather has changed abruptly, however, during the past 3 months. We have today almost 3,000,000 unemployed in this Nation. Prices are falling in many lines.

Instead of pressing for more business controls, for Government-owned steel plants, for more taxes, more spending, and more bureaus, the administration should be devoting itself to constructive measures to encourage business, expand private investment, and to hasten new business ventures which will provide jobs. We simply cannot afford the luxury of a depression and every effort must be made to avoid it.

This is no time to ask the American people for more taxes, for more spending on things we can't afford. Our thoughts and energies must be devoted to keeping the people at work and maintaining the national income.

During the 2 years of the Republican Congress, this country enjoyed the highest level of prosperity and business activity, and the highest level of employment, ever experienced in our peacetime history.

Now that the strong tide of business has been halted, we are not immediately faced with the problems of inflation, shortages, and runaway prices, but rather with the problems of a possible business recession, which must be handled with wisdom and vigorous purpose if we are to head off further unemployment.

I hope the administration thinkers and planners catch up with the business picture as it exists today, before it is too late.

The Republican Eightieth Congress passed a tax-reduction bill which made a real beginning toward cutting back the cost of Government to levels the American people can afford.

Today, in millions of American homes, as the final tax returns for 1948 are being prepared, there is a wider appreciation of the work of the Eightieth Congress in its tax-reduction program. Everyone, as he makes out his tax return and realizes the tax cut given by the Eightieth Congress, must conclude it was a pretty good Congress.

I predict tonight that if the present administration has its way with its fabulous new plans for Government spending, the tax-reduction bill passed by the Republican Eightieth Congress will go down in history as the last tax cut ever given the American people in the twentieth century.

This is no time to consider further tax increases.

The great need of this hour is for less Government spending, lower taxes and less interference and obstruction to the normal American instincts for business expansion and new economic ventures.

A stimulant to employment could be given by reducing the excise taxes at least to their prewar levels. They are killing some businesses and depriving people of jobs.

The Government at Washington has been over-spending for 16 long years. That is why we have the 60-cent dollar today, as measured in terms of 1940 purchasing power. We must stop this senseless retreat to fiscal chaos.

The record of legislative accomplishments of the Republican Eightieth Congress is a record of fundamental Americanism. After those tax cuts of $4,800,000,000, we ended the fiscal year 1948 with a Treasury surplus of more than $8,000,000,000, with which to make a substantial reduction in the national debt.

The Eightieth Congress gave America the most powerful national defense ever provided for any nation not at war. It provided a broad program of veterans' care.

It restored law and order in the field of labor-management relations. It enacted a broad program of economic aid for war-torn Europe and Asia. In less than 2 years, the Eightieth Congress abruptly reversed America's 14-year drift toward State socialism and eventual national bankruptcy.

We who helped make that program in the Eightieth Congress have no apologies to make for our work. We rejoice in its consistent record of sound, forward-looking, solvent constitutional Government. Every supporter of fundamental Americanism today applauds the record of the Eightieth Congress.

The 52 Association

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 22, 1949

Mr. MULTER. Mr. Speaker, following is an editorial which appeared in the New York Times of February 15, 1949, commending the 52 Association for the splendid job it is doing among the wounded veterans of World War II:

THE 52 ASSOCIATION

Four years ago American troops smashed their way into Japanese-held Manila, Corregidor, and Bataan and planted the American flag atop Mount Suribachi on Iwo Jima. On the other side of the world the battle of the bulge had ended, General Patton's tanks were approaching the German borders and Roosevelt, Churchill, and Stalin met at Yalta. The end of the war was in sight.

That same month in New York a group of businessmen met to make plans for the returning veteran, plans that included a pledge that the wounded shall never be forgotten. These men, as the founders of 52 Association, have observed that pledge during the past 4 years and have served more than 35,000 wounded and disabled servicemen and veterans with a personal program of entertainment and job placement. These activities are services that cannot be purchased by money, for the members of the 52 Association give not only of their substance but of their time and themselves.

The more than 11,000 hospitalized and disabled servicemen and veterans whom the 52 Association aided last year can testify to the good faith with which this organization has lived up to its 1945 pledge.

American Military Government in Germany

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1949

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the second installment of an article from the magazine Politics, dealing with our military government in Germany.

The first installment of this article, together with my correspondence with Secretary of Defense Forrestal, was included in my extension of February 21, 1949.

The article confirms in no uncertain terms what I have charged on the floor of this House on more than one occasion—the infiltration of people who have no sympathy toward our form of government and whose whole philosophy leans to some other form of control.

The article follows:

INSTALLMENT II

Item No. 4: The magazine Heute

So far, I have only mentioned German-operated enterprises and the manner in which ICD entrusted these to Stalinist agents. This particular case concerns the American-published, German language magazine Heute, a periodical similar in layout to Life, and an official organ of the United States military government. Published in Munich, Heute was an enormously important propaganda weapon and education medium.

In May 1946 Heute was entrusted to Capt. Heinz Norden, a former counterintelligence officer in the Army's Frankfurt headquarters, where I knew him slightly. Norden is an intelligent, intense person; fanatically anti-German, I think, but otherwise a very pleasant young man.

Captain Norden was also—and this is more to the point—(1) a member of the American Labor Party; (2) a one-time financial contributor to the American League Against War and Fascism which, according to Francis Biddle when he was the Attorney General, was "established in the United States in an effort to create public sentiment on behalf

of a foreign policy adapted to the interests of the Soviet Union." The league's vice president was Earl Browder. In addition, (3) Norden was involved in several agitations in New York City in which the Communist Party was also involved; (4) Norden was publicized in the Daily Worker of January 28, 1938, in connection with a speech he had made before the American Youth Congress.[1]

I repeat that Norden seems to be a perfectly nice guy. He has, of course, every right to hold the views he does hold. But there is no excuse for MG to have engaged a person (or persons) holding such views to fill positions of critical and strategic importance in Germany. MG headquarters, when in possession of the above evidence, still (in 1947) saw nothing to warrant Norden's dismissal, but asked him nevertheless not to resume his contract with ICD when it expired in the fall of 1947.

The magazine Heute under Norden's editorship published articles by such noted democrats as Ilya Ehrenburg, and gave frequent publicity to the kind of self-styled progressive circles in the United States which are currently circling Henry Wallace. Whatever one may feel about them, they hardly represent a majority cross section of the United States. During a sample period (January 1 to August 15, 1947, i. e., after Norden had already come under criticism for his editorial policies, and was presumably on his best behavior) Heute, which appears twice a month, contained the following type of articles and pictures:

January 1, 1947: 2 pages Langhoff Moorsoldaten (CP Spanish Civil War anthem). Picture of friendly U. S. S. R. soldiers, tough, hard-boiled western soldiers. Picture story on seamy side of London. One-page story on Berlin (Soviet sector) theater. Full-page photo Paul Robeson as Othello.

January 15, 1947: Picture of Friedrich Wolf (Professor Mamlock) and Johannes Becher, president, Soviet Culture League. Picture story of idyllic Budapest. United States—represented by Lilly Daché.

February 1, 1947: Picture story on Warsaw lives—popular demonstrations for Communist front, etc. Stalingrad article. U. S. S. R. article by Russia-apologist Edgar Snow. Picture story on idyllic U. S. S. R. United States—represented mostly by basketball games.

February 15, 1947: Statement by Heinz Norden defending Soviet expulsions of Germans from the East, referring to them as "Allied extradition policy." Three-page story on Palestine troubles, British arrests, etc.

March 1, 1947: Picture—Leipzig Fair (Soviet zone): CP minority delegates in Bavaria: Chaplin as Verdoux. United States—represented by Greer Garson. Photo: Kindly U. S. S. R. soldier, mistrustful British official. Four pictures on idyllic U. S. S. R.

April 1, 1947: Picture of beatings in Trieste, Friedrich Wolf (Professor Mamlock) play in Soviet sector, Berlin. United States—represented by football free-for-all. Picture on idyllic Moscow. Photo of outcast, homeless New York City veteran couple, living on park bench. United States—represented by 14 pin-up pictures.

May 1, 1947: Critical story of Greece, showing happy, bouncing Partisans, seamy side of Greek Government. Picture story on happy Polish DP's return to idyllic Poland—almost a straight copy of current Soviet propaganda hand-outs.

May 15, 1947: United States—represented by Ozark hillbillies. Picture story of idyllic Weimar, rebuilding fast under Soviet occupation. Picture of Soviet-sponsored ballet in Berlin and Leipzig.

July 15, 1947: United States—represented by picture indicating labor exploitation, money grabbing in Texas. Three pages on trouble in India. United States—represented by drugstores. Two pages of cartoons critical of United States atomic policy.

August 15, 1947: Picture of trouble in Palestine. Picture of trouble in Indonesia.

And so it goes.

Since Captain Norden left Heute a definite change of policy has been noticeable. Picking up the issue of December 1, 1947, I find:

1. Story on Martyrs of Freedom—Mikolajczyk, Maniu, Petkov, and Nagy.
2. Three-page story on transit camp for German expellees from Soviet zone (most of them political refugees who dared refuse to join the SED).
3. Story on French efforts to help German prisoners of war.
4. Excerpts from Byrnes' Frankly Speaking.
5. Picture of transformation of German armament industry in United States zone to peace production (thus scotching favorite Soviet propaganda lie).
6. Picture showing United States Army helping orphaned east German refugee kids.
7. Pleasant, intelligent story on small United States town.
8. Good article by André Gide.

Stalinist infiltration into even so well-guarded and colorless a newspaper as the official American Neue Zeitung is demonstrated by a series of five articles on the Literature in Exile, written by the Czech Communist F. C. Weiskopf, and published in this official MG paper during the months of March, April, and May 1947. Weiskopf, using the well-known technique of camouflage reporting, deliberately overemphasized the part played in exile by German pro-Soviet writers, from Brecht and Becher down to dozens of unknown party members, while omitting the names and works of those who, during the thirties, revolted against the Stalinist-controlled Schutzverband Deutscher Schriftsteller.

To round out the picture of the Norden case, I will add that Miss Ruth Norden, a former OWI employee and an associate of her brother Heinz in various political enterprises, was in charge of the political direction of the German-language radio station in the United States sector of Berlin. That's the lot then: Dr. Mayer in Radio Frankfurt, Bentschen in Radio Munich, and Ruth Norden in Radio Berlin—which last was as blunt a democratic weapon as was Heute.

Item No. 5: Alfred Kantorowicz

This particular case history is presented more as an explanation of the manner in which Soviet agents have been able to use the naïveté of liberal Americans, than as an indictment of ICD methods. Alfred Kantorowicz, organizer of the French section of the Schutzverband Deutscher Schriftsteller, was a German refugee in the United States when the war ended. Some who know Kantorowicz believe him to be almost as important a Soviet agent as Gerhard Eisler. Evidently the State Department did not know about him, for it permitted him to return to Germany after VE-day—although I believe that his request to return by way of the U. S. S. R. was refused.

Kantorowicz arrived in Germany loaded down with a number of introductions and recommendations. Among those who—as I recall it—approved of him were William L. Shirer and John Scott, Time's Berlin correspondent. With this kind of backing Kantorowicz was able very quickly to obtain interviews with the highest ICD officials in Berlin, and before long there was a scheme afoot that he should publish a highbrow magazine in the United States Zone; the project fell through only because of a paper shortage. Next there was talk of getting Kantorowicz an ICD license to edit the United States-Zone Weser Kurier—a Bremen newspaper, published in the strategic and only supply port for the United States Army in Germany. This, too, had to be abandoned, for his Russian friends had different plans for him; Kantorowicz is currently engaged in editing the Soviet-licensed, Berlin magazine Ost und West, the sort of Soviet propaganda sheet that tells the West how the warmongers are all wrong in their pictures of the progressive, peaceful U. S. S. R. Yet, as late as 9 months ago, Mr. Kantorowicz was still in contact with American officials, trying for an ICD license. If past performance is any guide, there is no reason to think that he won't get it.

Item No. 6: ICD Censorship

While the Soviet-controlled German press began almost immediately after VE-Day to criticize, slander and malign the Western Allies in flagrant violation of the Potsdam and other agreements, ICD ruled its German newspapers with an iron fist, insisting that no hint of criticism of the U. S. S. R.—or even of Stalinism—taint their editorials and news stories. This might have been all right if such had been the policy vis-a-vis all Allied Powers; but while no German editor dared to come out against the savage mass-expulsions of millions of Germans from the areas East of the Oder-Neisse line (and while Editor Norden defended these expulsions editorially), Communist Editor Carlebach of the Frankfurter Rundschau was perfectly at liberty to attack French attempts to stir up separatist sentiment in the Rhine and Saar Valleys. Such attacks, appearing in the United States-licensed German press, were among other things designed to provide Thorez, Duclos & Co. with some of their best election material.

Yet there was not a shadow of doubt that some of the most important German news stories of the 1945–47 period concerned—as Victor Gollancz saw so clearly—the unspeakable excesses committed by hordes of Red Army vandals in eastern Europe, the equally fantastic brutalities attending the expulsion of Germans from eastern lands, and the resulting starvation throughout Germany.[2] In addition, millions of Germans knew, and many Americans could and did confirm stories of feverish Soviet efforts to mine uranium in Saxony and Thuringia (areas which we had handed to the Soviets at Yalta); millions knew of the Soviet manufacture of German war machines—jet planes, V–1 and V–2 weapons, tanks, guns, etc., throughout the eastern zone—all, of course, in direct violation of every single article of the Potsdam agreement; millions knew of the terror spread through the eastern zone by the combined forces of the MVD (Soviet secret police) and the ex-SS against German anti-Nazis, with the kind help of the Gestapo;[3] millions knew of the collaboration of prominent eastern Nazis with the SED, of German General Staff officers with the Red Army General Staff, and so on. And millions had heard recurring rumors of German armies being organized by the Soviets in the east, and of thousands of German prisoners starving to death in Russia, under conditions resembling Belsen and Dachau.

All these, and many other stories, facts, rumors were withheld from the ICD-licensed German press, although there was never any lack of confirming evidence. No German editor had the guts—or the political attitude—to print such news. It would have resulted in his immediate dismissal.

---

[1] All these references and additional details can be found on p. A207, January 15, 1948, CONGRESSIONAL RECORD, address by Representative GEORGE A. DONDERO.

[2] See Politics, December 1945, January 1946.

[3] The Russian-appointed chief of the Berlin Criminal Police, for example, was exposed as a war criminal and leading Gestapo agent, and finally had to be sacked—in 1947, as a result of western pressure.

In view of this terrible gap in German news coverage—a gap that was only too apparent to most German readers—the reeducation effort through the German press in the United States zone became a depressing farce, and Germans quickly lost confidence in their newly acquired democratic press. It is no exaggeration to say that ICD's press effort was almost totally wasted during the 2 years after VE-day—unless it was designed to discredit western standards of journalistic accuracy and truthfulness in German eyes.

(B) POLITICAL AFFAIRS DIVISION

I had occasion to be in Berlin immediately after its capture by the Soviets some days before VE-day. The capture of Berlin had been denied to American troops who could have accomplished it in 3 weeks before the Red army got anywhere near it. (So, too, American troops were held back from capturing Prague so that the Red army could get credit for the city's liberation—a credit the Communists cashed in on when they took over Czechoslovakia recently.)

The Russians had entered Berlin not only with tanks, but also with thousands of posters bearing Stalin's famous quote: "Hitlers come and Hitlers go, but the German people go on forever." To one who had just come from Eisenhower's Germany, in which we stood as conquerors, not as liberators, the Soviet attempt even before VE-day to win over the popular sentiment of the Fascist beasts seemed strange in view of the viciously anti-German propaganda drives by the American pro-Soviet press. But there it was, visible even to the newly formed American military government.

MG's vision, however, had been skillfully obscured. For years western Stalinoids had prepared for the Soviet entry into Berlin. Trumpeting the most illiberal anti-German declarations, a peculiar assortment of Stalinoids, liberals, and mixed "Germanophobes" had seen to it that the Morgenthau plan would represent the western attitude toward the Germans—while Stalin's would be the gracious offer of a new Hitler-Stalin pact, addressed especially to the Junker militarists and the Fascist beasts. It was a neat arrangement, and whichever way the Stalinoids played it, they could make it stick. If the Western Powers slipped Germany a Morgenthau, Stalin would wave Von Paulus & Co.; if the Western Powers retained their reason (and a few vague memories of the Atlantic Charter), Stalin's propagandists—from the New Times to PM—would yell that the monopoly capitalists were building up the German war machine against Russia. It was a wonderful scheme, for not only did it work both ways alternately, but it also worked both ways at once: Stalin would privately pat the Junkers on the back and let the Gestapo in by the back door, while publicly accusing us of doing that very thing—which, of course, scared the living daylights out of American liberals in MG. They therefore saw to it that our Germans did nothing that could possibly offend the U. S. S. R.

Lincoln Day Dinner

EXTENSION OF REMARKS

OF

HON. WILSON D. GILLETTE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1949

Mr. GILLETTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wayne Independent, Honesdale, Pa., giving excerpts from an address by the Honorable FRED L. CRAWFORD at the annual Lincoln Day dinner of the Wayne County Republican Committee on February 17, 1949:

More than 300 paid tribute to Lincoln at the annual Lincoln Day dinner held on Thursday night at 7:30 o'clock in the Eagles' Hall, Main Street, Honesdale. The affair was sponsored by the Wayne County Republican Committee and the Wayne County Republican Club.

Attorney Lester R. Male, Republican county chairman, gave the address of welcome stating it was a critical time at the time of Lincoln's birth, when he was President and the time is critical now, but the Republican Party has stayed alive and on the job during all these trying times. We have not broken in faith, in enthusiasm, or in a financial way. It is our duty and responsibility to carry on the two-party system of our country.

FRED L. CRAWFORD, Congressman of the Eighth District, Michigan, who has had a wide experience in fields of banking, industry and in the National Government then gave a stirring address, which did not paint a very good picture of world conditions today, nor of our national situation in conjunction with world problems.

Before going into the subject of his talk, National and International Trends, he spoke in complimentary terms of our Congressman, WILSON D. GILLETTE. He considers him a stalwart Republican in Congress, which is now engrossed in the most crucial period in the history of our country. The speaker termed GILLETTE "a genuine Republican, conservative and one with well-balanced judgment. He is of the type upon which we will have to depend to pull our country through its interior and exterior mess as it exists today. Mr. GILLETTE is faithful to his duties, ever present and holds a record for attendance at committee meetings and House sessions." The speaker then emphasized: "Radicals do not solve our problems, but rather put us into more problems for solving."

As for himself, Congressman CRAWFORD, stated he had lived in 16 States, traveled 3,000,000 miles, visited 37 countries on this globe and has seen the broken cities, the rubble of destruction, men and women scavenging for food.

Just recently he had the privilege of visiting Rome and having a personal interview with his Holiness the Pope, who said "My friend, you have had the opportunity to visit these death spots, seen the destruction of war, noted the suffering. It is the responsibility of your people to render assistance."

The speaker said in part:

"In the formation of our Republic, the drafting of our Declaration of Independence, the designing of our Federal and State Constitutions and the provisioning of our early laws, the preservation of the dignity and the identity of the individual held a top position and in the all-over approach.

A person without identity is also one with no dignity. Allow a person to feel he is of no consequence, and he automatically loses all contact with the spiritual forces which constitute the cornerstone of organized society.

In your heart, my friends, is a burning desire to amount to something—in your vocation, your company, your church, your club, and in your political party. You wish as an individual to touch the throne.

Out of the desires and efforts of individuals, men and women who have been inspired by the Anglo-Saxon Christian religion, this Republic derives its moral, material, and political strength. Until within recent years all our people were quite clear on the proposition that the state existed for the benefit of the citizen, instead of the citizen being the vassal of the state.

The great Lincoln recognized the prime importance of the dignity and identity of the individual.

There was in Lincoln's heart no room for the slave, for the caste system, for the savage anonymity that has been and is the traditional curse of every social state of every dictatorship, of most all military establishments.

Lincoln's philosophy placed freedom before peace, sacrifice before comfort, the common good before self, and, most fundamental of all, Lincoln was opposed to the philosophy of one man eating his bread from the sweat of another's face. He was opposed to human slavery in all of its forms. He contended each able-bodied person should make his own contribution to organized society and draw his returns from his own efforts.

Lincoln did not evaluate strength in terms of material power. He well knew that the history of man up to Lincoln's day was proof sufficient that the true strength of nations and their armies rests in the beliefs of the people. Past centuries have underscored with blood and blasted cities, dead bodies, and broken souls that great aggregations of physical power alone cannot survive the God-given strength which rests in a firm conviction that right must prevail. The Goliaths depending only on power will continue to go down before the Davids who are vigilant, and who fight for the freedom of individual man.

But our people must understand and accept the right philosophy; by this, I mean the fundamental principles of freedom, initiative, incentives, and energy which made this country great. Our moral care must be preserved. Perverted philosophies, to the extent they have entered our national bloodstream, must be eliminated. This gives you and you and you a job to do.

We should recall that General Washington engaged Tom Paine to keep the fires of freedom burning in the hearts of his soldiers. Spinoza (philosopher) observed: "Men fight better with ideas on the ends of their bayonets." But have you observed that vast sums of your dollars in recent years have been used to promote the social welfare state? To convince you that you are incapable of managing your own affairs; that you must rely on one collectivist approach after another for your social and material security; that what now is past production should be redistributed by Federal Government?

And pray tell me, why during the past few years the administrations in power have lent such great aid to those who have sought to drive wedges of hatred, suspicion, and scorn between the voting public and three certain groups: 1, the National Congress; 2, those who manage business; 3, the general military staffs. These three groups have been maligned, pointed out to us as scoundrels and black enemies of the people. And for what purpose?

Simply to destroy the main ramparts charged with the responsibility of protecting the freedom of the individual. Incentives and personal initiative plus freedom has carried our people to the pinnacle of the world.

The speaker repeated recent words of General Eisenhower that dictatorship is not brought about by guns but by the surrendering of our responsibility. We must exercise the policies of our country. As Lincoln said: "I have been given a job to do for the United States, and I will do it." Why did Eisenhower make these observations of his relative to individual freedom of our people, and the marching of dictatorship over the face of the world?

Mr. CRAWFORD noted the presence of many young people at the banquet. When he was a young man our national debt was $1,500,000,000; today it is $252,000,000,000. It takes great management even in the attempt to pay it off. It will mow us down just as physical storms mow down crops. The largest budget in the history of the world has now been presented by President Truman. The speaker referred to the North Atlantic Pact

which is rocking the foundations of Washington at the present time. Included in this will be the fact that war can be declared without the sanction of Congress. Congressman CRAWFORD watches this with great interest and concern.

The dangers to private enterprise were discussed clearly and aroused one's thoughts to the dangers that lie ahead if various industries, particularly the steel industry, is federalized. Truman made a direct attack against steel recently and when this is federalized, the social state has moved in.

Socialized medicine received scorching denunciation from the speaker. In England today the women have been forced to their knees due to this socialized-medicine program. It costs England $2,800,000 a week. Would you like your case histories taken and then sent down to the Labor political headquarters? That is what is happening in England. Do you want the patient completely destroyed? The state cannot furnish the doctors, the nurses, the hospital, or the medicines. I am definitely against socialized medicine.

There is a bill being presented for the creation of a Department of Welfare which will add another member to the Cabinet for this Department, which "will look after you."

Congressman CRAWFORD urged that we pay more attention to Government, study Government, have our children study Government, and use more energy toward the right form of government. It is better to inform ourselves, our associations, our churches and clubs. We must have the courage of our convictions, reached from studying the various problems at hand and based on our conclusions.

The speaker reviewed the incidents of socialized England and France, where we have been pouring millions of dollars for their reconstruction since the war.

He warned that there is a bottom to our economic meal bag and we will find out soon about this. Truman is making the same errors as Roosevelt.

The ideals of our Constitution must be upheld and there is a tough job ahead. The balance of the world is looking toward us.

The intricate political problems of China, our virtual "checking out" of the Far East was discussed at length, and again there was a note of warning of the future. Work is being rushed for the fortification of Alaska.

In closing, Congressman CRAWFORD again urged everyone to use more energy to uphold the democratic form of government.

All joined in singing the Battle Hymn of the Republic, and Rev. Francis J. Merkel, Rock Lake, pronounced the benediction.

Dancing was enjoyed with special entertainment featured by group of musicians and dancers.

Four-Year Term for Congressmen

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 22, 1949

Mr. NORBLAD. Mr. Speaker, under permission to extend my remarks, I include the following editorial from the Oregon Statesman, Salem, Oreg., of February 17, 1949:

FOUR-YEAR TERM FOR CONGRESSMEN

An Arkansas Democrat, OREN HARRIS, wants to have the Constitution changed to give Representatives a 4-year instead of a 2-year term. Such a change ought to be made. Now, a Member hardly has a chance to warm his seat before he must begin active campaigning for reelection. The cost takes a substantial slice out of his salary, if he has any opposition at all, and he is kept in political hot water all the time.

There is no need to make Representatives jump through the hoop every 2 years. They ought to have tenure for at least 4 years so they get to know their way about the Capitol, and not be kept on political pins and needles all the time out of concern for their reelection.

Arab Refugees in Palestine

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks a copy of a letter by Kermit Roosevelt to the editor of the New York Times on February 1, 1949. Mr. Roosevelt is an authority on this subject and his letter will be of interest to the Members of this Congress who will soon be called upon to approve a request for som $16,000,000 to aid these unfortunate refugees.

The letter follows:

PEACE IN MIDDLE EAST HELD DEPENDENT SOLUTION TO PROBLEM

To the EDITOR OF THE NEW YORK TIMES:

The penetrating articles of your correspondent Anne O'Hare McCormick from Israel are a reminder that, whether individual Americans be pro or anti Israel, there are certain basic goals of American policy in which almost all of us believe. Likewise, the discussion of liberalization of existing displaced persons legislation should remind us of certain basic humanitaran goals which almost all of us share. We should be careful in each case not to allow partisan debate over means to endanger the goals.

In Palestine and the Middle East our goals are peace, security, and to the extent possible in a contradictory world, justice. And the DP legislation should be an expression—though it is prejudiced and inadequate in its present form—of our goal that the suffering shall be comforted, the hungry helped to find food, the homeless and dispossessed assisted to shelter, the outraged restored to security and human dignity.

Mrs. McCormick's articles suggest how these two problems overlap. The European DP problem is not our only, nor even our biggest, refugee problem. There are 750,000 Palestinian refugees, mostly Arabs, many of them Christians, who formerly made their homes in Palestine but are now homeless wanderers outside the proclaimed boundaries of Israel.

STATEMENT ON FLIGHT

Writing from Tel Aviv, Mrs. McCormick comments: "So far no one here has expressed any responsibility or sympathy for these wretched victims of the Palestine war." Later she observes that "Israeli authorities argue that the Arabs' panic flight was unjustified even by the admitted excesses of illegal terrorists (such as the massacre of Deir Yassin, which most correspondents agree started off the main evacuation). They say that there is plenty of room for the refugees in the undeveloped Arab countries."

According to Mrs. McCormick, Israel's Foreign Minister Moshe Shertok, expressed the view "that Israel should compensate the (Arab) refugees for their property on the condition that the money be used constructively to settle them in new homes and not 'frittered away' in temporary relief measures."

I agree with Mrs. McCormick when she states: "This seems to preclude the possibility of the return of the exiles, many of whom are waiting in camps across borders and in Arab Palestine in confident expectation that they will go home as soon as peace is restored." They will be denied a right to return to homes where they were born and lived, where their ancestors have lived for at least 1,300 years but which are now under Israeli domination.

As Mrs. McCormick's stories make clear, entire Arab villages are being demolished as rapidly as mechanized equipment can do the work. Ancient Arab Jaffa has been swallowed by modern Jewish Tel Aviv. The doors are locked. Although Israeli officials indignantly repel the insinuation that the Arab evacuation was the result of a deliberate policy on their part, Mrs. McCormick notes: "They cheerfully acknowledge that they lost no time taking advantage of it."

GOAL OF EXILES

As Americans, we must ask ourselves, What will the creation of three-quarters of a million exiles do to the long-range prospects for peace in the Middle East? We cannot expect that these exiles will abandon willingly the goal of returning to their own homes. The lands into which they have been driven are shaky, both economically and politically; they are in no condition to cope with a refugee and resettlement problem as large as this.

If our object is the establishment of peace and security in the Middle East, the solution of this refugee problem must be high upon our agenda. It is a problem which should be faced conscientiously by Zionist and non-Zionist alike, as is the problem of European DP's, whose relief has long been delayed by confusion of their plight with the aspirations of political Zionism.

KERMIT ROOSEVELT.

WASHINGTON, *February 1, 1949.*

Social Security

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1949

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following portion of a radio broadcast made by myself upon the subject of social security:

I propose that the present social-security law be amended to extend coverage to the following:

1. Employees of small firms.
2. The self-employed, such as small-business and professional men.
3. Agricultural people, both owners of farms and farm laborers.
4. Employees of nonprofit charitable institutions, such as hospitals.
5. Employees of States, counties, cities, and subdivisions thereof.
6. All those who become injured and disabled before reaching retirement age.

Regarding coverage for the self-employed, Mr. Arnold Beezer, Seattle attorney, writes: "I am firmly convinced that the act should be amended to include all self-employed individuals. Many others with whom I have talked concerning this phase of social security agreed with me without exception."

Mr. M. C. Fortney, president, Municipal Employees Civil Service League of Seattle, writes as follows: "This organization, composed of civil-service employees of the city of Seattle, respectfully requests your support of expansion of social security to include employees of local governments." And in this same connection Mr. Mark Wienand, vice chairman, State employees retirement board, writes: "With regard to the State of Washington, as long back as 1941, the State legislature voted an enabling act that would bring all public State employees into Federal social security, whenever such coverage became available." National coverage of all public employees would in no way affect local pension programs such as those in operation in many cities. If the firemen of a city did not wish to be included because of their local pension program, they could stay out. On the other hand, if they have no program of any kind, they should, in my opinion, be automatically covered.

Mr. Charles Potter, of Tacoma, writes an interesting letter in which he describes the need for the injured and disabled to receive social-security benefits before reaching the age of 65. Writes Mr. Potter: "I am 61 years of age and a plasterer by trade. Since June of 1947, I have been in the hospital five times and am now under doctors' orders not to work. Our savings are about gone and I have nothing to live on, since I can't receive social-security pension payments until I am 65. I have paid social-security withholding taxes ever since the law was passed." Mr. Potter's case is duplicated many times throughout the country. Such cases can only be properly dealt with if our present laws are amended to provide pension payments for those covered by the Social Security Act who become disabled.

Next, I advocate lowering the retirement age of women to 60. If it is financially possible, we should reduce the retirement age of our men also. In this connection Mr. John Wade, of Tacoma, writes: "We American men are prone to marry women years younger than ourselves. I think the age for wives should be lowered to 60 for purposes of the Retirement Act." And to prove Mr. Wade's statement, Mrs. J. Bath, of Graham, writes: "My husband is 70 years old and receives $17.58 per month. I am 63 years old, in ill health, unable to work, but can't get any pension for two more years."

Next I shall urge Congress to increase the monthly social-security pensions to the highest degree that is financially sound. At present the pensions could be increased substantially without requiring any increase in the withholding taxes. In the 12 years that old-age and survivors' insurance has been in operation it has collected $6 for every $1 it has paid out. Five dollars in every six has gone into a general reserve fund now containing almost $11,000,000,000. Higher withholding-tax rates should not be necessary until such time as the pay-outs for pensions begins to approach the income of the fund. In this regard Mr. W. E. Stanhope, of Tacoma, writes: "Will you please use your influence to increase Federal social-security payments. I believe the amount in the surplus fund with the amount steadily coming in from pay-roll deductions will easily take care of a substantial increase." Graphically describing the need to increase present pension payments, Mrs. Maude Wood, of Tacoma, writes: "I am now receiving social security, but even though I own my home, I have difficulty getting by. My monthly pension check is less than $30." And Maude Wood is not alone. The average national social-security payment is now only $23.25.

Next I propose that the $14.99 allowable monthly earning be increased to $50. Under present law, if a Federal pensioner earns more than $15 in a given month, his entire pension for that month is thereby affected. Mr. Joseph Hunold, of Tacoma, wrote me an interesting letter which clearly shows the unfairness of the present law. Said Mr. Hunold: "There are 18 of us former employees of the Tacoma News-Tribune who individually are not receiving more than $34 per month Federal pension. We are not even allowed to take 1 day's work at our former job because we would earn $15.25, which would mean that we would lose our social-security pension."

In testifying next week before the House Ways and Means Committee, I shall further urge that veterans be allowed credits on a reasonable hypothetical salary for time served in the armed forces. At present, veterans who come under the Railroad Retirement Act and the Postal Retirement Act do receive credits for time spent in the service. This often means an increase of $5 per month in monthly pension payments.

Time does not allow me to discuss social security in greater detail today. In closing let me briefly review the testimony I shall present to the House Ways and Means Committee next week when it begins hearings on social-security legislation.

First. We need to develop an over-all national program insuring equal treatment for all our people.

Second. We need to extend social-security coverage to include the self-employed, employees of small firms, public employees, agricultural people, employees of nonprofit institutions, and all those injured before reaching retirement age.

Third. We should lower the retirement age for women to 60. If financially possible, the retirement age for men should be lowered to 60 also.

Fourth. We should increase the monthly pension payments to provide a decent retirement.

Fifth. The $14.99 allowable monthly earning should be raised to $50.

Sixth. All veterans should be allowed wage credits for time served in the armed forces.

At the present time it is too early to tell exactly what action Congress will finally take. I want to assure you now, however, that as your Congressman I will do everything possible to obtain satisfactory action on the six major points I have discussed with you this evening. Poverty and hardships are no respecters of time. This is a job we should have done long ago.

ECA Bacon for Great Britain

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1949

Mr. VURSELL. Mr. Speaker, a document issued by the Economic Cooperation Administration entitled "Commodity Supplier Data" shows that during the period from October 1 to 15, 1948, ECA purchased more than 120,000,000 pounds of bacon from Canadian concerns. All purchases were for the British Ministry of Food, and the invoice amount shown for the purchases totals in excess of $11,300,000. Not 1 pound of bacon is shown to have been purchased from any American producer.

In giving these figures, I have omitted 966 bales of bacon purchased from Canadian concerns and having an invoice amount of $83,593.21. I am not sure how many pounds of bacon there are to a bale.

Personally, I cannot understand why American producers are excluded from these bacon purchases, and I would like to see an explanation of that conduct.

Can it be that the ECA program is, after all, favoring foreign competitors over American industry and labor? If such is the case, it is time we find it out.

Outraged Christianity

EXTENSION OF REMARKS
OF
HON. HAROLD O. LOVRE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1949

Mr. LOVRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include a very well thought out editorial from the Yankton Press and Dakotan, of Yankton, S. Dak., concerning the Cardinal Mindszenty incident and subsequent events which are shocking to the Christian world. The editor of the Press and Dakotan is my good friend, Fred Monfore.

The editorial follows:

MORE PURGING

An outraged Christian world scarcely had time to catch its breath after the sentencing of Hungary's Cardinal Mindszenty before the familiar pattern began again in Bulgaria. This time 15 Protestant clergymen, rather than a Roman Catholic primate, were the victims. But the charges were much the same.

Once again there were accusations of treason, currency manipulation, and spying for the United States and Britain. Once again came the official announcement that the accused had "fully confessed" their alleged crimes.

The closeness and similarity of these two events might be due to carelessness, but it seems more likely that they result from indifference. It is as if the Kremlin's agents in Budapest and Sofia were saying, "You denounce these charges as trumped up. You say they are part of a Communist campaign to wipe out religion wherever it can. You say the charges are a baseless insult to the American and British Governments and their citizens. All right, what are you going to do about it?"

And what, indeed, can be done? These half-secret mock trials and the ensuing punishments are violations of the terms which gave Hungary and Bulgaria a limited sovereignty under their peace treaties. The terms include freedom of religious worship, speech, and political opinion, and freedom from discrimination because of sex, race, religion, or language.

Under normal conditions, complaints of this sort would be settled by the treaty signatories, Russia, Britain, and this country. But under present conditions it is almost certain that the Communist heads of government in Hungary and Bulgaria would say that the accused were tried under laws applying to all citizens and that, moreover, they had confessed their crimes.

Even if the signatory powers did go through the motions of meetings and discussions, there is no chance of their agreeing. Moscow obviously ordered these travesties of justice. And Moscow just as obviously isn't going to admit that it was wrong or permit its decisions to be reversed.

So the prospects are for more persecutions and purges of religion and its leaders in the

Soviet satellite states. One may wonder, in that connection, why Russia permits its own war-revived religions to continue operating with no more apparent hindrance than the usual denunciations in the Communist press.

The answer can only be guessed at. But it seems likely that the Russian churches have been allowed to continue only on condition of prescribed behavior. In the satellite countries both Protestant and Roman Catholic churchmen are threats to the Communist dictatorship, just as they were to the Nazi dictatorship when it existed in the same countries.

Cardinal Mindszenty and the Bulgarian clergymen are to the Communists what Cardinal Hlond and Pastor Niemoeller were to the Nazis before them. They are champions of the rights and freedom and dignity of man. They are foes of atheism. They are believers in truth, justice, and charity. As such they are enemies of the Communist state. Their light must be extinguished.

Subsidies Fully Repaid

EXTENSION OF REMARKS
OF
HON. SCHUYLER OTIS BLAND
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1949

Mr. BLAND. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article in the Maritime Reporter of February 1, 1949, entitled "Subsidies Fully Repaid," and to include also remarks by Hon. Raymond S. McKeough of the United States Maritime Commission, and by Hon. S. O. BLAND, Member of Congress and chairman of the Committee on Merchant Marine and Fisheries.

The article appearing in the Maritime Reporter is as follows:

SUBSIDIES FULLY REPAID

Checks totaling $5,252,628.66 were delivered recently to the United States Maritime Commission by the American Export Lines in a ceremony in which the steamship company repaid in full the operating-differential subsidies it had received during the last 10 years.

H. M. Gillespie, vice president and secretary-treasurer of the American Export, presented the checks to Raymond S. McKeough, vice chairman of the Commission at a meeting of the Government agency attended by Commissioners Joseph K. Carson, Jr., J. Grenville Mellen, and David J. S. Coddaire. Also present at the ceremony was Representative SCHUYLER OTIS BLAND, chairman of the House Maritime Committee, who fostered passage of the Merchant Marine Act of 1936 under which subsidies are paid by the Government.

In a short talk after the checks had been turned over, Representative BLAND hailed American Export's payment as "the strongest proof that the Merchant Marine Act of 1936 is the public's greatest guarantee of a strong American merchant marine for both economic and national security.

"This repayment, and others which will follow," he said, "disproves the fallacy long held by many that operating-differential subsidies paid to shipowners have been of enormous size. Actually such subsidies during the past 10-year period averaged about $2,000,000 net to the Government per year; and of all Federal subsidies, that paid to ship operators is the only one subject to recapture."

It was just a little more than 10 years ago that American export lines became one of the first companies to apply for and receive a contract under the 1936 act. That contract covered regular scheduled operations of modern, express passenger, and cargo steamers between North Atlantic ports of the United States and ports in North Africa, the Mediterranean Sea, Black Sea, and was later extended to include the Red Sea, India, Ceylon, and Burma.

American Export was the third company to return operating subsidies in full and its payment made a total of about $16,000,000 in subsidies that have been returned. Other companies that made full payments recently were Lykes Brothers Steamship Co. and Mississippi Shipping Co. Payments are scheduled to be made this year by United States Line Company, Grace Line, New York, and Cuba Mail Line, and Oceanic Steamship Co.

Commissioner McKeough, speaking in behalf of Vice Admiral W. W. Smith, chairman of the Commission, said the operating-differential subsidy does not assure shipowners a profit or guaranty against a loss. In noting that the subsidy is paid simply for the purpose of making up the difference between costs of operating an American and a competing foreign ship, Mr. Gillespie emphasized that 61 percent of the payment received by American Export, or $3,234,756.09, was for seamen's wages over and above the average received by seamen who manned competitive foreign-flag vessels.

Mr. Gillespie said American Export is currently operating four combination passenger and freight vessels and 20 modern express freighters, all built for its particular trade routes and of approved Government design for naval auxiliary service in the event of any national emergency. The company now operates a schedule of 130 regular sailings annually, including 26 annual sailings to each of 5 overseas areas that comprise the essential trade routes. In addition to its 24 wholly owned modern vessels, the line has several Government-owned freighters on bareboat charter to supplement regular schedules. It has also signed construction contracts for two express liners for its Mediterranean services at a cost of more than $46,000,000. These liners are to have 30,000 tons displacement and 20,000 gross tons and a speed of 25 knots. Preliminary work on these ships has been under way for some months at the Bethlehem Shipbuilding Co.'s Fore River Yard, Quincy, Mass., where keels are due to be laid soon.

The remarks of Commissioner McKeough on the above occasion were as follows:

The repayment today points up sharply the manner in which the subsidy program provides a form of insurance that our essential trade routes will be serviced by American ships.

During a 10-year period when the average profits have been good, such as this first period, the cost to the taxpayer is at a minimum. The total return, for example, from all the steamship lines (of which there are seven) in this first accounting period, will amount to about $26,000,000 compared to a total of $36,000,000 paid out by the Government. This means only $1,000,000 per year net cost to the Government. When all the returns are in, for all of the 12 subsidized companies, it is estimated that the annual cost to the Government will not be more than $2,000,000 per year.

The operating-differential subsidy program should be thought of as having a cushioning effect; the subsidy at least places American operators on a basis of parity, insofar as costs are concerned, with their foreign competitors on the same routes. That is the principle behind the subsidy program. It does not guarantee a shipping line against loss. A steamship company must continue to practice economy and efficiency of operation if it hopes to make money.

The reason for the Government's participation in the costs of merchant-ship operation is the need of insuring that the trade routes deemed essential to our economy are served. At the same time it encourages private capital to engage in water transportation and thus assures a modern American merchant marine in being so that it may serve, if necessary, in cases of national emergency.

The subsidy program under the Merchant Marine Act of 1936 has only been in operation since 1937. Since that time the Nation has been through the greatest war in its history, and built the greatest fleet of merchant ships in history. Because of the subsidy program with the impetus it gave to construction and operation of modern merchant ships, the start of the war found many new ships available for the defense of our country.

American Export Lines was the first to come in under the postwar building program under existing legislation to begin construction of badly needed passenger vessels. They have replaced vessels as rapidly as possible in the vital United States to Mediterranean service. Congratulations are due the American Export Lines for its fine work in maintaining close cooperation between the industry and the Government in providing an American merchant marine adequate for trade and defense.

The remarks of the Honorable SCHUYLER OTIS BLAND were as follows:

The repayment by the American Export Lines to the United States Maritime Commission of more than $5,000,000 as the full amount of the operating-differential subsidy they received from the Government since 1938 is again to me, as it must be to the Congress of the United States, the strongest proof that the Merchant Marine Act of 1936 is the public's greatest guaranty of a strong American merchant marine for both economic and national security.

This repayment, and others which will follow, disproves the fallacy long held by many that operating-differential subsidies paid to shipowners have been of enormous size. Actually such subsidies over a 10-year period will average about $2,000,000 per year; and of all Federal subsidies, that paid to ship operators is the only one subject to recapture.

The operating-differential subsidy does not assure shipowners a profit—or guarantee against a loss. They do not hamper initiative or destroy competition. They are paid only to place American shipowners on a parity with their foreign competitors, and thus preserve to American maritime labor far higher standards of wages, working, and living conditions.

The repayment speaks for itself and is practical proof that Congress enacted a fundamentally sound statute which will continue to guarantee this Nation, at the lowest possible public cost, an American merchant marine commensurate with the Nation's position in world affairs.

Mr. Speaker, I wish Senator Royal Copeland, of New York, could have been present with us at the ceremony described above. I miss him very much. This was the result of his labors, and I would love to have his guidance and assistance now. He worked hard and too much credit cannot be given him for the result of our labors.

Transportation Tax Repeal

EXTENSION OF REMARKS
OF
HON. HAROLD O. LOVRE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1949

Mr. LOVRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include Senate Concurrent Resolution 8 of the South Dakota State Legislature:

Senate Concurrent Resolution 8

Concurrent resolution relative to memorializing the Congress of the United States in relation to repealing the transportation tax

Be it resolved by the Senate of the Thirty-first Legislative Session of the State of South Dakota (the House concurring):

Whereas for the purpose of meeting wartime emergency necessity, the Congress of the United States enacted as excise taxes a 15-percent levy upon the transportation of persons and a 3-percent levy upon the transportation of property; and

Whereas one of the principal purposes of levying such tax upon the transportation of persons was to discourage unnecessary wartime travel, the need for which no longer exists; and

Whereas it is the opinion of the Legislature of the State of South Dakota that excise taxes should not impose an unfair burden on the long-distance shipper and the long-distance traveler as does the present tax on the transportation of property and persons; and

Whereas it should be a principle of Federal taxation to levy taxes in such a manner as to prevent them from falling as an unequal burden on citizens residing in different areas of the country; and

Whereas the distances to, from, and within the West impose an unfair burden on the western traveler and shipper; and

Whereas the present transportation tax on property is unfairly burdensome upon the State of South Dakota, as it adds what is in effect an additional tariff on the goods shipped from South Dakota to the eastern markets, with the result that those goods are not able to compete freely with the goods originating in more closely adjacent southern areas; and

Whereas the State of South Dakota is particularly interested in preserving the eastern market as an open market in which the agricultural products of South Dakota, in particular, may compete freely with southern produce without the hindrance of artificial barriers such as the present transportation tax; and

Whereas the State of South Dakota is particularly interested in protecting and developing its vacation and tourist travel on an equal basis with other vacation travel areas; and

Whereas the transportation of both persons and property plays such a vital role in the economic life of this country the extent that the costs of transportation should always be kept at the lowest possible level; and

Whereas transportation is in no sense a luxury but is a vital necessity, and there is, therefore, sound reason for distinguishing between the transportation taxes and other excise taxes that are imposed upon luxury items; and

Whereas it is the opinion of the Legislature of the State of South Dakota that the best interest of the country and particularly the Western States, who are now discriminated against by the present transportation taxes, would be served by a repeal of those taxes; and

Whereas there is presently pending before the Congress of the United States H. R. 205 which would repeal the tax on transportation of property and H. R. 208, which would repeal the tax on transportation of persons: Now, therefore, be it

Resolved, That the Legislature of the State of South Dakota respectfully memorialize the Congress of the United States to enact into laws H. R. 205 and H. R. 208, or any other bill or bills which would accomplish the same purpose; and be it further

Resolved, That the secretary of the senate be hereby directed to transmit copies of this resolution to the President and Vice President of the United States and to each Senator and Representative from South Dakota in the Congress of the United States.

Summary of Situation Concerning Request for Emergency Flood-Control Funds

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1949

Mr. MANSFIELD. Mr. Speaker, on about February 5, 1949, the Chief of Engineers requested a telegraphic report from seven division engineers concerning the situation with respect to snow cover throughout the western United States. This request for information specified that each division engineer was to prepare an estimate of the amount of emergency money required in the event that unfavorable weather conditions in the spring break-up caused severe flooding.

In response to this telegraphic request, reports were received from the division engineers throughout the Mississippi River Basin and all States west thereof indicating that an unfortunate combination of temperature and rainfall during the spring break-up would produce floods in that portion of the country which would make necessary the expenditure of approximately $25,000,000 in emergency money.

This information was communicated to an informal meeting of Senators in the Senate Public Works Committee room on February 11. On February 18, Secretary of Army Royall transmitted a request to the Bureau of the Budget for the approval of a budget estimate in the amount of $22,500,000, for emergency flood-control funds chargeable against the authorization contained in the Flood Control Act of 1948.

The Senate Committee on Appropriations has scheduled a hearing for Wednesday, February 23, when testimony will be taken concerning the need for emergency funds in the Western States. It is understood that the Committee on Appropriations in the Senate intends to amend the first deficiency bill now before that committee to include the additional emergency flood-control funds which it believes to be necessary in order that the Corps of Engineers may meet its obligations in connection with emergency flood fighting during the coming spring.

It is most important that emergency money be made available to the Corps of Engineers at an early date. The snow cover throughout the western United States is abnormally heavy and an adverse combination of temperature and rainfall during the spring break-up could produce record or near record floods in many of the major rivers including but not limited to the Missouri and tributaries, the Rio Grande, the Colorado, the Columbia and tributaries, and certain streams lying entirely in the State of Utah and the State of Nevada. In the event that funds are made available to the Corps of Engineers in the ve_y near future, certain emergency repair work can be undertaken in advance of the flood season. Work done under normal conditions, in advance of a flood, produces greater benefit for each dollar expended than any emergency work which can be undertaken when a flood is actually upon us.

Stop Subsidizing Socialism in Europe

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include the remarks before the House Committee on Foreign Affairs on the proposed appropriations for ECA for the fiscal year beginning July 1, 1949, by Merwin K. Hart, president, National Economic Council, Inc.:

Last year I urged this committee not to make any appropriations unless the condition were attached that none of the proceeds should be used to subsidize socialism—that is to say, that the beneficiary countries should go no further in nationalizing their own industries or activities.

I urged this because it is perfectly clear to us in the National Economic Council that socialism is the next step to communism, and I thought it inconsistent for the United States to be spending hundreds of millions in the effort to stop communism in Greece and elsewhere while appropriating billions for European countries which in effect are subsidizing Marxist socialism.

Today it is even more apparent to us that we were right in our contention.

The Congress, however, under the instigation, I believe, of Marxists in the administration and under the influence of the propaganda of numerous left-wing organizations the country over, did not attach any such conditions.

The reason given was that it was not for the United States to interfere in, or with respect to, the internal affairs of any nation; that every nation should be free to have any kind of government or economic system it wished, regardless of its possible and future menace to our own safety.

This attitude is obviously insincere when one considers that the admitted reason for refusing to include Spain in the Marshall plan is that the administration does not like the present form of government in Spain. In other words, it was all right for the American administration to interfere as it has been

doing for many years in the Government of Spain, but it is not all right for us to attach the slightest condition to our loan to Britain and other Marshall-plan countries.

I have gathered first-hand information in visits to Europe during the last two summers. I have had considerable acquaintance with Europe through visits there over the past 52 years. I have been compelled by my own observations to conclude that the motivating cause of the refusal of the United States to attach any conditions to our loans and gifts to the 16 so-called Marshall-plan countries, as well as the successful efforts made by the administration to persuade the Congress last year to reverse the overwhelming vote of the House to include Spain in the Marshall plan, is that the American administration is guided, whether aware of it or not, chiefly by Marxist Socialists. Although the vast majority of the American people retain their confidence in, and are loyal to, the private-enterprise system of government, yet because the left-wingers are better organized, they are, through such measures as this Marshall plan as it is now being administered, driving the United States straight into the arms of socialism.

There has been fresh evidence the past 12 months of the futility of socialism. Every nationalized industry in Britain is losing money. In an interim statement, the chairman of the British Transport Commission announced that for the first financial year of transport there would be a loss of $112,000,000.

During the first year of nationalization, coal mining lost $94,000,000.

Civil aviation lost $100,000,000 the first 14 months.

Electricity in the few months it has been in operation has already lost $28,000,000.

Now the Socialist government which you are asked further to subsidize proposes to force through, before it can be voted out of power, nationalization of the iron and steel industry.

It is interesting to compare the experience of coal under socialism and steel under private enterprise. The last year before the recent war, the British coal industry produced 227,000,000 tons of coal. The target set by the Socialist government for the first year under nationalization was 211,000,000 tons. It actually produced 208,500,000 tons—although using 8,000 more men than were engaged in the industry in the year 1938.

On the other hand, steel production in 1938 was ten and one-third million tons. The Socialist government called upon the steel industry to produce 14,500,000 tons. Under private enterprise, steel actually produced about 14,900,000 tons. Still, the Socialist government is going ahead with nationalization of steel—unless something or somebody stops it.

Crossing the channel, we find every nationalized French industry also has been losing money. The five banks that have been nationalized used to be among the heaviest taxpayers in France, but in the past year they lost $30,000,000 at the present rate of exchange. The nationalized airplane factories have constantly been turning out poorer work and over a period of a few months last spring and summer—I have no first-hand information later than the summer—there have been major disasters to French-made planes.

Whenever an industry is nationalized, whether it be in Britain, France, or the United States, the incentive to conduct the enterprise on a sound, solvent basis disappears. That is just what has happened in Britain and France and just what will happen here unless this Congress has the wisdom and the fortitude to turn down every proposal that takes us, directly or indirectly, down that same road.

Socialized enterprise, everywhere, is everybody's business—and so it is nobody's business. Just one illustration in France: A young friend of mine, a veteran of the French underground, told me that on his weekly commutation ticket a single trip of 15 miles costs about 2½ cents. The French Government takes the loss—and the United States in turn pays for it.

In such ways as these, the money of the American taxpayers is being thrown down the drain.

I find that in Britain conservative sentiment, of which there is a vast amount, is mostly prevented from reaching the columns of newspapers and magazines—and almost never the radio—largely due to the pressure of the government in power and to the fact that most writers, including news writers, incline toward Marxist beliefs. Hence, left-wing publications are favored in various ways by the party in power.

Reverting to steel nationalization: The steel employers are against it. The union of iron and steelworkers is against it. Yet, the left-wingers in the British Parliament are resolutely pushing this thing through.

We believe the Congress of the United States will make a fatal mistake if it does not insert in the current appropriation bill a condition that the nationalization of iron and steel, as the most basic of industries essential to private enterprise, shall be dropped and that no new projects of nationalization shall be undertaken. For if we permit the nationalization of iron and steel to go on, the back of private enterprise in Britain and on the Continent will be broken forever.

Then it will be hopeless to try to rehabilitate Europe.

Men are traveling in this country today, obviously sent here by the Labor Government of Britain, lecturing the American people that socialism in Britain is a success. One such is Skeffington-Lodge, chairman of the left-wing Parliamentary Socialist group which he says seeks to "break with the standards of conduct that were encouraged by the jungle law of private enterprise." Under these standards of conduct Britain built herself up to become great. So did we in the United States.

Another more polite apologist for British socialism is the learned editor of the London Economist, Geoffrey Crowther. Mr. Crowther recently made an address before the entirely unofficial National Planning Association, many of whose officers I would infer from the letterhead are not averse to a certain amount of Marxist socialism. In it and in another address which I myself happened to hear, Mr. Crowther, while admitting that British socialism has still to prove itself a success in certain respects, nevertheless asserted that nationalization of industries had hurt no one in England—except the stockholders.

I don't agree with him for an instant. But what interests me most is that he apparently feels that the stockholders, or those who have saved their earnings and by investing them have made possible the purchase and maintenance of tools needed by British industry, are of little consequence—that those frugal persons who have furnished the capital are entitled to no consideration.

Here in the United States, I am informed, we have more stockholders in corporations than we have workers. If we had not had persons able to invest and buy stock, where would the jobs be that are available today?

In handing out the American taxpayers' money to Britain and these other Socialist nations of Europe, we are going against every tradition our people have held and every principle on which they have acted.

I repeat, Mr. Chairman and gentlemen of the committee, that I believe for us not to attach the condition I have indicated will be a fundamental and disastrous mistake.

In any event, the appropriations if wisely used are far greater than are needed to stage recovery in Europe. They raise the strong suspicion that the sums asked for, even if being trimmed down by our own administration, are based not upon practical needs in the light of common sense and experience, but in order to sustain an ideology totally foreign and repugnant to the American people.

More than all else, I urge the committee to stop nationalization of industry in the countries that are to be the beneficiaries of our gifts and loans.

Because of the extremely limited time allotted for the presentation of the views of the National Economic Council to this committee, it has been impossible to treat of many other important considerations which should be weighed in considering the whole ERP program. If there were more time, the National Economic Council would stand, also, upon the following propositions:

1. That there is grave doubt as to the constitutionality of the entire program.

2. That so-called dollar shortages in Europe, which ERP professes to attempt to cure, are the result of exchange controls operated by the beneficiary countries, and that if all such currencies were made freely convertible there would be no need for vast donations from the United States.

3. That the program contains a psychological error at its very heart—the naive idea that affection and cooperation can be purchased. It is much more likely that when the program ends we will be bitterly attacked because we do not keep it up forever.

4. That the program will have grave inflationary effects.

5. That the long-term effect upon Europe will be nil, so far as improvement is concerned, since the decline of European trade has taken place over a period of 75 years and it is not caused by the late war.

6. That according to statements made by persons high in ECA the so-called dollar shortage will still exist in Europe in 1952 in an amount variously estimated at between one and three billion dollars annually. This is evidence of the basically unrealistic nature of ERP, which does not deal with the real economic ills of Europe but rather conceals them. It is the philosophy of WPA on a global scale, and will not bring prosperity abroad any more than WPA brought prosperity to the United States of America.

7. That the long-term effect upon the economy of the United States will be bad, because our money is now creating future competitors for world markets, based upon a lower standard of living than our workers enjoy.

8. That the noncooperation of beneficiary countries in making available to us strategic materials is notorious, and that stringent conditions in this matter should be attached to any further aid.

9. That dismantling of German manufacturing plants is a scandal, and that further aid should be conditioned upon the beneficiaries waiving all further claims to such facilities.

10. That the requirement that ERP goods must be shipped at least 50 percent in American bottoms should be written into any legislation enacted, and its provisions made mandatory upon the Administrator.

11. That before any further authorizations are made for ERP there should be a thorough study of the whole picture of what further expenditures may be required to implement the so-called North Atlantic defense pact. Our resources are not unlimited.

Big Bad Business

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1949

Mr. VURSELL. Mr. Speaker, I have read the editorial published in the St. Louis Globe-Democrat of February 20, and regard it with such approval and favor that I am offering it for publication in the CONGRESSIONAL RECORD, in the bebelief that all Members of the Congress will find it worthy of careful study. It calls attention to fundamental facts, generally overlooked.

The editorial follows:

BIG BAD BUSINESS

Indications are increasing that the Governernment intends to continue the Rooseveltian policy of ferreting out evil monopoly with haymaker prosecutions. Until the war intervened and the late President was forced to call for help from the big bad business he deplored, the tactic was to slug any enterprise that looked capable of monopolistic practice, regardless of reasonable evidence. The innocent were condemned with the guilty.

It is not likely indiscriminate attacks on all big business as bad business will eliminate giant concerns from the American scene. But in simple fairness the Government should help, not discourage, the public to recognize the part they have played in giving us the comforts of life we take for granted now.

Certainly among them are a few miscreants. But to use these to damn the system is to violate the spirit of the Constitution and aid the crackpot radicals toward their objective of a state socialism of the Moscow stripe.

Where, indeed, would we be without the maligned big business? Could the railroads, which own $27,000,000,000 worth of property but which nevertheless are highly competitive, operate as small concerns? Yes; but what would be their rates and the prices of the consumer goods they carry? At present they provide jobs for 1,300,000 workers and a market for a good portion of the coal mined by 200,000 men and the steel produced by 400,000 employees.

Is General Motors the biggest in the auto industry and therefore to be cordially hated? How about the thousands of jobs it provides, the dividends its securities pay to thousands of little stockholders, its parts contracts upon which hundreds of small businesses and their employees depend? Has it not given Americans cars cheaper than any other peoples, its own possible price excesses being curbed by its own big competitors? Could little firms match, for example, the Big Three's operating economies and research activities?

Could a multitude of little chemical manufacturers match both Du Pont's prices and its 77,000 employment? Could a small packer obtain the capital and achieve the efficiency to serve the Nation's meat needs at one-fourth of 1 percent profit per pound, as do the "bad" Big Four?

We accept more graciously the principle of bigness in public utilities, on the theory regulatory bodies will hold down rampant evil. But when they get going good, we begin wondering if they are not nevertheless chiseling in supplies companies. Now that American Telephone & Telegraph, for instance, has set up Western Electric Co. to supply all its mechanical equipment, we are not eager to admit it may be passing on to A. T. & T. the savings it obtains in not having to maintain sales, credit, and collection departments. Here again we prefer to suspect big business rather than search for its virtues. But would we want telephone service broken down into little units?

Outside the manufacturing field, big business similarly benefits the people. One western bank has distanced all the rest through better serving its customers. One life insurance company bulks far above the others and consequently affords its policyholders protection at much lower net cost.

Be it big league production, service, or finance, the rank-and-file consumer usually benefits.

In striking contrast to the Government's bigness phobia is its hand-wringing preoccupation with little business. The incongruity is remarkable. The number of new businesses has been dropping for some time. Less than 400,000 started last year, as compared to 600,000 in 1946, and 300,000 shut up shop in 1948. Part of that is due to a return to normalcy.

But what portion of the loss was due to the Government's tax and persecution policies against the large concerns which farm out much of their work to the small ones?

The facts of our economic life are that there must be both big and little business if we are to fare best. Unless one feeds and stimulates the other, the economy cannot enjoy healthy growth and living standards cannot continue to rise. There must be small, middle-sized, and large businesses to supply the people with the variety of things in the way they want them. In no other way can the varied business talents of individuals be most profitably used.

It would be foolhardy to impose rigid limits on the size of enterprises, thus to promote inefficiency in production and distribution. It would be disastrous for that over-all limitation to be left in the hands of Government—subject to the mercy of little bureaus judging which and how much industries should expand.

The customer, through long-range control over prices, still is the final arbiter of business' size. He will be the principal loser if he isn't allowed to retain that control.

Taft-Hartley Act

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1949

Mr. MANSFIELD. Mr. Speaker, under unanimous consent, I am inserting in the RECORD a copy of House Joint Memorial 1 as passed by the House of Representatives of the State of Montana. I want to urge the House Labor Committee of the Congress to give every possible consideration to this expression of Montana's legislators:

House Joint Memorial 1

Joint memorial to the President and Congress of the United States, requesting the introduction and enactment of appropriate legislation authorizing the immediate repeal of the Taft-Hartley Act, Public Law 101 of the first session of the Eightieth Congress, cited as the Labor-Management Relations Act, 1947

Whereas the citizens of the United States of America have indicated, by their vote at the recent general election, that they are dissatisfied with the Labor-Management Relations Act, 1947, popularly known as the Taft-Hartley Act; and

Whereas the provisions of that act are incompatible with the tradition of free collective bargaining in the United States of America: Now, therefore, be it

Resolved by the House of Representatives of the Thirty-first Legislative Assembly of the State of Montana (the Senate concurring): That we respectfully urge the Congress of the United States to enact proper legislation providing for the immediate repeal of Public Law 101 of the first session of the Eightieth Congress, the Taft-Hartley Act, cited as the Labor-Management Relations Act, 1947; be it further

Resolved, That copies of this resolution be forwarded by the chief clerk of the house of representatives, to the President of the United States, to the President pro tempore of the Senate of the United States, to the Speaker of the House of Represenatives of the United States, and to the Honorable JAMES E. MURRAY and ZALES N. ECTON, Senators from Montana, and the Honorable MIKE MANSFIELD and WESLEY A. D'EWART, Representatives in Congress from Montana.

The Judge Gives His Opinion

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, the writer of the letter I include with my remarks is a county judge who, as he writes me, has reached his conclusions from his experience as an operating farmer, administrator of old-age assistance, county judge, former district attorney, and practicing attorney.

We hear so much about the family-size farmer benefiting under the present agricultural program, but the fact is that the larger farm operators are receiving most of the money.

The letter follows:

COUNTY COURT, WAUSHARA COUNTY,
Wautoma, Wis., February 1, 1949.

Hon. REID F. MURRAY,
House of Representatives,
Washington, D. C.

DEAR MR. MURRAY: One of the matters coming up for legislation in the very near future is the continuation of price controls for farm products. In our district the potato price support seems to be more important than the regulations covering other farm crops. Before the era of price support and controlled production, fully 80 percent of the farmers of our district planted potatoes as one of their chief cash crops. We now have a situation where very few farmers are raising them for the market but a few growers operating on a large scale, such as Gunderson of Waupaca, Woodward of Plainfield, Oneida Farms Co. of Clear Water Lake, and Owens Farms Co. of Dousman, are producing practically all of the potatoes that go to market. When the quotas are allotted, the real farmers are allowed such a small acreage that they are not warranted in spending the money for the purchase of proper equipment to produce a crop.

I believe that this is the time to determine just what you are trying to accomplish by supporting the price of potatoes and whether the results will be important enough to warrant the expenditure of the millions of dollars of tax money used for taking pota-

toes off the market. If you are merely trying to raise the price that the consumer pays, or protecting the investments of speculators who have gone into potato raising in a big way, the present program is well adapted to accomplish those results. However, I don't think either one of these justifies the use of money raised by taxation. Through the use of subsidies and by withdrawing millions of bushels of potatoes from the market we are building up fortunes for a small class of farm operators—not real farmers—and compelling the consumers to pay an exorbitant price for their food.

It has occurred to me that the program should be calculated to insure an adequate supply of food at a reasonable price; to conserve soil fertility by limiting the acreage (or rather encouraging the limiting of the acreage) of soil-depleting crops and to encourage the continuation of the operation of family-unit farms. If those are the objects of the program, Congress can legally guarantee to the farmers who contract to supply the potatoes a reasonably adequate return for their labor and adequate rental for the use of their land.

Through the medium of the Farmers' Home Administration, and at a cost of many millions of dollars for service loans and subsidies, the Government is trying to establish operating farmers on family-unit farms. But at the same time we are spending other millions of dollars in the form of price supports in a reasonably successful effort to place agriculture in the hands of corporate farmers. If this keeps on, our farmers will become migratory wage earners following the Mexican families from place to place in search of seasonal work. Something has already happened that should cause us grave concern. In 1907, the total bill for all forms of public aid in Waushara County was $3,600. In 1947, with fewer people, our bill amounted to $225,000. We seem to be on the road to almost complete dependence on public aid. We ought to return to the path of self-support.

I have been trying to form a plan that should be adopted but will not burden you with an explanation of it, because you have probably thought of a better one. However, if you think my plan would be of interest to you, I will be glad to write you again. Maybe a Republican can still accomplish something in Congress.

Yours truly,

GAD JONES.

Our Plundered Forests

EXTENSION OF REMARKS
OF
HON. HENRY O. TALLE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1949

Mr. TALLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following testimony by me before the Forestry Subcommittee of the House Committee on Agriculture, Thursday morning, February 24, 1949:

Mr. TALLE. Mr. Chairman, it is my considered judgment that the continuing depletion of our natural resources is the most urgent domestic problem with which our Nation is confronted at present. If the dissipation of these resources continues unchecked, it will be only a matter of time until economic disaster overtakes us. Timber is a case in point. An adequate supply of forest products is absolutely essential to this Nation's peacetime welfare and wartime security. Wood is one of our indispensable raw materials. And yet the wastage of this prime natural resource continues at an alarming rate for want of sufficient Federal authorizations and appropriations.

The Clarke-McNary Act of 1924 marks the real beginning of attention to forest conservation by the Federal Government. The programs set up under it are, however, in urgent need of expansion. Consequently, I have introduced a bill, H. R. 2952, which proposes a five-point expansion policy for the restoration and development of our forest resources.

Section 1 of my bill authorizes additional funds for forest-fire control. Fire protection is, of course, a fundamental step in timber conservation. The Clarke-McNary Act set up a program under which the Federal Government assists the States and private owners in preventing and suppressing forest fires. Forty-three States are now cooperating; and more than two-thirds of our 439,000,000 acres of non-Federal timberland is now receiving the benefits of organized protection. However, the funds available under present authorizations are wholly inadequate; hence, the protection is spread too thinly. In my State, Iowa, for example, the State government spent something more than $15,000 last year and the Federal Government contributed approximately $10,000 to protect 2,250,000 acres of timber against fire hazard. This is less than one-half of the amount of money needed to do a thorough job. We will reap returns amounting to many times the expenditure proposed in my bill if unnecessary losses are eliminated by the expansion of fire-protection activities.

Mr. Chairman, section 2 of my bill proposes to enlarge the tree-planting program under which the Federal Government cooperates with the States in producing and distributing seeds and plants for the establishment of forests, windbreaks, shelter belts, and farm wood lots. This is another basic conservation measure. It is a shocking fact that we are still cutting many more trees annually than we are planting. Ever since our country was first settled we have taken the wood we needed from old-growth forests without proper regard for wise forest management and conservation practices. Consequently, we now have 62,000,000 acres of idle and unproductive forest land, and less than 10 percent of our forests still have virgin timber. Henceforth, to get the lumber we need, we shall have to grow it as a crop. Tree planting has been carried forward on a small scale under the Clarke-McNary and Norris-Doxey Acts, but limited funds have retarded the program. In Iowa, only 200,000 acres have been planted and 650,000 still require attention. Last year the Federal Government contributed less than $3,000 to the Iowa project while the State government spent something more than $16,000. State Forester G. B. MacDonald, Iowa State College, has this to say about the program:

"For many years we have been cooperating in Iowa under the tree-planting program of the Clarke-McNary Act. Although we have made some good advances in reforesting denuded lands for soil and watershed protection and timber production, we are not accomplishing this work in time to avoid serious trouble. If Congress authorizes appropriations such as you have suggested in your bill, this should go a long way toward getting our denuded timber lands replanted within the next 25 or 50 years."

Sections 3 and 4 of my bill, Mr. Chairman, are closely related. Section 3 proposes to expend the extension program under which the Federal Government cooperates with the land-grant colleges in disseminating useful forestry information to farm and rural people through the extension-agent system. Section 4 proposes to expand the program under which the Federal Government cooperates with the States in providing technical guidance and assistance to small timber growers. These forestry-education programs are necessary for promoting wise conservation practices. The task is magnified, of course, by the fact that three-fourths of our private forest land is in small holdings. In other words, forestry education must be brought to the individual farmer. Although he may be skilled in the latest methods of producing the usual agricultural crops, the average farmer has had no experience in planting, harvesting, and marketing forest products. He needs, first of all, the advice and services of a trained forester to get started properly. Then he requires authentic up-to-date information on good management and marketing procedures. The present authorizations for these programs under the Clarke-McNary Act are pitifully inadequate. In Iowa, for example, there are no large forest owners. Approximately 80,000 small owners control more than 2,000,000 acres of timber—the average holding being 27 acres. Lack of adequate funds restricts the personnel to two extension foresters and three local farm foresters. Obviously, five persons, no matter how capable and active, are physically unable to give personal attention to the needs of 80,000 small forest owners. Iowa provided more than $14,000 for these programs last year, and the Federal Government contributed about half that amount.

I should like to direct the attention of the committee to one feature in section 4 of my bill which differs from other similar bills now under consideration. At the suggestion of Mr. D. C. Kern, chairman of the Forestry Committee, Iowa Division, Izaak Walton League of America, my bill provides that the Federal Government shall contribute $10,000 in addition to the matching of funds to each cooperating State. This is similar to the provision which I believe most of the bills under consideration contain insofar as section 3 funds are concerned.

Mr. Chairman, section 5 of my bill proposes to amend the McSweeney-McNary Act of 1928, as amended. It merely provides authorization for sufficient funds to complete the initial survey of our national forest resources, previously authorized, and to maintain a continuing inventory of such resources. I understand that about three-fifths of the United States has already been surveyed, but I regret to report that Iowa has not yet been covered. Prof. George B. Hartman, head, department of forestry, Iowa State College, has written to me on this point as follows:

"Those of us who are interested in forestry in Iowa have been trying for some time to have the United States Forest Service extend its Nation-wide forest survey to cover Iowa. Missouri and Illinois have both been covered. * * * Recent estimates indicate that there are in Iowa 2,250,000 acres of forest land which may support something around 5,000,000,000 board feet of timber. In 1946, some 850 sawmills in Iowa cut better than 90,000,000 board feet of lumber. This production of native timber means a lot to Iowa farmers. During the war, about the only lumber which was available for repairing or replacing farm buildings was that which came from the woodlot of the farmer himself or his neighbor. In addition, from the farm woodlot come such necessary items as fence posts and fuel. * * * Until we know definitely just how much forest land we have in the State, where it is located, how much timber it supports, and how fast it is growing and is being cut, we are unable to plan adequately for meeting our needs. Insofar as wood products are concerned, we believe that the State can be more nearly self-supporting in regard to wood requirements than it is at present, and we would like to undertake a forestry program which would bring that about. Facts which would be obtained by the Nation-wide survey are basic to setting up such a program."

Mr. Chairman, I close as I began with emphasis on the great need for conserving our

natural resources. The legislation pending before your committee seeks to restore and to perpetuate our forest resources. It is very important legislation. Its enactment at this time will not only insure an abundant supply of timber for future generations but it will help materially in the promotion of soil and water conservation, in erosion and flood control, and in the propagation of wildlife.

Mr. Chairman and members of the committee, I appreciate this opportunity to testify in support of my bill, H. R. 2952, and I solicit your favorable consideration.

McNary Dam—Answer to Power-Hungry Northwest

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1949

Mr. ANGELL. Mr. Speaker, pursuant to leave granted, I am including as part of my remarks an article on the McNary Dam project written by Tom Humphrey and published in the Oregon Journal February 8, 1949. The article follows:

MCNARY DAM—ANSWER TO POWER-HUNGRY NORTHWEST

(By Tom Humphrey)

To the power-hungry Pacific Northwest McNary Dam, now well under way, is the answer to a region's prayer.

Impressive is the word for it.

First, it will be one of the world's most magnificent hunks of power—840,000 kilowatts from the first 12 generators, with 140,000 more to follow.

Think of McNary in terms of horses—more than a million of them—or in terms of Bonneville, almost two of them.

POSITION STRATEGIC, IDEALLY LOCATED

Think of it in terms of its strategic location—between Bonneville and Grand Coulee, close to the rapidly developing Pasco-Kennewick area and the greatest of all atomic energy plants, the Hanford works. Relatively close to the great load center of Portland with its aluminum industry. Within easy range of eastern Oregon. Ideally situated as a relay point, boosting power from Coulee to Bonneville.

Think of its navigation feature—drowning out the difficult Umatilla Rapids, backing slack water up to the base of Ice Harbor, lowest of the four lower Snake projects.

Think of McNary from an engineer's point of view—a nice job physically and economically—not beautiful, but massive and extremely practical. A spillway that doesn't interfere with the locks. The single-lift locks, designed to take bigger tows, will be the largest in the world. An opportunity to advance the science of turbine designing, the turbines having the largest thrust load of any in the United States—3,750,000 pounds maximum.

MONUMENT TO LATE, GREAT SENATOR

Think also of McNary as a monument to the late, great Senator from Oregon, Charles L. McNary, who, more than any other man, except Franklin Delano Roosevelt, was responsible for Bonneville, first giant project on a mighty river.

Think of McNary as the means of averting a tragic black-out in the Pacific Northwest—doing it quickly and effectively, breaking the bottleneck that is strangling the industrial development of the most promising region in America.

Then think of McNary in terms of its job-making capabilities—4,000 year-around jobs for 4 years, then slanting off gradually to the completion date. Labor will receive about $167,000,000 of the project's total cost—about $73,500,000 on the site, $94,000,000 off the site.

Now think of McNary Dam as a dream come true—the dream of those who conceived it and fought for it through the wearisome years, against skepticism, special interests, and all odds.

Finally, think of McNary Dam in terms of human values, of what it means to people, our own and those coming in seeking a new way of life. These people need everything—housing, food, goods, services, schools for their children, hospitals, highways. But most of all they must have jobs. And the only way we can provide new jobs is to provide new industries. And the only way we can provide new industries is to supply more power—power from projects like McNary.

PROVIDE JOBS

Conservatively speaking McNary Dam will be able to provide power for industries with a tax-paying investment of $100,000,000 and supplying 100,000 jobs. And we don't mean during the construction period; we mean for the next 50 years. Think what 100,000 new year-around jobs would do for Oregon right now. They would wipe out current unemployment, with 30,000 jobs to spare. Or, to put it another way, they would take care of the over-all needs of 350,000 people.

McNary Dam is going to cost some money—plenty of it. Remember, heavy construction is up 175 to 225 percent since Bonneville. So McNary is going to cost around $270,000,000. And that isn't hay, even in these days of four-bit dollars. But here's what McNary will do, besides repayment of every penny allocated to power:

1. Benefit navigation at the rate of $1,000,000 a year—$800,000 net after paying for operation of navigation facilities.

2. Reduce pumping costs for land adjacent to McNary pool by $298,000 a year.

3. Produce approximately 7,000,000,000 kilowatt hours of power, worth $17,500,000 each year. One way to estimate the value of that amount of power—inexhaustible power—is to remember that it would take 3,000,000 tons of coal or 11,000,000 barrels of oil to produce it—irreplaceable coal, irreplaceable oil.

There are secondary benefits from McNary Dam, of course. While it is a relatively low, stream-flow dam (91 feet high) it will form a pool 59.2 miles long and will help firm up Bonneville power during low water periods.

As for the fish problem, the Army engineers plan an elaborate system of ladders and fish locks, comparable to those used at Bonneville, but taking advantage of Bonneville's experience. These facilities will include two ladders—one on the Oregon side and one on the Washington side. Two fish elevators are also planned, one now and one later. Thus if the salmon have trouble with McNary Dam, it will be their own fault. It won't be the fault of the $20,000,000 fishways.

There will be no highway bridge across the dam, although a 34-foot roadway, with walkways on either side, was once included in plans. Army engineers determined, however, that it would be cheaper and better for security reasons to construct a separate bridge below the dam, and Representative STOCKMAN, of Oregon, has already introduced a bill for this purpose.

It wasn't easy to get McNary started. For years the site (once called Umatilla) has been pegged by Army engineers as one of the best on the Columbia. For years farsighted engineers, Congressmen, and residents of the mid-Columbia have envisioned it as a golden key to basin development. It wasn't until 1945 that the project was authorized by the Congress. And the first $4,500,000 in construction funds, nailing the project down and getting actual work started, wasn't appropriated until 1947.

Even then, with a power shortage looming large on the horizon, it wasn't easy to convince eastern Congressmen that the fastest growing region in America had to have more power, great gobs of it, and fast.

FUNDS CUT

It not only wasn't easy, it was impossible.

We asked the Eightieth Congress for $40,000,000 for McNary. The Budget Bureau recommended $30,000,000. We finally got $22,000,000. And that cut-back cost us a full year's time. A year gone forever.

But that is history.

President Truman, who recently labeled the Pacific Northwest power shortage critical, has recommended an appropriation of $40,000,000 for McNary next year. He has recognized that precious time has already been lost—recognized it by recommending a supplemental appropriation of $8,000,000 to speed work between now and fiscal 1949–50. He knows that every cent of the power cost will be paid back into the United States Treasury, with interest—just as power installations at Bonneville and Grand Coulee are being amortized, with interest—and 2 years ahead of schedule.

We aren't out of the woods yet on McNary.

Both of the President's recommendations will have to run the gantlet of the House subcommittee on civil functions of the Corps of Engineers, the House Appropriations Committee as a whole, the House itself; then the Senate subcommittee, the full Committee on Appropriations, and the Senate itself, then conference action. It's a long, tough road, but McNary now has powerful friends in Washington as well as in the West.

PRAYER'S ANSWER

If this year's financial hurdles are cleared, it may be possible, by increasing regular and supplemental appropriations for the next 6 years, to recapture that precious year the Eightieth Congress cost us. Maybe, mind you, miracles take a little time, even for Army engineers.

It's worth trying, however. And everyone in the Pacific Northwest—Congressmen, chambers of commerce, labor-management groups, power company presidents, newspapers—are giving it everything they've got.

That's because they regard McNary as the most important project in America right now and because they know that it will repay $1.25 for every $1 invested in it.

As we say, McNary Dam is the answer to a region's prayer. A Nation's prayer, really.

William E. Tate

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1949

Mr. RANKIN. Mr. Speaker, I rise to pay my humble tribute to one of those great Americans who devoted his life to the cause of his fellow man.

Death came last night, as it must to all men, to William E. Tate, national director of rehabilitation for the Disabled American Veterans.

Though severely disabled while serving his country in World War I, Mr. Tate for more than 2 decades devoted his entire energies in assisting his disabled comrades and widows and orphans of the ones who made the supreme sacrifice in

order that they might be adequately cared for.

Mr. Tate, a native of South Carolina, was a past national commander of the Disabled American Veterans, and was at the time of his death not only national director of rehabilitation but also president of the service foundation fund for the Disabled American Veterans.

In the legislative field he was especially helpful to Members of Congress, especially to the Veterans' Affairs Committee in formulating policy and working out the details of legislation for the benefit of service-connected disabled veterans and their dependents. His death, therefore, will be mourned by many Members of Congress as well as hundreds of thousands of disabled veterans, widows, and orphans throughout the country.

In the passing of Bill Tate the disabled American veterans have lost one of their best friends and our country has lost one of her finest and most patriotic citizens.

General Accounting Office

EXTENSION OF REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1949

Mr. ANDERSON of California. Mr. Speaker, the enclosed communication from our good friend and former colleague, Mr. Lindsay Warren, is extremely interesting. I presume that it has been sent to every Member of the House and Senate, but I think it should be placed in the CONGRESSIONAL RECORD for others to read.

It is of more than passing interest to note that the General Accounting Office is one of the few agencies of the Government that does not have a press agent. Personally, I believe that some other agencies should follow this excellent example.

The communication is as follows:

COMPTROLLER GENERAL
OF THE UNITED STATES,
Washington, February 23, 1949.

DEAR CONGRESSMAN: The other day two Members of Congress came to me seeking some information about the General Accounting Office, and the conversation broadened into a general discussion. They expressed amazement at some of the things I told them, and called my attention to the large turn-over in the Congress since my term began on November 1, 1940, and to the inability of so many Members to find time to inform themselves about the Office. They mentioned that the Annual Report of the General Accounting Office had not yet been printed, and that at best few Members have time to read such reports. They suggested that I tell other Members of Congress some of the things I said to them, and that is the reason for this letter.

The General Accounting Office is a nonpolitical agency. It was set up as the agent of the Congress and has always been a part of the legislative branch of the Government. Congress emphasized that in the 1945 Reorganization Act, and the same provision is now in the pending reorganization bill which has already passed the House. The Comptroller General is appointed for a term of 15 years and cannot be reappointed, and can only be removed by the Congress.

On April 15, 1946, we reached our peak employment of 14,904. On February 1, 1949, our personnel numbered 9,499, showing a net reduction of 5,405. This reduction was made without any instructions from the Congress, which has always given us the appropriations we have requested. For the next fiscal year we hope to have a still further small reduction in personnel. At the time I took office the annual appropriations made for the entire Government were about $17,000,000,000. They are nearly forty-two billion for the present fiscal year.

The General Accounting Office is one of the very few agencies in the Government that not only pays its way but in addition makes a substantial contribution each year to the Treasury and saves untold further amounts by the deterrent effects of its work. I am sure it will be interesting to you to know that in the last 8 years and up until January 1, 1949, the General Accounting Office has collected back and put back into the Treasury over $608,000,000. This money had been illegally or otherwise improperly paid out by various offices in the Government, and it is a fair statement to say that little of it would ever have been recovered except for the General Accounting Office. Our appropriation for the current fiscal year is $35,901,000. The latest pay raise amounted to $3,000,000 for the Office. I am happy to report that we will absorb $1,000,000 of this in our current appropriation. During the last five fiscal years the General Accounting Office has returned $13,000,000 of its appropriations unused because we were unable to obtain the type of employees needed.

During the last fiscal year we audited over a year's payments by all the departments of the Government, with over half of our audit force working outside of Washington and on the site; we settled over 550,000 claims; settled over 62,000 fiscal officers' accounts; made 429 legislative reports to the Congress and its committees and handled 6,605 inquiries from Members of Congress; rendered over 12,000 decisions to the departments and agencies, claimants and others; visited 1,166 different offices in 395 cities on inspections and surveys; examined over 800,000 contracts; and audited the multibillion-dollar operations of the Post Office Department. We are constantly sending to Congress our commercial-type reports on audits of Government corporations.

Our methods and systems are under constant review to effect economies and improvements, wherever possible. We are continually lending assistance to agencies in the executive branch on legal and accounting problems, and are now carrying on with the Treasury Department and the Bureau of Budget, with participation by all of the agencies, a joint accounting program which has met with enthusiastic reception. This program bids fair to produce outstanding accomplishments for better Government.

The General Accounting Office is an office of law. Its duty is to enforce the will of Congress with respect to expenditures of the taxpayers' money.

As the General Accounting Office is one of the few agencies of the Government that does not have a press agent, I am sending you this information which I hope will be of interest to you.

With best wishes, I am,
Sincerely yours,
LINDSAY C. WARREN,
Comptroller General of the United States.

MVA Propaganda Mills Going Full Blast

EXTENSION OF REMARKS
OF
HON. WESLEY A. D'EWART
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1949

Mr. D'EWART. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Miles City Star of Miles City, Mont., which was published in that newspaper February 20, 1949:

MVA PROPAGANDA MILLS GOING FULL BLAST

The lads who want to foist off a Missouri Valley Authority on the people of Montana and nine other States, are going full blast again, turning out propaganda. Confirmed Socialists never give up. They are eternally at the business of spreading the doctrine, which in this country is drifting along the line of national socialism. But the answer is always the same in the end—dictatorship of one kind or another.

Just why the MVA lads have come to life all of a sudden is a bit of a mystery. And then again, maybe it isn't. Press dispatches of a month ago told how the MVA association was going to start out shaking the tin cup for more funds. Seems whatever was gathered on previous jaunts is all gone. This time they want a mere $100,000 from the valley—$10,000 from Montana. And for what?

Well, probably for "expert" pronouncements like this one:

"HELENA, February 11.—'The Pick-Sloan plan for Missouri Valley development is now as dead as a salted mackerel,' was the comment of Col. Jerome G. Locke, chief engineer of regional committee of MVA, here today. Colonel Locke said that within the past few days the Interior Department has urged the President to back MVA, and the Hoover Commission has declared the present Missouri Valley Basin development calamitous, with a recommendation that Army engineers be taken out of all river-improvement work.

"Senator MURRAY'S revised MVA bill will be dumped into the Senate hopper within a day or two, and MVA's greatest opportunity is now on our doorstep. However, opposition forces are politically strong and equipped with untold financial and publicity facilities. We will get a decent democratic valley development only if the people in this region fight for it like Trojans."

Now, then, who is this expert that has come forward with a know-it-all opinion about everything? Perhaps we can identify the expert a little more closely. Let's try.

The present Governor of Montana told the legislature there were worthless securities in the holdings of the industrial accident board. He said an investigation ought to be made to learn more about the matter. Everybody listening on the radio to the Governor took his charge to be directed at the late J. Burke Clements, chairman of the board until his untimely death shortly before the turn of the new year. Since the Governor named no names, we looked into the matter, and this is what we found out.

There are worthless securities among the holdings of the Industrial Accident Board, as charged by the governor. So worthless that the legislature now has a bill before it to permit settling for anything at all and charging the balance off as a complete loss. When did these worthless obligations get into the fund? Certainly not in Burke

Clements' time. Certainly not while Clements was chairman of the board. Who was chairman, then?

Ah! None other than the same guy who is now telling the people of Montana that he knows more about water, steam, electricity, hot air, cold air, land, mud, snow, sleet, rain, concrete, iron, steel, copper, slide rules, engineering, or what the heck have you.

None other than the "Col. Jerome G. Locke, Chief Engineer of Regional Committee of MVA" who has made the august pronouncements in the foregoing quoted "release on receipt." Yes, sir, here is that man again with another bill of goods for the people of Montana. The colonel says the Pick-Sloan plan is as dead "as a salted mackeral." (We pause here to correct his spelling for him. The word is "mackerel," Colonel.) There are those who think Col. Jerome G. Locke's MVA plan is likewise as dead "as a salted mackerel."

Some time ago the wildly edited mouthpiece of the MVA and assorted socialistic eager-beavers—The People's Voice—quoted at length from Business Week about the MVA. Now you must understand the reason for such quoting from Business Week was to indicate that even a magazine of the hated capitalistic class had given up to the inevitable. The Voice said this, in regard to Business Week.

"The article does * * * explain * * * there may be a good deal of truth in the MVA contention * * * there is an insufficient supply of water in the Missouri River to serve both the Pick and Sloan plans. In this event, admits Business Week, there will have to be a very considerable modification of the Pick and Sloan plans."

Well, what did the Business Week article really say. We are giving it to you in their words, not in what somebody else wants you to think they said, such as the above quotation from the Voice. Here it is:

"The backers of a Missouri Valley Authority * * * gathered at Omaha last week. Their objective: to get the Eighty-first Congress to set up a TVA-type administration for developing the water resources of the Missouri and its tributaries. By the time the meeting adjourned, it was understood that Senator JAMES E. MURRAY, Democrat, of Montana, would introduce an MVA bill. MURRAY sponsored two earlier, unsuccessful MVA proposals. This bill will be only a gesture; the backers of MVA don't really expect it to pass. Too much has already been invested in the Missouri Valley by Government agencies—particularly the Army engineers and the Interior Department's Bureau of Reclamation. Besides there is not much local support for MVA."

Now let's get back to the quotation from the Voice, supposedly quoting the opinion and statement of Business Week. Here is what was actually said:

"MVA proponents financed an engineering study by Jerome G. Locke; it indicates that water needed by the western, headwaters area will be drawn off by navigation projects of the engineers on the lower Missouri. Locke says that only about 1,000,000 to 2,000,000 acres could be irrigated in the western area if the navigation proponents have their way; on the other hand, 5,000,000 to 6,000,000 acres could be irrigated if water in the western part of the basin were reserved for western use. MVA supporters are confident that if Congress orders an over-all engineering survey of the basin, it will vindicate the Locke report. But the Army engineers disagree: They think enough water comes down the Missouri to satisfy everybody."

There you have it in cold turkey. Business Week was not making any pronouncement on the Pick-Sloan plan. It was merely quoting the report of the paid heirling of the socialistic forces trying to put over an MVA on us.

Of course, this opinion of Col. Jerome G. Locke and his spelling of "mackeral" is not the first and only time he has been off base. He continually prates about the lower States of the Missouri Valley stealing all the water for navigation purposes, leaving the upper-basin States, including Montana, divested of their natural water supply. That's a bunch of hooey, and even Col. Jerome G. Locke should know better, unless he suffers from the same blind staggers that put the worthless securities in the industrial-accident fund.

In 1944 Congress passed a flood-control act, setting up the Pick-Sloan plan, and authorizing the development of the Missouri basin thereunder. In that act Congress incorporated the O'Mahoney-Millikin amendments—a set of carefully thought-out specifications designed to specifically prohibit the thing the colonel constantly squawks about. Those amendments provided that—

"The use of water arising west of the ninety-eighth meridian for navigation shall not conflict with its use for irrigation and other beneficial consumptive purposes."

The upper-basin States, including Montana, all are west of the ninety-eighth meridian. The colonel knows that as well as anyone else, but the MVA can't pass the tin cup to finance the colonel's studies if points like the one cited are made known to those under whose noses the cup is to be waved.

So remember this expert when the tin cup comes along. If you must give your dough to finance more expert dissertations, at least know you are giving it for propaganda purposes and for feeding distorted facts and quotations back to you, in order to becloud your vision of the real intentions of national socialism, now on the march in this country.

Air Power Is Peace Power—the Necessity for a 70-Group Air Force

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1949

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I attach hereto the following copy of an address I delivered before the Fourth District Rural Letter Carriers Association of South Carolina at Union, S. C., on Tuesday, February 22, 1949:

Mr. President, ladies and gentlemen of the Rural Letter Carriers Association, I am greatly honored in the privilege of being with you on this occasion. We are observing, as you know, the birthday of George Washington whose name is honored and revered as the father of our great country. It is a coincidence that we are also celebrating the fifty-sixth anniversary of rural free delivery mail service. We can hardly realize up to a little more than half century ago no provision of any consequence was made for the official delivery of mail. You are members of one of the most efficient and far-reaching service agencies in the country. So far as many people are concerned you are the only Federal official they ever see or know. I congratulate you upon your fine organization and the faithful service you are rendering to our country.

I am familiar with your problems and shall continue to vote for improvements in the mail service, including better pay and better working conditions.

I ask permission to speak somewhat out of order on probably the most important subject confronting the world today—that of peace.

During the past 2 years a great deal has been said about an adequate national defense. When the flush of victory had receded after the last war we discovered that the possibility of still another war was not nearly so remote as we had assumed. Furthermore, we discovered that our national defense program had sadly lagged, and that, in the words of the wartime commander of the Air Forces, this country's Air Force had become a one-punch outfit. All leading authorities of military concepts agree that air power is essential either for an adequate defensive or an offensive force. The time when this country could feel secure against a sudden attack because of our geographical location is gone forever. The science of aeronautics has brought the nations of the world so close together that none may feel secure against attack. It is obvious, therefore, that we must maintain an adequate Air Force. All who are interested in the welfare of the United States concur on that point. The question is not whether we should maintain a strong Air Force—everyone agrees to that. The question is what size Air Force we should maintain in order to have an adequate national defense. I am in favor of a force composed of 70 groups.

It is not by accident or at random that I have chosen that figure. I am not a military man, but civilians, as well as the military, can, in times of peace, examine the available data and draw conclusions. During an emergency we must rely upon our military forces and accept their decisions. When speed of action is a requisite civilians must place their trust in their professional servicemen and aid them in every possible way to accomplish the results that are necessary for the security of all. In peacetime the situation is different. We are prone to look distrustfully at the requests of the military men, and we generally feel that they are asking for more than they expect when we examine their demands for appropriations. Such accusations cannot be made against disinterested civilians who study a situation and then make recommendations. Within the past 18 months two civilian groups have thoroughly examined the national defense picture and made recommendations concerning an adequate Air Force. These two groups were the President's Air Policy Commission and our own Congressional Aviation Policy Board. It is significant that both recommended the same number of planes that our military men deem essential—70 groups.

If it were not for the cost, there would be little opposition to the 70-group program. Our expenditures for national defense must, of course, be kept within the country's ability to pay for them. I believe our economy can easily stand the 70 groups. Even if supporting an air force this size should prove quite expensive, it seems to me that we have no alternative. The element of time which has been on our side in previous conflicts is not likely to be with us again.

If it should prove necessary to build our defenses from the bottom up after a war started, the task might be impossible. In addition the nucleus of a powerful air force should be a strong deterrent to any nation considering an attack upon this country.

Maintaining a force of 70 groups will be more expensive than a smaller force, but in the long run it may prove much cheaper. The cost of a war will be far greater than the comparatively low cost of keeping an adequate air force in time of peace. There is no denying that an aggressor nation might not risk an attack if the possibilities of losing the ensuing conflict are strong.

There seems to be a great misconception in the minds of some as to the purpose of those who advocate an air force of 70

groups. Certainly building a force of this size cannot be construed as a preparation for war. It would take a far greater number of planes to win a war. The advocates of 70 groups feel that a force this size would be sufficient to hold any enemy until we could fully arm and take the offensive. A force this size is merely a defensive arrangement.

Building an adequate air force is not a matter of days, weeks, or months. It is a matter of years. Over a year ago the President's Air Policy Commission made their recommendations. Comparatively little has been done since that time. The Air Force now has only about 50 groups. Approval of the 70-group program does not mean that we will have 70 groups by next year or even the next. As Secretary of Defense Forrestal summed up the situation, this program merely places a ceiling upon the size of the Air Force, with the yearly appropriations determining the actual strength. It is essential that we get this program approved and under way. There are numerous factors and problems involved in building up our air power. The new technology has greatly intensified the engineering and research problems of the aircraft industry upon which the Air Force is dependent for its planes. A strong and healthy industry is indispensable to our national security. If the plane manufacturers are not able to turn out the needed planes for the Air Forces upon short notice, we might well lose a war before getting started. Getting this program of expansion under way will be a breath of life to the aircraft industry, which has not been healthy since the end of the war. In terms of airframe weight the industry has produced less than half what it turned out during the war and has at times fallen to about one-fourth the amount produced during the war years. This is an alarming situation in that these low-production figures make it difficult to keep adequately trained personnel on hand, and in the event of a national emergency the plants would be slow in producing their quota of planes. We must assume that if we are attacked the enemy will be well prepared, and a delay in our production anywhere along the line could be disastrous. These facts demonstrate that the expansion of the Air Force to 70 groups will also bolster our defenses from another angle, since the expansion will aid the ailing aircraft industry.

In supporting the 70-group program let me state that I do not consider this step a panacea for all of our military problems. Everyone must realize that there is no absolute defense against an enemy equipped with modern weapons. All that is possible for any nation to do in these dangerous times is to be so well prepared as to discourage any possible aggressor. The threat of a strong retaliatory force is more eloquent than words.

It is a striking paradox that peace may be achieved by air power, that implement which has become the greatest force for destruction in the history of the world. While a strong Air Force cannot give us absolute security, it does provide relative security from two directions. The first I have just mentioned. This relative security is provided by the fact that any nation would hesitate to attack us if we are well armed. The second state of relative security which an adequate air strength provides is the ability to smash any attack which might come. National security demands that we equip and maintain an adequate force. This is not preparation for war. It is preparation for the possibility of war, and between those two goals lies a world of difference. After the last war wishful thinking on the part of many people in this country caused us to disarm at an alarming rate. No one wished war, and we even refused to accept the possibility. We placed our hopes for peace in the newly created United Nations and let our military affairs lag. Today the error of that policy is very much in evidence. Another powerful nation chose to place its trust in its military strength rather than in the United Nations. Now our country is in the position of having to rearm or face disaster. We do not have to face disaster. Our resources and wealth are such that we can build up adequate defenses without seriously upsetting the economy. While we are building up our air power, we must continue our efforts for peace through the United Nations. The fact that we expected too much from such a young organization must not be allowed to hamper its future possibilities. We are striving for peace, and, while we must now place our faith in a strong air defense, perhaps our children or grandchildren can place theirs in a strong United Nations rather than in their military potential.

Less than a year ago the Congressional Aviation Policy Board completed an extensive survey of this country's air-defense needs and reached many of the same conclusions that the President's commission had reached. To any civilian interested in military affairs this is highly important. The interservice squabbles over what we need for defense have often put Congress in the awkward position of determining who is right and what is best for the country regarding strictly military affairs. We face no such dilemma in the matter of an expanded Air Force. The recommendations of both the Board and the Commission were explicit as to the minimum needs. Both emphasized that weakness and uncertain national security are greater risks than the cost of this program. Both reports were made after months of exhaustive study. Both were made by groups who were interested in nothing but the security of our country. In the light of these facts it is necessary that we give sober consideration to their findings and recommendations. The Board's statement that "Anything less than complete supremacy in the air is self-deception" is especially significant. It is emphasis of the fact that an inadequate Air Force is not far from being as bad as no Air Force at all.

It was in recognition of the importance of air power that the Air Force was created as an autonomous military service by the National Security Act of 1947. Quite recently the Chief of Staff of that service listed the tasks of the Air Force in a given military situation. These tasks include the delivery of an immediate and powerful offensive against the basic sources of the enemy's war-making capacity; the defense of United States bases against air attack; and the tactical support of the Army and Navy in exploitation of the opportunities presented through the success of the first two tasks. Our present air strength would not allow the Air Force to accomplish these objectives. It must be placed in a condition of readiness to handle any situation which might arise. Where our national security is involved we are not at liberty to gamble, and anything less than an expansion toward 70 groups seems like a gamble.

The President's Air Policy Commission divided the threat of an attack against this country into two phases. We are in the first phase now. This phase represents the condition of world affairs. If war comes, it will be by accident, not by design, since the enemy is not fully prepared. The Commission assumed the enemy would be full prepared by January 1, 1953. In other words the enemy can be expected to have the atomic bomb also, and phase two will begin. During this phase we can expect a deliberate and unprovoked attack. It is well to remember that during World War II most of the initial attacks were sudden and unexpected. The beginnings of any new war will undoubtedly follow the same pattern, and it is not at all unlikely that our country will be the target this time. The date at which one phase will merge into another is nothing but an intelligent guess. Although it seems unlikely, this year could conceivably be the beginning of phase two. We suspect that the enemy is not yet fully prepared; we know that we are not.

Our military men and two separate civilian groups have informed us of the size and type of Air Force that is essential for national security. The size is a force of 70 groups. We must take immediate steps and plan to reach that goal within the next 4 years. Our present force is inadequate. The national security is at stake, and we have no alternative but to remedy the situation by expansion of the Air Force. To say that any other course would be disastrous is highly arbitrary, since no one knows for certain that war will come. To say that any other course would be inviting disaster expresses the situation clearly and accurately. It is within our power to reject this invitation. We must not fail to do so.

From the Good to the Bad

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, no one can deny that, under the Constitution given us by our forefathers, adhering to the principles therein laid down, through hard work and thrift we became the most powerful nation in all the world; our people had and exercised the greatest degree of individual freedom and they enjoyed more of the things which men desire than any other people anywhere in the world at any time.

In other lands, under other forms of government, the individual was poor, oppressed, and, as a rule, had neither freedom of thought nor action, nor was he able to better his condition or provide for his future.

Notwithstanding the fact that, under our form of government and our way of life, we have become the most powerful nation, the most prosperous people, for some strange and inexplainable reason, of late we have been propagandized into either believing, or, at least, pretending to believe, that forms of government, ways of doing things which have but brought disaster to every other country which has tried them, should be here substituted for the best way, our own way.

That we are on the wrong road; that we are deliberately ignoring the principles which have made us what we are, which have given us so much, is becoming apparent day by day to those who watch our National Government.

The President and the administration, ever since 1933, have been steadily, deliberately, and successfully changing our representative republican form of government into a dictatorship.

From the right of the individual and local governments to conduct their own affairs within constitutional limitations, we have passed to a dictatorial system, which shortly will have us into a completely socialistic form of government.

From the Allegan Gazette of February 21, a small-town weekly published at Allegan, Mich., comes an editorial which clearly and concisely shows what is happening:

TRUMAN'S ECONOMIC PLAN WOULD MARK TURNING POINT IN HISTORY

Not so long ago some Government officials in the agricultural department expressed alarm at the downward trend of prices. In Wednesday's dailies we read that a member of the President's Council of Economic Advisers told the Congress that an inflationary movement will set up again this spring and could lead to an ultimate crash.

Immediately following this warning, Truman sent a draft of his socialistic plan to Congress for their consideration. This scheme was submitted in the form of a bill granting the President power to impose controls on prices and wages and to build and operate industrial plants.

In general this bill provides:

1. Authorization for the Government to make loans for industrial expansion and where needed as a last resort, actually to construct facilities for larger production.

If passed, the above provision would give the President the power of a dictator over certain large essential industries. He could and would bestow his political favor on those industries he favored, in the form of loans, and could and would engage in competition with those industries opposing the socialistic state. Thus, a favored few industries subservient to the state would become rich and powerful and those not favored, unable to compete, would suffer.

This undemocratic proposal follows the pattern of the German dictatorship. A few German industries willing to cooperate with the Nazis were permitted to grow and expand at the expense of the other industries, resulting in complete control of German business in the hands of the Nazis.

Another provision is as follows:

2. Mandatory priority and allocation to be used in channeling scarce materials and facilities into essential production and uses, to relieve or prevent shortages and maldistribution affecting essential domestic requirements, cost of living, national security, and the carrying out of foreign policy.

This provision would permit the President to control material, and he could and would provide his favored industries with material to the detriment and eventual destruction of other industries. This, too, follows the pattern of Germany and Russia, where the state had complete control of industry.

There is absolutely no need and no reason why our supposedly democratic government should be granted these broad life-and-death powers over industry. If this bill is passed by Congress, it will later be considered by historians as the turning point in the history of our country.

We will have become a dictatorship. We will have turned our backs on democracy and followed the European plan, eventually leading to the utter destruction of freedom in this country.

LEO W. HOFFMAN.

Fair Rents Systems

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1949

Mr. MULTER. Mr. Speaker, during the course of the public hearings on rent controls before the House Committee on Banking and Currency there was considerable discussion about writing into the bill a formula for a fair return to property owners.

I have no doubt that there will be considerable discussion about the subject on the floor of the House when the bill reaches us for debate and passage.

A rather complete discussion of the subject, including the legal involvements and implications thereof, appeared in an article entitled "Fair Rents Systems," written by John W. Willis for the George Washington Law Review of December 1947.

Since it will provide much valuable information for use, I set it forth in full, as follows:

FAIR RENTS SYSTEM

(By John W. Willis)

Although overshadowed by international affairs and the labor situation, one of the important issues in American public life in recent months has been the question whether we shall continue to have rent controls and, if so, what kind of controls. The question has been only temporarily settled by Congress, for the new Federal act[1] expires February 29, 1948. It may very well be extended; if it is not, State and local governments will probably take steps to continue controls under their own laws.

In the discussion of the subject there has been widespread criticism of the freeze type of rent regulation practiced by the Office of Price Administration over the past 5 years. The purpose of this article is to examine a different type of control, which for easy reference is called the fair rent system, without attempting at this point to evaluate the relative merits of the different types of control.

Under the freeze system, rents are fixed by legislative fiat, by reference to the rents charged on a given date. While adjustments are allowed on various grounds, there is usually no attempt to guarantee each individual landlord a fair return. The fair rent system, on the other hand, looks toward the fixing of rents in individual cases upon some basis designed to give the landlord a fair return, while protecting the tenant against profiteering.

The various countries throughout the world which have experimented with rent control have employed variations of one or the other of these systems, or a third system, whereby rents are fixed across the board on the basis of a percentage of the value of the property.[2] In a few isolated cases, dollars-and-cents rent ceilings have been fixed.

Rent control as administered in the District of Columbia and in several States during the early 1920's was based on the fair-rent principle,[3] and the same is true under the New York Business and Commercial Rent Acts of 1945.[4] The recent Virginia Emergency Fair Rent Act also adopts this concept.[5] In enacting the District of Columbia Emergency Rent Act of 1941[6] and the Emergency Price Control Act,[7] on the other hand, Congress definitely rejected the theory that each landlord should be entitled to a fair return. The Emergency Price Control Act required only that rents be generally fair and equitable (sec. 2 (b)). During the consideration of the original price-control bill Congressman Dirksen proposed an amendment to allow adjustments so as to produce a gross rental which, after payment of taxes and other costs of ownership, management, and operation, including depreciation and an allowance for vacancy, will provide a net return which is reasonable upon the value of the property.[8]

The amendment, however, was subsequently withdrawn. In *Wilson* v. *Brown*[9] the complainant had proposed that the rent regulations be amended to permit adjustments where "the rents for the entire property for a period of 1 year nearest the date the petition is filed, after deducting normal and customary expenses of operation, including general real-estate taxes, depreciation, reasonable allowances for vacancies, and bad accounts, etc., provide a net return of less than 6 percent per annum to the landlord, based upon the fair market value of the property as of March 1, 1942."[10]

The Price Administrator rejected the proposal[11] and the Emergency Court of Appeals upheld him, stating that there was no constitutional requirement that each landlord receive a "fair return" under wartime regulations.[12] The Supreme Court later came to the same conclusion.[13]

During the debate on the extension of the Price Control Act in 1944, Congressman HOWARD W. SMITH proposed an amendment striking out the word "generally" in the provision that rents must be "generally fair and equitable," stating that:

"It is not necessary to have generally fair rent control, because what they did as a matter of administration, is to fix the price of every single individual living unit. Every house, every apartment has to be registered. So it is not a great job to revise in any particular instance. So, we provided that they must not only be generally fair and equitable

---

[1] Housing and Rent Act of 1947, Public Law No. 129, 80th Cong., 1st sess., act of June 30, 1947. See Willis, The Federal Housing and Rent Act of 1947 (1947), 47 Col. L. Rev. —.

[2] I. e., it is provided that rents shall not exceed a specified percentage of the value of the property. The percentage may vary with the value of the building but there is no attempt to fix individual maxima for each house, or to guarantee the owner a profit.

[10] Id. at p. 352. The proposal continued as follows: "In determining fair market value the Administrator shall consider sale prices of comparable properties, construction costs less depreciation and obsolescence, and rentals for comparable units in similar buildings. In determining expenses of operation the Administrator shall consider only current expenditures within the year and grant only pro rata portion to said year of those expenditures which are not annually required; interest payments shall not be regarded as an expense of operation; depreciation shall be based on normal life of building or equipment; management fees or rental commissions or both shall not exceed 5 percent of gross annual rentals; insurance expenditures shall be customary and reasonable; real estate taxes shall be prorated for said period. In no event, where an increase is requested on the grounds of unproductivity or underproductivity, shall the granted increase exceed a net return of 8 percent per annum, based upon the fair market value of the property as of March 1, 1942."

in their rents, but they must be fair and equitable to everybody." [14]

The bill reported out of the House Banking and Currency Commitee, however, merely provided for individual adjustments where the rent on the maximum rent date was, due to peculiar circumstances, substantially higher or lower than rents generally prevailing in the area for comparable accommodations. Chairman SPENCE pointed out that it would have been "absolutely impossible to make specific findings in each case." [15] The latter amendment was adopted.[16]

As far as new priority-assisted construction was concerned, however, OPA accepted the rent fixed by FHA. The method employed by FHA was described as follows:

"On newly constructed rental housing, the FHA establishes maximum returns on an economic-return basis rather than a fixed ratio to a comparable property on a freeze date. In setting these rents recognition is given to necessary current costs of construction, including land. Rents are fixed on a basis to permit an annual return of 6½ percent on that investment, after allowance for all operating expenses, maintenance, and local taxes. This return on investment is also predicated on a 7-percent allowance to cover vacancy and collection losses, so that to the extent that any particular landlord has smaller losses, to that extent his net return is increased." [17]

The Federal Housing and Rent Act of 1947 states that rent control "should be administered with a view to prompt adjustments where owners of rental housing accommodations are suffering hardships because of the inadequacies of the maximum rents applicable to their housing accommodations * * *" and directs the Housing Expediter to "make such adjustments in such maximum rents [established under the Emergency Price Control Act] as may be necessary to correct inequities or further to carry out the purposes and provisions of this title." [18]

Congressman WOLCOTT, now chairman of the Banking and Currency Committee, during the debate interpreted this latter phrase as meaning "that if the landlord is not receiving rent which covers the cost of maintenance, plus a reasonable return on his investment, an inequity exists which should be corrected." [19]

The committee report does not support this interpretation.[20] The Housing Expediter, however, who had merely repromulgated the former OPA regulations on adjustment of maximum rents,[21] on August 22, 1947, amended them to provide that in issuing adjustment orders "full consideration shall be given to hardships resulting from the inadequacy of the maximum rent applicable to the housing accommodation and any inequity within the meaning of the Housing and Rent Act of 1947." [22]

What instructions may have been given the local rent officials [23] as to the meaning of this vague language have not been made public. The term could very well, however, be interpreted as at last opening the door to the use of the "fair return" concept—despite the absence of standards in the regulations.[24]

Fair rent laws may be divided into two main classes: Those under which rents are determined on the basis of a fair return on some definite base—similar to the fixing of rates for public utilities—and those which apply more vague and general standards. The former class includes most of the fair rent laws in the United States,[25] as well as Australian, New Zealand, and South African legislation. The second method has been used most widely in the British Empire and to some extent in Europe and Latin America.

THE FAIR RETURN METHOD

The method under which the landlord is given a fair return on a rent base, as might be expected, imports many problems. On what basis is the return to be calculated? What is a fair return? What expenses are to be considered in calculating a fair return?

In the United States, the solution of these problems has usually been left to the courts or commissions with little or no assistance from the legislatures. The various laws adopted in the 1920's required merely that rents be fair and reasonable [26] or reasonable and just [27] or provided that the tenant could defend an action for rent or for possession on the ground that the rent was unjust and unreasonable and that the landlord could plead and prove a reasonable rent.[28] Some of these laws created certain presumptions as to reasonableness, based chiefly on the rent charged on a previous date, or listed items of information which the landlord was required to furnish in a bill of particulars, but they made no attempt to spell out any complete formula for fixing rents. About the only exception to this rule was a Los Angeles ordinance of 1921, and it was held unconstitutional because it set out a standard which the court considered unlawful.[29] It is interesting to note, however, that both in New York and the District of Columbia the courts in interpreting these vaguely worded statutes were drawn as by a magnet to the theory of a reasonable return on the fair value.[30] The same is true of

[14] 90 CONGRESSIONAL RECORD 5463 (June 7, 1944). See Fifth Intermediate Report of the Smith Committee (H. Rept. 1366, 78th Cong., p. 11 (1944)). See also H. R. 1877, 78th Cong., sec. 2 (1940), which would have guaranteed every landlord a "fair and equitable" rent.

[15] 90 CONGRESSIONAL RECORD 5478 (June 7, 1944).

[16] See Stabilization Extension Act of 1944, section 102, adding a sentence to section 2 (c) of the Emergency Price Control Act to read as follows: "Under regulations to be prescribed by the Administrator, he shall provide for the making of individual adjustments in those classes of cases where the rent on the maximum rent date for any housing accommodations is, due to peculiar circumstances, substantially higher or lower than the rents generally prevailing in the defense-rental area for comparable housing accommodations, and in those classes of cases where substantial hardship has resulted since the maximum rent date from a substantial or unavoidable increase in property taxes or operating costs" (58 Stat. 632, 50 U. S. C., Supp. V, sec. 902 (c) (1946)). See *Kuskin & Rotberg, Inc.* v. *Porter* (153 F. (2d) 1016 (ECA 1946)) construing the term.

[17] S. Rept. 86, pt. 2, 80th Cong., p. 3 (1947), quoting the National Housing Administrator. New construction is exempted from control under the new Federal act, supra, note 1, sec. 202 (c) (3) (A).

[18] Supra, note 1, secs. 201 (b), 204 (b).

[19] 93 CONGRESSIONAL RECORD, May 1, 1947, at 4403. See criticism by OPA memorandum inserted in the CONGRESSIONAL RECORD by Representative DOUGLAS, 93 CONGRESSIONAL RECORD, Appendix, A2208; cf. notes 130–136, infra.

[20] "The title directs that such adjustments shall be made as may be necessary to correct inequities or to further carry out the purposes and provisions of the title. The committee is unanimous in its desire to correct inequities in rents and to insure correction has provided a mandate that such shall be done as expeditiously as possible. One of the major criticisms of the administration of rent controls under present law has been the almost total lack of prompt allowance for hardship relief in rent cases by the Office of Price Administration. The committee reiterates such criticism and condemns the intricate and dilatory procedures now in effect for requesting such relief and the inflexible standards on which applications for such relief have been continually decided. Such relief, where justified, should be granted, and granted promptly." (H. Rept. 317, 80th Cong., p. 12 (1947)).

[21] Controlled Housing Rent Regulation, § 5, 12 Fed. Reg. 4331, 4334 (1947).

[22] Controlled Housing Rent Regulation, Amdt. 2, 12 Fed. Reg. 5699 (1947).

[23] Under the Housing and Rent Act of 1947, supra note 1, adjustments are made by area rent officials, but the advisory rent boards set up under sec. 204 (e) are authorized to make recommendations to the area officials on individual cases.

[24] Amdt. 2, supra note 22, also deleted the former provision in sec. 5 of the Controlled Housing Rent Regulation, which prevented adjustments on the ground of hardship from raising the rent above the level for comparable accommodations in the area.

[25] But see Hawaii, Session Laws of 1945, Act No. 69, sec. 7 (d), providing for the fixing of rents on individual commercial premises which are generally fair and equitable, judged in the light of what the premises are worth for their licensed use, but excluding from consideration any rental rate which could reasonably be met only by an increase of the prices generally prevailing in such line of business.

[26] District of Columbia, Ball Rent Law (41 Stat. 298, sec. 106 (1919)).

[27] Wisconsin, Laws of 1920, ch. 16. This law was declared unconstitutional because it applied in Milwaukee only. *State ex rel. Milwaukee Sales & Investment Co.* v. *Railroad Commission* (174 Wis. 458, 183 N. W. 687 (1921)). See also Maine, Laws of 1919, ch. 256 (Rev. Stat. 1944, ch. 124, sec. 41) penalizing "unreasonable or unjust" rents "taking into due consideration the actual market value of the property at the time, with a fair return thereon."

[28] New York, Laws of 1920, ch. 136, as amended by ch. 944, secs. 1, 4. Section 2 of the statute provided that when the answer set up the defense of unjustness and unreasonableness the plaintiff would be required to file a bill of particulars, setting forth "the gross income derived from the building of which the premises in question are the whole or a part; the number of apartments in the building and the number of rooms in each apartment, and the number of stores in such building; the rent received for each such apartment or store for the period of one year last past; the consideration paid by the landlord for the building, if he be the owner thereof, or, if he be a lessee, the rent agreed to be paid by him; the assessed valuation of the property and the taxes for the current year; the annual interest charge on any incumbrance paid by the landlord; the operating expenses with reasonable detail; and such other facts as the landlord claims affect his net income from such property." New Jersey, Laws of 1924, ch. 69, and Massachusetts, Acts of 1920, ch. 578, were similar to the New York law; so also is a Virgin Islands Ordinance of June 13, 1941, infra note 156; and cf. Philippines, Commonwealth Act No. 689, secs. 2, 3 (1945).

[29] The ordinance (No. 41266 (N. S.) of January 12, 1921) limited rents to 11 percent of the landlord's investment in the building and 16 percent of his investment in the furnishings. Superior Court Judge J. B. Wood held the law unconstitutional, stating that he would have upheld it if the rent had been based on the fair market value rather than on investment. Berger and Emery, Rent Control in War and Peace (Nat. Muni. League, 1939), p. 42.

the New York business and commercial rent laws of 1945.[31] While these acts are considerably more detailed, they provide that the rent to be fixed shall be a reasonable rent based on the fair rental value of the tenant's commercial [business] space and create a mere rebuttable presumption that a net annual return of 6 percent is a reasonable return; [32] but the courts have held that the statute requires the rent to be computed so as to return the landlord a reasonable net return on the value of the premises.[33]

The rent base

Among the bases which have been used or suggested the most important are the owner's investment, the cost of reproduction, the assessed valuation, the preemergency value, or the fair present value.

The owner's investment, or original cost, has been used as a standard in some instances.[34] It is not a satisfactory base, however, from the standpoint either of the landlord or of the tenant. What the landlord receives or what the tenant pays should not be made to depend on such adventitious matters as how much the landlord gave for the property or has invested in it.[35] Many rental properties were bought up at sacrifice prices during the depression, but that is not a good reason why the owner should be forced now to accept lower rents than other landlords; on the other hand, tenants should not have to pay a high rent because a speculator has bought the building at an inflated price.[36] It has been pointed out also that—

"The original cost test does not take into account changes in rental value resulting from such factors as changes in the character of the neighborhood or in transportation facilities." [37]

[37] *In the Matter of 900 Michigan Avenue North Corp.*, supra note 11, aff'd *Wilson* v. *Brown* (supra note 9).

Accurate records of investment and depreciation are frequently not available;[38] and the standard cannot be applied where the owner acquired the property by gift or bequest.[39] The common-sense view seems to be that taken by a New Zealand court, which held that while the actual investment was a relevant factor, it might or might not be decisive: If the owner paid too much, his imprudence should not be rewarded at the tenant's expense, while if he made a good bargain the tenant should not be entitled to share in his good luck.[40] Where new housing is concerned, however, it may be expedient—in order not unduly to deter construction—to guarantee the landlord a fair return on his actual cost. This was done, for example, in the South African Act of 1920.[41] A different base was substituted in the World War II legislation, but cost of erection is still to be considered.[42] The Canadian regulations, which had theretofore adhered strictly to the "freeze" method, were amended in April 1947 to provide for fixing the maximum rent of accommodations completed by original construction or structural alteration on or after January 1, 1944, "at an amount which, in the opinion of the rentals appraiser or of the court of rental appeals in the event of appeal, will yield a fair return, based on prevailing costs of land, labor, and material." [43]

And as we have seen, a similar procedure was followed under the joint OPA-FHA plan.

Cost of reproduction as a base has generally been discarded for the obvious reason that reproduction value during an abnormal period of high building costs—which generally accompanies housing shortages—is not a fair test of property valuation for purposes of fixing fair rental values,[44] and because reproduction cost at any particular time may be much greater than the cost at which the property could sell.[45]

"The reproduction cost basis is also unsatisfactory because reproduction costs are highly conjectural. In addition, it fails to consider such factors as location and transportation facilities which influence rental value." [46]

[46] *In the Matter of 900 Michigan Avenue North Corp.* (supra note 11). See Whitman, The Public Control of House Rents (1925), 1 J. Land & P. U. Econ., 343, 351–2, suggesting that reproduction cost less depreciation is the best basis if it is assumed that normal competitive conditions and prices prevail. But what is "normal"?

About the only instance in which this base has been used is the New South Wales Act of 1915, under which the capital value of a house was defined as the unimproved value of the land plus the estimated cost of erecting the house at the time of the application less an allowance for depreciation.[47] The 1928 act changed this, providing that the value of both the house and the land was to be determined on the basis of what they might be expected to realize if offered for sale on such reasonable terms and conditions as a bona fide seller might require—the test previously used for the land alone.[48]

Assessed valuation has generally not found favor as a rent base because it usually does not correspond to the actual or market value.[49] This is not necessarily true, of course, and if assessed valuation corresponds to "actual" value, or has some fixed relationship to it, it may be used as a base, either as it stands or increased by a given percentage.[50] In any event, assessed valuations are properly considered in deciding on "actual" or "fair" value.[51] The New York commercial rent laws of 1945–47, for instance, provide that assessed value shall be prima facie the fair value, but that this presumption may be rebutted by other evidence.[52]

Present market value, without qualification, cannot well be used as a base, although it has been; [53] the conditions which the rent laws were meant to counteract result in high market values as well as high rents.[54] For this reason some courts have used market

values existing before the emergency period.[58] Capitalization of rents is not a legitimate method to use in arriving at value, since this is going in a circle.[56]

Fair value: It will be seen from the foregoing discussion that neither investment, reproduction cost, assessed valuation or present market value, taken by itself, is an adequate standard. No one factor can be adequate in all situations.[57] The idea of a fair return, however, ex necessitate, requires that some base be selected on which the return is to be calculated. Probably the best course is that taken in a leading New York decision of 1922 and followed by the District of Columbia Court of Appeals under the Ball Rent Act. This is to take as a base the fair value of the property—an amount arrived at after considering original cost, cost of improvements, purchase price, reproduction cost, assessed valuation, rental value, bona fide sales of similar property in the neighborhood, market value before the emergency, the design and facilities of the building, its location with respect to the purposes for which it is used, etc.[58] This way all of these factors can be given some weight, but none need be controlling. Assessed valuation may be taken as presumptively the fair value, in order to provide a starting point and simplify proof; but the owner should be allowed, if he can, to show that the property is worth more than its assessed value, and the tenant to show that it is worth less.

The discretionary nature of this test is well illustrated by a very recent decision of the New York Supreme Court in a proceeding to fix a fair rent[59] under the Commercial Rent Act. The present owner of the property in question had formerly been the mortgagee under a mortgage for $38,500; in 1945 the mortgagor had defaulted and the mortgagee had taken a deed to the property in lieu of foreclosure. The court held that this fact did not prove that the fair value of the premises was only $38,500, since it was probably worth more. Nor was the owner estopped from asserting a higher value by the fact that on a proceeding to reduce the assessment it had contended that the property was worth only $25,000. In arriving at a fair value of $40,000 the official referee had considered the condition of the building, its location for transit purposes, the zoning restrictions on its use, selling values and rental values of comparable properties, assessed valuation, opinions of experts, and the above-stated facts as to the mortgage and as to the attempt to reduce the assessment. The court affirmed the finding.[60]

The fair value is to be determined without regard to encumbrances. Whether a property is mortgaged or not has nothing to do with its rental value; to allow a return only on the owner's actual investment would result in disparity in rents between houses otherwise identical, and, if carried to its logical extreme, would give the owner no return at all if the mortgage equaled or exceeded the value of the property.[61]

It should be understood that the concept of fair value, as used herein, is not the same thing as the much vilified and now substantially rejected fair value standard which the courts employed for many years in cases involving rate making for public utilities.[62] Actually, fair value, as used in the utility cases, meant, to a large extent, reproduction cost, and we have seen that that standard—whether or not it was ever workable in the public-utility field—will not do as a basis for fixing rents. But neither will the prudent investment theory, now given the sanction of the Supreme Court, since it depends on elaborate accounting data as to historical costs, which cannot be supplied in the case of the average dwelling house. The short of the matter is that a fair return to the owner of a dwelling house cannot be fixed with the same degree of mathematical precision as the reasonable return allowed a public utility. While principles of public-utility law may be helpful as analogs, they cannot be applied too rigidly. In a cogent decision by Judge Magruder, the emergency court of appeals rejected the contention that the Emergency Price Control Act was unconstitutional because it did not guarantee every landlord a fair return, saying:

"The due-process requirement of fair return upon fair value in rate regulation of public utilities is supposed to rest upon some analogy to the requirement of just compensation in the taking of property by eminent domain. See *Reagan* v. *Farmers' Loan & Trust Co.* (1894, 154 U. S. 362, 410); *West* v. *Chesapeake & Potomac Telephone Co.* (1935, 295 U. S. 662, 671). Recently the soundness of this analogy has been questioned. See concurring opinion by Black, Douglas, and Murphy, JJ., in *Federal Power Commission* v. *Natural Gas Pipe Line Co.* (1942, 315 U. S. 575, 602 et seq.).

"However this may be, we are satisfied that principles derived from the law of eminent domain are not the proper constitutional criterion for determining the validity of a Nation-wide program of price and rent control enacted by Congress under its war powers. In the case of public utilities there is an extensive and permanent regulation of the use of the properties in the public interest, of which the regulation of rates is only a part. The situation more nearly approaches a taking of the properties, or the use thereof, than in the case of wartime rent regulations. * * * The useful life of housing accommodations extends far beyond the contemplated period of rent control. There is, in fact, no appropriation of the housing accommodations at all, and so far as there is a narrow restriction on their use, it is for a very limited period. 'A limit in time, to tide over a passing trouble, may well justify a law that could not be upheld as a permanent change.' *Black* v. *Hirsch* (1921, 256 U. S. 135, 157). Furthermore, the act does not require the landlord to continue his property in the market for housing accommodations. * * * The landlord is thus free to occupy the property himself, or devote it to some commercial enterprise, or utilize it in any other way. This serves to emphasize that there has been no taking of his property in the constitutional sense.

"The proper test of constitutionality, we think, is the more general one applicable where legislation is challenged under the due process clause as constituting an arbitrary and capricious exercise of a granted power."[63]

The Supreme Court subsequently approved the holding.[64]

The rate of return

Economists tell us that the rate of return under the fair-rent theory should be high enough to allow the owner the current interest rate on the fair value of the property plus an amount for additional risks and entrepreneurial effort, and that it should be fixed at a point between the normal competitive return—i. e., an amount sufficient to enable the owner to continue operating his investment unimpaired—and the high scarcity return. The exact point is a matter of moral and economic judgment; extortion should be prevented but new capital should not be discouraged.[65] The courts, legislatures and commissions have generally attempted to approximate this, although it is said that they have not always distinguished between the legal return—the amount necessary to avoid confiscation—and the economic return, the amount necessary not to discourage new capital.[66]

It is probably an economic fallacy to assume that a rate of return can be fixed by legislative fiat which will be fair under all circumstances.[67] Legislatures in the British dominions have indeed attempted to do this,[68]

[59] Actually, the proceeding was not one to fix a "reasonable rent" in excess of the "emergency rent" (115 percent of the March 1, 1943 rent) but was a proceeding initiated by the tenant to fix the emergency rent, the premises not having been leased on March 1, 1943. However, the court treated the case as one for the determination of a reasonable rent.

[64] *Bowles* v. *Willingham* (321 U. S. 503, 64 Sup. Ct. 641, 88 L. Ed. 892 (1944)). The Court concluded that "A nation which can demand the lives of its men and women in the waging of * * * war is under no constitutional necessity of providing a system of price control on the domestic front which will assure each landlord a 'fair return' on his property" (321 U. S., at p. 519).

[65] Whitman, supra, note 46, at pp. 351–354; Dorau and Hinman, Urban Land Economics (1928), p. 346.

[66] Whitman, supra, note 46, at p. 354. As far as courts are concerned, the author fails to realize that under some statutory schemes (see note 76, infra) the power of the court is limited to determining whether a rent is confiscatory. See *Kennedy Bros.* v. *Sinclair* (52 App. D. C. 398, 287 Fed. 972 (1923)), where the court complained that if the rent commission fixed rents at the bare minimum above the point of confiscation, investment in that class of property would inevitably cease to be desirable and tenants would be worse off, but held that the court could not interfere unless the rent fixed was confiscatory, that is, below the "legal rate" of interest, 6 percent.

[67] "The determination of what rate of return on a landlord's investment is 'fair' presents an additional problem. Different types of investment yield different rates of return. Furthermore, even the rate of return realized by different units representing the same type of investment varies under normal conditions. The assumption that there is one ascertainable fair return rate is entirely inconsistent with the normal situation in a competitive economy." *In the Matter of 900 Michigan Avenue North Corp.*, supra, note 11.

[68] See note 81 et seq., infra.

but it is preferable to leave the matter within the discretion of the board or court which administers the law, so that it can adapt the rate of return to changing conditions. The approach taken by the recent New York Business and Commercial Rent Acts seems a wise one: the acts create a presumption that a specified return is reasonable, but permit the landlord or tenant to rebut the presumption.[69]

The reasonable return of course is a net return, after payment of necessary costs of operation.

The courts and legislatures have varied considerably in their ideas of a fair return, but most of the figures are found in the range from 6 to 12 percent. To some extent, of course, this is affected by the rent base employed. The New York court, in *Hirsch* v. *Weiner*,[70] held in 1921 that a net rent not exceeding 10 percent of the present value of the property was not unreasonable, although it might have been if the evidence had showed a different situation as to possible return from other investments than it did. In a later case the same court said that 10 percent was not a conclusive and invariable standard, but what was a fair return depended on the conditions of the financial market, and that where there was no proof as to the return on good securities at the time of the trial, a finding that 8 percent was reasonable was not wrong.[71] Another division held that the rate should vary with market fluctuations of returns on other investments, but should not exceed 8 percent.[72] Less than 5 or 6 percent was held insufficient on appeal.[73] Some New York courts, on the other hand, held reasonableness of the rent to be a jury question.[74] In one such case the court said that 10- or 11-percent net income was not unreasonable, but that this was not a matter of law and net income was not the only factor to be considered.[75] The District of Columbia Court of Appeals, approaching the question from a different angle—as it was required to do because of the differences in the statutory schemes [76]—held that a net income below 6 percent of the value of the property would be confiscatory.[77] This was qualified in a later decision of an inferior court, which held a 5-percent gross return not unreasonable because of the run-down condition of the particular property, the court saying:

"If one should erect a peanut stand upon a million-dollar lot, he could hardly expect to receive 6 percent upon the sale value of the lot. The rate of 6 percent refers to property reasonably adapted to rental purposes, and the value must be fixed with respect to such purposes, not to other and remote uses involving a total change in the character of the property." [78]

A Denver ordinance limited rents to 12-percent gross return, but since this allowed only a 5-percent net, we are told that the Rent Commission actually permitted a somewhat higher return.[79] The New York Commercial Rent Acts of 1945–47 provide that a net annual return of 6 percent on the fair value of the entire property, including the land, plus 2 percent for amortization of mortgages shall be presumed to be a reasonable return,[80] but this presumption is rebuttable.

The original Fair Rents Act, that of New South Wales, contained elaborate provisions designed to keep the rate of return in line with current market conditions. The act provided that the return should not be less than the interest charged on overdrafts by the Commonwealth Bank and not more than 2½ percent in excess of that amount, to which various items of expense were to be added.[81] Actually, in most cases the Fair Rent Court allowed 6½ percent (the Commonwealth Bank rate) plus a half percent for collection.[82] The 1928 act raised the minimum to 1½ percent above the Commonwealth Bank rate and removed the maximum.[83] Under the 1939 act the rate was 1½ percent above the average interest rate on first mortgages on urban securities, as calculated by the Government statistician (5½ percent in 1939).[84]

These provisions apparently did not commend themselves to legislators elsewhere in the Antipodes. The Queensland Act of 1920 merely provided for a fair rent not to exceed 10 percent of the total value of the land and house,[85] as did the Victoria Act of 1938.[86] The 1916 act in New Zealand guaranteed the owner of a house let before August 3, 1914, 8 percent on the capital value.[87] The 1920 act permitted any landlord to apply for relief on the ground that the standard rent [88] did not give him a net annual return of 7 percent on the capital value as of August 3, 1914.[89] The 1936 act empowers the Governor General to provide by regulation that the annual amount of fair rent shall be a prescribed proportion of the capital value, between 4 and 6 percent, plus certain expenses; [90] no regulations have ever been made, but the magistrates generally allow 5 percent.[91]

In South Africa the rent is not "reasonable" if after deducting certain expenses the owner receives more than 8 percent per annum of the reasonable value of the dwelling and 6 percent on the land.[92] Previously, the presumption was the other way, and the rent was not unreasonable if it gave the owner a return of 10 percent on the actual cost of the building and 6 percent on the land.[93]

OPERATING EXPENSES

In order to ascertain the net return it is of course necessary to decide what expenses are to come out of the gross rental and what are to be borne by the owner out of his return. The process, as defined by the courts, is to determine the gross rentals demanded by the landlord, and then deduct the gross operating expenses, leaving a net rental, the fairness of which is determined under the rules laid down in the preceding section.[94]

Interest on mortgages is usually not allowed as an operating expense.[95]

The reason for this is apparent. The landlord is geting a return as rent on his total investment which includes that part represented by the mortgages on the property, which must be paid to save the amount actually advanced.[96]

While the man who owns his property free and clear obtains a higher return, this rule makes for uniform rents of similar properties and simplifies accounting.[97] Indeed, economists have found it necessary to justify any margin between interest paid and return received on the ground of the owner's risk and entrepreneurial activities.[98] Amortization of mortgages also should come out of the net return. The New York Business and Commercial Rent Acts, however, provide that a net annual return of 6 percent on the value of the property and 2 percent of principal for amortization of mortgages shall be presumed to be a reasonable return.[99] The court may allow 2 percent even though the owner is actually paying only 1 percent.[100] The acts have been criticized as penalizing him who owns his property free and clear, and rewarding him who owns his property on a shoestring investment, by depriving the former of the 2 percent allowance for amortization and granting it to the latter.[101]

The one who is penalized, however, is the tenant, since he must in effect contribute to the retirement of the mortgage by paying a higher rent than he would have to pay if there was no mortgage.

Depreciation: In *Schwartz* v. *Deutsch*,[102] Justice Lehman (later Chief Judge of the Court of Appeals) held that the owner had a right to an allowance for depreciation in order to keep his capital intact, and that this was a proper charge against gross income. The court said that depreciation might be

[75] *Marchbanks* v. *Moore*, supra note 74.

[76] Under the New York statutes, the court (or jury) decided whether a rent was "unreasonable and oppressive" or was "fair and reasonable." Under the Ball Rent Act, the rent was fixed by a rent commission, and the court had only limited power to review the finding of the commission. The court could hold that a rent was confiscatory, but it could not directly fix a fair rent. See *Kennedy Bros.* v. *Sinclair*, cited note 66, supra.

[77] *Kennedy Bros.* v. *Sinclair*, cited note 66, supra; *Rust* v. *Heavey* (52 App. D. C. 320, 286 Fed. 782 (1923)); *Karrick* v. *Cantrill*, supra note 58. See note 2, supra.

[78] *Walker* v. *Hunt* (51 Wash. L. Rept. 321, 322 (D. C. Sup. Ct. 1923)). This principle is implicitly recognized by real-estate men. A one- or two-story building erected on valuable real estate in "New York parlance" is termed a "taxpayer," *Adda, Inc.* v. *Commissioner of Internal Revenue* (9 T. C. No. 33 (Aug. 18, 1947)).

[102] Supra note 57.

covered by the allowance for repairs, but that the landlord was entitled to receive it in some way. Other courts held the same way, sometimes fixing 2 percent as the proper figure.[103] Under the Commercial Rent Acts of 1945–47, however, the New York courts have held that depreciation is not a proper item of operating expense, on the ground that in listing various items which are to be considered, not including depreciation, the legislature indicated its intention that depreciation should come out of the fair return.[104] A contrary result was reached in a case where the lessor was tenant of the land under a long-term lease, and would have nothing left at the end of his term.[105] In South Africa, the owner is entitled to an allowance for maintenance and repairs or to depreciation not in excess of 2 percent.[106] The New South Wales statutes include in operating costs "an amount estimated to be the annual depreciation in value of the buildings, if such depreciation diminishes their rental value." [107] Other statutes seem not to have mentioned the matter.[108]

Repair costs of course are a proper item of operating expenses if they are of a recurring or current nature.[109] Repairs of a more or less permanent character, however, should be spread over a period of years and not loaded on the particular tenant who happens to be in possession at the time they are made.[110] Repairs due to previous neglect, similarly, should not be charged off all in one year.[111] The reasonable rent cannot be based on an estimate of repairs to be made in the future.[112]

Maintenance costs obviously are to be allowed. In addition to such items as taxes, insurance, janitor service, gas, water, fuel, and electricity,[113] this category also includes "necessary legal expenses made by the landlord incidental to maintaining his right to possession and necessary expenses actually paid out for collecting rents." [114]

An allowance for vacancies should be made in the unlikely contingency that vacancies are proven.[115]

Income tax of course is not part of operating expenses, since it is a tax on profits and the tenant is not required to contribute to the landlord's taxes beside paying his own.[116]

Miscellaneous considerations

Apartment rents: The courts have held that apartment rents should be fixed on the basis of the value of the particular apartments in proportion to the value of the entire property, regardless of what rents may be obtained from apartments not included in the proceeding; in other words, the landlord cannot be required to take a low rent for one apartment because he may be obtaining high rents from other apartments whose rent is not in question, or from unregulated store or office leases.[117] Of course, variations in desirability of different apartments in the same building should be recognized.[118] The New York Commercial Rent Acts provide that the reasonable rent "shall be fixed in such manner that it shall not exceed a fair and reasonable proportion of the gross rentals from all the business space in the entire building or other rental area, giving due consideration to the amount and character of the business space used or occupied by such tenant, provided, however, that the gross rental from all such business space shall not exceed a fair and reasonable proportion of the gross rentals from the entire building or other rental area." [119]

Furnished accommodations: Special provision must, of course, be made for furnished apartments or dwellings; furniture depreciates much more quickly than real estate, and it would not be fair to the landlord to limit him to the same rate of return on the former as on the latter. Valuation of furniture, too, does not involve the same difficulties as valuation of real property, and it may be practical for that reason to treat furniture separately. The Australian legislation specifically empowers the rent boards to determine separately the fair rent for any furniture which is rented with the house.[120] Under the New South Wales Act, 10 or 12 percent was usually allowed on the value of the furniture, as against about 7 percent on the real estate.[121] A Los Angeles ordinance provided for a return of 16 percent on the landlord's investment in furnishings as against 11 percent on the realty.[122] A different tack is taken in the South African act, which mentions "a reasonable allowance for furniture" as an item of gross expense.[123] Elsewhere the question seems not to have been mentioned in legislation;[124] how the New York courts and the District of Columbia Rent Commission may have handled the matter under the 1920 laws is not known.

Subleases: How is the fair rent to be determined where the landlord is himself a lessee? [125] A New Zealand court has held that in fixing the fair rent for a sublease of a part of a house, the same procedure should not be followed as in fixing the rent for a part of the premises as between an owner and a tenant (i. e., apportionment of the fair rent for the whole premises), but that the sublessor should be allowed a "fair and reasonable profit"; in the particular case, the court reduced the profit from 45 percent to 20 percent.[126] In a 1922 New York case, *Ward* v. *Stilwell*,[127] the trial court followed a similar method where the landlord was a lessee under a long-term lease, allowing a 10-percent profit on the sum of the ground rent, taxes, depreciation, insurance, and repair costs. The appellate court, however, reversed, holding that the proper procedure was to compute the fair return on the assessed valuation of the property; no consideration was to be given to the ground rent paid by the lessor, although the other items mentioned were allowable as operating expenses. In that case the lessor himself contended for the method adopted by the appellate court, since it gave him the benefit of an increase in the value of the leasehold due to changes in the character of the neighborhood. Usually, however, the shoe will be on the other foot. Thus in a 1945 proceeding the New York Supreme Court, following *Ward* v. *Stilwell*, fixed a rent for a sublease which was something less than the total of the ground rent plus allowable expenses. The court said:

"The clear intent of the statute is that upon any application in this period of emergency to increase the rentals of business property more than 15 percent over the June 1, 1944, rentals, a 6-percent net return upon the fair value of the real property shall be presumed to be a fair rental or return upon the property, where the property is unmortgaged. The legislature did not intend a 6-percent return to the owner and a 6-percent return for each subsequent lessor. Nor did the legislature intend that by the simple expedient of adding a lessor's ground rent to the operation expense, such a result could be accomplished. Ground rent like other

[124] Except Malta, Ordinance No. 16 of 1944, supra note 41, sec. 8 (2), (3), (4) (board may fix fair rent for furniture at 15 percent of appraised value).

[125] The Virginia Act, supra note 5, sec. 8 (d), provides that "* * * Nothing herein shall restrict the power of the board to determine the fair and reasonable rent for a dwelling payable by a sublessee," but does not otherwise indicate how the board is to proceed.

Several of the statutes adopting the discretionary method, discussed infra, expressly mention the rent paid by the landlord as a factor to be considered; e. g., Northern Ireland, infra note 137; South Australia, infra note 142; Isle of Man, 13 Stat. 87, sec. 3 (1930); and see text accompanying note 149, infra.

[126] *Berry* v. *Coad* (35 Magistrate's Court Rep. 99 (1940)). But cf. Jelbart, op. cit. supra note 56, at p. 44, stating that a determination of a fair rent for a dwelling applies also to a sublease.

[127] Cited note 52 supra.

rent is essentially a return from the premises and not an expense of operation. It is true that in the case at bar the rentals are divided between the owner and the petitioner lessor. But to construe the statute so that each would be entitled to at least 6 percent of the value would be disastrous to the tenants, in that legal sanction would be given to oppressive rents sought to be avoided during the period of public emergency. The question becomes clearer if we consider that situations undoubtedly exist where there is more than one sublessor of an entire premises. Following the petitioner's theory, each of these in turn would be entitled to net 6 percent. The mere suggestion of such a possibility demonstrates the fallacy of petitioner's contention. The intent of the legislature was clearly that in a proceeding under said statute the tenants in business property should not be called upon to pay rentals which would total more than 6 percent over and above the ordinary operation and maintenance charges upon the property." [128]

The court did, however, allow depreciation and management fees as proper items of expense. This position seems the more equitable one: As the court said, tenants should not have to pay an excessive rent merely because of the interposition of a sublessor between them and the owner, although the sublessor should be entitled to compensation for management functions actually performed by him. It is perhaps relevant to note that the New York courts have declined to extend to a sublessor, not in possession of any part of the premises, the security of tenure accorded true tenants.[129]

Administration

An argument repeatedly advanced by the Office of Price Administration against the fair-return system was that it is so cumbersome and complicated as to be impossible of administration on a Nation-wide scale—or even on the narrower stage of the District of Columbia.[130] As the Office said in one of its last official statements: [131]

"This requirement [that each landlord be guaranteed a reasonable return on the fair value of his investment] would make effective rent control impossible, because rent control cannot be administered in accordance with the concepts employed in fixing public-utility rates. There is no satisfactory standard by which fair value of individual rental units may be measured. * * * Whenever in the past such standards have been introduced into State rent-control legislation the whole system of administration has bogged down. The staggering administrative burden involved in any determination of a reasonable return on the fair value of each piece of rental property throughout the United States would reduce the whole rent-control system to impotence."

This conclusion may be true.[132] The proof which the Office marshals in support of its conclusion, however, is weak. The only State rent-control laws on which any information is available are the New York laws of the 1920's and the Ball Rent Act of the District of Columbia.[133] The New York laws were not as effective as they might have been,[134] but this was probably due as much to the awkward procedure for judicial determination of fair rents and to the loopholes in the statute as to the use of the fair-return formula. The history of the District of Columbia Rent Commission furnishes a better example, but while it is apparently true that proceedings before that body were long-drawn-out,[135] it is hyberbole to say that the whole system of administration * * * bogged down. Studies of the New South Wales and New Zealand fair-rents laws report no criticism of the procedure on the ground of delay.[136] Adequate statutory standards are, of course, a valuable aid to the courts or agencies administering the law, although they have frequently not been provided.

THE DISCRETIONARY METHOD

The various statutes and regulations which have been grouped under this head do not lend themselves to analytic comparison; about all that can be done is to quote or paraphrase the legislation itself, and for this reason only a representative number of examples will be given.[137] The characteristic of the discretionary method is that the fixing of a fair rent is delegated to a board, officer, or court; the administering agency is directed to consider various listed factors, but no formula for computation of the fair rent is laid down, and the concept of reasonableness is not that of a fair return to the landlord but a more vague and abstract one.

One of the most elaborate provisions is that found in the Australian landlord and tenant regulations. The original fair rent regulations, promulgated in 1939, provided merely that the fair rent boards should determine the fair rent without giving any definition of the term.[138] However, the landlord and tenant regulations, issued 2 years later, set out a detailed list of factors which the boards were to have regard to. In its latest form, this list reads as follows: [139]

"(a) The capital value of the premises at the prescribed date, or, if the premises were not in existence on that date, on the date on which the erection of the premises was completed;

"(b) The annual rates and insurance premiums paid in respect of the premises;

"(c) The estimated annual cost of repairs, maintenance, and renewals of the premises and fixtures thereon;

"(d) The estimated amount of annual depreciation in the value of the premises and the estimated time per annum during which the premises may be vacant;

---

[128] *Application of Flushingside Realty & Construction Co.*, supra note 105, at p. 134.

In *Gulf Oil Corp.* v. *Paino* (115 N. Y. L. J. 1525 (1945)) an official referee fixed the fair rent for a gasoline station at an amount less than the landlord paid its own lessor. The referee followed the unusual procedure of basing the reasonable rent on the amount of profit the subtenants were making from their use of the property. The referee's report was confirmed without opinion, but after notice of appeal was served the tenants vacated the premises and the appeal was dropped. (Information from Samuel H. Borenkind, Esq., counsel for the landlord.)

[129] *WMCA, Inc.* v. *Blockfront Realty Corp.* (67 N. Y. S. (2d) 867 (Sup. Ct. 1946), affirmed 272 App. Div. 800, 71 N. Y. S. (2d) 895 (1947)); see also *44 West 14th St. Co., Inc.* v. *Chanlan Corp.* (73 N. Y. S. (2d) 95 (Sup. Ct. 1947)). Contra: *Gasoff Realty Corp.* v. *Serval Food Exchange, Inc.* (71 N. Y. S. (2d) 58 (Muni. Ct. 1947)).

[130] See OPA, First Quarterly Report (1942), p. 52, commenting on the hearings preceding the enactment of the District of Columbia Emergency Rent Act: "The Office of Price Administration, through its experience with voluntary rent control in cooperation with Fair Rent Committees, was convinced that such [fair return] methods would be unworkable, particularly in emergency legislation which demanded expeditious action as a first essential of fair administration. Any formula based on fair or reasonable return on investment ran the risk of long drawn-out proceedings, which might be appropriate for certain types of rate fixing but were definitely not well-suited for the establishment of equitable maximum rents for the thousands of rental dwellings in the District of Columbia."

[131] Memorandum on H. R. 3203, prepared May 2, 1947, 93 CONGRESSIONAL RECORD, Appendix (May 9, 1947), pp. A2209, A2210. As of May 4, 1947, OPA was terminated and its rent-control functions transferred to the Office of the Housing Expediter. Ex. O. 9841, 12 Fed. Reg. 2645 (1947).

For similar statements see OPACS, Fair Rent Committee Bulletin No. 2 (1941) ("If the [fair rent] committee is to function successfully and to cover a substantial number of cases, it is not practicable to enter into the elaborate analysis involved in any judgment of return on original investment."); OPA, Fair Rent Bulletin No. 1 (1941), pp. 3, 6, reporting testimony of District of Columbia Commissioner Guy Mason (a member of the 1920-25 District of Columbia Rent Commission) at hearings on District of Columbia emergency rent bill: *In the Matter of 900 Michigan Avenue North Corp.*, supra note 37, discussing the New York experience; Linowitz, State Rent Control After Two World Wars (1947) 19 N. Y. State Bar Assn. Bull. 10.

[132] See remarks of Representative SPENCE, supra, note 15. In *Wilson* v. *Brown*, supra, note 9, the Emergency Court of Appeals, after quoting at length from the OPA opinion in *In the Matter of 900 Michigan Avenue North Corp.*, supra, note 37, stated that " We could not improve on this statement which, we think, amply demonstrates a rational basis for the judgment of Congress that to make the wartime regulation of rents effective it was necessary to authorize the Administrator to establish rents which are 'generally fair and equitable' instead of requiring him to make individual adjustments so as to assure to each landlord a fair return on the fair market value of his property." 137 F. (2d) at p. 354.

[133] This is the only legislation referred to by OPA, see notes 130, 131, supra. On the Massachusetts experience, however, see Report of the Special Commission on the Necessaries of Life, Massachusetts House Document 1210 (1925).

Acts of 1943, c. 9 (Rents Tribunal determines whether rent is fair and reasonable, having regard to all the circumstances of the case, including the poor-law valuation, the rent which the landlord pays anyone else on the house, the cost of renovations and repairs, etc.); Mauritius, No. 52 of 1920, supra, note 36, sec. 9; Government Notice No. 167 of 1939, supra, note 36, Reg. 11 (1) (committee is guided by the rent on a given date, the state of repair, increases in taxes, cost of improvements, increased cost of repairs and of living, locality of the property, any benefit derived directly or indirectly from the tenant's occupancy, etc.); Hong Kong, ordinances of 1939, No. 44, sec. 4 (court can decide if any proposed increase is fair and reasonable; assessor's certificate of what he considers to be fair and reasonable is prima facie evidence); Kenya, ordinances of 1940, No. 12, sec. 2 (iii) (where "frozen" rent would yield landlord an uneconomic return, board can determine rent at such figure as it considers reasonable in all the circumstances of the case); Straits Settlements, ordinances of 1921, No. 3, sec. 9; No. 35 of 1939, Laws of Straits Settlements (1940 Supp.) 650, sec. 7 (no standards).) See also note 25, supra.

[138] National security (fair rents) regulations, statutory rules, 1939, No. 104, reg. 6. The Tasmanian Increase of Rent (war restrictions) Act, 1939 (3 and 4 Geo. VI, No. 39, was similar. See also western Australia, Increase of Rent (war restrictions) Act, 1939, 3 and 4 Geo. VI, No. 45, sec. 6).

[139] National Security (landlord and tenant) Regulations (Stat. Rules 1945, No. 97, Reg. 19 (1), superseding Stat. Rules 1941, No. 275, Reg. 9 (8) as amended.

"(e) The rents of comparable premises in the locality of the premises the subject of the application;

"(f) The rate of interest charged upon overdrafts by the Commonwealth Bank of Australia;

"(g) Any services provided by the lessor or lessee in connection with the lease;

"(h) Any obligation on the part of the lessee to effect any improvements, alterations, or repairs to the premises at his own expense;[140]

"(i) The justice and merits of the case and the circumstances and conduct of the parties; and

"(j) Any hardship which would be caused to the lessor or lessee or any other person by the making of an order increasing or reducing the rent of the premises including (but without limiting the generality of the word 'hardships') any loss which might be imposed upon the lessor by an order fixing the rent of the premises at an amount less than the lessor's liability under a mortgage of, or contract of sale in respect of, the premises, or under a hire purchase agreement or contract of sale in respect of any goods leased with the premises." [141]

Under the South Australia Act of 1942, the Housing Trust or the court fixes the fair and equitable rent, having regard to the accommodation provided, the state of repair and general condition of the house; the neighborhood; if the lease relates to a part, the rent of the whole, if any, and any right of the tenant to use other parts of the house or fittings therein; the value, condition, and suitability of any furniture the use of which is included in the lease; if the tenant is to pay the landlord for electricity, gas, water, fuel, etc., the reasonable value thereof; and any amount which the lease requires the tenant to spend for repairs, renovation, or improvement. If because of the tenant's dirty, harmful, or careless habits, greater than the usual expenditure on repair or renovation will be necessary, that can also be considered.[142]

The South African legislation has combined the fair return and the discretionary methods. The first act provided for the fixing by the rent board of a reasonable rent, defined as the rent which the board found under all the circumstances and conditions of the particular case to be reasonable, regard being had to the rent payable immediately prior to July 1, 1914, in respect of the same or similar dwellings, the actual amount of the increase or decrease in taxes on the dwelling and land since that date, any improvements or additions since that date, the increase in cost of repairs not to exceed 10 percent of the rent, and any rent payable by a sublessee to the lessee. The act contained a proviso that as to a building constructed since July 1, 1914, the rent was not unreasonable if it allowed a specified return to the landlord.[143] In the 1940 amendment, the section was recast to provide that the board should consider collection charges, costs of maintenance, repair, replacements, and insurance, and depreciation not exceeding 2 percent of the cost of the building annually, but that as to any building the rent should not be considered unreasonable if it gave a specified return to the landlord.[144] In the 1942 act, it is provided simply that reasonable rent shall mean the rent which the board finds in all the circumstances of the particular case to be reasonable. The rent is not reasonable if it gives the landlord more than a specified return.[145]

The New Zealand Act of 1936 provides that in fixing the fair rent, the magistrate shall have regard to the relative circumstances of the landlord and the tenant, and to all other relevant matters.[146] Actually, however, the magistrates have usually allowed 5 percent on the capital value.[147]

The British Furnished Houses (Rent Control) Act, 1946, and its Scottish predecessor provide merely that the tribunal shall approve the existing rent or reduce it to such sum as they may, in all the circumstances, think reasonable, or increase it in certain circumstances.[148] The acts do not indicate what factors are to be considered by the tribunal, except for a specific provision in the British act as to increases since September 3, 1939, in the cost of providing services. The interdepartmental committee whose report preceded the passage of the act, however, had the following to say: [149]

"The function of the rent tribunals should be to decide applications for an increase or reduction of the registered rent in respect of any tenancy or subtenancy furnished or unfurnished to which the act applies. Upon such applications they should determine what is a fair rent for the tenancy or subtenancy having regard to all the circumstances of the case, including the situation of the premises, the accommodation, amenities, furniture, or services to which the tenant is entitled, the expenditure necessarily entailed on the parties on the assumption that they are fulfilling their respective obligations under the tenancy agreement as regards repair or any other matters and the general level of rents of comparable houses in the district which are kept in good repair. In the case of a subtenancy, the tribunal should have regard to the rent payable by the sublessor, and the amount of accommodation comprised in the subtenancy, and take into account any additional wear and tear due to the subletting. In view of the recommendation we make in paragraph 84 for the reduction of rent on the issue of a certificate of disrepair, the tribunal should determine the rent on the assumption that the house is in good repair. Any deduction the tenant is thereafter entitled to make on obtaining a certificate will be made from the registered rent as defined in paragraph 61.

"The tribunal will have to take into consideration the rent charged for any uncontrolled premises which the tenant may be required to take in conjunction with the controlled premises. We mention this point because it has been suggested to us that landlords sometimes seek to evade the rent restriction acts by compelling would-be tenants to take a tenancy of uncontrolled premises, such as a garage, as a condition of letting them a controlled house and charging an excessive rent for the uncontrolled premises. Tribunals can defeat this device by reducing the rent for the controlled premises so as to insure that the tenant is only required to pay a fair rent for the whole of the premises let to him."

Examples of the discretionary method may also be found in European and Latin-American legislation.[150] In general, most weight is given to the location, construction, and condition of the accommodation.[151]

EFFECT OF HISTORICAL RENTS

In order to give some point of departure and to deter inordinate increases it may be well to provide that rents on some previous date should be considered prima facie reasonable, thus putting the burden on the landlord to justify a higher rent. If some increase is regarded as justifiable in every case, this can be handled by providing that an increase in excess of a given percentage shall be regarded as unreasonable.

The original New York law of 1920 (ch. 136) provided that—

"Where it appears that the rent has been increased more than 25 percent over the rent as it existed 1 year prior to the time of the agreement under which the rent is sought to be recovered, such agreement shall be presumptively unjust, unreasonable, and oppressive."

This provision was generally misconceived as authorizing any landlord to increase his rents by 25 percent.[152] Six months later the legislature deleted the words "more than 25 percent," so that the landlord had to justify any increase if the tenant resisted it.[153] The Massachusetts law of 1920, however, contained the same 25-percent provision.[154] The New Jersey law of 1924 permitted the tenant to raise the defense of unreasonableness in an action for rent or for the recovery of possession where the rent had been increased over that charged a year before; the rent was considered prima facie unreasonable and oppressive if it had been increased 35 percent or more within 3 years prior to institution of action.[155] A Virgin Islands ordinance of 1941 permits a tenant to defend an action for possession by showing that the rent is unjust and unreasonable; rents on April 1, 1941, are considered reasonable and an increase up to 15

[140] Subdivision (h) did not appear in the original Landlord and Tenant Regulations, supra note 139.

[141] Subdivisions (i) and (j) were added to the original regulations as Reg. 9 (8) (aa) and (ab) by Stat. Rules 1942, No. 412.

[142] Acts of 1942, No. 33, sec. 21. See also Housing Improvement Act, 1940, Acts of 1940, No. 56, sec. 54, under which the Housing Authority can fix rents for substandard housing, considering the state of repair and general condition of the house and the accommodation provided in it. Uniform rents for houses of similar condition and accommodations in the same locality are to be fixed so far as possible.

[143] Act No. 13 of 1920, supra note 41, sec. 14.

[144] Act No. 26 of 1940, supra note 34.

[145] Act No. 33 of 1942, supra note 42, sec. 1.

[146] Fair Rents Act of 1936, supra note 90, sec. 7, see infra, note 160. Heine, op. cit. supra note 136, at p. 21 says that the court should consider the rate of mortgage interest payable by the landlord, the size of the landlord's equity, the state of repair, whether the tenant has sublet, subsidiary use for business purposes, etc.

percent "to cover improvements" is also considered just and reasonable.[156]

The New South Wales Fair Rent Act of 1915 provided that the "fair rent" should not exceed the rent on January 1, 1915, unless circumstances rendered an increase equitable.[157] This deterrent feature of the act was said to represent its "most valuable achievement." [158] The Queensland Act of 1920 contained a similar proviso,[159] as do the New Zealand acts of 1936–42.[160] The more recent Australian legislation, however, omits any such provision.[161]

Logically, it would seem that historical rents would be more important under the discretionary method of fixing fair rents under the fair-return method. In fact, however, express reference to historical rents is rare. The South African Act of 1920 provided that the rent board should consider rents paid immediately prior to July 1, 1914, with respect to the same or similar dwellings.[162] The Ecuador law of 1945 (which never went into effect) provided that rents fixed by the Junta de Inquilinato should not exceed rents charged on December 31, 1944, in the absence of express resolution to that effect by the Junta.[163]

COMBINATION OF FAIR-RENT PROVISIONS WITH RENT FREEZE

Under the New York rent laws of the 1920's, and similar laws adopted in other States, limitation of rents to fair levels was dependent upon affirmative action by the tenant. As the court said in an early case:

"A landlord still has the right, if he finds a tenant willing to pay him the rent demanded, to accept the rent which such tenant is willing to pay." [164]

If a tenant wished to obtain an adjudication that the rent demanded was oppressive or unreasonable, he had to refuse to pay it and thus invite legal proceedings. In such an action there was a presumption that the rent on a given date was reasonable, so that any increase had to be justified;[165] but if the tenant was willing to pay the increase, the landlord was free to impose it. Similarly, several of the Australian laws,[166] as well as the South African Act of 1920 and the New Zealand Act of 1936, while permitting the tenant to apply to a court or fair rent control board for determination of a fair rent, nevertheless put no restriction on rents where such a proceeding had not been instituted.

It seems obvious that under such a system there must be many tenants who pay unreasonable rents rather than bring their landlords to bar; and it might well be contended that the burden should be on the landlord to obtain official sanction for any increase, at least if the housing shortage is acute. And most of the more recent legislation takes this point of view, providing that rents shall be frozen at the amount charged on a given date unless and until an increase is duly authorized. This is true, for example, of the Australian regulations,[167] the South African legislation,[168] and the New Zealand Economic Stabilization Regulations.[169] The New York Commercial and Business Rents Acts freeze rents at 115 percent of the rent on the base date; if the landlord contends that a higher rent is "reasonable," he must generally initiate court or arbitration proceedings.[170] The Virginia Emergency Fair Rent Act of 1947 freezes rents to those charged at the time an emergency is declared, until the fair and reasonable rent is determined.[171]

PROPRIETY OF CONSIDERING PERSONAL SITUATIONS OF THE PARTIES

Under the "fair return" method of determining fair rents, the personal situation of the landlord or the tenant is of no moment; what is a fair return is a matter of law and one landlord should not get more than another because he needs more, nor should the landlord be forced to take a smaller return because the tenant is in financial straits. The same considerations of course do not apply to the discretionary method, but except for laws in Australia, New Zealand, and Italy, no instances have been found where the personal circumstances of the parties is expressly mentioned as a factor to be considered.

The New Zealand act provides specifically that the magistrate in fixing fair rents is to consider, inter alia, the relative circumstances of the landlord and of the tenant.[172] For this reason the determination does not run with the house, but terminates if the tenant moves out.[173] The extent to which the magistrates have given effect to this provision is not known to the writer, but it is reported that the courts usually fix the rent on the basis of a 5-percent return on capital value.[174] Under the New Zealand Economic Stabilization Regulations, the relative circumstances of the parties was expressly not to be considered.[175]

The Australian regulations, quoted above,[176] mention "the justice and merits of the case and the circumstances and conduct of the parties," as well as possible hardship to the lessor, lessee, or any other person from an increase or reduction in rent, as factors to be considered. Paradoxically, however, the determination of a fair rent runs with the property.[177]

An Italian law of 1923 provided that rents should be fixed at a figure which would not aggravate disproportionately the tenant's economic position, especially if he was a state employee or pensioner with a modest income.[178]

During the committee hearings and debates on the British furnished houses (rent control) bill,[179] several members of Parliament expressed the view that "a reasonable rent ought to be divorced entirely from any consideration of the personal circumstances of the parties." [180] As Mr. Willink, the member from Crydon, said:

"Tribunals would get into the most hopeless mess and confusion in dealing with registered furnished rents if any encouragement were given to the view that the proper rent to one person would be so much and to another a different sum. A reasonable rent must be quite objective." [181]

Similar views were expressed by Lord Llewellin.[182] The member from Coatbridge, Mrs. Mann, on the other hand, took a different view. She pointed out that where people live in the same house, clashes of temperament often arise, and frequently that "where services have been agreed upon, the dominating personality of one woman makes the other woman perform all the services in order to keep the peace."

She suggested that "in cases where there is great difficulty by reason of the clash of temperaments" or "if the lessee [sic, lessor] is having a great deal to put up with she should have a profit of 25 percent." [183]

The fair rent committees, set up before passage of the Emergency Price Control Act, were advised by the Office of Price Administration and Civilian Supply (as it then was) not to consider the tenant's income or any change therein since the maximum rent date.[184]

CONCLUSION

The two types of fair-rent systems discussed above have the same laudable objective: the fixing of rents which will be fair, both as to landlords and as to tenants. They vary widely, however, in the means employed to achieve that end. Which is the better method would not be easy to say, but the fair-return system is certainly more in line with prevailing economic and legal concepts in the United States. It is not an easy system to administer, and involves many problems; but it has the merit of positing definite bases on which the calculation of fair rents is to be made, whereas the discretionary method presupposes a grant of broad and ill-defined powers to the agency administering the law, and puts fewer checks on arbitrary action.

American Merchant Marine

EXTENSION OF REMARKS

OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1949

Mr. BLAND. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article on the American merchant marine, written by Mr. Frazer A. Bailey, president

[156] Municipality of St. Thomas and St. John, Ordinance of June 13, 1941.

[157] Supra note 47, sec. 9 (2). This provision was deleted by the 1928 act, supra note 48. As to the 1939 act, see infra, note 167.

of the National Federation of American Shipping, Inc., entitled "Sound, Continuous United States Shipping Policy Needed." This is an article which appeared in the March 1949 issue of Lykes Fleet Flashes, published by Lykes Bros. Steamship Co., Inc., of New Orleans, La.

The article is as follows:

SOUND, CONTINUOUS UNITED STATES SHIPPING POLICY NEEDED—HISTORY OF OUR MERCHANT FLEET HAS BEEN A STORY MARKED BY INITIAL SUCCESS AND A SUBSEQUENT DECLINE

(By Frazer A. Bailey, president, National Federation of American Shipping, Inc.)

Thirteen years before the Pilgrims landed at Plymouth, a little ship, the *Virginia*, was launched by George Popham's colonists in Maine near the mouth of the Kennebec River. The launching of that 30-ton pinnace and her daring trans-Atlantic voyages in 1607–8 marked the birth of the American merchant marine.

If since 1607 our national shipping policies had been sound and continuous, this article would be just another American success story. Unfortunately the history of our merchant marine has been quite different—a story of initial success, subsequent decline, and future uncertainty.

By the time of the Revolution and the War of 1812 the American merchant fleet had grown to a stature demanding world respect. It gave us such brilliant naval leaders as John Paul Jones, John Barry, and Stephen Decatur. In 1807 it carried 92 percent of our foreign commerce. Its tonnage ranked second to that of Britain. By the 1850's the United States clipper ships were the envy of the world. They broke record after record and carried 70 percent of our exports, 65 percent of our imports, and a substantial part of the commerce of other nations.

But following the 1850's public apathy, economic opportunities in other fields, and foreign competition forced the American merchant marine into a rapid decline. Forgotten were the admonishments of Washington, Jefferson, and Madison: "To have vessels employed in commerce * * * to lay the foundation of a navy." Efforts of Presidents Grant, McKinley, and Theodore Roosevelt to hold our place on the seas were without avail. In 1901 we carried only 8.2 percent of our foreign commerce.

World War I found us with a wholly inadequate merchant fleet and forced us into a frantic $3,000,000,000 emergency program of construction, most of which was completed after the end of the war. We were reduced to the ignominy of having Japan build desperately needed ships for us. This new fleet provided a stimulus to our shipping for a short time, but by the late thirties we were again in the rut, carrying less than 30 percent of our foreign commerce.

With the outbreak of World War II we were forced for the second time in a generation into a frenzied and extremely expensive construction program to provide the required shipping to support our military. This time we built some 5,500 ships of 55,000,000 deadweight tons with over $15,000,000,000 of taxpayers' money.

Today, about 3 years after VJ-day, we are carrying only 39.5 percent of ou exports. Our position in foreign commerce is deteriorating. We are rapidly trending toward our prewar participation in the transportation of our foreign trade.

Even with the cogent and expensive lessons of history fresh in our memory, the United States today does not occupy a position in world shipping commensurate with its importance as a leader in world affairs. The burden of the military, economic and political security of all freedom-loving peoples has fallen primarily upon us. History and common sense establish inescapably that our merchant fleet must play a major role in shouldering that burden. No nation which has failed to maintain its flag upon the seas has long retained a position of prosperity and of leadership in world affairs.

To meet our responsibilities, we must have a merchant fleet in service capable of meeting our immediate shipping requirement at the impact of an emergency. It must be one which will not desert us leaving our foreign commerce piled high upon our wharves and terminals, as foreign ships have in the past when opportunities for more lucrative employment were suddenly offered elsewhere.

Our military leaders have stated that we must have a minimum active impact fleet of some 1,300 privately owned vessels capable of absorbing the work load incident to the outbreak of an emergency, and that we must also have a national defense reserve fleet properly conditioned and husbanded, for prompt commissioning to transport military supplies and to replace casualties until shipyards can begin turning out ships in volume. Our so-called moth ball reserve fleet is vitally essential. It is supplemental and auxiliary to the active impact fleet. It fills voids which would otherwise exist in expanding military requirements and war casualty replacements.

If we lack these active and reserve fleets at the outbreak of war, how will we keep our war industries supplied, provide for our essential civilian requirements, and furnish sea transport for men and materials to our armed forces? Many fail to appreciate the magnitude of the supply problem involved in war. Even with 5,500 ships produced by our shipyards for World War II, Admiral Nimitz said that we never had sufficient shipping.

No thoughtful person would minimize the great value of aircraft, both in combat and supply. But aircraft are not a substitute means of transportation for the great volume of heavy logistical materials which must be transported overseas in war. Even considering differences in speed and turn-around, an average merchant ship can, in a given period, carry overseas the equivalent capacity of some 175 large cargo planes. On this basis, 5,500 ships are the equivalent of almost 1,000,000 large cargo planes.

Aircraft have their place in an integrated, over-all transportation system as emergency suppliers at high cost of very limited quantities of highly essential supplies. But they can only skim the cream of military transportation requirements. The basic large tonnages of material for base depots can only move in ships.

The problems of maintaining a merchant marine adequate for national security, and the responsibilities of world leadership are not easy of solution. Our American standards of wages, crew subsistence, working conditions for seamen, and safety at sea impose substantially higher cos on American operators. Without compensating Government aid there does not exist realistic competitive opportunity for American ships in the foreign trades.

Again we continually encounter misguided persons who would have us abandon our merchant fleet in favor of ships of other nations because they can more cheaply operate with underpaid foreign crews or because they need credits to bolster their sagging foreign exchange. Recently there was a serious effort to turn over to the Marshall-plan nations a large part of our national defense reserve fleet. Luckily this effort was killed by wise congressional action.

The United States is seriously advocating the rebuilding of the Japanese merchant fleet to over four million gross tons—a fleet as large as they possessed in the early thirties when they carried 65 percent of their overseas commerce, 92 percent of their nearseas commerce and all of their domestic commerce in their own ships. Fortunately this is being opposed by other members of the Far Eastern Commission. It is often forgotten that the productive capacity of Germany and Japan has been largely destroyed along with their shipping and that their import and export requirements could not in the foreseeable future support such a fleet upon a basis of reasonable participation.

Fortunately public interest is becoming aroused and farsighted vigilance is being exercised. Congress, the Government agencies concerned, national organizations like the American Legion, the Propeller Club of the United States, chambers of commerce, labor groups and the general public are assuming a more interested attitude toward American shipping. This can be expected to accelerate even more during 1949.

Another difficulty with which American shipping is faced is the increasing prevalence of discriminatory practices against our shipping by foreign governments, particularly in South America. Laws, decrees, and regulations have been passed designed to require carriage in their own ships of a major part of their international commerce. We are not afforded in their ports the treatment which we give to their ships in ours. Free and fair competition for this traffic is not permitted. Diplomatic efforts by our State Department have proven fruitless. The Maritime Commission has agreed to investigate these malpractices and report their findings to the President. Until we are prepared to enforce a firm policy for equal treatment, our ships in these trades will continue to suffer. It now appears that congressional action as a basis of such a policy will be necessary. Fortunately, the industry has found a sympathetic attitude in certain congressional quarters.

While we have made a fair showing in restoring our shipping to foreign routes, we have done less well in our domestic trades, where our fleet is about one-quarter of its prewar size and capacity. These ships were valuable for national defense purposes, since, being always in home waters and readily available, they were among the first ships utilized by our military.

Operating costs, and more particularly cargo handling and fuel expenses, have risen sharply; competitive rail rates have been deliberately lowered to noncompensatory levels to take competitive business. Expenses have out-distanced revenues. There is small encouragement to a private owner in these trades even upon the basis of getting a new dollar for an old one. The industry is struggling, with no success so far, to create an economic atmosphere in which the domestic trades may successfully operate.

In the face of these circumstances, it is high time for us to set a definite goal for our merchant fleet. We should have a merchant fleet of modern combination and cargo vessels manned by American officers and seamen, transporting (a) all of our domestic coastwise and intercoastal and territorial commerce; (b) at least one-half of our imports and exports; and (c) backed by a fleet of modern passenger vessels operating between the United States and all important world areas.

It is not an overambitious goal nor can we be accused of selfishness in seeking it. Since the war we have generously sold some 1,132 large vessels to foreign nations on terms as favorable as those offered our own citizens. We will still have a privately owned fleet smaller than Great Britain. It will not represent encroachment upon the legitimate business of other countries.

In the Merchant Marine Act of 1936, Congress took a long step toward creating realistic economic conditions for American shipping and toward reducing the competitive disadvantages inherent in the disparity between cheap foreign labor costs and our own higher labor standards. To permit

our ships to compete in the foreign trades and to provide dependable American-flag services for American importers and exporters, it authorized the payment of a subsidy, plainly labeled as such, to equalize these expenses while providing a regular scheduled service over trade routes deemed by the Maritime Commission essential to the foreign commerce of the United States.

This ship-operating subsidy has not proved to be expensive. It amounted to but $20,000,000 for the first 10 years of the act. Senate Document 13, Eightieth Congress, shows that total Federal subsidies payments to all business and farmers in the years 1934–46 amounted to over $13,600,000,000. Of this, the ship-operating subsidy has amounted to only six-tenths of 1 percent. It is far less than price support and subsidies of other business activities.

The Merchant Marine Act also endeavored to maintain our shipbuilding capacity for defense, and to provide ships for our foreign-trade companies at the same capital investment required by competing foreign owners by authorizing a construction subsidy in appropriate cases to cover the difference between American and foreign shipbuilding costs. To induce the construction of vessels especially adaptable to defense requirements it also authorized Government payment for national defense features incorporated in the ships at Navy request.

Certain extensions and modifications of this law now appear to be in the public interest. All cost disparities, not merely selected ones, should be removed. The construction of passenger vessels adaptable for troop transports must be encouraged. Contracts have recently been placed for the construction of five fine passenger and combination passenger and cargo vessels, but these contracts are only the beginning. We are still definitely on the deficit side and we must have progressive legislation to encourage further construction.

One opportunity to aid the intercoastal trades appears in an equitable adjustment of transit tolls at Panama. The Panama Canal was built for the dual purpose of serving our national defense and the commerce of the world. Without adequate means of prompt interocean transfer of our fighting ships, we would require a complete two-ocean Navy. However, no part of its cost of operation has been charged to national defense, but rather a charge has been made of 3 percent interest on the funds advanced by our Government for its construction and improvement. Omitting interest, tolls paid by commercial shipping over the life of the Panama Canal plus tolls forgiven on Government vessels which transit the Canal toll-free have been sufficient to pay not only all operating and maintenance expenses of the Canal but also all of its construction cost plus a profit of $2,000,000.

It is the contention of the shipping industry that the waiving of the interest charge is the minimum contribution which can equitably be made by the Government for national defense. President Truman recently suspended a proposed increase in Canal tolls predicated on the fact that he anticipated Congress would shortly examine into and recommend a fair and equitable tariff of tolls for the future.

These are the problems upon whose solution will depend the maritime power and prestige of the United States, and even upon the ability of the Nation to help in maintaining peace in the world.

It is indeed fortunate as the Eighty-first Congress meets in Washington that all segments of the maritime industry—the United States Maritime Commission, seafaring and shipbuilding labor, shipbuilders and shipowners, are aware of these problems and have a common desire and the will to work for their solution.

A Part of the Whittaker Chambers Story

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, the people of this country were shocked at the story unearthed by the House Committee on Un-American Activities when Whittaker Chambers testified that former employees in the State Department had been transmitting confidential information from State Department files to the Russian Government. The climax to the story told by Mr. Chambers came when he led members of the Un-American Activities Committee to a pumpkin garden and from a pumpkin lifted microfilm which told the story about this espionage matter.

Mr. Speaker, the story told by Whittaker Chambers required a lot of courage, and while we do not condone his activity as a participant in this underground movement, yet we must give him credit for revealing the information which is now public property. At this time we owe him a debt of gratitude rather than a vote of censure.

Mr. Speaker, Isaac Don Levine in the January issue of Plain Talk has written an article relating to this matter which is important and should become part of the record in this case. Under leave to extend my remarks, I am including it herewith:

If Whittaker Chambers had chosen to keep silent, the shocking truth about the Soviet espionage ring in the State Department would still remain a deep secret from the American people.

This is the key to the prime issue raised by the Chambers revelations. If in 1938, when there was no Soviet-American rivalry, Moscow's underground machine was pumping out of the offices of the Secretary of State highly confidential papers at the rate of some 30 a week, then what is the extent of Soviet espionage in Washington in 1948?

During these 10 years, the United States and the Soviet Union were partners in the war against Nazi Germany. We courted the rulers in the Kremlin, we cultivated certain ideological bonds with them, and surely that must have produced a large crop of ideological traitors.

How long will it take for us to be abreast of the new recruits in Moscow's underground network and its present-day operations, when we have hardly caught up with the disclosures of 1938? Must we wait until 1958 to get the evidence from the future emulator of Chambers?

If Whittaker Chambers had not commenced some 5 years ago to talk in journalistic circles about his amazing experiences as an underground Communist, our Government and our press would in all probability have maintained their attitude of indifference and disbelief toward any reports of widespread Soviet espionage.

If Whittaker Chambers had not volunteered his information in his appearance before the House Committee on Un-American Activities early last August—an appearance which came in consequence of his talking—the country would perhaps never have learned the detals of the sordid epic unfolded day after day in the daily press.

My own painful experiences in trying to break through with the truth since 1939 only serve to underscore the signal service rendered, of his own free will, to America and to humanity by Whittaker Chambers.

When I first found myself in possession of the appalling facts, I was sure that I could storm the citadels of political and journalistic power, and help smash the subterranean empire of treason in the Capital. It took me about 6 months, from September 1939 to March 1940, to spend myself in fruitless assaults upon the blindness or naiveté or apathy or irresponsibility or helplessness of those whom I approached with the Chambers story.

But as I look back to my first involvement in the affair (see Plain Talk, October 1948), I can recall 10 specific instances, over a period of 7 years, of my efforts to reveal the truth. I outlined the salient features of the story to 10 public figures. To only the first two did I disclose the name of Whittaker Chambers. These 10 were—

Marvin H. McIntyre, secretary to President Roosevelt. At the end of August 1939, after the signing of the Stalin-Hitler pact, I called on Mr. McIntyre at the White House and asked him to arrange for a private audience with President Roosevelt for Whittaker Chambers, a former Soviet agent in Washington, who had some astounding information of the veracity of which I was utterly convinced. I indicated to Mr. McIntyre the nature of the disclosures in all its gravity. He referred me to Mr. Berle, then Assistant Secretary of State in Charge of Intelligence.

Adolf A. Berle, Jr. At a private dinner in his home on September 2, to which I had brought Whittaker Chambers, Mr. Berle listened to Mr. Chambers' description of two underground Soviet rings operating in Washington. The startling information included names of many Federal officials who had supplied top-secret documents to Chambers for transmission to Moscow. Six of those named were State Department employees, including Alger Hiss, his brother, and one Wadleigh. It was Chambers' and my understanding that the information would be conveyed by Mr. Berle to the President and that Chambers would not be punished for his service.

Loy Henderson, then chief of the Russian section in the State Department and now United States Ambassador to India. To Mr. Henderson, a close friend, who had served in our Embassy in Moscow and who was deeply concerned over Soviet infiltration, I confided much of what had been divulged at Mr. Berle's home. I was worried lest important papers relating to our Russian policy, then in Mr. Henderson's jurisdiction, would find their way to the Kremlin. I took it for granted that Mr. Henderson would put the security officers of the State Department on the alert.

Adelaide Neall, lifetime assistant to the late George Horace Lorimer and then a senior editor on The Saturday Evening Post. In the course of several visits to Philadelphia, I kept Miss Neall in touch with the developments, expecting a national sensation as a result of Government action on Chambers' revelations. I had hoped to do a series of articles for the Post reviewing the story in all its frightening ramifications.

Senator Warren R. Austin, now United States chief representative at the United Nations. Having formed a close friendship with Senator Austin, of Vermont, on a tour of the Near East in 1936, I went to him in the early months of 1940 with a fairly comprehensive account of the Soviet underworld in Washington. It seemed to me then, and I made no secret of it, that the information on Communist espionage, if presented under his authoritative auspices to the American people, might justly earn for him the nomi-

nation of the Republican Party for the Presidency and enable him to clean house in Washington. Senator Austin did not react to my disclosures as I had hoped.

Martin Dies, then chairman of the Un-American Activities Committee. After virtually giving up hope of Executive action on the Chambers disclosures, I submitted to Martin Dies in a private conference in March 1940 sufficient facts to convince him of the need for an intensive probe. We agreed that it would take a staff of 12 ace investigators to secure the evidence on Communist espionage in Washington, an assignment for which the committee lacked the necessary funds. Shortly after our conference Chairman Dies issued a public statement through the Associated Press to the effect that he had uncovered a "lead" on far-flung Soviet secret-police operations in the United States and that he would hear testimony soon from "the head of the OGPU" in this country. The hearing was, of course, never held.

William C. Bullitt, former United States Ambassador to Soviet Russia and to France. At a breakfast conference with Mr. Bullitt at his Anchorage Hotel apartment I related the main points of the Chambers-Krivitsky revelations. A confidant and favorite of President Roosevelt at that time, Mr. Bullitt, who had known me since 1918, was sufficiently stirred to indicate that he would take the matter to the White House at the first opportunity. I had informed him of my conversations with Mr. Berle and my conferences with Loy Henderson, who had served under Bullitt in Moscow.

Walter Winchell, columnist and frequent White House guest. A year and a half after my first efforts to bring into the open the Chambers story, in March, 1941, I called on Walter Winchell at the Roney Plaza Hotel in Miami. In the course of a long talk dealing with subversive activities, when he informed me of having President Roosevelt's ear, I acquainted Mr. Winchell with much of the information furnished by Chambers and told him that at least six Soviet agents were known to have operated within the State Department alone. Mr. Winchell, greatly shaken, indicated that he would take the matter to the highest quarters. In his broadcast of December 12 last he announced that he had carried the story to President Roosevelt.

Gov. Thomas E. Dewey. In the early summer of 1944, a couple of weeks before the Republican convention, I was invited to a private luncheon with Governor Dewey in his apartment at the Roosevelt Hotel in New York City. I sketched for the Governor the underground Communist spider web in the Federal service, with special emphasis on the operations of the Soviet unit in the State Department as described by Chambers. I urged upon Dewey the vital need for informing the American people during the campaign of the shocking state of affairs inside Washington. Governor Dewey pledged vigorous action, if elected, in clearing out the nests of treason from official Washington.

Henry R. Luce, publisher of Time, Life and Fortune. The late Raymond Leslie Buell, formerly the head of the Foreign Policy Association, arranged early in 1946 for my meeting Mr. Luce at lunch at the St. Regis Hotel. Without once mentioning or otherwise identifying his employee, Whittaker Chambers, I described to the powerful publisher the underground Soviet apparatus in the State Department which had been exposed to the authorities by a former Communist agent who was an editor of a national magazine. Mr. Luce obviously had no idea that the editor in question was on his own staff. It is only fair to add that my disclosure to Mr. Luce was intended merely as an illustration for his benefit of the vast scope of Soviet espionage in the United States.

If we are ever to get to the bottom of the traitorous and multicelled underworld planted within our free and carefree Government, we must recognize the patriotic motives which led Whittaker Chambers to make amends for his past sins by offering to his Government and his country incontrovertible proof of Soviet espionage.

It is not generally known that Mr. Chambers began to atone for his past long before his recent disclosures. He cooperated some 7 years ago with the Rapp-Coudert committee in New York in ferreting out subversive Communists among the teachers in our public schools. During the war he cooperated unreservedly with naval intelligence officers in their efforts to identify secret Communist agents in the armed services.

Above all, the American people should be grateful to Chambers for preserving the microfilms and the other documentary evidence of the deadly germs in the bloodstream of our Nation. Chambers could have destroyed all the evidence and been the better off for it. His possible error of judgment in not bringing forth the precious evidence earlier is inconsequential as compared with the enormity of the error committed by those who refused to heed his warnings.

Punishment on any technical ground or severe censure by the press of the course of action pursued by Whittaker Chambers would be punishing the American people by discouraging any further disclosures. The great challenge of the Chambers-Hiss affair is how to unearth and expose the entire subterranean labyrinth installed within America by Soviet technicians.

The Government of Canada knew how to meet this challenge. It rewarded the Soviet code clerk, Igor Gouzenko, who came forward with a batch of documents showing widespread Communist espionage, by conferring upon him Canadian citizenship and other emoluments.

If the Government of the United States recognized the service rendered by Whittaker Chambers to our national defense, it would encourage many an underground Soviet agent on the point of deserting the Communist fold to come out into the open. Only in this manner can we catch up with Stalin's secret brigade operating now in our midst, and keep pace with Moscow's operations in the cold war.

Cement Union Fears Price Ruling

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1949

Mr. MASON. Mr. Speaker, I am deeply concerned over the Supreme Court's decision in the so-called Cement case. My home town, Oglesby, Ill., is a city of 4,000 people, most of whom depend upon our two cement mills for a living. The pay rolls of the two Oglesby cement mills constitute the major part of the financial lifeblood of our community. No wonder I am deeply concerned over the Supreme Court's decision in the Cement case.

Mr. William Schoenberg, general president of the United Cement, Lime, and Gypsum Workers International Union, has made the clearest and most concise statement in connection with the Cement case that I have heard or read. It was carried in the January 1949 issue of the Machinists Monthly Journal, the official organ of the International Association of Machinists. Since this article explains the effects of the Court's decision better than I can, I include it as a part of my remarks for the benefit of my colleagues:

CEMENT UNION FEARS PRICE RULING

My interest in these hearings arises out of what we construe to be real dangers stemming from the ruling of the Federal Trade Commission in the Cement case, and threatening the welfare and future happiness of that group of citizens employed in the cement industry.

These dangers, of course, first threaten the industry, and because these workers and their labor union are an integral part of the cement industry they are deeply concerned about the impact of the ruling in the Cement case upon the industry.

Because of the present enormous demand for cement and the existing sellers' market, no serious ill-effects have yet been suffered by the industry in complying with the Federal Trade Commission's rulings, other than curtailment of scheduled expansion of certain production facilities and an unhealthy distortion of retail prices in some areas.

However, when every indication points to the outburst of a serious conflagration it is extremely unwise to await the actual envelopment by flames before notifying the fire department.

It is my desire to approach this vital subject matter in a logical manner and from the point of view of the workers employed in the cement-manufacturing industry.

My appearance here is in the capacity of general president of the United Cement, Lime, and Gypsum Workers International Union, an affiliate of the American Federation of Labor.

Approximately 80 percent of the workers in the cement industry are members of our organization, and we have well-established contractual relationship with practically every operating cement producer in the country.

WORKER'S FUTURE INVOLVED

At the outset, I wish to state that it has never been, and is not now, the policy of our organization at any time, in any shape, manner, or form, to interfere with the prerogatives of management to establish their marketing systems and determine their marketing areas so as to safeguard the best interests of the capital investors in the industry; the workers who invest their knowledge, experience, and intelligence in the producing of cement; and, finally, the general public, who are the purchasers and consumers of portland cement.

However, since the workers who are employed in these mills, quarries and plants are a very integral part of the industry itself, it becomes incumbent upon our international union to exert every reasonable and practical effort in order to bring about equitable relief from the impending ill effects created by the ruling of the Federal Trade Commission against one particular industry.

I am not concerned with trying to defend any collusion or conspiracy on the part of industry to fix prices or eliminate competition.

We wish it understood that our organization has at all times, as a group of law-abiding citizens of the United States, fully adhered to and complied with all the requirements of any and all laws, whether they were Federal, State, or municipal.

Nevertheless, in the Cement case we are convinced that the Federal Trade Commission's ruling outlawing "delivered prices" is beyond the intent of Congress, as expressed and defined in the Federal Trade Commission Act and the Clayton Act, as amended by the Robinson-Patman Act.

It is also our considered opinion that in this particular ruling the United States Supreme Court may not have had all the facts in the case, including the impact upon our

economy as will result, in due time, from enforcement of the Federal Trade Commission's contention.

THE PRICE SYSTEM IN CEMENT

Portland cement is an exceptionally heavy commodity and, therefore, is not generally shipped to markets too distant from production site.

Because of freight costs, cement is seldom shipped any farther than within a radius of approximately 600 to 700 miles, yet in the past portland cement was sold within the larger cities of the United States much at a uniform price.

As an illustration, in the city of Chicago it was immaterial whether the purchaser bought from the nearest portland cement producer (Universal Atlas Cement Co., at Buffington, Ind.) or from the Lehigh Portland Cement Co., the Dewey Portland Cement Co., or the Lone Star Cement Corporation, or others.

The distances between Chicago and the nearest manufacturing plants of the other companies mentioned range from 100 to 250 miles; nevertheless, the price of cement in Chicago, depending upon the type, was more or less the same.

Under the present ruling of the Federal Trade Commission, as we understand it, each of the above companies must use a f. o. b. mill price for marketing their product.

Thus, due to different freight costs (added to f. o. b. price) controlled by distance of each mill from Chicago, prices for the same highly standardized types of cement are quite unbalanced.

In normal times, this condition will simply result in a virtual monopoly of the Chicago market by the closer producers, for we cannot visualize any purchaser being willing to pay even 5 cents per barrel more in order to purchase from a particular producer.

Under the above conditions, as a matter of necessity, for a cement-producing company to remain in a competitive position they would be compelled, in our judgment, to move large aggregates of their entire plants, including movable equipment, closer either to Chicago or some other cement-consuming areas.

MILLS MUST BE NEAR SUPPLY

That in itself, of course, would be wrought with many difficulties, for in order to produce portland cement economically mills must be located near the source of the raw material, where the stone is quarried.

Thus, the moving of plants or the building of new installations well-removed from the source of raw material, thereby placing them near to markets, would involve the hauling of raw materials long distances and, necessarily, add materially to the cost of producing cement in the new location.

The dividing of a present-day portland-cement-producing plant into two or three separate and smaller units would, indeed, be a costly process.

Overhead expenses would be heavily increased, for instead of having one group of executives in a supervisory capacity this would entail three such groups.

In addition, and disregarding the above burdens, it is our judgment that the three subdivisions would not be able to produce the equivalent number of barrels of cement of the one integrated plant.

From the foregoing description of plant disruptions and removals, the genuine dangers confronting the cement workers become vividly apparent. We find that within the cement industry the turn-over of workers is very low.

Generally speaking, the workers are old-time employees of their respective companies, many with 25 to 35 years of service. Often we find that the second and third generations are already employed in a particular plant or by a particular company.

Because cement plants are now located at the source of the raw material, a great majority of the plants are in rural districts.

Even at that, because of manufacturing conditions and problems peculiar to the industry, were it logical to assume that if necessary raw materials were available on La Salle Street in Chicago, or on Broadway in New York, or on Chestnut Street in Philadelphia, the industry still would not build a portland-cement plant in these fine cities.

As mentioned, cement plants are located in very small communities—the community, indeed, having grown around the cement plant.

As these cement plants grew up, the workers built churches and homes for their families, and schools for their children, in which all of their savings and entire equity in life are involved.

The moving or closing of any of these large cement plants, or even a part of a plant, would disrupt the community life of these small towns, because these small towns are more often one-industry communities.

At that, it would be impossible for most of these workers to migrate to new locations because of family conditions and other reasons, and it would all result in the creating of small ghost-towns, such as we have experienced in coal-mining communities after the supply has been exhausted.

I assure you that, in my opinion, the foregoing calamities to the workers would not occur in just a few isolated cases but, due to conditions peculiar in the industry, such would become the general rule.

OTHER WORKERS INVOLVED

The cement workers have been deeply concerned during the past several years about the apparent unsound reasoning of the Federal Trade Commission on the question of "delivered prices" as they affect their industry.

Nor are only the workers in the cement industry involved in this probable calamitous situation, but also the lime, gypsum, and workers in the allied building-materials industries, for the products of these plants are also heavy commodities, on which shipping costs are a vital factor in competitive selling prices.

Equally threatened by such dislocations and subsequent miseries are literally millions of other workers in various industries, such as iron and steel and their fabricating industries, rubber, tobacco, food products, and most basic industries.

DELIVERED PRICE WIDELY USED

Perhaps it is most fortunate for the cement workers that this question of delivered prices affects such a large segment of our industrial economy, or else the cement industry might have become completely demoralized and severely crippled by the Federal Trade Commission's ruling before this dangerous condition was fully recognized and remedied.

I do not profess to be either an economist or an authority on marketing and selling practices or customs, yet, as a practical-minded person, it does seem strange that the welfare of the cement workers should be so seriously jeopardized by an unsound Federal Trade Commission ruling, when every day thousands of other business concerns employ the same principles in their sales methods as are involved in the delivered price method.

May I utilize some of the committee's time by briefly describing a few of the everyday and normal practices which apparently the Federal Trade Commission failed to realize would also be adversely affected by the marketing principle they have enunciated in the Cement case.

1. In Chicago, you may purchase the Chicago Daily Tribune right in front of the Tribune Building for 4 cents per copy.

When you buy the Tribune 50 miles away, in suburban Maywood or Chicago Heights, you also pay 4 cents per copy, although it must cost something to deliver it from their Chicago plant to the neighboring communities.

2. In my pocket I have a package of ordinary "Vicks" cough drops. On the package is imprinted the price of 10 cents.

These cough drops are made and packaged in Philadelphia. They sell for 10 cents regardless of whether you buy them in Chicago, New York, Philadelphia or Washington.

3. The Federal Government follows this same principle, particularly in the Post Office Department. To have an ordinary letter delivered within the city limits of Chicago, one must affix a 3-cent stamp thereto.

For the price of the same 3-cent stamp, the Post Office Department will also deliver anywhere in the continental United States an ordinary letter posted in Chicago.

In many, many other cases similar principles prevail throughout our economic life. They are essential parts of our highly organized industrial set-up.

INVITING CHAOTIC CONDITION

Now, it apears inevitable to me that should we knowingly permit the Federal Trade Commission to change and eliminate these customary "delivered price" selling practices, so widely prevalent throughout industrial America, we are virtually inviting chaotic conditions within our economic system.

My intense interest in the question, and my opportunity to observe conditions, has taught me that what is true of the situation concerning the portland cement industry and its employees is equally true with respect to a vast number of other industries and the little towns and industrial communities scattered over America.

In reality, those who will be most adversely affected are the thousands of workers who have established, built, and paid for their modest homes; where they have brought up their children; established schools for their education and churches for their religious worship; and where the small-town merchants, and, in fact, the whole life of these little communities, as well as the families of these workers, depend upon the pay rolls of these widely scattered units of manufacture.

I know that what will happen to the little towns and settlements around the cement plants will be repeated, time and again, in hundreds of other similar situations involved with scores of other industries, all of which may be affected alike.

They will be made into ghost towns, and their inhabitants will become displaced persons. This, we are striving so hard to prevent. Collectively, we of the American Federation of Labor have been grateful and happy at the recent trend toward locating manufacturing enterprises in the little towns and hamlets of America.

REVERSING DECENTRALIZATION

We have felt assured that the effects of this decentralization of industrial production would be highly conducive to our national well-being, safety, and security, both in time of peace as well as in the event of any future military conflict.

This trend definitely appeared to improve and strengthen the position of the many thousands of small, single-unit manufacturers, generally described as little business.

Now, there is conclusive evidence and fact that the rulings of the Federal Trade Commission not only threaten to disrupt this trend but actually to reverse it.

Gullible's Travels

EXTENSION OF REMARKS
OF

HON. ROBERT F. RICH
OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Alfred Hassler, from the Christian Century for February 9, 1949:

GULLIBLE'S TRAVELS

(By Alfred Hassler)

I

It was in the year of our Lord 1949 that I, Jason Gullible, having looked to my affairs, written my last will and testament, and bid fond farewell to my loved spouse and dear children, found myself standing amid my bags and bundles on the dock at New York, waiting to board the vessel that was to take me on the amazing voyage that will be recorded here.

My ship was the bark *Hurst Press*, and a tight, seaworthy craft she was. While she could not take me all the way to my destination—that being a landlocked country—she did her best, and much of the success of my mission I attribute to the *Hurst Press* and her captain, William Randolph.

This mission of mine was, in short, to see for myself the wonderful Swiss people and to discover the secret by which they, a small nation, had managed to remain at peace while all their neighbors were at war. These are parlous times for my own beloved country, whose people, loving peace, yet seem constantly threatened with war, and our accustomed tranquillity is rent with dissension over the question of how best to assure continued peace.

Truth to tell, the answer to this question was already clear to me before I ever arrived in Switzerland, the matter having been explained to me by my doughty captain, William Randolph, who was brimful of admiration for the noble and courageous Swiss people. One conversation I had with him will indicate the force of his personality and the logic of his thinking.

"Captain Randolph," said I one evening as we stood together on the deck, "how did the Swiss remain at peace during the war that so recently scourged the world and raged at their very borders?"

Without removing his pipe or opening his lips, the captain answered succinctly: "Peacetime compulsory military training. It never fails."

"You mean," I interpreted, "that the sight of a strong Switzerland, prepared to defend herself, was enough to keep the Nazi hordes at bay?"

The captain nodded. "Aggressors respect strength and only strength," he explained crisply.

"Captain," I asked tensely, "how can our own dear country keep aggressive powers at bay and remain at peace?"

The captain peered first over his left shoulder, then over his right. Assured that no subversive characters were eavesdropping, he replied in a lowered voice: "By strength. By adopting peacetime conscription of all our young men. By seeing to it that every youth learns the art of killing by the most advanced methods. By taking them from their homes while they are yet in their formative years and imbuing them with the military virtues: unthinking obedience to orders, and reliance upon force as the ultimate means of settling all disputes."

"Will that work?" I inquired.

"It's worked for the doughty Swiss," retorted the captain. "Isn't that proof enough?"

So the reader will understand that I had the answer already, and that the rest of my travels was primarily to see for myself how well the captain's formula had worked.

II

I will not weary my reader with an account of my travels through France to Switzerland, except to record a curious conversation that I had on a train with a man who professed to be French.

The day had been long and tedious, so when this traveler entered my compartment I welcomed the chance for diversion. In my fluent French, which has served me well in many a New York restaurant, I inquired as to the state of his health. Glancing at me curiously, he responded in imperfect English. His unwillingness to converse in his native tongue aroused in me suspicions which his later remarks served to heighten. (In my own beloved country, I may say, we have not always been sufficiently suspicious of such actions, which frequently betray the character we label subversive, and it is only in very recent times that a healthy distrust of everyone has become a part of our national life.)

In any event, when my companion asked the purpose of my trip, I recounted to him my desire to see for myself how peacetime conscription of young men had helped the Swiss to remain at peace. When I had finished, he glanced at me quizzically.

"Have you stopped off in France?" he inquired.

"Only long enough to change from boat to train," I replied courteously.

"Look," admonished my companion, pointing out of the train window, and I saw we were passing by one of those tragic villages that were completely destroyed by bombing and shellfire during the late war.

"You should have stopped in France," my fellow traveler continued sadly as we watched the shattered walls and chimneys. "La belle France had peacetime conscription, too, for many years before the war. La belle France had the strongest army and the biggest trained reserve of any country in the world. It did not save her from war."[1]

My suspicions of my neighbors's character were instantly confirmed, and I lapsed into a dignified silence, that being the only way of avoiding contamination from subversives. After a few tentative efforts to renew our conversation, my companion drew from his bag a volume on modern mythology and proceeded to read.

III

In Switzerland I was immediately impressed by the way in which compulsory military training has succeeded in locating many very high and very steep mountains about the country, thus increasing the hazards of invasion enormously. This served to heighten my admiration for the doughty Swiss and to increase my resolve to secure such compulsory military training in my own country.

Safely established in a comfortable hostelry in Berne, I proceeded to cultivate the acquaintance of one Colonel Yodel, who kindly offered to act as guide on my trip. Here also I made the acquaintance of an obstreperous individual who introduced himself as However Butt. He fastened himself to me like a leech and would not be shaken off during the remainder of my trip.

My first inquiry of the brave colonel was as to the number of young men required to take military training in Switzerland.

"Every last one of them," replied the colonel, "except the unfit."

"Ah," said I, "that would explain why an aggressor nation would fear to attack you, with every young man a well trained soldier."

"However," interrupted However Butt, "their training period is for only about 4 months. Polish young men were each trained for 2 years, and the nazi armies invaded and overran Poland in 19 days."[2]

"Oh," said the colonel complacently, "but Switzerland is Switzerland, while Poland is only Poland."

I would have thought that the conclusive logic of this remark would silence Butt, but he was as impudent as ever.

"Yes," said he. "Switzerland had in 1939 a population of only 4,000,000 against Poland's 32,000,000; no standing army against Poland's army of 266,000 and reserves of 1,500,000; a professional military establishment of 337 officers and 23,000 trainees[3] against Poland's yearly crop of 200,000."

This exchange appeared to me totally unhelpful to my quest, so I suggested that it be discontinued, and it was.

IV

I was most anxious to see some of the famed Swiss engineering accomplishments, and Colonel Yodel suggested that we visit the St. Gothard and Simplon railway tunnels. Since However Butt seemed equally desirous of visiting the tunnels, we set out without further ado.

On the way, Colonel Yodel, who is one of the top-ranking Swiss officers,[4] spoke enthusiastically of the role of peacetime military training in keeping the Germans out of Switzerland during the war, of the effective mobilization of these trained reserves, and of the determination and courage with which they prepared to defend their borders. I was ecstatic, and could see in my mind a picture of the grim Swiss soldiers confounding the nazi hosts.

"However," interrupted However Butt, a trifle drily, "you had no standing army and your total reserves of all kinds totaled only 450,000, didn't they?"

"True," said Colonel Yodel.

"And you had no armored forces of any size, no tanks, and your airforce consisted of only 5,000 men, all in the reserve?"

"That about describes our situation," said the colonel stiffly.

"And that kind of army struck terror into the German Army of 9,000,000 men, with 10,000 fighting planes and the most highly mechanized forces in the world? An army of which sections numbering 300,000 men smashed the combined Dutch, Belgian, French and British armies in little more than a month of fighting?"[5]

"I can only tell you what happened," repeated the colonel in an offended tone. And since this conversation, too, seemed irrelevant, I bade Butt be quiet. He thereupon made a rude noise with his lips, but said no more for the time being.

V

Unfortunately, Butt resumed his impudent ways at the tunnels. Breaking in on Colonel Yodel's recital of the size and capacity of the tunnels, Butt asked if it were true that both tunnels had been mined by the Swiss during the war.

"Yes," said the colonel, "that is true."

---

[1] The French Army in June 1939 numbered 800,000 men, backed by a trained reserve of 5,500,000. "As of June 1939, the French Army is still the strongest all-around fighting machine in Europe."—Time, June 12, 1939.

[2] Germany invaded Poland September 1, 1939; took Warsaw, last seat of organized resistance, September 28.

[3] 1937. See Report of President's Commission on Universal Military Training, p. 297.

[4] The highest Swiss Army rank in peacetime is that of colonel.

[5] Germany invaded Belgium, Holland, and Luxembourg May 9, 1940. Holland surrendered May 15; Belgium, May 28; France, June 17.

"Isn't it also true," persisted Butt, "that three-fourths of the rail traffic between Germany and Italy, carrying vital war materials and other freight, passed through these tunnels?"

"Correct," said Colonel Yodel.

"And that Switzerland informed the Germans and the Italians that the tunnels would be blown up at the first sign of invasion?"

"Absolutely right," thundered the colonel proudly. "And that made them stop and think, believe me."

However, Butt looked at me and winked. "It seems to me," he said sweetly, "that the tunnels did more to protect you from invasion than all your trained soldiers."

But this was such a fantastic statement, and so obviously inspired by unworthy motives, that I again bade Butt be silent, and spent an agreeable half-hour listening to the colonel repeat how military training had saved his country and kept it at peace.

VI

My visit was nearly at an end, and I spent the rest of my stay there in the very pleasant occupation of marveling at the way in which the Swiss have combined compulsory military training with true democracy, though noting also that Switzerland, like my own dear country, numbers among its citizens a proportion of malcontents who have no compunctions about criticizing their government most disloyally. Some of these subversive characters, whom I met through the officiousness of However Butt, insisted that I visit the prisons where some conscientious objectors to military training were locked up. The sight of these men languishing in their cells at first raised some doubts in my mind, but the warden in each case assured me that they were receiving first-class treatment, and pointed out to me that a personal conscience is a luxury in such times as these, and must be paid for, which is a piece of wisdom I hope to remember for future use.

Others of the critics I met pointed out to me the strong influence the military exercise even in the earliest grades of public school, and asked me if that was in line with the conception of true democracy held in my own dear country. Others referred to the fact that Swiss women, while legally liable to be conscripted, are not permitted to vote. However, while these seemed somewhat deplorable weaknesses in the Swiss democracy, I could not believe that they were in any way connected with compulsory military training.

On the last day of my visit Butt insisted that I must talk with a professor of economics at the nearby university, and though I protested vigorously, I had to yield.

Professor Profitt proved to be a fine-appearing man, and he and I had a most interesting discussion, though with no bearing that I could see on the problem of military training. He explained to me how the Swiss had done business with both sides during the war, and how important much of this trade had been to the Axis nations, cut off from other sources of materials by the British blockade. At this point Butt, who had been sitting silent in the corner, interrupted:

"So it really was to the interest of Germany to have Switzerland at peace, professor?"

"By all means," agreed Professor Profitt.

"That's all, brother," said However Butt, and bade the professor good day.

I record this incident merely to show how profitless were these experiences with However Butt, and to show why I was forced finally to send him away. When one is on a serious mission such as mine, one cannot afford to be distracted by such irrelevancies, however well intentioned.

VII

Three days later I was once again aboard the *Hurst Press*, having passed as rapidly as possible through Austria, Poland, Holland, and Belgium. In each of these countries I encountered seedy characters who tried to deceive me into believing that they had had compulsory peacetime training before the war, and more rigid than the Swiss system, but had not been able to stay out of the war or to vanquish the hosts of Germany and Italy (which they said also had had military training).

On board the *Hurst Press* the days passed pleasantly. To Captain Randolph I recounted all that I had seen and heard, not excluding the strange comments of However Butt, but this person the captain dismissed as an obvious subversive, and congratulated me on the wisdom and insight that had enabled me to see the truth in spite of Butt's attempts to deceive. And so I came home to my loving family, and shortly thereafter redoubled my efforts to assure the adoption by my own beloved land of universal-military training, since surely my travels revealed that such a course, having kept doughty little Switzerland at peace, can do the same for us.

Small Business Should Be Small Business

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1949

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the United Mine Workers Journal of February 15, particularly with respect to that portion of the editorial which refers to the National Federation of Small Business and its director, George J. Burger, who so ably represents it here in Washington:

BIG SHOTS DUCK UNDER COVER OF SMALL BUSINESS IDENTITY TO DECEIVE PUBLIC

Professional public relations fakers have long looked upon the legislative activities of State legislatures and the Federal Congress as the most lucrative of pay-dirt fields.

The depletion and depreciation provisions of tax bills, as well as the tax rates, legislation to curb monopolistic practices, new laws giving Government agencies power to force observance of fair trade practices, legislation to curb labor unions and stimulate a song of hate among the populace against the men who perform America's work, and general institutional advertising to promote good will among the voters, and what have you, all in all constitute the basis for the intangible package which the shrewd public relations salesmen peddle to businessmen, big and little.

Just how these fakers succeed in deceiving men who head large corporations into believing that the people turn off their radios, pass up dances and shows, refrain from visiting sick friends and sit up to the wee hours of the morn to read their advertising and pamphlet copy, as well as the editorials and special articles that they allege appeared as the result of their "in" with publishers here and there is something that has perplexed the legitimate editorial and advertising contingent for a long time.

A three-column page-length ad published in the New York Times February 2, stresses the over-all gullibility of businessmen whom the fakers cash in on. The ad copy is directed to the attention of labor leaders, and its 17 paragraphs attempt to show why the NAM-Taft-Hartley law should remain intact. The ad is signed by National Small Business Men's Association, Inc., DeWitt Emery, president.

The ad carries the address of the national association as Akron, Ohio, with two branch offices, one in Washington, D. C., and the other in Chicago, Ill.

The ad structure smelled to us on first reading as the hue and cry of a phony setup. We discovered that the Emery outfit may be milking small-business men on the side but, in the main, its clientele is big industry, with the take largely from the coffers of rubber and oil.

The National Independent, dated January 1948, refers to DeWitt Emery as a promoter of small business outfits, and says this:

"One of Mr. Emery's mailing efforts contains a listing of prominent contributors to his foundation. It includes, among others, the following firms: Firestone Tire & Rubber Co.; B. F. Goodrich Co.; Goodyear Tire & Rubber Co.; Pure Oil Co.; Socony Vacuum Co.; Standard Oil Co. of Indiana; Standard Oil Co. of New Jersey; Texas Co.; Chrysler Corp.; DeSoto Motor Corp.; Plymouth Motor Corp.; Libby-Owens-Ford Glass Co.; Sears, Roebuck & Co.; Inland Steel Co.; Republic Steel Co.; American Rolling Mill Co.; Electric Boat Co.; First National Stores, Inc."

The contributors read more like a roll call of the topnotchers listed in the American blue book of industry. Reading the list, we cannot find a single company which through the years has not been able to take care of its interests against all comers—including Government and labor.

It isn't anything new to learn that these companies would contribute to a fund to conduct advertising against any amendment, no matter how sound or practical, to the NAM-T-H law. It cost these concerns a wad of money, directly and indirectly, to support Taft, Hartley, and Ball, and the coterie of corporate attorneys and lobbyists who formed the un-American antisocial legislative political pact which succeeded in double-crossing the American people by passage of the NAM-T-H law.

Since the NAM and the United States Chamber of Commerce are presently refraining from an open advertising antirepeal publicity campaign, big business heads who always sit back and try to escape the odium of the misgivings of the United States Chamber of Commerce and the NAM are resorting to other avenues to deceive and mislead the public. Hence, the present use of the alleged National Small Business Men's Association.

There is a national small-business men's organization. It bears the name of National Federation of Small Business, Inc.

The federation's headquarters is San Mateo, Calif., and its Washington office is in the Bond Building. George J. Burger directs the affairs of this federation. It publishes the National Independent, the magazine that exposed Emery's big-business contributors.

Mr. Burger has informed the UMWA that Mr. Emery, instead of aiding small-business men, actually fought for the big rubber companies by strenuously opposing the adoption by Congress of the rubber-tires bill, the purpose of which was to give full and adequate protection to 300,000 retailers of tires throughout the United States.

Further investigation reveals that Congressman PATMAN and numerous others have looked upon the Emery set-up as a phony for a long time. Congressmen have no hesitancy in declaring the Emery outfit a fake. And, furthermore, they understand to the fullest that Emery is financed by big industry—rubber and oil, for the most part.

One of the "because" reasons contained in the Emery ad attacking repeal of the NAM-T-H law states that—

"This law requires an itemized accounting by the union to its members of all receipts and disbursements."

If our information is correct, Emery does not personally believe in the same accounting methods in the conduct of his private phony Small Business Men's Association that he so ardently praises as a provision of the NAM-T-H law.

Investigation reveals that Emery has had numerous financial squabbles with his coconspirators in the conduct of his public relations set-up. According to one who occupied a post as treasurer of the set-up, Emery has persistently refused to let the books be audited and insists on performing the duties of the treasurer to the exclusion of all others.

It is said that the organization has approximately 500 members, and 2,500 affiliated members—who evidently pay a lesser tax. The membership roll is merely a list of donators to the Emery set-up. The outfit is said to hold a phony convention now and then, at which time an advertising program is published that collects from $20,000 upward in advertising from the gullible big moguls.

The Journal has insisted for a long time that Congress should call before it the leading lights of phony business organizations and phony public relations set-ups—whether they deal with transportation, industry, or labor—and reveal the manipulations of these sinister endeavors so the public can learn the identity of the culprits who are employed and financed by big business to deceive the American people.

Right now—when we have a peak load of social legislation in the congressional hopper—would be an ideal time for Congress to do something about these separate and collective packs of monetary wolves and brand them for what they are.

United Farmers Demand 100 Percent of True Parity

EXTENSION OF REMARKS
OF
HON. AUGUST H. ANDRESEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 31, 1949

Mr. AUGUST H. ANDRESEN. Mr. Speaker, the Committee on Agriculture of the House of Representatives is holding hearings on the long-range farm program. Members of the committee are anxious to secure information from all reliable sources on the needs and desires of American farmers.

On February 1, 1949, Mr. Martin B. Tongen, of Zumbrota, Minn., president of the United Farmers of Minnesota, made a statement on support price and parity before the Committee on Agriculture of the Minnesota House of Representatives. His statement will be of value to Members of Congress engaged in the drafting of the long-range farm program. It follows:

STATEMENT OF MARTIN B. TONGEN, STATE PRESIDENT OF THE UNITED FARMERS OF MINNESOTA, BEFORE COMMITTEE ON AGRICULTURE OF THE MINNESOTA HOUSE OF REPRESENTATIVES

I am a farmer from Goodhue County, Minn. I farm 140 acres near Wanamingo and am engaged in diversified farming of grain, hogs, poultry, beef and principally dairying.

Although my farm work keeps me rather busy, I have been elected to represent the United Farmers of Minnesota, Inc., as their president and am also vice president of the national organization. Other members of the State board of directors attending this hearing are Melvin Ramstad, Dennison, Minn., and Edward Swanson, Cannon Falls.

I will now explain why we are here:

The State board of directors of the United Farmers of Minnesota, Inc., met in Wanamingo January 14 and voted to ask Representative Roy L. Voxland and Senator Grover C. George to request the legislature to "press Congress to enact a farm program of 100 percent true parity for all farm products under a revised formula that shall include all necessary costs of production and reasonably sufficient wages for all productive farm labor."

We also went on record "favoring federally financed, but privately owned increased storage facilities for farm products to help protect both producer and consumer from sudden disastrous fluctuations in farm prices."

This action corroborates similar action taken previously by the Minnesota Farmers Union through four State legislators, Odean Enestvedt, Reuben Felt, Otto Clark, and Curtis Olson. This action is in variance with the Farmers Union program, however, in fact that their request calls for 100 percent parity while our program calls for 100 percent true parity, although both organizations call for a revised formula.

We are most interested in this revised formula. Parity means equality, but under the present way of figuring parity it is far from equality for the farmer. I will try to prove this to you.

In looking over the past record, back to 1929 and all the way up to the end of 1946 (the latest available records from the United States Agriculture Department) we find that the per capita net income of the farm people was never one-half of that of the rest of the population in any year. The average for farmers was about one-third that of other people. Yet the same table tells us that the farmers had all the way from 61 percent of parity in 1932 to 168 percent parity in 1946. In the latter year at 168 percent of parity our per capita net income was $620. That of the rest of the population was $1,326. Now, how can that be called parity at all?

Therefore we stipulate true parity. Farm business must be handled like any other business to be successful. We must have support prices under an up-to-date revised formula that will include, as in any other business, all our necessary costs of production. When we speak of cost of production we mean depreciation, soil depletion, interest, taxes, an equitable return on our investment, and wages for farm and family productive labor at a reasonable rate necessary to maintain a high American standard of living.

Such a support price would only give us equality which is only just and sound. No consumer expects anyone to operate and receive prices below cost. You may call this 100 true parity or simply true parity.

Now we hear so much about the danger of too high support prices. The argument is that they may create surpluses. I will try to prove this is not so. In regard to this I have some interesting figures from the United States agriculture census. The population in 1890 was 63,000,000; in 1944 it was 138,000,000. An increase in 54 years of 120 percent.

In 1889 we raised 34 bushels of corn per capita.

In 1944 we raised 20 bushels of corn per capita.

In 1890 we produced about one hog per capita.

In 1945 we produced about one-third of a hog per capita.

In 1889 we raised 13 bushels of oats per capita.

In 1945 we raised 7 bushels of oats per capita.

In 1889 we raised 7 bushels of wheat per capita.

In 1944 we raised 7 bushels of wheat per capita.

These are figures for the whole United States. Our production of wheat per capita, even with tremendous wheat crops of the war years is no greater than production per capita in 1889. The last depression of the thirties was said to be partly due to surplus production. This was not the case. In 1934 we imported 3,600,000 bushels of wheat more than we exported. In 1935 we imported 30,709,000 bushels of wheat more than we exported. In 1936 we imported 26,340,000 bushels of wheat more than we exported and during the war in 1943 we imported 96,201,000 bushels more of wheat than we exported. (From U. S. Department of Agriculture statistics.)

During the days of the acreage allotments and wheat penalties we imported more wheat than we took out of production here at home. It was these imports during this period of depression that brought about the depression to a great extent. These imports came in at prices far below our cost of production. From 1932 to 1936 we imported more wheat than we exported, but we were made to believe that we had a surplus of wheat. In this same period farm net income in general was 61 percent, 81 percent, 83 percent, 107 percent, and 99 percent of parity respectively under our present parity formula.

Proper distribution is the problem; surplus is not the problem. Our country normally consumes 90 percent of its farm production; of the remaining 10 percent we need to store some from the fruitful years to prepare for the lean years and for emergencies; we can export some at a world price, and we can find new uses for increased production.

Any production consumed domestically must have a true parity support price to protect our national economy. When farm prices are below true parity, labor and industry suffer with agriculture. You cannot have low agricultural prices and have full employment. There exists a 1-1-7 economic formula. Every $1 of gross farm income generates $1 of total factory pay roll and $7 of national income. This is conclusively proven over the past 25-year records. With our high national budget and our tremendous national debt (which is equal to a mortgage of $220 per acre on all farm land in the Uinted States), our Nation cannot let agriculture suffer and still stay solvent. We must look at the problem with a long-range view ahead. A revised formula must be established to support agricultural prices for all farm products and sufficient storage capacity must be built to store crops and produce from the fruitful years to tide us over the lean years.

We must encourage foreign trade but not at the expense of agriculture. Any product we can raise here must be protected by a tariff high enough to bring the price of a competing imported product equal to true parity or the cost of production floor price. Under our high American standard of living and high cost of production we cannot compete with foreign labor at lower living standards.

As legislators you know that to make appropriations for the numerous increased costs of State government you are faced with raising a great deal more money necessary to satisfy the wants of our modern high standard of living. You are faced with this problem at a time when agricultural prices are sinking rapidly, unemployment has started and business is slackening. Judging from the past we know that the total factory pay roll will decline within 6 months to an extent approximately equal to the present decline in farm income. Farm buying power in Minnesota has dropped 19 percent in the last year (according to report from university agriculture economists). You can look for the factory workers buying power to drop 19

percent within 6 months, business and industry will follow suit and the national income will decline proportionally, unless something is done soon.

The farmer is getting tired of making his investment each year and plans for full production without having any assurance of what market he will have for his year's work. Support prices we have had during and after the war have helped raise production to record heights and have assured the American people of plenty of food and raw materials for industry and a high standard of living. With sufficiently high support prices that will guarantee the farmer at least our costs with a fair return for our farm and family labor, we will be encouraged to reach still greater achievement, will in turn supply sufficient raw materials for industry, food for the consumer, buying power for everyone, and a national income that will prevent bankruptcy.

This plan is the best European recovery plan we could extend to our friendly neighbors overseas. It is a sound plan that will put them on the road to recovery quicker than any other plan.

The United Farmers ask you to pass a resolution to memorialize Congress and our President to establish a floor price for all farm products at not less than 100 percent true parity, or, as we call it, the average cost of production. We also ask that Federal loans be extended to private enterprise to construct sufficient storage facilities for farm products.

Farmers Home Administration Provides Assistance to Farmers

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1949

Mr. TEAGUE. Mr. Speaker, last summer I visited a number of farms in my district in Texas and I obtained first-hand information on the work being done on the farms by our governmental agencies, especially the work of the Farmers Home Administration. Farmers who are not able to borrow from banks or other private or cooperative credit sources may receive a loan from the FHA to help operate their farms, to purchase a family-size-farm unit, or to make improvements on their farm.

An additional service has been added by the Farmers Home Administration which I believe will prove to be of great help to our farm economy. Banks and other private lenders can make certain approved loans to farmers and the FHA will guarantee the repayments. This new mortgage-insurance program offers a greatly needed service to supplement the program of farm-operating loans, farm-ownership loans, and the farm-improvement and water-facilities loans now being made.

Loans and insured mortgages made by the Farmers Home Administration have proven to be very sound investments from the financial standpoint as well as from the necessity of helping our operators of small farms to help themselves. Sufficient funds should be made available to the Farmers Home Administration to encourage more tenant farmers to become owners, and to provide financial assistance to owners of small farms to make necessary improvements to operate more efficiently. I trust that the Congress will make adequate appropriations to take care of these needs.

Mr. Speaker, under leave to extend my remarks in the RECORD I wish to include a newspaper report regarding the Farmers Home Administration which was published in the Fairfield Recorder, Fairfield, Tex., on February 17, 1949:

FARM EQUIPMENT BOUGHT BY VETS THROUGH FHA

About 41 percent of the $81,000,000 loaned by the Farmers Home Administration, United States Department of Agriculture, during the year went to returned servicemen to buy or equip farms, it was pointed out in the agency's annual report for 1948, released through the Dallas State office by State Director L. J. Cappleman. Veterans who are becoming established in agriculture made up about a quarter of the 320,000 farmers participating in the program.

Supervised credit has proved well suited to the needs of many young veterans and their wives whose financial assets and farm management experience are limited but who desire to become successful operators of family type farms, the report stated. Veterans receive preference for all loans. Special loans were made to 141 disabled veterans who bought farms suited to their abilities.

The annual report pointed out that many farmers are still earning low incomes. Despite the relatively high prices and good yields of recent years, the average gross income from half the Nation's farms is less than $1,000 a year.

"A large part of our farm population has not shared to a very great extent in the Nation's prosperity," wrote Dillard B. Lasseter, administrator, in a letter to the State director. "This fact is often overlooked. It can be completely realized only by examining the limited farming facilities of many rural families."

The report said that additional working capital and better farming methods are two of the main needs of low-income farmers whose output is limited.

Only those farmers who are not able to borrow from banks or other private or cooperative credit sources are eligible for assistance from the Farmers' Home Administration.

Applications for credit increased over the 1947 totals, but fewer loans were made because of smaller appropriations. There were 117,885 farm-operating loans, 1,904 direct farm-ownership loans, and 884 water-facilities loans made during the 12 months ending June 30, 1948. The number of families off loans in the same period totaled 146,000.

A new mortgage-insurance program put into effect in October 1947 aided 352 farmers in 33 States to buy, enlarge, or develop farms. Banks and other private lenders advanced $2,490,910 for these loans, and the Farmers Home Administration guaranteed the repayments.

The agency said its field workers reported gains in crop diversification, new sources of income, widespread adoption of modern practices on borrowers' farms. "The great majority of the families have built up their herds and flocks, worked out soil-conservation programs, improved their homes," the report stated. "Farmers and their wives who once could not afford to enter into community affairs are becoming active in church groups, joining farm organizations, and taking a leading part in neighborhood activities. Children are finishing school with chances for college or special training."

Statement of John G. Wright

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mr. REED of New York. Mr. Speaker, the dying American Eagle turned his head and saw that the arrow piercing his heart was feathered from his own wing. So it is with the Marshall plan dollars directed against our industries.

Under leave to extend my remarks in the RECORD, I am inserting a statement made by Mr. John G. Wright, president of the Boston Wool Trade Association, before the Senate Foreign Relations Committee on S. 833, a bill to amend the Economic Cooperation Act of 1948:

My name is John G. Wright, of Boston, Mass., where I am engaged in the wool business. I appear here today as president of the Boston Wool Trade Association. This association has among its members about 650 individuals and firms engaged in the business of buying and selling and manufacturing wool. Almost all of the wool consumed in the United States is handled through the members of this association and most of the wool which is manufactured in the United States is manufactured in the northeastern and middle Atlantic States.

The business of buying and selling wool is practically at a standstill today, and many wool mills are either shut down or are running at curtailed capacity, resulting in much unemployment.

The causes for this stagnation of business are several. This country consumes annually approximately one billion pounds of wool, less than one-third of which is grown in the United States. A large portion of the fine wools which this country is required to import is grown in the British colonies, particularly in Australia. This means that American business must convert their dollars into pounds sterling to pay for such wool, and the British government compels us to pay $4.03 for our pounds sterling (the official rate), whereas some European nationals with Marshall plan dollars are permitted to purchase their sterling in the free market at a cost of approximately $3.20, which gives them a 20 percent advantage over American business. This has had the effect of increasing the prices of Australian wool to the point where it has been, and is, impossible for American business firms to compete in the purchase of such wools. Some of this wool is purchased by countries with Marshall plan aid and then is manufactured by the purchasers into yarns and cloth and shipped to the United States where the seller receives dollars with which he is again able to purchase cheap sterling.

On behalf of the members of the Boston Wool Trade Association I wish to present for the consideration of the committee the following recommendations which the wool trade believes would solve this problem:

1. That American business be permitted to purchase sterling at whatever price it is offered in the market just as certain other European nationals are permitted to do today, thus allowing American business to compete with the European business in the purchase of wool in the foreign markets, or,

2. That American business be permitted to make separate exchange agreements with wool-exporting countries such as Australia, New Zealand, and South Africa. By this we

mean to suggest the dollar and the pound of these countries should be freed to find their own relative value, which course if adopted would result, we believe, in a far greater bilateral trade.

I cannot bring to the attention of this committee too forceably the fact that unemployment and further deterioration in our Wool Textile Industry will continue and become more acute unless the advantage enjoyed by certain European nationals who have access to free-market sterling, is also made available to American business.

I appreciate the opportunity that the committee has extended me in presenting the problem of our industry to the committee and in conclusion, may I express the hope that our problem will have your serious consideration.

World Government and Peace

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1949

Mr. TEAGUE. Mr. Speaker, about 160 years ago the founders of this great Nation had some very difficult decisions to make in setting up the American Republic which would be strong enough to exist and yet retain the democratic principles of freemen. These truly great statesmen resolved their differences of opinions and today we still enjoy the benefits of our form of government.

The world must also settle its differences and certainly we have made such an attempt within the organization of the United Nations. A great deal of thought is being given to proposals to form a world government by strengthening the United Nations. A group known as the United World Federalists, Inc., has endeavored to create interest in such a project which in their estimation is the only hope for permanent peace in this world.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an address by Mr. Lindsay P. Walden before the Oklahoma annual convention of the Oklahoma State CIO which deals with a most timely and serious subject, World Government:

LABOR AND WORLD GOVERNMENT

International peace is the gravest problem facing the United States and the world today as our new Congress goes into session. We of the CIO, together with other groups in this country, emerged successfully in the recent elections, and, in doing so, we rode the ship of grave domestic issues. These issues are important to us, but, let us ask, what have we profited if we conquer the domestic front and yet lose the peace of the world? The threat to peace is real, not imaginary. We may again in our generation see the workers of one nation providing and exhausting their resources, not for their domestic use but for the purpose of destroying their fellowman and the fellow workmen of other nations.

No longer can we say that "to the victor goes the spoils," but rather we must say that "to the victor goes the responsibility for all."

In order that we may understand the underlying condition that prompts this threat to our international peace, I would like to cite a portion of a statement from our own Chief of Staff, General Bradley, made on Armistice Day of last year, as follows:

"With the monstrous weapons man already has, humanity is in danger of being trapped in this world by its moral adolescents. Our knowledge of science has clearly outstripped our capacity to control it. We have too many men of science; too few men of God. We have grasped the mystery of the atom and rejected the Sermon on the Mount. Man is stumbling blindly through a spiritual darkness while toying with the precarious secrets of life and death. The world has achieved brilliance without wisdom, power without conscience. Ours is a world of nuclear giants and ethical infants. We know more about war than we do about peace, more about killing than we know about living. This is our twentieth century's claim to distinction and to progress."

Workers are vitally interested not only in industrial peace, but in world peace as well. This interest does not stem from us alone as members of the working class—we are also members of a world society, even though that society is loosely organized.

Regardless of the merits for or against a closed shop in the industrial world, we cannot have world peace unless we have a closed shop in a world organization, and membership in that organization must be open to all nations of the world. Just a closed shop in the labor movement is restricted to certain purposes and powers—a world closed shop may be restricted or limited to certain purposes and powers—that of preserving peace between nations and of preventing wars. Just as a labor organization may be operated on a democratic basis, so may a world society be run democratically. Yes, a democratic and restricted world closed shop is indispensable to world peace.

In terms of political science this closed shop means world government with limited sovereign rights not only to mediate and adjudicate disputes between nations, but also with vested rights to enforce its decrees against the individual citizens of this world order who may undertake to violate these decrees.

Today, there is a decided tendency among some people to brand all talk of world peace as communism and to brand peace advocates as Communists. Certainly, we should not make that mistake even though we are well known in our opposition to communism. It is true that in order to have world peace, a world government must accept Communist nations into its membership, but this does not mean that the other member nations must accept communism in order to be a constituent part of world government. One of the purposes of world government would be to decide disputes between a free enterprise nation and a Communist nation and thus prevent war between the two.

Communist nations so far have not appeared to support the idea of the kind of world government of which we are here discussing. Likewise, our own Government has not appeared ready to accept such a plan. Recognizing this problem, the United World Federalists, of which our own CIO secretary-treasurer, James B. Carey, is a prominent leader, in its November convention in Minneapolis, adopted the following resolution:

"A new and broader approach must now be adopted, recognizing that the problem of transforming the United Nations into an effective federation and the problem of settling the main issues between the Soviet Union and the West are inter-dependent and cannot be separated. We believe that the time has now come for a great effort to achieve a general settlement with the Soviet Union, and, as an integral part of such settlement, the simultaneous charter revision essential to lasting peace."

Someone will naturally ask "Do we not already have a United Nations for this purpose?" The answer is "yes", but the UN Charter does not go far enough to accomplish its objective. It is similar to an "open shop" as we know it in the industrial field—each affected employee in an open shop is free to accept or reject the majority decisions of the union, just as any member of the UN may accept or veto the decision of the Assembly. We today, can see the ineffectiveness of the UN Charter by looking to the wars in Palestine, China and Indonesia. No, we do not need to abandon the UN—we simply need to give it power to try disputes and to enforce its decrees, with such Charter revisions as may be necessary to that end.

Did any of you ever hear of the great war between your State of Oklahoma and my State of Texas, which was fought because of a disagreement as to the boundary between the States? Well, of course, you didn't because no such war was ever fought, but it could have been, because, a serious dispute over this issue flared into the open not too many years past. Why didn't these two States go to war over this issue? The answer is simple—we had previously relinquished a part of our respective State sovereignty to a larger government, known as the United States, which had the power to hear and determine the issues, and to enforce its decree, if necessary. If Oklahoma and Texas had not previously entered into a larger federation, most likely this actual dispute would have been determined through open warfare. My relatives and fellow workmen would probably have killed many of your relatives and fellow workmen and vice versa. Thank God, we had a Constitution and a Supreme Court.

The principle of settling differences between nations of the world is the same as settling disputes between States of our Federal Government. Yes, we need a World Federation, too.

Some people say that it is impossible to get all nations of the world to agree to enter into a world federation because of the differences in: (1) Political thinking, (2) races, (3) languages, and (4) economic interest. You know some people were just as pessimistic in 1786 and said that it would be impossible to establish a Federation of States on the North American Continent. But, it was done, in spite of the fact that:

1. There were no automobiles, railroads, airplanes, telegraph, radios, telephone, or television.
2. New York wanted to retain control over commerce and trade on the Hudson.
3. The southern States wanted to retain human slavery, while the New England States wanted to abolish slavery.
4. Virginia, the largest State, wanted popular representation in the Federation, while Delaware and several other smaller States wanted equal representation.
5. Some delegates insisted that "property was the main object of society."
6. Some delegates insisted "there never was, nor never will be, a civilized society without an aristocracy."
7. Some delegates thought that wealth, rather than numbers of persons, should determine State representation in the new federation.

Yet, with these and many other basic differences confronting these States, a new and lasting federation was created.

In 1786, it took George Washington over two weeks to travel from Mount Vernon, Va., to Philadelphia, and some delegates took over a month to attend the Constitutional Convention. Today, a delegate from any single nation in the world can go to a world conference at any place in the world, in less than two days. In 1786 it took over a month for people in Georgia to communicate with people in Massachusetts, but today it takes only a few minutes for the Secretary of State in Washington to converse fully with the

Foreign Minister of Australia or of any other nation in the world. People in South Africa today can read full newspaper accounts of political and economic events in the United States on the same day of such happenings, while in 1786 such communication would have taken months, and then South Africans would have gotten only small segments of such news.

With our modern system of communication and transportation, ideas likewise travel throughout the world quickly. Yes, people in all lands are longing for a world government at the same time. Should we now have a world constitutional convention, the results would be known simultaneously throughout the world, rather than months later, as in 1786.

Yes, world government is possible now. It has as good a chance now, as did the State Federation in 1786.

Do you want peace in our time and for our posterity? If so, let's actively let our feelings be known to our own Congress and President. Ask them to support a move for world government through the United Nations, with full power to prevent war.

Light in a Dark Place

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 22, 1949

Mr. WHITE of Idaho. Mr. Speaker, we are indebted to our good colleague, Congressman GOSSETT for giving some very important information as the result of his personal investigation of a very serious situation concerning the infiltration of undesirable immigrants—a situation that was thought to exist for some time without having definite information.

There is submitted for printing in the RECORD information concerning the admission of displaced persons:

GOSSETT ADDRESSES WOMEN'S CLUB OF CHEVY CHASE

Immigration based on need or merit should be drawn from other sources than displaced persons' camps, Representative GOSSETT, of Texas, said yesterday at the monthly meeting of the Woman's Club of Chevy Chase.

"There are 10,000,000 others in the world more worthy of immigration here," he stressed. "We should take care in this day, when fifth columns are the order of infiltration, of the folks we invite over here," he declared.

The speaker, who visited some of the DP camps in Europe, is a member of the House subcommittee dealing with immigration and allied problems.

Mr. GOSSETT said the "hue and cry" that the DP's would be killed if they returned to their countries is "pure bosh." He declared that persons in a Jewish camp outside a Frankfurt, Germany, when questioned made it clear they "didn't want to return to their countries because they wanted to come to America."

"It became a preferred status in Europe to be in an American DP camp," Representative GOSSETT continued. "We feed these people 2,000 calories a day. Many said they had no place to go, but the plain truth was there was no place they wanted to go, but America. Australia literally is begging for immigrants."

"Sentimentalists say we ought to open the door to the displaced persons," he continued. "No other country on earth operates this way. It's our door and throwing it open is not for our country's best interest.

"Some people say we must be good Christians and take in the people who have sat in our camps for years. I say this wouldn't be good Christianity—it would be stupidity."

Mr. GOSSETT warned the audience to read between the lines when they saw pictures of little children as representative of the people in the DP camps. It isn't the children who are coming over, he said.

Mr. GOSSETT said workers were not needed in this country and a club member asked why there had been a story in the news that we needed farm labor.

He replied that the displaced persons "wouldn't strike a lick on a farm."

Federal Security Agency

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1949

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a resolution adopted by the George E. Hilgard Post No. 58, American Legion, Belleville, Ill., in opposition to a single Federal Security Agency to combine the Veterans' Administration hospitals, the Public Health Service, the Army and Navy hospitals, and the Bureau of Indian Affairs:

A resolution against the Federal Security Agency as recommended by the Hoover Commission

Whereas the medical committee of the Hoover Commission recommends the creation of a single Federal Security Agency under which would be placed the Veterans' Administration hospitals, the Public Health Service, the Army and Navy hospitals and the Bureau of Indian Affairs hospitals; and

Whereas veterans' hospitalization was not competently and efficiently administered until placed in a category all its own; and

Whereas these four groups have problems and needs, individual and vital to each group, demanding individual administration for effective and efficient solution; and

Whereas the combining of this administrative authority under a single Federal Security Agency as proposed by the Hoover Commission would improve none and impair all four of the existing services: Now, therefore, be it

Resolved, That in the interest of the best possible service to the largest possible number of citizens of the United States the Veterans' Administration hospitals, the Public Health Service, the Army and Navy hospitals, and the Bureau of Indian Affairs hospitals remain under separate administrative authority: And be it further

Resolved, That our Representatives in both Houses of Congress be urgently advised to use their best efforts to defeat the recommendation of the Hoover Commission for the creation of a single Federal Security Agency.

Approved and passed this 10th day of February 1949, by the 1,057 members of Geo. E. Hilgard Post No. 58 of the American Legion in regular meeting assembled.

NORMAN BIEBEL,
Commander.
GEORGE VARONE,
Adjutant.

Indian Social Security

EXTENSION OF REMARKS
OF
HON. JOHN R. MURDOCK
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1949

Mr. MURDOCK. Mr. Speaker, with leave to print granted me, I wish to include herewith the text of a memorial, Senate Memorial No. 1, from the Senate of the Arizona State Legislature requesting immediate action by the President and Congress with respect to social security payments to Indians on reservations.

The entire country has been greatly disturbed and almost horrified by the widely published stories of the plight of the Navajo Indians during the past two winters. This present winter distress has been augmented by a natural disaster, in that the high plateau on which these Indians live has been covered deep with unprecedented snow threatening great loss of animal life and some human life. However, the distress of last winter was not so largely caused by natural disaster as an unfortunate situation due to governmental negligence. It all points up, however, to the fact that these Indians, more than any other Indians in America, lack wise and humane social security.

There is a difference of opinion as to what should be the nature of that social security, even among the friends of Indians. Some would-be friends of the Indian believe that the Indians ought to be turned loose to get their full rights and privileges as citizens from the States in which they live, which in that case would mean turning the entire problem over to Arizona. Others equally friendly to the Indians, of which I am one, believe that their care in their present condition is chiefly a financial responsibility of the Federal Government. There are various suggestions between. I have introduced legislation, H. R. 1921, looking toward a partial solution.

The memorial is as follows:

Senate Memorial 1

A memorial requesting immediate action by the President and Congress with respect to social-security payments to Indians on reservations

To the President and the Congress of the United States:

Your memorialist respectfully represents:

That the Federal Social Security Administration has threatened to withhold Federal social-security grants to Arizona unless Arizona assumes the obligation of the Federal Government with respect to the payment of indigent assistance to Indians living on reservations within Arizona.

That Arizona, because of the effect of such threatened action on thousands of its citizens who are now receiving and require assistance, is being bludgeoned into accepting an obligation which it does not have and which it cannot afford to assume.

That there has been introduced in the current session of the Eighty-first Congress legislation (S. 691) which, if enacted, will afford an equitable solution of the problem for all concerned.

Wherefore, your memorialist, the Senate of the State of Arizona, requests:

1. That the President, as head of the executive department of the Federal Government, direct the Federal Social Security Administration to cease and desist from withholding Federal social-security grants to Arizona, pending consideration by the Congress of the problem of assistance to reservation Indians.

2. That the Congress give immediate consideration to, and enact, such legislation as will eliminate the present situation, assure to Indians living on reservations within Arizona the indigent assistance to which they are entitled, remove from worthy and eligible citizens of Arizona the current threat of hardship and distress, and relieve Arizona from the assumption of an unjustified and undue financial burden.

Adopted by the senate February 9, 1949, by the following vote: 18 ayes, 0 nays, 1 not voting.

Filed in the office of the secretary of state, February 10, 1949.

What Really Happened at Yalta

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mrs. DOUGLAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the following article by Raymond Swing, entitled "What Really Happened at Yalta," printed in the New York Times, Sunday, February 20, 1949:

WHAT REALLY HAPPENED AT YALTA—CRITICS HAVE TRIED TO MAKE THAT MEETING A SYMBOL OF FOLLY, EVEN TREASON. HERE IS AN EVALUATION REACHING THE OPPOSITE CONCLUSION

(By Raymond Swing)

Four years ago, on February 4, opened the most discussed and surely the most misjudged conference of World War II. By now Yalta is considered by many unbigoted persons as an occasion when a dying President lost his grip on American interests and made a number of fateful surrenders to the Soviet Union. They think they are generous to forgive him for the secret agreements about the veto and voting strength in the United Nations, and for bargaining away the rights of China, because he labored under the shadow of death. Others less generously accuse President Roosevelt of flagrant betrayal of his country. Yalta has almost ceased to be the name of something historically measurable and has become a byword for failure, folly, or treason.

Let it be said first that there are no more Yalta Conference secrets. Although the minutes and attendant letters and memoranda have not been published they hide nothing of importance. Everything that was done at Yalta has been revealed, so has nearly everything of moment that was said. A few snatches of conversation remain unreported, some of them piquant, but they are only conversation. The story of the conference has been adequately told by former Secretary Byrnes in Speaking Frankly and by Robert Sherwood in Roosevelt and Hopkins, based on the Hopkins papers.

According to them it was not a conference of surrenders, but one that developed give and take beyond expectation and set the stage for postwar Allied cooperation that promised to establish enduring peace. The talk was of a peace of 50 years. None of the Yalta negotiators could have believed that the cold war would be on in 3 years. Why this cooperation was to be lost after Yalta remains in part a mystery, certainly more mysterious than anything that happened at Yalta itself.

The Yalta Conference was acclaimed at the time as marking the high point in Allied unity in the war. Now that the unity has vanished it may be superficially considered to have been of little value. But that is true only if Allied victory was of little value, and those who disparage the work of Yalta are in danger of doing just that. At the time, the grand coalition had only just come in sight of victory, after surmounting much menacing mutual distrust. Since the last previous conference at Tehran, the second front at last had been opened. It had come a year late in terms of the precise pledge given to Russia, but it was on a scale to eradicate most of the Russian fears that the Western Powers were conniving to let Russia bleed to death along with Germany on the embattled eastern front.

It was a burst of such positive effort that it seemed to assure early victory in Europe and pave the way for the defeat of Japan. The Battle of the Bulge had closed the horizon for a spell, but shortly before Yalta the German counteroffensive had been mastered and advance from the west could again be scheduled. The Russians for their part had smashed and shelled their way to the German frontier in the east.

What had to be assured at Yalta was the consolidation of the mutual confidence so lately established by these military successes. In their report to the conference, the spokesman for the Russian Chiefs of Staff could boast of a 4-to-1 preponderance over the Germans in the east, whom they were crushing by an unprecedented concentration of artillery and manpower. The American chiefs could boast with even greater pride that they were meeting and beating the Germans on a division-for-division equality in the west. Both sides were impressed.

Now, for the first time, the great Allied personalities were able to confer over final operations of a victory that was within grasp rather than one still only hoped for, and, to do this, they needed more open-mindedness and faith in each other than had yet characterized their dealings.

The scope of the conference was unlimited. It had to build on full military agreement, with each of the two fronts trusting the other to do its utmost. Then it had to envisage the broad outlines of a German settlement. From that it had to pass to the task of defeating Japan, and, finally, to the establishment of the world organization which was to be the coalition's crowning creation.

Suspicion was not altogether allayed by the Yalta Conference. There were to be occasions when both western and eastern leaders thought they detected in each other evidence of malingering in the conduct of the war. Events, however, showed the suspicions to be ill-founded, and the complete victory was won as a joint enterprise in the fullest sense of interdependence. This, no doubt, is the fruit by which Yalta should be judged first, and perhaps finally. Only those willing to espouse the idea that this complete victory was a mistake and that compromise with Nazi Germany would have been preferable are logically justified in condemning the achievements of Yalta.

The conference brought together the finest galaxy of Allied leadership. In addition to the two heads of state, Stalin and Roosevelt, and the British Prime Minister, were gathered all the Chiefs of Staff of the three countries, excepting only General "Hap" Arnold, absent through illness. No such array of military chiefs, prepared to discuss the actual cooperation of such vast armies, air forces and navies, had ever been held. And because of their intentions and the state of the war, Yalta must count as having been dominated more by military than political considerations. But the array of political leaders was hardly less notable, with the Foreign Secretaries, Molotov, Eden and Stettinius, in attendance with such colleagues as Vishinsky, Gusev, Gromyko and Maisky for Russia, Clark-Kerr for Britain and Hopkins and Harriman for the United States.

And the economic implications of the coming peace were emphasized by President Roosevelt's insistence on the presence of Mr. Byrnes, at that time his economic alternate in domestic affairs. No more comprehensive wartime conference ever assembled, not only in World War II, but in history.

Americans should know that the first objective of American policy at Yalta was military; it was to fix the date desired for Russia's entry into the Japanese war. Here the Chiefs of Staff set their requirements and President Roosevelt had to meet them as best he could. That was their duty and his. It should be clear that the objective was not to obtain a pledge of Russia's entry into the Japanese war. That had already been given by Premier Stalin to Secretary Hull at Moscow in 1943. The point at issue was the time. The political terms granted the Russians in return for their promise to attack within 2 or 3 months after the surrender of Germany were frankly the price paid for this date, to which tremendous importance was attributed.

Much of the criticism of American policy at Yalta has been possible only because the critics subsequently learned what President Roosevelt and his military advisers could not know in February, 1945. This was that Japan was to surrender in August of that year, without invasion and without much regard for Russia's entry into the war. With this knowledge they can argue that the promises given the Russians were at best unnecessary and at worst were immoral and ultimately disastrous to American interests in the Far East. They do not argue that the military and the President should have known that the surrender was so near. To do so would be absurd, for they could not have known. But the critics do not hesitate to condemn a policy based on a miscalculation even though it was unavoidable.

The importance of Russia's entry into the war within 3 months of Germany's surrender lay in the intention of the American high command to invade Japan in November 1945. This was expected to be one of the most sanguinary actions in history, costing up to a million American casualties. For it to succeed the Japanese must not be able to reinforce their home garrisons from their infantry in Manchuria, reputedly the flower of their army. Indeed, the American strategists foresaw a tremendous struggle between the Japanese and Russians, in which the Red army would bear the brunt of the land fighting in Asia in much the same way it had done in eastern Europe while the United States and Great Britain were pouring their men and weapons onto the Normandy beaches.

If the Russians waited until after the invasion of Japan to enter the war, and if the Japanese army in Manchuria had been weakened to strengthen the homeland, the Russians would have had a walk-over, and might have emerged in the Far East more powerful than we. So there appeared to be impelling reasons to pay a price for the Russian commitment. Not to do so, might cost tens of thousands of American lives and promote Russian supremacy in the area. The considerations of ultimate power may not have been uppermost in American minds at Yalta. What did obsess them was the success of the projected invasion at a minimum cost in American lives.

So the political price was paid. In addition to the Kuriles, the agreement gave the

Soviet Union the position Russia enjoyed in the Far East before the Japanese attack of 1904. This involved the rights of China in Dairen and in the control of the Manchurian railway. The record of the Yalta conference shows that President Roosevelt did not carelessly agree to everything the Russians asked in the Far East. They wanted Port Arthur and Dairen outright, as well as full control of the Manchurian railways. He urged that both cities be made free ports and that the railways be administered by a joint commission with the Chinese.

Mr. Stalin assented to these modifications in a conversation with Mr. Roosevelt, but when the Russian draft of the agreement was produced it said nothing about free ports or a joint commission, and it ignored Mr. Roosevelt's insistence on obtaining the concurrence of Chiang Kai-shek. So the negotiations were renewed through intermediaries. Stalin insisted on a naval base at Port Arthur, so here a free port would be impossible. But he acceded to one in Dairen. He accepted the joint commission for the railways.

The need for the concurrence of Chiang Kai-shek also was set forth in the final wording of the agreement. However, it went on to say that "the heads of the three great powers have agreed that these claims of the Soviet Union should be unquestionably fulfilled after Japan has been defeated." And China's recognition of the status in Outer Mongolia also was demanded by the Russians. It was left that President Roosevelt was to ask China's agreement to these terms, but not until after 25 Russian divisions could be moved from Europe to the Far Eastern front after the German surrender. (Later, Stalin undertook to obtain China's agreement himself on the occasion of T. V. Soong's visit to Moscow in July 1945. This was one of the minor successes of Harry Hopkins' mission to Moscow in May of that year.)

It is clear that this bargain was kept secret temporarily from the Chinese only because disclosure to the Japanese was feared. Chungking at that time was notoriously loose with secrets. Had the Japanese known what was up they could have attacked the Russians in the Far East and presumably overwhelmed them.

The morality of bargaining away Chinese rights behind the back of Chiang Kai-shek has been legitimately challenged. It is true, too, that President Roosevelt, after holding out for Chiang's right to be consulted, accepted the peremptory clause in which he and Mr. Churchill assured the Russians of getting what they wanted. But it is only fair to see the agreement as it appeared at the time to the men who made it. If there was to be the heavy fighting anticipated, and if the Russians defeated the Japanese, they would be in a position to take whatever they wanted in Manchuria. So the terms granted actually set a maximum to Russia's demands. To grant them did not appear to be doing China a disfavor. And when the terms as finally formulated included a pledge by the Russians to sign a treaty of friendship and alliance with the Nationalist Government in China, they looked both moderate and cordial.

Former Secretary Byrnes has pointed out that the Russians might have entered the Far Eastern war without accepting any limitations at all, coming in at a time of their own choosing and demanding whatever they could exact. They had a score of their own to settle with Japan, and vital interests in the Far East. The agreement at Yalta did override China's rights, but it cannot be said to have overridden China's interests, in view of all the circumstances.

Nor is it certain that Chiang Kai-shek was unprepared for all the demands. Mr. Sherwood found among the Hopkins papers a note scribbled on an envelope at Cairo suggesting that the Generalissimo had there agreed to Dairen's becoming a free port. Long after Yalta the Russians tried to press the Chinese for greater concessions, and Secretary Byrnes strongly supported their resistance. But the Chinese agreed to the Yalta terms without making a great public outcry.

The bargain about the Far East cannot be challenged for not having served American interests as they were conceived at the time. Had it not been made, and had the far eastern war developed as expected, the cost in American lives would have been heavy. Then President Roosevelt would have been justly condemned for not having done his utmost to obtain Russian cooperation, and it is to the credit of this agreement that General MacArthur could be accepted as supreme commander in the Far East. So an indirect benefit is that today we do not suffer in Japan the danger and dismay from divided counsels which confront us in Europe.

Though the political accord about the Far East had to remain secret, no apparent need for secrecy existed for the decision at Yalta to give the Russians two extra votes in the United Nations Assembly. President Roosevelt himself insisted on the secrecy in a strong memorandum Harry Hopkins sent to Mr. Byrnes. This is mystifying and it proved unfortunate, for the issue was not a major one, and the resort to secrecy threw suspicion over the entire Yalta proceedings. Mr. Roosevelt did not like the concession he made to the Russians. Before going to Yalta he had told congressional leaders that he would oppose it, and, if necessary, demand 48 votes for the United States.

At Yalta he found the British agreed with the Russians; they wanted to be sure of obtaining a vote in the Assembly for India, not then a sovereign state. The minutes simply record a change in the American position, in that no opposition was raised to the extra votes when the foreign ministers got down to a discussion of it. But Mr. Byrnes was greatly troubled. He privately urged the President to insist on at least equal voting rights for the United States. The President wrote letters to Mr. Stalin and Mr. Churchill, who promptly acceded to his request.

The only plausible reason for secrecy is that Mr. Roosevelt was afraid the news might hurt the United Nations before it could be established. But it may be that he had a strategy in mind. He may have hoped to confide in Mr. Stalin that American opinion would be offended by the voting proposal, and suggest that both Russia and the United States drop the demand. At the time the news leaked out I was told this had been the President's intention. But once the news was out retreat was impossible. So the Russians got their extra votes, the United States never asked numerical equality and Yalta came to be known as a place of sinister secret bargains.

At Yalta the Russians gave as well as gained. Not that a conference should be scored like a ball game for the concessions won by the two sides. But to succeed it must reveal willingness to yield as well as to insist. The Russians were precipitated into an immediate and unexpected meeting to establish the United Nations. Then they accepted the American compromise formula for the Security Council veto, which had been sent them in December but had remained unacknowledged.

At Dumbarton Oaks the Russians had insisted on a veto by any of the three powers on any question whatever. At Yalta they accepted the American proposal by which two categories of conflicts were defined, one in which military sanctions were to be imposed, where the veto could operate, and one in which the dispute was to be settled without sanctions and a party to the dispute could not vote, not even if one of the major powers.

The Russians also were pushed into a corner to agree to supplant the Lublin regime in Poland with a Government of national unity. And they concurred in a ringing American-drafted resolution reaffirming the Atlantic Charter in a declaration of policy for liberated countries in Europe.

It is true that almost immediately after Yalta the Polish agreement began coming apart at the seams. Russian intentions in Rumania also awoke suspicions as to whether a government friendly to the Soviet Union could at the same time be free. This was while President Roosevelt still lived, so that he himself began to have doubts about the unity established at Yalta.

What today counts as the failure of Yalta is in fact largely the failure after Yalta. Now it is clear that the death of President Roosevelt marked the end of any real hope of maintaining allied unity. Had he lived, he would have attempted to conduct a good-neighbor policy with Russia. He would have wished to continue lend-lease, and he would have supported—on strict terms—a large postwar credit to Russia for reconstruction. (At Yalta Secretary Stettinius cordially agreed to discuss one at any time, either in Moscow or Washington.)

Whether American opinion would have supported such a policy may be open to question. Shortly before his death Mr. Roosevelt expressed a fear that the American people might make some great mistake, as they had done after World War I. He may have been thinking of another wave of isolationism, and if so he was wrong, as he rarely was about American opinion. He also may have dreaded a repudiation of a policy of patience and generosity toward the Soviet Union. Since then, the conduct of the Kremlin seems to have amply justified any American distrust.

But it is necessary to recognize that this conduct developed after Moscow reached the conclusion that Washington no longer intended a good-neighbor policy. Stalin complained bitterly to Harry Hopkins over the sudden end of certain lend-lease shipments to Russia after the German surrender. He could understand why they had been discontinued, but he had been offended by the way it was done. He called it brutal.

He pointed out that it had not been discussed frankly in the manner necessary to keep Russian friendship. Later, when the Russians did ask outright for a postwar credit, the request was not even answered, having been inadvertently mislaid by a State Department official, surely one of the most eloquent of gestures known to diplomacy.

The good will created at Yalta swiftly seeped away, and antagonism developed on both sides. To judge what would have happened had President Roosevelt lived may be thankless guesswork. It now is hard to believe that the United States and the Soviet Union could have kept in step for a long time. But in a world of only two great powers, if they were striving sincerely for a relationship of good neighborliness, the day of disillusionment might have been put off for many years. And in the interim progress might have been made from a world of power and war to a world of law.

Soviet Russia's Strategy To Dominate the World

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1949

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following summary of an address by Kenneth deCourcy, editor

of Intelligence Digest, published by The Union League Club of Chicago, as a contribution of important information of interest to Americans, February 1949:

SOVIET RUSSIA'S STRATEGY TO DOMINATE THE WORLD

For the first time in the history of the human race the very existence of the human family is at stake. We should face that fact while we have an opportunity to do so.

The present situation is a great deal simpler than it was in 1937 when the question of Germany was rolled in with many other problems, which made it very difficult to solve at that time.

In contrast, the present situation is very simple, indeed, although it is a very grave one.

SOVIET RUSSIA'S PREPARATIONS FOR WAR

There is a country occupying a sixth of the area of the globe which has devoted and is devoting, with ever greater intensity, her whole resources to the making of a great machine of war. We should all realize before it is too late that all these political activities, which Russia sponsors all over the world and in the most secure as well as in the most insecure areas, are geared to a general staff plan.

They are not mere political activity. They are activities of a kind designed to undermine the strategic security of Russia's enemies, and these great fifth-column movements are used as espionage organizations everywhere.

This Soviet system, which has 14 ministries working on war production at this moment, which last year produced 35,000 tanks from her war plants—the best tanks in existence today—has a design, a policy, an overall strategy which is being worked out, step by step, and phase by phase.

Intelligence in Russia is very difficult to organize and to maintain. But some information does reach us in London and Washington, which is reliable. It is known as a fact that a number of very important conferences took place in the Kremlin during the summer of 1947, many of them presided over by Stalin himself, to consider an over-all strategy for the next 10 years or so.

Stalin did not preside over all these conferences because his health has not been very good. He has some stomach trouble, the exact nature of which we do not know, but it takes him away a good deal from Moscow to a warmer climate; but during the hot summer months of 1947 he was well enough to attend many of these important meetings; and the Russians considered very carefully what their situation was as compared with ours.

RUSSIA SEEKS TO GAIN TIME

Those who conferred at those important meetings made up their minds that Russia must, at all costs, gain time.

First of all, they believe that economic difficulties are likely to overwhelm Britain and America, and in the course of a number of years so to weaken us that Russia will be relatively stronger. That is nonsense because the economic position of Britain and America is not likely to change greatly for the worse in the immediate future.

They also considered that they have had many internal difficulties at present of a grave kind, which required time to arrange. They have guerrilla troubles in the Ukraine. They have some troubles in their Asiatic Republics. They have a great mass of people moving about without documents as a result of the disturbances of the war, and they have a certain amount of trouble—which we should not overrate—in the satellite countries. Therefore, they required time to iron out those difficulties and to settle those things down.

Above all that, they required time in order to build new industrial plants in the vast, almost invulnerable, hinterland of the Soviet Union, in the great semi-Asiatic areas, and in the great northern areas where weather conditions are so bad for so much of the year that attack by us from the air would be extremely difficult. Some of these areas are even scheduled on our most secret intelligence maps. They required time for development.

Above and beyond all, they required time in order to get ahead with their research into atomic warfare and the mysteries of nuclear energy. They have, as a matter of fact, all the theory of atomic energy and nuclear energy already, but they have not so far been able to come up to schedule in the production of their first militarily useful atom bomb. But the time is not far distant when they will have settled that problem.

The Soviet high command, therefore, decided that it would go in for piecemeal aggression for 5 or 6 years, getting away with what it could while preparing a military endeavor of first magnitude and hoping that in the meantime, by fifth-column activities here and in Britain and in other countries, that it would undermine every policy and every device of ours to deal with Russia before they reached that time of military superiority.

WASHINGTON AND LONDON SLOW TO ACT

When these decisions were taken and when the news reached Washington and London, great disquiet was caused. Many people felt that the whole Soviet production schedule and its foreign policy plan should be examined afresh to decide whether we could really allow them to operate until they reached the moment that suited them best, and then "face the music."

We were very slow in taking any decisions at all. But about 3 or 4 months ago so much news came to London and to Washington, which confirmed everything we had heard, that certain decisions were at least considered.

It was planned to try to give a little extra help to China so as to keep the pot boiling there, and to pin down the maximum Russian forces in the Far East that could possibly be pinned down in case of world war, so that they would not be available for use in western Europe, or in the Middle East.

But that decision, unfortunately, was taken too late. One of my observers on my paper has just been in the Far East. He tells me that the situation there now is far more serious than even our most pessimistic newspapers tell us; that we are on the verge of seeing the complete collapse of the defense of the anti-Communist forces in the Far East.[1] This means not only the loss of China but also the loss of Malaya, of Indonesia, and of Siam. It means the outflanking, on the largest possible scale, of Japan and Australia and India. It also means the consequent release for use elsewhere, in case of world war, of great forces of the Soviet Union, which might otherwise have been pinned down and kept busy there so that they could do no harm anywhere else.

STRENGTHENING THE MIDDLE EAST

Another decision which was taken, or which it was hoped should be taken, in order to face this Russian menace, was to strengthen the whole defensive position in the Middle East. But unfortunately, owing to disastrous mistakes made last summer in Greece, we did not send the right help to the Greek front, with the consequence that we have not been able to strengthen the whole Middle or Near Eastern position.

I went to the Greek front and saw for myself what the situation was—and I guarantee to you that what I say is factual. We did not send the resources which would have settled the war in Greece last summer.

[1] This statement was made November 23, 1948.

For that reason alone, the Greeks will have to remain mobilized for the whole of this winter and the whole of this spring that is coming. Because they will have to face another campaign next year, Greece may break and a government may be established there which will be hostile to western powers.

Another reason we have not been able to carry out the Middle Eastern policy of securing the situation there against the Soviet Union is because the Palestine war continues, and thus makes any coordinated effort in that area extremely difficult.

PLANS UPSET IN WESTERN EUROPE

And, finally, it was the intention of Britain and America to increase the defensive strength of western Europe so that it would be almost impossible for the Russians, in case of world war, to make a great breakthrough there and thus destroy, in 1 hour, the cradle of civilization.

But all our efforts to secure western Europe and to strengthen our position there, and thus to deter Russia in time of war, have been upset by the constant interruptions of recovery. In France Communist activities are all planned by Russia and geared to their General Staff plans. The unhappy relations which exist between Spain and the rest of the countries of western Europe are, of course, also stirred up by every device which the Soviet Union can use.

All that is bad enough; but it is made worse when we have a political complication in England which makes a really strong policy extremely difficult. I have no doubt that the majority of members of the British Cabinet are anxious to avert further Russian expansion. But, unfortunately, these Cabinet ministers are dependent for their parliamentary support upon a party which has a very strong and powerful left wing. This group has much too close liasion with Russian friends for my measure of patriotism. Consequently, the Cabinet is under pressure the whole time not to pursue a strong policy, not to go too far, and to dilly-dally. It thus makes possible this Russian policy of gaining time until 1954 or 1955, which is what the Russians want. All that adds up to an extremely grave total.

DRIFTING FROM ONE WEAKNESS TO ANOTHER

We could have settled the whole Russian question in the summer of 1948 if we had so desired. If we had declined to accept the blockade of Berlin and had used the resources we now possess in scientific weapons, which are vastly superior to those of Russia as we now stand, they would have capitulated over Berlin and the whole world situation would have changed.

Or, if they had not capitulated and risked a war in the summer of 1948, we would have decisively won it within a very, very short period of time. We would have had to undertake a certain amount of mobilization and even to accept a certain retreat on our side; then to use our atomic bombs against, not their women and children, but against their main military concentrations. They would have "had it," as we say in England.

They would have been cut off from their sources of supply. Between them and their own country would have been great areas of radioaction, which would have been impenetrable for a very significant period of time; and the whole thing would have been settled.

But we have drifted from one weakness to another. We talk about being strong over Berlin. I see no signs of any strong policy whatsoever. We accept the blockade of Berlin, and go to enormous expense and trouble to send in frugal supplies by our air forces, when we ought to be sending them by the most convenient manner, down the autobahn, with an ordinary convoy. But we keep on doing exactly what the Russians themselves have calculated we will do, namely, compromise; capitulate; retreat; arrange—while they are getting stronger and stronger and stronger.

RUSSIAN ATOM-BOMB PROGRAM

There is strong reason to believe—and I want to put this to you very gravely, indeed—that next summer the Russians will have produced their first large-scale usable atom bomb. From separate sources of secret intelligence, one of the most powerful anti-Russian nations in the world has been told, and its intelligence services have accepted as a fact, that between June 1 and June 15, 1949, Soviet Russia will have produced its first atom bomb in Atomgrad, under the direction of Marshal Berier. Atomgrad is in one of the Asiatic Republics of Russia, bordering on Afghanistan. From then onward they plan, and believe that they can carry out, the production of four such bombs per month.

The Russian general staff takes the view that 30 such bombs would be decisive in a world war, directed against the western powers, because all that we have and possess on our side is concentrated in highly vulnerable areas of great population.

ATOM BOMB OUTMODES DEFENSIVE MEASURES

Of course, our steel production will always outmatch that of Russia and our technical efficiency in the production of aircraft will always outmatch that of the Soviet Union. Of course, in the normal world war, where things are slowly mobilized and where the great forces of Britain and America and our allies get into the field, we shall always be victorious.

But what of a war in which the other side has concentrated very large resources for use in a short space of time against our most vulnerable areas?

What about a war in which two or three atom bombs are dropped on London and our biggest industrial centers outside London, though London is by far the most important?

What about a war in which the Soviet Arctic Air Force, the most efficient Arctic air force in the world, developed on the largest possible scale in the last 2 or 3 years, drops atom bombs on the most vulnerable centers of Canada and the United States?

How can we ever mobilize? How can we ever continue? How can we ever put our natural resources into the scales?

Thirty atom bombs directed against our most vulnerable areas would, I fear, be decisive; and we have it in our hands to make such a catastrophe impossible by taking a strong policy now before the other side accumulates this fearful resource of power.

But if with all our intelligence, with all our democratic spirit, and all the democratic resources of information available to us, if with all our long experience of many generations and many centuries, if even after the experience of 1940–45, if even after the experience of the last 2 years, we really are such fools as to sit down here and wait until the Soviet Union has accumulated 30 or 40 atom bombs and loaded them up in her Arctic aircraft, and so on—then we really deserve certain defeat.

It is absolute madness for us to sit here and wait until the other side has prepared, on the largest scale, the most devastating weapon ever known to mankind, that is going to strike us in the most vulnerable bases and against our most highly populated areas.

But that is what we are doing at this moment. We have played about with a counter-policy, as I have said, of securing the position a little more in the Far East; of building up a little more in the Middle East; and making a greater buffer in the West. We have cleared up a few Communist agents here and there. But even the things we have done have been undermined by the things that I have described to you.

But on the whole, and taking the thing at large and looking at the over-all picture, we have let the whole position, so far, go by default.

WE HAVE ANOTHER YEAR AT MOST

We have another year at most, and probably less, in which to settle this matter on our own terms. Winston Churchill spoke the other day at the Conservative Annual Conference in London and based his remarks and the policies he suggested on the most intimate knowledge of the most secret documents of the most secret facts available to the greatest intelligence services in the world.

He declared that we must bring the Russian question to a point of decision now. If we do not do it, we shall be obliterated, not by marching Soviet armies, not by Soviet fifth columns, but by scientific weapons against which there is no defense. To allow them to manufacture, to accumulate, to prepare their use is a madness unparalleled in human history.

Mr. Churchill, well aware of all that, sounded his grave note. When the story of these times is written, if it is written, it may well be that Churchill's speech at London will go down as of far greater importance than the others he has delivered.

The child's play of the German war, and the monstrous difficulties of politics at home and abroad, are nothing to compare with this single, all-powerful, transcendent issue. We shall have no time, no opportunity of setting our political philosophies, in order, of bringing about the renaissance in religion, which we also desire, and the other great things which we have in mind, if we allow the next year or so to drift on, as we are allowing things to drift now.

There is no expert in Europe or America today, in any of the intelligence services, and in any of the high official levels, who does not fully and 100 percent share the views that I have ventured to express to you today.

I hope that you will go away from this meeting very seriously to consider what is your duty, as powerful citizens of a great country, in such a moment as this. If democracy means anything at all, it is for us to direct what governments and cabinets should do in circumstances of this kind. History will request and require an answer from you gentlemen, as it will request and require an answer from me, as to what we did with the democratic powers with which we were entrusted.

TRIBUTE TO UNITED STATES

(In his opening remarks, Mr. deCourcy paid tribute to the economic and political power of the United States; he also urged a program of economic development of natural resources as a means of speeding world economic recovery.)

The United States of America is at the height of her power and her prestige and her influence upon all the affairs of all the world. Your vast productive capacity, your great economic strength, your great manpower, which has military significance as we now know from the last war and the one before it, your vigor, springing from your abundant youth—all those things together and more besides give you a position of preeminence in the most critical moment of world affairs in all recorded history.

This vast wealth, this great prestige, this unprecedented success, of which you are the inheritors and to some extent the creators, have sprung from one of the most remarkable things in history. In all the record of the human story no great nation has been founded so decisively by so small a group of people of one mind as this Nation was founded.

First, they were convinced that they could do nothing of themselves; that they were entirely dependent upon Almighty God; and, secondly, that they believed in freedom above all else.

In many great nations you can find a gradual evolving sense of religion and God-fearing conduct, and an evolving sense of freedom, and so on; but I do not know, in all recorded history, of a case where a nation was founded by men and women who, at every turn in their adventure, referred in every detail of their affairs to their God-fearing convictions.

I have no shadow of doubt that it is that great witness in history, which they made, which God has honored; and it is for that reason that this country has risen to its vast position of prestige and power which it now enjoys. I equally have no doubt that their great devotion to freedom has also been honored with this result.

For these reasons the United States is at the height of its prestige and power and, therefore, forms a supremely important influence in the world situation from every point of view—economic, military, and, of course above all, morally.

WE HAVE SCARCELY SCRATCHED OUR RESOURCES

There are certain things about my country, England, which ought to be more clearly realized. Unlike the United States of America, we have scarcely scratched our resources yet. If you look at England as the center of a great commonwealth of nations which exists in a very powerful form, and perhaps even more powerful than the old imperial form, you will find that she possesses undeveloped wealth which is unrivaled by that of any nation in the world.

The time is not very far distant, for example, when the United States will draw upon the British commonwealth's resources for her iron ore, and in the very near future Canada will be a gold-producing country of greater power and influence than ever South Africa was. If one will look through the whole British commonwealth, he will find vast, untouched resources which, if they were developed, and if they were used, would make that system of nations a very powerful and influential one. If you will put that potentiality alongside your existing power, you have a combination of forces and nations which is unrivaled in all the world outside.

"CHARITY GOES DOWN THE DRAIN"

It is an astounding thing to me why this practical and powerful Nation of America insists upon doling out charity to the British Commonwealth of Nations when you could so easily invest your money in profitable enterprise to develop these great resources and bring into existence new wealth. That course would be so much more wise than giving charity which goes down the drain, leaving the problem at the end of the charity even more acute than the problem was before it was given. The present policy does nothing except to deceive the people in my country as to their true position.

Unfortunately, in my country these great resources are not being developed. This idea of expansion and enterprise has been damped down because we have been taught by 40 years of propaganda that personal success is an unrighteous and illicit thing and that it's wrong to be successful; that wealth is somehow a sign of disgrace; and progress in economic affairs something of which we have to be ashamed. That, of course, is a Socialist doctrine. We have to reduce everything to drab ugliness and mediocrity instead of raising it to greater wealth and power and therefore to beauty and success.

INFLUENTIAL CHANGES IN THE MAKING

That is an unhappy state of affairs. I hope that America will do nothing to subsidize that monstrous system. I hope, on the contrary, that the great influence of this Nation will always be used in the English-speaking world for the putting forward of greater ideas of enterprise and adventure and personal in-

itiative and personal success from which national success springs.

If there were no interruptions from outside I have no doubt whatsoever that before very long we should see in this country many influential changes and in my country many of these monstrous ideas of reduction and mediocrity and reducing of enterprise would be swept away, and we should see a great renaissance there, too.

We should see, within 50 or 100 years, the great African continent as powerful and as mighty economically as the United States is today. We should see Canada going forward in great power and strength, with a vaster population and all her resources being developed; and we should see Australia, which has practically no population at all and yet is of unparalleled wealth, developing a great community, a great influence in the Far East; and we should see similar things in New Zealand, where everything has been reduced to an abysmal mediocrity by 7 years of rotten socialism. All that we should see if we were left undisturbed for the rest of this century.

What Has Become of the United States?

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. REED of New York. Mr. Speaker, the more I listen to the speeches made in the House and the comments by and large in the dining room and to the conversations among various groups of people, sometimes I wonder whether the United States as such still exists. It is a rare thing to hear any person express the slightest interest in our domestic problems. It would seem that the philosophy of spending has become the chief topic of interest. The public debt means nothing to those who converse about conditions. The ultimate cost of various programs relating to foreign affairs is of no little consequence apparently to those who desire to spend other people's money.

We see before our eyes a repetition of what happened as a result of arming Japan—only that now we are arming Russia. Those who thrive on war and make millions out of war have set their stakes for the next war 15 years from now. The babies born within the United States and who survive until they are 21 will be in the next war, according to the military timetable of various nations, including our own. I wonder if the American people, divided as they are into respective congressional constituencies, really sent their Representatives here to devote all of their attention to affairs in every remote country on the face of the earth. It will be some time before our people realize that their birthrights have been bartered away for a mess of foreign pottage. This generation and succeeding generations will suffer the loss of liberty as a result of the reckless program under which a great bureaucracy will spend the crushing taxes exacted from our people because this great collective Frankenstein believes that the American taxpayer lacks the intelligence to spend his own hard-earned money.

It has always been said that experience is a good teacher, but after arming Japan and then sending our boys into the Pacific to give their lives and shed their blood to conquer Japan it would seem that this experience had taught our internationalists and interventionists nothing at all. They still clamor to pour our resources into the hands of our potential enemies without let or hindrance.

There appear to be no such words as "stop, look, and listen" in the affairs of Government. Pressure groups here and pressure groups from abroad seem to be the dominant influence in the Capitol of this great Nation. The foreign social lobby is at work. The pressure groups, like flocks of howling wolves, are barking at Congress to raise more money to spend here, but mostly abroad. I wonder if it will ever dawn upon the sovereign citizens of this great Republic that their safety, their liberty, and that of their children and their grandchildren must be based upon a solvent Government?

I notice in today's Washington Times-Herald an article which, of course, will fall upon deaf ears, yet it is one of the things that points to a repetition of the ineptness of the administration that suffered and permitted the arming of Japan. Under leave to extend my remarks in the RECORD, I am inserting the article written by Frank Holeman:

ERP GOODS BEING SOLD TO RUSSIA—MARSHALL PLAN NATIONS MAKE DEALS WITH REDS

(By Frank Holeman)

Soviet Russia and her satellites are acquiring through 91 trade deals with Marshall plan countries many of the potential war materials which this Government, through export controls, refuses to ship to the U. S. S. R. because of the cold war, a survey showed yesterday.

Statistics on the flow of trade—amounting to about $3,000,000,000 in total value—across the iron curtain came from Government agencies and embassies here of our European allies.

SPIRIT OF ACT VIOLATED

Such trade deals involving heavy industrial equipment and similar war-vital goods violate the spirit if not the letter of the Marshall Plan Act, and also grabs off potential markets behind the iron curtain denied American exporters by the export control policy.

The cautious Eightieth Congress inserted in the Marshall plan law a provision designed to prevent recipient nations from selling behind the iron curtain those goods which this Government will not export into the Communist domain.

On the other hand, an ECA official pointed out yesterday, this trade is saving the United States money in that the ERP nations swap their exports directly for food and do not have to use dollars. If all raw materials had to be bought outside the iron curtain, the cost of the $17,000,000,000 Marshall plan would go up another $5,000,000,000 over 4 years, officials estimate.

METHOD USED BY REDS

The way in which Russia and its satellites have been able to force industrial equipment from Marshall plan countries in exchange for vitally needed food and raw material shows up in these trade facts:

1. In fiscal 1950 Britain, France, and other western European countries are committed to sell to iron-curtain countries an estimated $1,500,000,000 in goods which will further build up the Communist economy and make Russia tougher to fight if war comes. Crude rubber, tin and nickel, scientific equipment, locomotives, generators—those are some of the 'hot items."

2. In exchange for this inward flow of potential war material, the Communist nations are turning over approximately $1,500,000,000 in raw materials, including grain, coal, timber, potash fertilizer.

CAN'T BUY IT HERE

A Commerce Department official freely admitted that no export licenses for delivery to Russia would be granted on such items as these on the Russian-British trade list:

Ten oil refineries, 2,400 flat trucks, $600,000 worth of scientific and laboratory equipment, 1,100 narrow-gage locomotives, 150 mobile Diesel electric generators, 24 steam power turbines, 18 ball mills for copper ore grading.

The strict export controls have cut our outgoing trade with Russia down to $500,000 a month, compared with $12,000,000 a month in 1947.

One top ECA planner declared:

"If we served an ultimatum, and told the western European nations to quit doing business with the Communists, or give up Marshall plan aid, they would probably have told us to go to hell," he said, bluntly.

"They would rather have their world trade than the aid program any day."

Britain, getting the lion's share of United States aid, has besides its Russian agreement, a trade pact with Poland. This 5-year barter deal calls for Britain to supply $40,000,000 worth of wool a year, 3,000 to 5,000 tons of crude rubber a year, $500,000 worth of rubber tires for cars and tractors a year, $500,000 worth of auto spare parts, and 3,000 pounds of semimanufactured copper.

TITO GETS MACHINERY

In addition, Britain agreed to clear the way for British merchants to sell Poland 180,000 to 250,000 tons of crude oil from the Middle East every year. Also, they would help find sisal, manila, electrolytic nickel, ferrotungsten, ferrovanadium, ferromanganese and 1,000 tons a year of tin.

None of the stuff could be exported directly from the United States, the office of international trade advised. Moreover, the United States Munitions Board is still buying sisal, manila, tungsten, vanadium, and manganese for war stock piles, an official said.

The British-Yugoslav Pact provides for Tito to get $10,000,000 worth of "miscellaneous machinery," $2,400,000 of "electro technical material," $140,000 worth of "instruments and parts for scientific use," 3,000 tons of rolled steel, 10,000 tires, and 1,500 tons of rubber.

Other deals in the British pattern include:

France: Pacts with Finland, Czechoslovakia, Hungary, Yugoslavia, Bulgaria, and Poland. The French generally export luxury goods, wines, and light manufactures in exchange for timber and other raw materials.

Benelux countries (Belgium, Netherlands, and Luxemburg: Pacts with Finland, Czechoslovakia, Bulgaria, Poland, Russia, Soviet zone of Germany. Light manufactures and industrial goods, scientific instruments, and so forth, for food and raw materials.

SOVIET GETS $9,000,000

Sweden: Pacts with Finland, Czechoslovakia, Hungary, Yugoslavia, Bulgaria, Poland, Soviet zone of Germany. Sweden sells ball bearings, a wide range of industrial products in exchange for raw materials, sending Russia $9,000,000 of stuff a year.

Italy: Pacts with Czechoslovakia, Hungary, Rumania, Yugoslavia, Bulgaria, Poland, Russia, Soviet zone of Germany. Italy sells agricultural products, wines, and industrial goods for raw materials.

Turkey: Pacts with Finland, Czechoslovakia, Yugoslavia, and Poland. Poland has imported $166,000,000 worth of goods from Turkey and sold $106,000,000 since the agreement was signed in July 1948.

Greece: One pact, with Czechoslovakia. Terms secret.

Switzerland: Pacts with Finland, Czechoslovakia, Hungary, Rumania, Yugoslavia, Bulgaria, Poland, Russia, and the Soviet zone of Germany. Switzerland deals in a wide range of industrial and agricultural products, as the middleman of Europe. Own manufactures are mainly instruments and watches.

Rent Control

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 22, 1949

Mr. WHITE of Idaho. Mr. Speaker, it seems that now, with war emergency past, the people of this country would be given back the control of their property. The law of supply and demand controlling the thrift and industry of our citizens has built this Nation. It is time that we let the law of supply and demand adjust the value and use of rental property in this country. I enclose herewith an editorial for the consideration of my colleagues:

THE MODERN MAN NOBODY LOVES

The man no one seems to have any sympathy for is the landlord.

This isn't just today. It's been the case for a good many years. Landlords have been the subject of almost as many jokes that combined digs and humor as the fat man.

All during the war years nobody thought about the landlords. Workers got higher wages and bonuses and time and a half for overtime. Farmers got bonuses for planting one crop and not for planting another, price floors, and higher parity ratios. Industry got fixed-costs-plus contracts and, even under controls, realistic pricing schedules.

But the landlords got only rental ceilings. Since the war landlords have gotten the chance of raising rents 15 percent over prewar figures, if they and their tenants got together and voluntarily signed 2-year leases. The talk in Congress today on rent-control extension is that this provision for an increase ought to be kicked out and rents raised under this system put back where they were.

There have been a lot of incongruities, however. A brand-new building, or single home, for example, could apply for rental ceilings and get them on the basis of construction costs. A five-room home, for example, that cost $11,000 to build in 1948 could get a rental ceiling of around $95 a month. But the exact duplicate of this home built before the war at a lower cost but just as salable now at $11,000 can't earn its owner more than $45-a-month rental.

The owner of this prewar model house, however, has to pay the same inflated taxes. He has to pay a plumber $3 an hour instead of $1.50 before the war when he repairs. The same holds true for painters and electricians. Out of his rental income he has to pay 90 cents for a dozen eggs that cost 45 cents when he started renting his house at $45 a month. All during 1948 he paid for cost-of-living items roughly 65 percent more than he paid in 1941.

Some landlords in Oklahoma and Colorado have decided their only recourse, in the face of a promised stricter rent-control law from the Eighty-first Congress, is that might makes right. This isn't, of course, a new economic theory. John L. Lewis has used it with superb effect on numerous occasions. But when Lewis used it nobody in Washington got excited until the country was about out of coal. But right away now the United States Attorney General is busy with the Oklahoma landlords, who say they're going to put their renters out and let their properties stand idle. He's dispatched some assistants out there to get busy. He's telegraphed the Federal attorneys in Oklahoma to get going and drag the landlords into court. Under what statutes isn't yet fully determined; they're busy now trying to find something that might fit.

No, we're not in favor of gouging, whether by landlords, coal dealers or butcher shop owners. But we're in favor of a fair shake, both for the man who puts a new faucet on the kitchen sink and the man who rents the sink as part of the equipment of an apartment or house. And we don't think they've both been dealt cards from the same deck.

International Communism: Its Origin and Growth

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1949

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Col. Walter L. Furbershaw, chairman, committee on un-American and subversive activities, the Union League Club of Chicago, and wartime director of military intelligence, Sixth Service Command, United States Army, published by the Union League Club of Chicago as a contribution of important information of interest to Americans, February 1949:

INTERNATIONAL COMMUNISM: ITS ORIGIN AND GROWTH

ORDER OF THE ILLUMINATI

It was during the latter part of the eighteenth century, due to the revolutionary change in the means and methods of production and the consequent concentrations of population in industrial centers, that radicalism, as we now understand the term, was conceived and began its gradual development. In May 1776, Adam Weishaupt, a professor of canon law in the college at Ingolstadt, Bavaria, founded the Order of the Illuminati, a secret society, to spread his economic, philosophic, and political views. The main objects for which this society was formed were:

1. Abolition of all ordered government;
2. Abolition of religion;
3. Abolition of the family relation and the institution of communal rearing and education of children;
4. Abolition of nationalism and patriotism;
5. Abolition of what is now called capitalism;
6. Abolition of all private property and property rights, including the rights of inheritance.

These principles have been adopted by all succeeding revolutionary movements down through those of Karl Marx and Friedrich Engels in 1848, 1864, and 1889, to that of Nicolai Lenin, Leon Trotzky and Josef Stalin of 1916 and 1919.

Weishaupt had been educated under Jesuit auspices, but early in life had met one Kolmar, a radical of whom little is now known and from the latter received and accepted his subversive ideas and philosophy, which he later elaborated. He left the Catholic Church and became a bitter enemy to all religion.

The membership of his Order of the Illuminati was divided generally into a comparatively few adepts or leaders, who were thoroughly trained and initiated into the inner workings of the order, and dupes, who were many and had little information of its real purposes. The order spread rapidly throughout France, Italy, and what was later the German Empire. The Bavarian Government, realizing the menace of the order, investigated and outlawed it and sent copies of its voluminous evidence to every civilized government. This exposure and edict of proscription, as well as internal dissertion, caused the downfall of the order in 1785. The remnants of the order went underground and thereafter operated as the inner circle of an international revolutionary movement. Weishaupt died in 1830, and it is said his declining years were filled with remorse and regret for his early assaults on religion.

ADEPTS AND DUPES

Modern communism follows the original Weishaupt Illuminati plan in its means used to recruit adepts, or inner circle members, and dupes, or those whom it used as fronts for furthering its revolutionary program and spreading its propaganda. Nesta Webster, in her authoritative book, World Revolution, says:

"It was in the training of adepts that Weishaupt showed his profound subtlety. Proselytes were not to be admitted at once to the secret aims of Illuminism, but initiated step by step into the higher mysteries—and the greatest caution was to be exercised not to reveal to the novice doctrines that might be likely to revolt him. * * * 'One must speak,' Weishaupt explained to the superiors of the order, 'sometimes in one way, sometimes in another, so that our real purpose should remain impenetrable to our inferiors.' * * * This device proved particularly successful not only with young novices, but with men of all ranks and ages. 'The most admirable thing of all,' wrote Spartacus (Weishaupt) triumphantly to Cato (von Zwack), 'is that the great * * * theologians (Lutherans and Calvinists) who belong to our order really believe they see in it the true and genuine mind of the Christian religion. Oh! man, what cannot you be brought to believe!' By this means, as Philo (the Baron von Knigge) later on pointed out, the order was able 'to tickle those who have a hankering for religion.' "

The modern Communist movement even adopted the Illuminati practice of having secret or party names for its leaders. As Weishaupt was known as Spartacus, von Zwack as Cato, and Baron von Knigge as Philo, etc., among the Illuminati, so in the present Communist movement Vladimir J. Ulianov became Nicolai Lenin (patron saint of communism), Josef Djougashvili became Josef Stalin (present dictator of Soviet Russia), Vyacheslav Scriabin became Molotov, Bronstein became Leon Trotsky, Appelbaum became Zinovieff, Rosenfeld became Kameneff, Sobelson became Karl Radek, Sacha Maximovich became Maxim Litvinoff (Soviet Foreign Minister and angel of peace at Geneva), etc. This practice was formerly rather generally followed by American Communists and is still used when expedient to protect the real identity of prominent members. Karl Marx, himself, was no exception in this regard—his real surname having been Mordecai.

The Jacobin Club, organized in 1789, during the French Revolution, and which was responsible for so much of the Reign of Terror, was organized by many who had been affiliated with the Illuminati. Originally composed of bourgeoisie, the Jacobin Club was later dominated by Robespierre, whose ruthless methods have been adopted and practiced by the present Communist dictators

of Russia. At the close of the revolution in France the radical movement again was driven under cover where it remained awaiting patiently its opportunity.

FIRST INTERNATIONAL

As it became necessary for capital to organize to meet the needs of the stupendously growing industries, so, also, leaders mostly intellectuals and dreamers arose and called upon the workers to organize internationally to protect their rights and demand more of the products of their labor.

Several efforts were made to form international labor movements, the first in England, in 1823. But it was not until 1848, when Karl Mordecai, alias Marx, and Friedrich Engels issued their Communist Manifesto, that the first definite international workers' movement took form. This document broadcast that well-known slogan that has since been the rallying cry of all radical sects: "Workingmen of the world, unite! You have nothing to lose but your chains, and the world to gain!"

Speaking of the effect of the industrial revolution and the capital organized to meet the greatly changed industrial conditions, Marx and Engels in their Manifesto of 1848 wrote that "During its [capitalism's] rule of scarce 100 years it has created more massive and more colossal productive forces than have all preceding generations together. Subjection of nature's forces to man and machinery, application of chemistry to industry and agriculture, steam navigation, railways, electric telegraphy, clearing of whole continents for cultivation, canalization of rivers, whole populations conjured out of the ground—what earlier century had even a presentiment that such productive forces slumbered in the lap of social labor?

In addition to adopting the six basic principles of Weishaupt's Illuminati, the Communist Manifesto of 1848 promulgated the following program for the more advanced countries:

"1. Abolition of property in land and application of all rents of land to public purposes.

"2. A heavy progressive or graduated income tax.

"3. Abolition of all right of inheritance.

"4. Confiscation of the property of all emigrants and rebels.

"5. Centralization of credit in the hands of the state, by means of a national bank with state capital and an exclusive monopoly.

"6. Centralization of the means of communication and transport in the hands of the state.

"7. Extension of factories and instruments of production owned by the state; the bringing into cultivation of waste lands, and the improvement of the soil generally in accordance with a common plan.

"8. Equal obligation of all to work. Establishment of industrial armies, especially for agriculture.

"9. Combination of agriculture with manufacturing industries; gradual abolition of the distinction between town and country, by a more equable distribution of the population over the country.

"10. Free education for all children in public schools. Abolition of child factory labor in its present form. Combination of education with industrial production, and so forth.

"When in the course of development, class distinctions have disappeared, and all production has been concentrated in the hands of a vast association of the whole nation, the public power will lose its political character. Political power, properly so called, is merely the organized power of one class for oppressing another. If the proletariat during its contest with the bourgeoisie is compelled, by the force of circumstances, to organize itself as a class; if, by means of a revolution, it makes itself the ruling class, and, as such sweeps away by force the old conditions of production, then it will, along with these conditions, have swept away the conditions for the existence of class antagonisms, and of classes generally, and will thereby have abolished its own supremacy as a class.

"In place of the old bourgeois society, with its classes and class antagonisms, we shall have an association, in which the free development of each is the condition for the free development of all."

MARX INFLUENCED BY WEISHAUPT

Marx, who was born in 1818, was a man of education, having graduated from the Universities of Berlin and Bon in Germany. He had made a deep study of the writings of Adam Weishaupt, much of which he revised and modernized and published as his own. While Marx's works are generally considered as the original source of information concerning modern socialism, they are in fact but a restatement and plagarism of the subversive ideas of Kolmar and Weishaupt. Germany, considering the teachings of Marx as too radical and dangerous, ordered his deportation, and the rest of his life was spent in Paris and London. His Manifesto and other writings divided modern society into two general classes, the bourgeoisie, representing capital, and the proletariat, representing the workers—classes having nothing in common and therefore to be separated by hatred and class warfare until such time as the workers shall have overthrown and forever destroyed the bourgeoisie. This would be accomplished only when religion, family relations, patriotism, capitalism, and property and inheritance rights were abolished.

The work of Marx and Engels and their associates was successful and the First International was founded in St. Martins Hall, London, on September 28, 1864. It was called the International Workingmen's Association, and was organized for the purpose of uniting all workingmen's organizations of revolutionary tendencies, and included working-class leaders of all schools, from extreme anarchists to the most moderate and conservative type of trade unionists. England sent trade unionists; Germany, Socialists; Russia, France and other Latin countries sent anarchists and syndicalists. Several American workingmen's associations were affiliated also.

There was little or no unity at its meetings until Marx, using the common radical opportunist tactics, seized control of the policies of the international. Up to that time some of the representatives present demanded that the international be turned into an organization of conspirators to assassinate existing rulers; and Michael Bakunin, the Russian anarchist, insisted upon the adoption of his formula of "No God, no state, no politics." A bitter struggle ensued between the Marxists or Socialist groups and the anarchists, due to the fact that the Marxists aimed to displace one economic system by another while the anarchists decreed death to all economic and political systems. In order to destroy the growing power of the anarchists, who controlled the revolutionary movement in Russia and wielded considerable influence in Italy, France, and other countries, Marx virtually destroyed the First International in 1872. The Franco-Prussian War of 1870, however, had much to do with its downfall. The Marxist group moved the headquarters of the International to New York in 1872, and the last convention was held in Philadelphia in 1876.

SOCIALISM AND ANARCHISM

Salient differences between the Socialist and anarchist movements caused the disruption of the First International. Socialism, despite many opinions to the contrary, is not a state of mind. The new society, political and industrial, which socialism has in view, necessitates a complete reorganization of the world, reversing our present system and making the political body subordinate to the industrial organization. It hopes to institute a cooperative commonwealth, through common ownership of the means of production; to abolish private property; and to denationalize peoples and governments. These reforms are to be effected by political action, that is, by first securing control of the body politic through a strong political party. Socialism considers only the material interests and is therefore opposed to religion, to ethics, and to all other concepts not purely material.

Anarchism, on the other hand, is difficult to define, as each advocate of its philosophy gives expression to his own concept. Emma Goldman, the anarchist, who several years ago was deported from the United States to Russia, where she received scant welcome, defined it as "The philosophy of a new social order based on liberty unrestricted by man-made law; the theory that all forms of government rest on violence and are therefore wrong and harmful, as well as unnecessary."

Philosophical anarchists are not bomb throwers and believe in a society made orderly by good manners rather than by law, but the theory of an unrestrained society has attracted to the anarchist ranks great numbers of those who see no distinction between the terms "liberty" and "license" and who seek to give free rein to their greed and passions without incurring the penalties imposed by organized society.

The anarchism of Bakunin was expressed in open warfare against the autocratic powers of Russia, and he had many followers in those times when all Europe was more or less in revolt. The anarchist believes in the abolition of all governments and laws and of all national boundaries. He sees in the different radical movements the possibility of overthrowing the existing economic system in all countries, and is therefore willing and anxious to assist other movements having that end in view.

The true anarchist is an extreme individualist, while the Socialist is irreconcilably opposed to individualism. We thus have no difficulty in understanding why Marx was so willing to sacrifice the fruit of his long labors rather than see the First International fall into anarchist control.

It should be remembered that Marx did not force the radical ideas of his Manifesto on the First International, due to the presence of so many conservative trade unionists, but for 10 or more years after its dissolution and until his death in 1883, he and other Socialist leaders in Germany, France, and other countries of Europe put on a campaign of intensive education of the workers in the principles of socialism.

SECOND INTERNATIONAL

During this period, also, Socialist parties and trade unions developed in many of the great industrial countries, and leaders of these groups felt the urge to organize into another International. Pursuant to call, the Second International met in Paris in 1889 and was attended by some 400 delegates, representing 20 countries. This International later held congresses at Brussels, in 1891; at Zurich, in 1893; at London, in 1896; at Paris in 1900; at Amsterdam in 1904; at Stuttgart, in 1907; at Copenhagen, in 1910; and at Basel in 1912. In 1900 it established a permanent International Socialist Bureau at Brussels. This bureau was later transferred to The Hague.

During the period from 1889 to 1914 great progress had been made in forming Socialist political parties throughout Europe and in America, and workingmen more and more were brought into the Socialist fold and an aggressive class consciousness aroused in them. The Second International received a severe set-back at the outbreak of World War I, in July 1914, as the Socialists with few exceptions put patriotism above class consciousness. The most notable exceptions

were the Socialist Party of America and the Socialist Party of Italy.

The complete failure of the Second International to oppose the outbreak of World War I, and what its more radical element considered its betrayal of the workers during the war, precipitated a revolution in its ranks in nearly all important countries, its members being divided into parties of reformists, radicals, and revolutionaries. The reformists stayed with what remained of the Second International.

The real split in the ranks of the Second International took place definitely in Germany in 1917, at which time the Independent Social Democratic Party was formed. Similar groups were formed in other countries, and in 1920 these groups united themselves into what is known as the 2½ International, or the Workingmen's Union of Socialist Parties, with headquarters in Vienna. This International, in May 1923, amalgamated with the remnants of the Second International at a meeting held in Hamburg, and the new organization became known as the Labor and Socialist International, with headquarters at London. It comprised practically all of the Reformist, Socialist, and Labor Parties as contradistinguished from the Communist or revolutionary groups. Bitter strife arose between this organization and the Communists, who charged that the 2½ International, notwithstanding its radical phraseology, had no other program than the promised reforms of the Second International.

THIRD OR COMMUNIST INTERNATIONAL

We now come to the Third, or Communist, International, which is the revolutionary international of the proletariat. Its beginnings date back to the conferences held at Zimmerwald in September 1915 and at Kienthal (cities in Switzerland) in April 1916. Both conferences were called by the uncompromising, antinationalist revolutionary Socialists, who broke with the Second International. Some 40 delegates, representing a following in the principal countries, attended both meetings; but at neither were there any representatives of the majority or patriotic Socialist Parties of France, Germany, or England, nor was the Socialist Party of the United States represented. A manifesto was issued by the Kienthal conference calling upon all parties, organizations, and minorities to educate the masses in the spirit of the International Socialist Democracy, in order that the individual sparks and coals of discontent may rise to a mighty flame of invective and widespread protest in order that the international proletariat may, in accordance with its historic mission, hasten the world-liberating task—the fall of capitalism. It was at these conferences that the Communist or pronounced left-wing tendencies came to the front and Nicolai Lenin, of Russia, then in exile in Switzerland, took his place as an international revolutionary leader.

The bourgeois revolution in Russia in March 1917 led to the abdication of the Czar and the assumption of power by the Kerensky provisional government. In April 1917 Lenin and a number of his trusted lieutenants traveled by sealed train from Switzerland to Russia through hostile Germany, with the permission and financial assistance of the German general staff and Government. Lenin, in consideration of German help, had agreed to attempt the overthrow of the provisional government and, if successful, to desert the cause of the Entente allies. The Soviet of Soldiers', Workmen's, and Sailors' Deputies in Petrograd was then established as the center of all disloyal activities against the provisional Russian Government. The provisional government was overthrown on November 7, 1917; Kerensky was driven into exile and Petrograd was captured by the Red Guard.

The success of the Soviet revolution was due to the fact that the All-Russian Congress of Soviets had been packed so as to insure a majority for the Bolsheviki, or majority faction of the Russian Social-Democratic Labor Party. The Bolsheviki had split with the minority, or Mensheviki, when the former, some years previously, had insisted on an immediate revolt against the Imperial Government rather than await the further development of socialism and the education of the masses of the Russian people. The Bolsheviki, or Russian Communists, were for "direct action," and, by such action, seized control of Russia.

The Bolshevik leaders declared the international character of the principles of the Soviet regime, and, arrogating to themselves the title of the highest exponents of the teachings of Marxian socialism, conceived the rather ambitious plan for the establishment of a world Soviet regime by instigating social revolution in all countries. It is this attitude toward foreign countries that makes the spread of the teachings of communism a vital concern.

In January 1919 the Russian Soviet Government sent out a call for the Congress of the Third or so-called Communist International to convene at Moscow the following March. The call was addressed to some 40 Communist, revolutionary, or left-wing Socialist and syndicalist groups in all the principal countries of the world, and proposed a platform (which was later adopted) demanding the overthrow and annihilation of so-called capitalist governmental power and its replacement by proletarian power. It demanded that the proletarian system should include the dictatorship of the working class, including in some places peasants and agricultural workers, which dictatorship should be the instrument for the overthrow and utter destruction of the so-called exploiting classes; that the dictatorship should aim at the immediate expropriation of capitalism, the expropriation of private property and its transfer to the proletarian state under Socialist administration of the working class; and that the Socialist revolution should be secured by the disarming of the bourgeoisie and its agents and the arming of the proletariat.

The platform further called for mass action of the proletariat, going so far as advocating open-armed conflict with the governmental power of capitalism. Against the so-called patriotic Socialists remaining with the Second International, the platform declared for war without mercy, while every possible effort should be made to secure the support of the syndicalist element of the labor movement and the other groups and proletarian organizations of the left, or revolutionary, tendency.

AMERICAN ORGANIZATIONS REPRESENTED

The following American organizations were among the 39 or 40 included in the call for the Third International: (1) The Socialist-Labor Party of America; (2) the left wing of the Socialist Party of America, that is, the wing of the party having tendencies represented by Eugene V. Debs and the Socialist Propaganda League; (3) the Industrial Workers of the World, and (4) the Workers International Industrial Union. This call, it should be remembered, was issued before the formation in Chicago of the Communist and the Communist-Labor Parties of America, both of which later affiliated with the Third International. Neither the Socialist Party of America nor the Industrial Workers of the World affiliated with the Communist International, as they refused to subscribe to the 21 humiliating conditions for affiliation, nor would they submit to the discipline of a centralized world party with headquarters at Moscow.

Originally, the Third International was composed of labor unions, as well as political parties, but the Communists soon saw the need for a trade-union international based upon revolutionary principles. As a consequence, in 1921, a world congress was called at Moscow, at which was formed the Red International of Labor Unions, the membership of which is composed of radical labor unions and organized revolutionary minorities of conservative organizations. The best-known American representative of the Red Labor International is William Z. Foster, an able organizer and former syndicalist and member of the Industrial Workers of the World, who was given the mandate by the leaders in Moscow to organize the Trade Union Educational League. This was to be a propaganda agency charged with the duty of implanting the germs of industrial unionism and communism among the rank and file of the American Federation of Labor. The end in view was to overthrow the officialdom of that movement in this country and affiliate American labor with the Red International.

Foster's organization was later called the Trade Union Unity League, and was aggressively active in this country disseminating propaganda and conducting organizing drives. It had some success, especially in the textile industry in the South, the coal- and metal-mining industries, and other industries where great numbers of semiskilled and unskilled laborers are employed. The public press has been filled with references to rioting and bloodshed following in the wake of these Communist organizers.

The Third or Communist International uses the Red Labor International in the industrial field in combating the tactics of the International Federation of Trade Unions (or Amsterdam International, which is the trade-union arm of the Second International) and the American Federation of Labor in this country.

SYNDICALISM

Anarchist and socialist movements, posing more or less as political parties, have spread a spirit of revolt in the ranks of the actual workers, not only against the social order and organized government but as well against all conservative and constructive organizations of labor. This movement in England is known as syndicalism, in France as revolutionary syndicalism, and in the United States as industrial unionism. Its object is to break up the craft or trade-union system and organize the actual workers (not theorists) in what is known as one big union, having subdivisions along industrial rather than mere trade lines. In addition to fighting the everyday battles of the working class, syndicalism, said William Z. Foster, who is and always has been a syndicalist, intends to overthrow capitalism and reorganize society in such manner that exploitation of man by man through the wage system shall cease. The syndicalist is antipatriot and antinationalist; that is, he sees no need for a political supervising body, the workers in each industry managing their particular affairs. He hopes to effect his objective by the ruthless general strike and direct action, rather than through political action. He believes also in sabotage. To quote Foster: "The syndicalist accepts on principle the anarchist positions on the modern school, neomalthusianism (race suicide), marriage, individualism, religion, art, the drama, literature, etc., that go to make up the intellectual revolution, but he expends energy upon their propagation only insofar as they contribute to the success of his bread and butter fighting organization." The anarchist, for this reason, refers to the syndicalist as a "pork-chop revolutionist." Syndicalism has worked in close harmony with communism and ought to be considered as a part of that movement.

Syndicalism originated in France during the great French Revolution and exists today in practically every industrial nation. It has, or until recently had, its own international, with headquarters in Berlin, and is commonly called the Berlin International, although officially it is known as the International Work-

ingmen's Association, the name originally borne by the First International in 1864. The Industrial Workers of the World is the true American syndicalist movement.

The Congress of Industrial Organizations (CIO) was set up along syndicalist, or industrial union lines and has, at times, used syndicalist strategy and tactics, such as the general strike, violent mass picketing, slowdowns and sit-down strikes.

The anarcho-syndicalists and anarcho-Communists are primarily anarchists who hope to bring about pure anarchism through the use of syndicalist and Communist tactics.

The success of communism in Russia resulted in the formation of the Union of Socialist Soviet Republics. It is not a republic, or union of republics, but an arbitrary and intolerant dictatorship under which over 180,000,000 people are dominated by a comparatively small number of organized and disciplined leaders of the Communist Party, the membership of which was then estimated as being between 200,000 and 500,000. The former figure is probably nearer correct. In Russia the Communist Party, in general, comprises three main branches, the Politburo, which is a cabal of a few dominating leaders and is the real force of the movement; the Soviet Government, which administers the affairs of Soviet Russia; and the Comintern, or Third International, which is the center for the dissemination of revolutionary propaganda and direction of revolutionary activity throughout the world. (The Comintern is now known as the Cominform, or Communist Information Bureau, with headquarters until recently in Belgrade.)

The Communists also maintain a school in Moscow where radicals from all the countries of the world are trained as organizers and for sabotage and espionage work in their native lands. As a result the Soviet MVD, or secret police, have sources of information that are world-wide and a list of trained spies and saboteurs in every country that can be called upon at any time. This organization, under various names, is and has been for 30 years active in America.

For propaganda purposes the Communist Party of the United States has divided our country into districts, each with well-trained and organized directing and organizing forces. Nuclei, or units, of the Communist Party or its affiliated or sympathetic groups, are being organized in our Military and Naval Establishments, our law-enforcement agencies, our schools and colleges, our religious bodies, and our shops and factories.

By means of subtle propaganda and contacts in influential quarters, communism has been able to further its plans by stimulating the activities of the liberal, or "pink," elements in our churches, schools, and colleges, and even in our executive departments and legislative halls. These liberal fronts are referred to as "fellow travelers" and are usually socially, politically, or financially prominent. Wittingly or unwittingly, they are of great service to the subversive cause. In this class are included members of the numerous groups in America who are forever censuring our governmental and economic system, but offer nothing in the way of constructive criticism; who come to the defense of every subversive movement and condemn every effort of government to protect itself by prosecuting the disseminators of the doctrines of violence; who blatantly demand for themselves almost unlimited constitutional rights and yet preach the destruction of our present Constitution by narrowly limiting the powers of our courts—the very branch of our governmental system charged with the duty of protecting and enforcing personal and property rights; who advocated the recognition of the Soviet Government of Russia, which has resulted in Soviet diplomats and consuls flooding our country with the Red propaganda of communism, atheism, and destruction; and who strenuously oppose all efforts adequately to provide for the national defense and, in their zeal to prevent appropriations for our Army and Navy, would leave our country in as helpless and defenseless a condition as China finds itself today. Let me warn you against the subtle inroads being made by this class of propagandists. We should under no conditions forget that their propaganda is as surely directed at the destruction of our republican institutions and economic system as is that of their brethren, the rabid Red revolutionists.

Brotherhood Week

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1949

Mr. KEATING. Mr. Speaker, it is indeed appropriate that the yearly observance of Brotherhood Week should coincide with National Security Week. Perhaps no single factor is as necessary to the strength of our Nation as the unity of purpose of her citizens. Conversely, nothing can equal disunity and division in undermining our national strength.

Military might, our extensive economic aid to friendly countries, the maintenance of a vigorous domestic economy, our program in providing a better and happier life for our citizens—all these and every other worth-while effort can be set at naught through the bitterness engendered by religious or racial strife among our people.

At times of great national emergency, when we faced a common external enemy, there was little need for talk about brotherhood. On a foreign battleship, a sinking ship, or crippled plane, it was instinctive. Great sorrow, misfortune, or danger kindle the fraternal feeling.

The problem lies in keeping alive this flame when fortune smiles.

Without a true spirit of brotherhood, we can never achieve our objective of building a better and stronger country—of helping to build a better world. We may speak in different tongues. Our economic conditions may widely vary. Our customs, our secondary national loyalties, our form of worship may differ substantially. This week, however, serves to emphasize this central theme. We are all sons of one Father. We are, therefore, brothers. Let us strive to conduct ourselves as such. Therein lies the basic formula for national strength.

Under leave to extend my remarks, I include editorials from the New York Times, Rochester Democrat and Chronicle, and the Rochester Times-Union commemorating the observance of Brotherhood Week:

[From the New York (N. Y.) Times]

BROTHERHOOD WEEK

If there is one lesson that the yearly observance of Brotherhood Week has taught us in this country, it is that the spirit of genuine brotherhood, of racial amity and religious good will should prevail not for 1 but for 52 weeks of the year. Yet it is fitting to set aside 1 week for emphasis on brotherhood through special meetings and programs as a rule of life among all our citizens of every religion, race, and national origin.

This year's Brotherhood Week, sponsored by the National Conference of Christians and Jews, opens today and ends next Sunday. It gives us a special opportunity to remind ourselves that each of us has rights which we are bound to respect in others. It challenges us to reorient our thinking in order to deal successfully with new problems and new opportunities. Only through harmony and fellowship can we make certain our own tranquillity and continued progress.

Our words cannot help to establish peace in an outer world torn by dissension unless, through the practice of real brotherhood, we maintain a strong and united nation here at home. We must shun intolerance lest it divide and weaken us. We must reaffirm in our own lives the principles of Brotherhood Week through never-ending devotion to the democracy, humanity, and justice which we seek to exemplify. If we can take Brotherhood Week to our hearts and make it part of our very existences, we will have earned the peace and happiness we so greatly covet for ourselves and for all nations throughout the world.

[From the Rochester (N. Y.) Democrat and Chronicle]

BROTHERHOOD WEEK

The ideal of human brotherhood takes in the whole world. It implies emphasis on the common aims of humanity rather any differences between races or tension between nations.

Our first task, however, is right here in our own land. And while the effort is one which should be persisted in day by day, it is worth while to direct especial attention to it this week, in Rochester and throughout the Nation.

Such a call has been issued by the National Conference of Christians and Jews. It has, in a broad sense, a religious basis, as was indicated from many pulpits yesterday. Assuredly the moral principles which the churches seek to inculcate are the same for all faiths.

But the ideal of brotherhood, carried into the daily relations and acts of each one of us, is essential to practical, working democracy. If we are to maintain and foster effective unity as a free people we must put aside our prejudices. We must oppose intolerance and unfair discrimination of every kind.

Each one of us is different. No two human beings are cast in exactly the same mold. A sweeping adverse judgment on any group or race is not only unjust but at variance with the facts.

All Americans owe the high aim of Brotherhood Week firm allegiance.

[From the Rochester (N. Y.) Times-Union]

BONDS THAT UNITE

Brotherhood, in the sense in which it is used in the observance of Brotherhood Week, which begins today, suggests to most persons closer unity between the racial and religious groups of our own country. It is a plea for tolerance, for better understanding, for a removal of bars of prejudice and suspicion that cause so much unnecessary friction here at home. Where true brotherhood exists, there are no discriminations against any race or class, no favoritism in opportunity, no exploitation of the weak to the advantage of the strong.

We need more emphasis on brotherhood here at home, but we need it also in our relations with and our thinking about the people of other countries. The saying attributed to Will Rogers, that he never met anyone that he did not like after he got to

know him, might be extended to the international field. It is doubtful if there are any people in any land—speaking of the masses—whom we Americans could not grow to like if we knew them well enough.

Yes, even the Japanese whom we were vigorously hating a few years ago, have their good points. This is rather amusingly set forth by Richard D. Jones, director of the Canadian Council of Christians and Jews, who in an article in the Kiwanis Magazine tells of his experiences as referee of a basketball game in Yokohama.

"I have heard the fans and players of the United States call me a robber, crook, blind man, and bum," he writes. "But once I refereed a game in Yokohama between two Japanese teams. I know my decisions were as bad as those I made in the United States, but this time the slightest complaint was preceded by a bow, and the player on being told to return to his position did so, but first bowed again, again, and yet again. The Japanese. I like the Japanese. How polite."

Over here, of course, we do not bow to our basketball referees, and we certainly do not extend our ideas of brotherhood to a baseball umpire after a bad decision, but we, too, have our good points which the people of another country do not always understand. Too many people of other countries think of us as braggarts, possibly snobs, yet when they see American gifts rolling abroad in a volume never matched by any other country in history they get a different impression, and we hope the correct one, of this country.

Brotherhood is largely understanding, and we need much of that at home and abroad. Brotherhood does not mean giving up one's particular faith or convictions. On the contrary, as a speaker said in this city last week, the more deeply Protestants, Catholics, and Jews practice their various faiths, the deeper the bonds of brotherhood and understanding between them. The only convictions that endanger our society are those based on prejudice, hatred, intolerance, and the totalitarian conception. We have such convictions, even in America. One function of Brotherhood Week might well be to emphasize the barriers to brotherhood no less than the bonds that unite.

Floods and Flood Control—The Mississippi Threatens to Change Its Course

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 3, 1949

Mr. LARCADE. Mr. Speaker, at this time when hearings are being held by Appropriations Committees of the House and Senate on flood control and rivers and harbors matters, and coming from a State that is annually threatened by or actually is devastated by terrible floods, and as a matter of fact, at this moment due to the extraordinary snows in the North and Middle West of the United States, the stage is all set for another major disaster to strike Louisiana. I do not think it is amiss to call to the attention of the Congress the necessity to give careful consideration to the appropriation of the maximum amount of funds possible to protect our country from these recurring catastrophes.

Mr. Speaker, these recurring floods are not confined entirely to Louisiana and the South, but unfortunately all parts of our country at one time or another have suffered from floods, and will continue to do so unless we continue to make provisions for the Corps of Engineers to continue the battle on all fronts.

Thousands of lives have been lost and billions of dollars of damage to property have occurred, and if we avoid another major disaster again this year, it will be due largely to the fine work that has been accomplished over a long period of years by the Corps of Engineers of the United States by the great flood-control works which they have built, or by Providential control of the melting snows and rains from the upper portion of the country.

The Mississippi Valley, as is well known, is the drainage ditch of the Nation. Thirty-two States and 41 percent of the waters of the country drain down the mighty Mississippi and converge in Louisiana to reach the Gulf of Mexico.

The above startling fact that 32 States drain through the Mississippi Valley throwing 41 percent of the waters of the United States down the Mississippi River and converging upon Louisiana through all of the tributaries of the Mississippi is sufficient, I believe, without elaborating or going into further detail.

This is not Louisiana's making and Louisiana would prefer that this not be the case. Louisiana has been blessed with many natural resources, and were it not for the flood waters of the country being converged upon us to find a way to the sea, Louisiana could well take care of its problems.

I do not claim that Louisiana alone suffers from terrible floods almost each year, as I know that other States and river valleys are also susceptible to floods with their devastation and loss of life, and our people are solicitous and sympathetic with all other sections of the United States in affording protection to all parts of our Nation in solving their problems in regard to flood control. I believe that our Senators and Representatives in the Congress have manifested this fact by their full cooperation and support in this regard in the past, especially do I refer to our late lamented United States Senator John H. Overton, of Louisiana, who gave many of the last years of his life to the service of our entire country in flood control and rivers and harbor work.

I know that other portions of our country have had great disasters, but I would say that Louisiana has had more disasters and more often than any other portion of the country, and to bring this claim more vividly to the attention of the Congress I submit a list which I have compiled showing lives lost and property damage suffered from floods, hurricanes, and tidal waves which occurred principally in the eastern portion of the United States over a long period of years, to wit:

Isle Dernier, La., 1856: Four hundred lives lost.

Louisiana, 1863: Floods.

Louisiana, 1882: The greatest flood, setting a record at that time.

Johnstown, Pa., 1889. Two thousand one hundred lives lost; millions of property damage.

Galveston, Tex., 1900: Four thousand to six thousand lives lost; property damage, $20,000,000.

Kansas City, Mo., 1903: Many lives lost and millions of property damage.

South Central and Southeastern States, 1906: Property damage, $23,000,000.

Mississippi Valley, including Louisiana, 1912: Two hundred lives lost; property damage, $45,000,000.

Dayton, Ohio, 1913: Four hundred lives lost; property damage, $128,000,000.

Ohio-Indiana, 1913: Seven hundred and thirty lives lost; property damage, $181,000,000.

Galveston, Tex., and Louisiana, 1915: Three hundred lives lost; property damage, $20,000,000.

Atlantic coast, 1916: Fifty lives lost; property damage, $15,000,000.

Louisiana, 1922: Lives lost and heavy property damage.

Mississippi River Valley, including Louisiana, 1927: Two hundred lives lost; property damage, $200,000,000.

Lake Okeechobee, Fla., 1928: Two thousand lives lost; property damage heavy.

Pennsylvania, 1935: One hundred and thirty lives lost; property damage, $120,000,000.

Ohio-Mississippi River Valley, including Louisiana, 1937: Four hundred to nine hundred lives lost; property damage, $400,000,000 to $500,000,000.

Louisiana, 1940: Loss of life, and property damage, $11,000,000.

Nebraska-Missouri, 1941: Lives lost, and property damage, $13,000,000.

Omaha-Missouri, 1944: Lives lost, and property damage, $13,000,000.

Arkansas-Louisiana, 1945: Loss of life and millions of dollars of property damage.

Mr. Speaker, from the above partial list of disasters it would seem to me that it is a good investment for our country to provide funds for flood control and rivers and harbors projects to protect the lives and property of our people in all parts of the United States.

In this connection I include excerpts from an article from an AP news feature published in the New Orleans Times-Picayune on February 20, 1949, from which it is stated that Army engineers entrusted with flood-control work estimate that projects already in operation saved at least $69,000,000 of damage to areas hit by high waters in 1947. However, despite their efforts floods cost the Nation at least a billion dollars in that year alone.

The article above referred to follows:

HIGH WATERS STILL CAUSE HEAVY LOSSES ACROSS THE UNITED STATES

For almost a century the United States has fought a losing battle against annual floods.

The cost in property damage and flood relief has run into billions. The toll of lives has been heavy.

Spring of 1949 probably will be no exception. Flood-control authorities, studying the effects of the most severe winter in western history, predict heavy damage.

Snow deposits 40 to 60 inches deep have blanketed a vast area, threatening 1,250,000 square miles of watershed. A quick thaw accompanied by a rapid break-up of ice in the rivers would endanger the river valleys.

The Mississippi River still brings flood threats, despite flood-control efforts in recent years. The combined attempts of Federal, State, and private projects to harness Ol' Man River haven't been able to cope with the major floods that menace farms and cities each spring.

ASKS FOR PLAN

Engineers estimate that adequate measures would require at least 10 years of effort and the expenditure of ten to twenty billion dollars. Estimates of the cost range from four to ten billion dollars.

During the 1947 floods which ravaged the Missouri and upper Mississippi basins President Truman asked Congress for an effective 10-year program backed by adequate funds to end the flood menace. The flood-control act passed in July 1947 appropriated almost $300,000,000 for work during the fiscal year ending June 30, 1948.

The United States had 52 dams and reservoirs and 153 local protection projects in operation by June 1947. Congressional authorization has been obtained for more than 750 projects, with an estimated cost of more than $2,000,000,000. Many of the dams and reservoirs serve multipurpose use, including hydroelectric power, water conservation, irrigation, navigation, pollution abatement, and recreation.

The Mississippi River has a 2,500-mile levee system. Its valley includes rich farming and industrial sections, covering more than 40 percent of continental United States.

SAVE MILLIONS

In the Missouri River Valley, Federal and State representatives have coordinated their planning to develop a 6-year flood-control program. Congress will be asked for appropriations to carry out the integrated plan.

Included also in flood-control planning are the Sacramento, Ohio, Arkansas, and Columbia Rivers, together with their tributaries. In New England, the Connecticut and Merrimack River Basins have been the chief sources of flood problems.

Army engineers entrusted with flood-control work estimate that projects already in operation saved at least $69,000,000 of damages to areas hit by high waters in 1947. Despite their efforts floods cost the Nation at least $1,000,000,000 in that year alone.

Mr. Speaker, much has been accomplished as a result of the Congress making appropriations for the Corps of Engineers to harness the flood waters of the country as is well pointed out in the foregoing article, however, much remains to be done to protect the lives and property of our people.

At this time, in Louisiana, we are greatly concerned with a new threat of the Mississippi River diverting its channel from the main river through Old River to the Atchafalaya River, which would result in changing its course completely, and would leave Baton Rouge and New Orleans high and dry.

The Atchafalaya River forms the eastern boundary of my district, and part of my district lies in the Atchafalaya River spillway, and therefore, I am directly interested in this eventuality, for should this occur, not only will the Atchafalaya River Basin be flooded, but all of the southeastern portion of the State of Louisiana would be under water.

On this subject, Mr. George Healy, Jr., of New Orleans, La., has just published in the magazine section of the New Orleans Times-Picayune an informative and interesting article discussing this serious matter, and I include the same herein as follows:

OLD MAN RIVER

DON'T GET EXCITED. FATHER MISSISSIPPI ISN'T KICKING UP HIS HEELS AND TAKING HORACE GREELEY'S ADVICE—NOT YET, THAT IS—EXCEPT FOR WATCHFUL VIGIL OF UNITED STATES ENGINEERS, THE POSSIBILITY COULD EXIST THAT ONE FUTURE DAY THE MIGHTY PORT OF NEW ORLEANS WOULD BE LEFT WITH A SHALLOW LAKE—RIVER'S COURSE HAS CHANGED FREQUENTLY DUE TO NATURAL TENDENCIES, HAND OF MAN

(By George W. Healy, Jr.)

Is fickle Father Mississippi making ready to wander off and leave New Orleans?

It's possible, for the big stream has changed course and left many another settlement on the shore of a new lake—or at the side of a new sandbar.

It's improbable, though, for several reasons. Principal among them is New Orleans' dependence on the river. Most of the towns or cities which have been deserted by the Mississippi during its meandering have depended less on the stream than does New Orleans. All of them were smaller.

A few years ago the river's swift current swept past Greenville, Miss., within sight of that city's main business district. Today Greenville is on Lake Ferguson, named for a former president of the Mississippi River Commission. The muddy river is several miles away, in a new channel.

Countless other towns which were built on the river's banks now overlook "false" rivers or "horseshoe" lakes—still water which covers the bed of what once was the mighty Mississippi.

Some of the changes have been natural. In other cases, like that at Greenville, Father Mississippi had the help of man in moving into a new bed. Since 1933, the United States engineers have dredged or blasted 17 new channels for the main stream between Memphis and Old River. These cut-offs have shortened the river about 170 miles.

Left to its own devices, the river probably would forsake New Orleans and make a natural short cut to the Gulf of Mexico—down the Atchafalaya Basin.

Considering the stakes, there's little likelihood that the river will be left to its own devices. There's too much talk about the danger of its deserting New Orleans—the kind of talk that usually precedes action.

Among the most articulate talkers and writers about this danger is J. P. Kemper of Franklin, engineer for the Atchafalaya Basin Flood Protective Association. He sees immediate danger, unless drastic action is taken to stop the enlargement of Old River—the short stream which connects the Atchafalaya and Mississippi Rivers.

"Water out of control," says Kemper, "can be as destructive as fire. Why not quit fiddling and get busy?"

The United States engineers themselves see no urgent need for drastic action, but hope to begin corrective measures within 3 or 4 years. They estimate that the Atchafalaya River can continue to grow at its present rate for 40 years before that stream can capture 50 percent of the water flow which originates above Old River.

Dewitt Pyburn, member of the Mississippi River Commission, agrees with the Federal engineers that there is no imminent danger of capture of the Mississippi by the Atchafalaya. Like the engineers, he knows it would be unwise to wait 40 years before taking action to prevent this possible capture.

The problem of preventing the enlargement of the Old and Atchafalaya Rivers has received official attention for many years.

The first report submitted by the Mississippi River Commission, which was created by a Federal act of 1879, included estimates of costs for checking the expansion of Old River.

George Hudson, chief of the engineer division in the office of Col. John R. Hardin, United States district engineer at New Orleans, has studied early recommendations concerning this problem. The first commission report proposed (1) separation of the Red from the Atchafalaya by diversion through upper Old River and (2) closure of Old River. A board of engineers rejected both proposals on grounds that they would increase the danger of floods.

Unlike some problems, enlargement of Old River isn't one which everybody always talked about and nobody ever did anything about. In 1839, something was done about it.

To limit the flow from Old River down the Atchafalaya River, two sills, or sunken dams, were placed in the Atchafalaya River near Simmesport. The sills were about 250 feet wide, with their crests just below the low-water mark—except in the middle of the channel. There they were lower, to permit navigation.

Studies in 1894 indicated that these sills halted the expansion of the Atchafalaya.

Meantime, in the low-water season of 1888–89, a dam was started west of Turnbull Island to divorce the Red from the Atchafalaya. This structure was intended to force the Red River to flow into the Mississippi instead of the Atchafalaya. The plan didn't work, and the project was abandoned.

Despite this failure, the annual report by the Mississippi River Commission in 1913 included discussion of a project for closing Old River with a dam connecting the levee lines, with a lock for navigation.

The flood of 1927 changed thinking about ways to prevent floods. After that disaster there was greater effort to find new ways for the main river to reach the Gulf and less talk about stopping up natural outlets.

The Atchafalaya apparently has been a natural outlet for the Mississippi for several centuries. Earliest maps of the region which are available to the Corps of Engineers show the Mississippi River connected to the Atchafalaya in the vicinity of the present Old River. Some of these maps were prepared by followers of De Soto.

Because the 1927 flood magnified the need for better, newer flood-control works, it was followed by strong sentiment in favor of new spillways to relieve burdened levees. Consequently, efforts to halt enlargement of the Atchafalaya were relaxed. Sills which had been sunk near Simmesport were permitted to wash away. People along the big river's banks were more concerned with getting lots of water out of the Mississippi at high stages than with keeping the Mississippi's banks full at low stages.

As a result, the Old and Atchafalaya Rivers have continued to enlarge during the past two decades. In 1927 approximately 75 percent of the water originating above Old River passed to the Gulf by way of the Mississippi River channel. The other 25 percent flowed down the Atchafalaya Basin.

Today, almost 22 years after the 1927 flood, approximately 72 percent of the water originating above Old River is flowing down the Mississippi to the Gulf. The remaining 28 percent takes the route down the Atchafalaya.

If this ratio were constant, the engineers would be unconcerned. But it isn't. At some future day, 29 percent of the flow will go down the Atchafalaya. Later, unless new control steps are taken, more water will move down the Atchafalaya than down the Mississippi.

There's no mystery about why the water is flowing in increasing volume down the Atchafalaya. The reason is simple: From Old River to the Gulf via the Mississippi is

322 miles; from Old River to the Gulf via the Atchafalaya is 159 miles. Obviously, the route which is 163 miles shorter is the one the water seeks to follow.

Limits in the carrying capacity of the Atchafalaya River alone have forestalled capture of the full flow by that channel.

United States engineers say they can keep that carrying capacity limited by following a plan which has been approved by the chief of Army engineers and which will be considered by the present Congress. Part of the plan is old; part is new.

First, completion of the Morganza floodway is expected to slow the expansion of Old River. This structure was started under the Flood Control Act of 1928, as amended, but construction was delayed by World War II. On the basis of expenditures which have been made and which remain to be made, the floodway is about 33 percent complete. Guide levees from Morganza to the Gulf have been finished. Utilities, including railroads, highways and communications lines, have been elevated at Krotz Springs. Utility crossings are being raised at Melville, and plans are complete for a dam structure at Morganza which will carry utilities there.

When the Morganza floodway is opened, engineers say, much water will flow through this opening which otherwise would race through Old River and the Atchafalaya River and contribute to their continued enlargement.

The engineers, however, don't propose to depend entirely on the Morganza floodway to halt expansion of Old River. They plan to take positive control of the flow of water between the Mississippi and Atchafalaya Rivers by building a new spillway and navigation lock in the Old River area.

This spillway would include a needledam similar to that in the Bonnet Carre spillway, 25 miles above New Orleans. It could be opened or closed, as conditions might require.

United States engineers say operation of this spillway would accomplish several desired ends. It would halt enlargement of Old River without eliminating the Atchafalaya Basin as an outlet for Mississippi River floodwaters. It would permit the engineers to control the diversion of Mississippi River water into the Atchafalaya River in times of low stages, when salt water from the Gulf backs into the river at New Orleans and creates a serious problem.

An auxiliary part of the Old River area project would be a levee system to limit the backing of water into the Red River backwater area, relieving some areas now repeatedly flooded by backwater.

The new Old River project, at present costs, would call for an expenditure of $29,000,000 and would require authority from the Congress for spending in excess of the $14,000,000 already authorized for the protection of the Red River backwater area.

Time will tell when this additional authority and the necessary money will be available and the whole job will be done. Generally, the urgency of changing conditions influences final decisions in matters of this kind.

From a practical point of view, construction of the several features of the project could be initiated at any time that funds can be made available, but the actual closure of Old River should not be undertaken until the Morganza floodway control structure is ready to operate.

This Morganza floodway, delayed by war is an urgent part of the over-all flood control plan.

Folks who have been watching the Mississippi River a long time are confident that $29,000,000 or more will be spent to keep Old Man River from meandering off and leaving the city.

Baton Rouge, New Orleans and scores of other communities along the lower river need the river—and must keep it.

Mr. Speaker, I do not presume to enter into a technical discussion of the procedure to be taken to prevent the Mississippi River from changing its course into the Atchafalaya River, since the solution is an engineering problem and one which must be solved by the Corps of Engineers; however, I do say that from information which I have been furnished and from my own observation and study it is necessary that quick action be taken to prevent such a catastrophe, for, with the amount of water that is anticipated to be carried by the Mississippi River this year, it could happen this year. Some engineers in Louisiana predict it could occur this year and others from 1 to 3 years, but the fact remains that no one can say definitely when this change may occur, and, therefore, it is my opinion that proper steps be taken at once; otherwise it may be too late.

Authorization has been made by the Congress under the Flood Control Act of 1928, as amended, and the Flood Control Act of 1936 to deal with this situation, and some funds are available to undertake the necessary work on this project. However, additional funds are required, and no doubt at this session of the Congress the Corps of Engineers will present a report and estimate of the amount required and a request will be made of the Congress to appropriate the additional funds required to provide construction for this important project.

If we fail to take action immediately, the result may prove calamitous.

Since preparing the foregoing remarks, Mr. Speaker, as an evidence of the importance and seriousness of this matter, I submit a copy of an editorial just received, published in the city of New Orleans, La., again from the Times-Picayune, of date February 22, 1949, from which it will be noted that urgency and acceleration of the construction and completion of this program and project is imperative and immediate.

The editorial referred to is as follows:

FINISH MORGANZA

At every recurrence of high water in the lower Mississippi there is a new flood of suggestions ranging from temporary relief to permanent protection. But remarkably little is said about one of the priority projects in lower-river control—the Morganza floodway. It should occur to more people disturbed by the high-water threat that completion and use of the Morganza outlet would tend to reduce or solve many of the problems for which they seek emergency measures in time of danger.

Morganza is a fixed part of the control plan adopted 25 years ago and amended several times since. It would take Mississippi flood waters from the Mississippi about 30 miles below Old River, allowing it to flow between guide levees through the marshes east of the Atchafalaya to the Gulf. It is about one-third complete and could be used. But to turn the water through before it is finished would involve heavy damage.

The floodway probably would have been put to use in the 1945 flood except that wartime rail and highway transportation across the State would have been interrupted. Since then transportation arteries have been raised, but millions of dollars worth of uncompleted works are still needed to complete the job.

It seems to be generally acknowledged that use of Morganza, as intended during extreme high water, would substantially reduce the problem at Old River and on the Atchafalaya. There would be less need for alarm over the increasing flow through Old River and the tendency of the Mississippi to take to the Atchafalaya River bed. The people in the West Atchafalaya floodway would have less reason to fear that the fuse-plug levee between Simmesport and Hamburg would be overtopped, carrying the overflow down upon the Teche country.

While control and navigation works at Old River are a part of the plan and are necessary for several reasons, these probably are some distance in the future. The Morganza project can be readied for emergency relief service in a reasonably short time if the money is provided.

The work was held up during the war, but the Chief of the Army engineers said it should and would be completed after hostilities ended. In the 4 years that have intervened the State and the utilities companies have accomplished something, but the fact remains that there is still more to be done than what has been accomplished in the 25 years since the original plan was adopted. This may be the time for Louisiana Members of Congress to take up the Morganza project vigorously where the late Senator Overton left off. The construction lag could result in serious damage to the State at any time it becomes necessary to open the levee.

Mr. Speaker, the above editorial confirms practically all that I have mentioned hereinbefore, and I would like to particularly point out the statement made in the editorial that, notwithstanding the fact that authority for the Morganza spillway was enacted into law more than 25 years ago, that the project is only about one-third complete.

Under these circumstances, it will readily be understood that the Morganza spillway, in its present one-third completed condition, could not be utilized in the present emergency, nor will it be usable in the future until it is fully completed for the purposes of relief to the Mississippi River and the Atchafalaya River, for if the use of the uncompleted spillway would be utilized, this would place portions of south Louisiana under water just as would a break of levees in the main river or the Atchafalaya, and my constituents are unalterably opposed to the utilization of the Morganza floodway until it is fully completed and properly controlled for the purposes for which it is intended.

Mr. Speaker, in view of the Government having expended funds to the extent of one-third of the cost of completion of the Morganza spillway, it necessarily means that it would be good economy to finish the job.

Mr. Speaker, it is difficult to point out and discuss the whole problem and situation under consideration here in the space which is allotted, but it is proper for me to say that all of these matters are tied in under the comprehensive plan of the Corps of Engineers under the authority hereinabove mentioned and provide for projects affecting the lower Mississippi Valley, the Atchafalaya and Morganza spillways, the Bennet Carre spillway, the Red River, the Ouachita River, and other streams; however, to emphasize the threat of the Mississippi River changing its course through the Atchafalaya River, I would point out that the Atchafalaya River is the only stream in the United States into which the Mississippi River discharges, and through the channel of the Atchafalaya River it reduces the distance by 165 miles to the

Gulf of Mexico in comparison with the present course of the Mississippi. The Mississippi has been straightened between Memphis and New Orleans and the distance has been reduced 150 miles.

The Atchafalaya River is reputed to have one of the swiftest currents of any river in the world, and with the natural drop in elevation, the acceleration of the discharge in the Mississippi occasioned by the straightening of the Mississippi River; if the Mississippi would change its channel into the Atchafalya River, and since it is obvious that the Atchafalya River cannot take the water from the Mississippi; all of this great wall of water would pile into the Atchafalaya River and virtually drown out the best part of south Louisiana.

Mr. Speaker, if Providence will protect us from this disaster this year, or for a few more years, it is my fervent hope that the Corps of Engineers will be provided with the necessary funds to complete this great program which is so nearly completed, and if so, the country will discharge a reasonable obligation, and our people will be protected, lives and property saved and our natural resources preserved.

Mr. Speaker, I have been in constant consultation with the Corps of Engineers in regard to these problems, and only last week I directed communications to the Chief of Engineers, the Mississippi River Commission and Division Engineer, Corps of Engineers, at Vicksburg, and the District Engineer, Corps of Engineers, at New Orleans, La., calling to their attention, in more detail, all that I have stated, and I have been advised that they realize the seriousness of the situation; that they are aware of same, and that they will, and are ready to give their full cooperation in taking the necessary steps to complete this vital program just as soon as the Congress provides the balance of the funds required.

The Washington War: Economy Versus Gimme

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1949

Mr. HÉBERT. Mr. Speaker, there is no need for me to comment on the editorial which appeared in the New Orleans Item recently under the title of "The Washington War: Economy Versus Gimme."

It tells a story which can neither be added to nor detracted from .

It is undoubtedly one of the most terrific and powerful editorials I have read in any newspaper, any place, anywhere.

It says eloquently what so many million Americans would like to say if given the opportunity.

Here is the editorial:

THE WASHINGTON WAR: ECONOMY VERSUS GIMME

By stepping up the pitch of their demand for $4,000,000,000 of added Federal taxes to still greater intensity, both President Truman and Treasury Secretary Snyder make themselves the prophets and advocates of an illusive administrative policy. This is the theory of government by gimme. Gimme this, gimme that, gimme money, gimme taxes, gimme more money, gimme still more taxes—gimme, gimme gimme!

The Government needs more money. Well, so does Joe Doakes, who is a clerk or ditch digger or cotton farmer or bank teller or physician or the owner of a small corner grocery store. General Motors, Metropolitan Life, the Pennsylvania Railroad, and the newsboy on the corner all need more money for a new plant or a pair of shoes. But they, like Joe Doakes, can do one thing the Government can't, and another thing which the Government won't.

They can produce more at a profit in a free and competitive market, and thus provide more money to spend, or they can cut down present expenditures and apply the money thus saved to more compelling needs as these arise. The Government can't produce more because it can't produce anything. It merely levies tribute on its citizens. And apparently the Government won't save money by eliminating waste, in order to make its present resources go further.

THE BLUEPRINT HAS BEEN MADE

We don't assume to point out just where and how such savings can and should be effected. For one thing, there is no need to do so. A corps of experts, headed by former President Herbert Hoover, has just done that job to the queen's taste. Mr. Hoover's estimate is that the Government could save $3,000,000,000 a year or more by eliminating duplicate bureaus, by better budget making, and by a general overhaul of its structure * * * and only 5 of the 15 special Hoover Commission reports have r yet been submitted.

Nor is he the only expert who has pointed out, from intimate, first-hand knowledge, the various points at which governmental savings could be achieved. Said Comptroller General Lindsey Warren, in testifying before a House committee less than a month ago about the present administrative set-up of Government bureaus and departments: "It is ideal for the tax eaters or those who wish to keep themselves permanently attached to the public teat, but it is bad for those who have to pay the bill."

He and Senator BYRD, of Virginia, point out that no less than 29 separate Government agencies, each with a full staff of employees, now are engaged in the business of lending Government funds; 28 agencies are concerned with welfare, 65 with gathering statistics, 34 with the acquisition of land, 16 with the preservation of wildlife, and so forth and so on.

Secretary Snyder says the Government must have $4,000,000,000 of additional tax money in order to make payments on the public debt. That is a laudable purpose. Debts must be paid. And the Hoover Commission says, in effect: "Here are $3,000,000,000 you can use for that purpose because the money is now being wasted. Your Government business would be better run if you eliminated this extravagance." But President Truman and Secretary Snyder are the arch-proponents of a very different philosophy. Their solution is to say, with one voice, to the taxpayers of the Nation: "Gimme! Gimme more—$4,000,000,000 more!"

PROFITS, WAGES ARE ONE AND THE SAME

Since the Government creates no wealth, that additional money can come only from those who do. In other words it must come from the wages, professional earnings, and profits of those who create new wealth. This is a rich and productive country. Its sturdy tradition of free enterprise has made it so. The tax pasture of annual earnings is green. But our cattlemen learned by bitter experience what happens when any range is overgrazed. When the good earth is cropped too heavily and incessantly, the rich and fertile fields become a dust bowl. Out of still earlier lessons of man's individual economy come warnings against the folly of working a willing horse to death.

Louisiana pays nearly $1,000,000,000 a year—something over $880,000,000—to the Federal Government in income taxes. In Louisiana alone, 10 percent of all earnings go to State Government. Louisianians have other reasons for knowing, through recent legislative developments, that proposals to give State benefits to the people mean taking more from the people in the way of taxes first. Government by gimme has its limits, however, like the rich pasture that is overgrazed or the fertile field that is overcropped.

ALWAYS A HIGH-TAX ADVOCATE

President Truman believes in high taxes, and appears to be ready to fit whatever facts he encounters to that belief, rather than modify his belief in accordance with the facts. Federal income taxes were reduced for 1948. The reduction was slight. But even so, it was put into effect only over Mr. Truman's veto. At that time he declared openly that it was necessary to take the additional money out of the hands of the people in order to check the inflationary spiral of rising prices by reducing the Nation's purchasing power. The tax cut went into effect in spite of him, the additional money went into the hands of the people—and prices are now on the way down.

But no matter. Mr. Truman, and his Treasury Secretary, Mr. Snyder, can blow cold as well as hot. If they cried "Gimme!" when inflation was still on the march, they cry "Gimme!" even more loudly when the trend has been reversed and there is apprehension lest too rapid a deflation set in.

Let there be no mistake about one thing: "Gimme a bigger share of your profits" means, word for word, "Gimme a bigger share of your wages." Without profits there can be no employment, and without employment there can be no wages. This is a machine civilization. The cobbler who makes shoes by hand, or the weaver who produces cloth with a foot-power loom can't create wealth fast enough to keep us supplied with electric refrigerators, automobiles, television sets, and college educations for our children. It takes huge factories, filled with costly machinery, to do that sort of a job. And no one builds million-dollar factories or maintains million-dollar pay rolls for laughs and the exercise. It is done to make profits; profits that can be distributed in one way or another to the benefit of investor, manager, wholesaler, retailer, clerk, and laborer. Take away profits and you take away wages. That is why Government by Gimme can be carried to the point of disaster.

STATESMANSHIP CAN PREVAIL

We don't anticipate any such outcome, of course. Government officials are made of the common clay from which all of us spring. Some of them tend to forget this. Their unwillingness or inability to exercise the same hard-headed common sense in public administration that the successful citizen must exercise in conducting his personal business has made the governmental structure cumbersome, unwieldy and wastefully extravagant.

But Congress is closer to the people than are the bureaucrats. There are indications that in both House and Senate a sound core of statesmanship is making itself felt today, and that the test of realism is being applied to the President's soaring demands. "Wisdom," said Wordsworth, "is ofttimes nearer when we stoop than when we soar." If Mr. Truman's reiterated dictum that taxes must be raised by $4,000,000,000 a year is subjected to careful scrutiny and dispassionate study, Government by Gimme is not likely to receive anything more than a sound rebuff.

Some Basic Meanings of Democracy

EXTENSION OF REMARKS
OF

HON. EDWARD J. HART
OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1949

Mr. HART. Mr. Speaker, recently Dr. Forrest A. Irwin, president of the New Jersey State Teachers College at Jersey City, delivered an address before the Jersey City Kiwanis Club on Some Basic Meanings of Democracy. The address is so thoughtful and so superior in its content to the usual address of this character that I asked Dr. Irwin for permission to place it in the CONGRESSIONAL RECORD. It is worthy of our earnest consideration.

The address follows:

President Dillon and members of Kiwanis, it is a high privilege to appear before you today, and especially to speak on the subject that we have chosen for our consideration. Much has been said in recent years, and more generally since the end of the war, about democracy, the democratic social philosophy, and the preservation of the American way of life. Notwithstanding all that has been said and done, democracy is not adequately, generally, and fundamentally understood by our people. The speaker has developed a sensitive attention to the concepts revealed by word and action of our citizenry, and especially by a considerable number of college students, and he is forced to the conviction that the degree of understanding is not commensurate with the potentialities of democracy or with either the domestic demands or the world leadership role in our contemporary situation. Our conception of democracy must be sound, adequate, and socially potent. It is toward the clarification and refinement of this conception that I would speak to you today.

I venture the initial emphasis that this treatment of the subject, severely limited as it is by the brief time at our disposal, will undertake but one thing. This is to discuss some of the basic meanings of democracy and a few of their implications. It is important for us to remember that the present practices and current patterns of democratic procedures in the United States have their imperfections, even weakness, and sometimes unworthy manifestations. We know something about the limitations of our ways of life, and about our social, economic, and political problems. Our actions in some aspects of our national life are not always exemplary. These things we know, but they will not be the center of our attention today. To repeat, we want on this occasion to examine together some of the basic meanings of democracy and a few of their implications. Notwithstanding the fact and the admission of the imperfections just suggested, American democracy stands today as the one greatest hope in a troubled world. It may prove to be the stabilizing influence that will prevent wholesale disaster.

The major problem in the world today is that of human relationships. The social frictions, the contradictions in our collective behavior, the conflicts among individuals, groups, nations, and regions are dissipating our energies, wasting our resources, breeding skepticisms, and promoting dissensions. These things are hindering the progress of civilization and are, indeed, threatening to destroy the civilization that has been so laboriously developed. Today too much of our effort, our energy, our strength, and of both our material and human resources are being used to assuage the results of actions that are far less noble than those which should characterize intelligent, cultured people. More effective ways must be found to arrest human deterioration and social disintegration in the world at large.

It is our thesis that democracy, properly understood and faithfully developed along the lines here defined, is our hope and therefore worthy of our best efforts and our devoted loyalty. The test of the soundness and desirability of any social system is whether or not its full development according to its essential nature is conducive to the abundant life for all the people. It can be stated with considerable confidence, as a fundamental principle of successful and enduring social organization, that that system is best which when carried to its logical conclusion and applied in the greatest measure will develop most fully and utilize most completely the potentialities of the greatest number of people, toward the welfare of all.

We urgently invite you and all our people, to apply in all places and to all aspects of our national and international life the basic tenets of the democratic social philosophy as here to be defined. Some of the basic tenets of the democratic social philosophy are these:

1. The central meaning of democracy should be the essential dignity and worth of man. Democracy, or any kind of society, that respects the dignity and worth of man, obligates itself to seek by every worthy means the optimum development of every individual compatible with the social welfare.

Any social process that ignores or deviates from this position makes itself vulnerable to the exploitation of human beings. And the exploitation of groups and segments of humanity by other groups and segments is a major sin in contemporary society.

2. Democracy assumes that men possess the potential capacity and intelligence to govern themselves, to determine their own goals, to manage their own social processes, and to appraise their own achievements.

The people in a healthy democratic society know that they are the authority for government. They do not shift the incidence of responsibility to an abstract state removed from themselves.

Democracy deprecates paternalism as a principle in human affairs, for paternalism seductively substitutes external authority for potential self-reliance. A colossal temptation and a studied technique in the ideologies opposed to democracy.

3. Democracy predicates inalienable rights, among which are life, liberty, and the pursuit of happiness.

It is worthy of note and of tenacious retention that inalienable rights are those with which man is endowed by his Creator, not those which are dispensed by government.

This position implies the principle of equal opportunity for all citizens in a democratic society for individual development irrespective of color, race, or creed.

The fuller realization of this principle is a part of the unfinished business of democracy in the United States.

4. Government in a democracy is conceived as a servant of the people, not as their master. Hence it is a means, not an end.

Government is instituted for the people, not the people for the government.

5. In settling its questions and solving its problems, democracy employs the methods of deliberation, debate, reflection, consultation, arbitration, moral suasion, cooperation, reasonable compromise, and education, rather than the methods of coercion, blind obedience, and brute force.

The former procedures tend to dignify and develop its people; the latter tend to depreciate and enfeeble their potentialities and powers.

6. Democracy seeks enlightenment for its people and is devoted to the discovery of truth and its application to human affairs.

It must develop and effectively preserve the best traditions of intellectual freedom and inquiry.

7. The rights, liberties, and freedoms provided by a democratic society for its citizens have no existence in fact and no social meaning apart from commensurate duties, obligations, and responsibilities.

In a democracy a person cannot legitimately claim liberties which he does not use responsibly.

This is a lesson that education has not adequately taught and the people of the United States have not yet soundly learned. It is one of those weaknesses referred to early in our presentation.

8. Democracy assumes that the game of social life will be played according to rules that have been deliberately and collectively made, and that the rules will be respected until changed in an orderly manner (as set forth in tenet No. 5 above).

The intelligence which the rules reveal and the respect which they command are criteria of political and social health.

9. Democracy is more than a particular form of government, more than a pattern or spirit of social relationships, more even than an attitude of mind. It is a great social faith. It promises a possible development and state of human affairs progressively more intelligent, more civilized, more ethical, more genuinely satisfying, and profoundly more meaningful than man has yet achieved.

Democracy believes in the improvability of man.

10. The democratic way of life and the fruits of democracy are never fully and finally attained. Each successive generation of people may inherit conditions and traditions of a high order, but only by the efforts and devotion of each such generation in turn can democracy be preserved and improved.

Eternal vigilance is the price of democracy.

Our purpose today has been to examine the fundamental nature of the thing we profess. We wish to know if it is worthy of a dynamic faith. We have no disposition to overlook our national shortcomings or to overrate the quality of our society. We believe that it can be improved and that it is the sober duty and high privilege of every lover of liberty and humanity to devote himself to this end.

Democracy and the Hebrew-Christian tradition in the western world have much in common. Democracy as here set forth is the highest conception of a social order yet developed. It promises much more than has yet been achieved. But no serious student of human society and of man believes that man has reached the peak of his potentialities. There are possibilities ahead.

It is the function and the responsibility of education, and of every other social institution in a democratic society, so to relate itself to the basic social processes that the ends here envisioned may be progressively realized. A successful and enduring democracy requires a higher level of education, of practical intelligence, of self-discipline, and of ethics than any other form of society yet undertaken.

The supreme challenge to the United States today is the more complete application of these principles to our own people in all phases of our social order, and to demonstrate their successful operation to the other peoples of the world. In the degree in which we can incorporate these principles into our national life and are guided by them in all our relationships with other nations—in that degree we can look the world in the face without fear or apology. Any nation that so builds its life and so orders its action is worthy of leadership in this troubled world. The searching question for us today is whether we have the vision, the maturity, the discipline, and the moral stamina to perform the role creditably.

Basic Economic Structure of America Is Being Destroyed

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1949

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks, I include an address delivered by the Honorable GEORGE W. MALONE, United States Senator from Nevada, at the annual Lincoln Club banquet at Battle Creek, Mich., February 10, 1949:

At no time in the history of this 172-year-old Republic have the life-long teachings and the example of Abraham Lincoln been needed more than at this moment.

Lincoln said on one historic occasion more than 100 years ago that "you can fool some of the people all of the time and all of the people some of the time; but you cannot fool all of the people all of the time."

I believe that sensible statement is still true—however, neither Lincoln nor the American public had, at that time, even been subjected to the greatest propaganda machine ever built up in this or any other nation.

Through this superlative propaganda masquerading in each case under a Washington Government department news service the public mind is being focused upon special group legislation—while the national economic rug is being literally pulled out from under our feet.

The finest example of the selling job accomplished by the greatest public relations steam roller ever built up in the Nation's Capitol, is that practically all of the time of the Eightieth Congress was used up, and most of the time of the Eighty-first Congress will be consumed in committee hearings and debates on the floor of the United States Senate and in the House of Representatives on highly controversial group legislation, including farmers, manufacturers, veterans and labor.

While at the same time the basic three-part economic legislative program designed to distribute the wealth of this Nation throughout the world is in high gear, and if their plans are successful, will be adopted by this Congress with a minimum of debate. This three-phase program provides for making up the trade balance deficits of all of the European nations in cash each year, currently called the Marshall plan, a 3-year continuation of the selective free-trade policies adopted by the State Department under the 1934 Trade Agreements Act to divide the markets of this Nation with the low-wage living standard countries of the world and the creation of a permanent international-trade organization made up of the nations of the world to meet each year and to divide the remaining production and markets of the world among them, eventually on a basis of population.

This three-part program is designed to undermine the basic economic structure of this country, with the one objective of dividing our markets and leveling our living standard with the low-wage living standards of the Asiatic and European nations.

First. Appropriations to make up the trade-balance deficits of the European nations in cash each year, currently labeled the Marshall plan. Our chief export is cash;

Second. Extend the selective free-trade principle adopted by the State Department through a 3-year extension of the 1934 Trade Agreements Act; and

Third. Adoption of the international trade organization—52 nations with 52 votes. The United States would have the same vote as Siam or Lithuania. They would meet at least once each year with free trade the ultimate goal, add up the remaining production and markets of the world and divide them eventually on the basis of population.

The first step of the three part permanent program—that of making up the trade balance deficits of the European Nations each year in cash—our chief export is cash—began rather modestly with scattered gift loans to these nations, leading up to the gift-loan of three and three quarter billions of dollars to England in 1946—and then to the $17,000-000,000 5-year program currently known as the Marshall plan and soon to be followed by the Truman global recovery program.

The second step inaugurated through the 1934 Trade Agreements Act, under which the State Department has adopted the selective free trade principle, is to be extended for 3 years at this session of Congress—and the principle later to be made permanent through the adoption of the international trade organization principle.

The phrase "reciprocal trade" does not occur in the 1934 Trade Agreements Act—it is simply a catch phrase to sell free trade to the American people—cloaked with a more involved and less understandable phraseology.

The third and final step of this very clever three phase program to divide the markets and to distribute the wealth of this Nation throughout the world, is the adoption of the presently proposed international trade agreements act—under which the selective free trade principles, currently adopted by the State Department under the 1934 Trade Agreements Act, will be made permanent and become the settled policies of this Nation.

All of this division of the wealth of this Nation with the countries of the world through gift-loans to make up the trade balance deficits of the European countries—and the division of the markets through the 1934 Trade Agreements Act—and later to be adopted and made permanent through approval of the International Trade Organization—is on the theory that the living standards of the remaining countries will thereby be elevated to ours—and that in some mysterious way we will benefit through an increased foreign trade.

As a matter of fact, with 7 percent of the population of the world, the actual effect will be a substantial reduction in our own wage-living standards, with very little, if any, rise in the wage-living standards of the remaining 93 percent of the world's population.

It will be like deciding to average the level of the water in a water glass and the city reservoir—you may pour the water out of the glass into the reservoir until your glass will be empty, but the water in the reservoir will not be affected very much.

There is no bipartisan foreign policy as such—in the first place, we do not have a foreign or international policy—we have a succession of administration programs as already described—to which some of the Republicans subscribe.

There can be no bipartisan foreign policy. First, until there is a foreign policy, and second, until such policy is confined to foreign affairs and not at the same time designed to control national affairs through the State Department, as the present programs are set to do.

This Nation has no definite national or international policy as such, but has substituted a system of programs of "free trade" and of financing foreign nations dominated by the State Department. This is a deadly serious thing, and could, if not soon corrected, well result in a major change in the principle upon which our standard of living has been established and maintained—a change in our standard of living for which the majority of our people would not vote.

This change is being promoted by economic one-worlders who have for generations been trying to gain control of the American markets and who are the heirs and proponents of the "free-trade" theories first advanced in a different form through the European and international bankers more than two generations ago, when this Nation first began to rise above the European wage-living standards.

In place of the distribution of the wealth of this Nation throughout the world through making up the trade-balance deficits of the European and other countries each year in cash and by the division of the markets of this Nation through the selective free-trade theories of the State Department under the 1934 Trade Agreements Act, the Congress of the United States could establish a definite national policy and basis of trade with the foreign nations of the world through the flexible import-fee method.

This method was first adopted by the Congress of the United States in 1930 and proposed in the Eightieth Congress through a bill introduced in the United States Senate giving the Tariff Commission full authority to determine the differential of the cost production, mostly due to the difference in the wage-living standards based on "fair and reasonable competition" and to adjust such import fees in accordance with their findings—founded upon the principle of law and not upon the whim of a bureau official.

The work of the Commission would be conducted on principles established in such legislation as in the case of the Interstate Commerce Commission on freight rates and would remove the adjustment of import fees from the field of logrolling, lobbying, and horse-trading methods, and make the decision based on principle of law and not subject to executive order or the capricious judgment of a Bureau official.

The market for foreign goods would be definitely established in this country in this manner on the basis of equalizing the wage-living standards through the flexible import-fee methods and our economic structure would be protected while we were assisting the 57 lower-wage-standards-of-living nations to improve their living conditions.

This method would leave to every country in the world the power of self-determination with respect to its own wage-living standards, but would provide a definite incentive for the other 57 member nations of the United Nations to raise their wage-living standards since they would immediately be given credit for such accomplishment through a corresponding reduction of our import fees.

Then when any nation raised its wage standard of living to approximately our level, free and unrestricted trade would be the immediate and automatic result. Each nation would be the sole judge of its own living standard.

Our position in Europe and Asia at the moment is intolerable, and is the direct result of our own bungling in most of our recent foreign dealings, and lack of a clear international policy.

The basic subject of foreign policy has never been frankly discussed with the American people through two world wars.

The issue is the same now as it was in 1823 when President Monroe met the same threat from the empire-minded nations, in the Western Hemisphere and prevented the encroachment and domination of the nations of the Western Hemisphere by the European nations through a simple pronouncement of an international policy later to become known as the Monroe Doctrine, which said:

"We owe it therefore to candor, and to the amicable relations existing between the United States and these powers, to declare that we should consider any attempt on their part to extend their system to the Western Hemisphere as dangerous to our peace and safety."

I would not name any nation, since while Russia may be the worst offender in attempting to extend their system, they are not the only one.

President Monroe further indicated that if conditions changed in the future, the authorities at Washington could extend the

doctrine. Advances in methods of communication and transportation have greatly changed the physical world since President Monroe established his policy, but the fundamental principles involved have not changed.

The State Department and the President are charged with the responsibility, through the Constitution of this Nation, of fixing foreign policy. Therefore, they should immediately determine the areas and name the nations in Europe, Asia, and the South Seas, in addition to the Western Hemisphere, whose integrity is important to the ultimate safety of this Nation.

If it should be determined after full consideration of our experience through two world wars that a threat to the integrity of any member nation of the United Nations Organization by any other nation would constitute a threat to our ultimate safety, then President Monroe's exact words could be utilized in announcing an extension of the established 125-year-old Monroe Doctrine or the open-door policy in such nations, simply leaving out any reference to the Western Hemisphere.

Congress has no authority to establish international policy. It can only be done through the executive department in the manner established by the Constitution of the United States.

We should then build at once a military force, spearheaded by an air corps, that would bear silent evidence to all concerned that we were ready and able to enforce the extended doctrine, just as we have enforced the original Monroe Doctrine covering the Western Hemisphere for more than 125 years.

As a result the nations of the Western Hemisphere are still free and we were kept out of a major war for more than 75 years.

The Congressional Air Policy Board and the President's Air Policy Board reported early in 1947 and recommended a long range military plane purchase program which would provide a 35,000-plane striking force costing $16,800,000,000 over a 5-year period, which would keep any other nation on the ground in the event of war. The subject is still under consideration.

In the debate on the Marshall plan on March 4, 1948, I challenged the State Department to name the nations of the then 56 member countries of the United Nations Organization, whose integrity we must currently protect for our ultimate safety and to tell the world and the American people so that any empire-minded nations would be apprised of our intentions and thus avoid what could well develop into a third devastating world war. Our own people deserve to be informed in matters of such vital importance. I renew that challenge.

We apparently do not learn from our experience through two world wars. From 1914 through 1916 we denied that we would fight—were not prepared to fight—and upon examination the Kaiser did not think we could prepare to fight in time to be effective in his war—so he swarmed over Europe.

In 1939 to 1941 we denied we would fight—were not prepared to fight—and upon examination Hitler did not think we could prepare to fight in time to be effective in his war—so he swarmed over Europe.

We are now confronted with a similar situation for the third time in my generation—as we still have not defined the areas or named the nations whose integrity is currently important for our ultimate safety—neither the nations of the world nor our own people know what we consider important.

We are in a fair way to lose all of Asia—the Middle East and the South Seas through our lack of decision—and vacillating tactics. Furthermore, our action in Yalta in giving Manchuria and Berlin to the Russians—could well prove to be the two major mistakes of the century.

Following a definite pronouncement of a foreign policy for the Nation the Congress of the United States can arrange in any emergency for the feeding of hungry people within the areas named as a matter of charity to the extent that it may be done without undue injury to our own economic structure—and also provide for the rehabilitation of industries within the areas designated on the same basis as such industries are rehabilitated in our own country in an emergency. There are huge sums of foreign capital that would be available in many areas provided the governments in those areas would encourage and protect the integrity of private investment.

Rehabilitation of industry could then be assisted through loans from the world bank in the same manner as money is loaned by the Reconstruction Finance Corporation for the same purpose in this country.

Businessmen and industrialists will take the business risk—but they cannot take the risk of nationalization and socialization of their capital.

My inspection of these areas definitely indicates that it will prove a pleasant surprise to both the Congress and the people of the United States, the relatively small amount of funds that such nations will require for industrial plant refinancing if such loans must be secured on a business basis as is required for such loans for rehabilitation of the same type of industries in our own country.

Abraham Lincoln made some observations on foreign trade that are as sound today as when they were made. It will be remembered that he said, in effect, on one occasion when the matter of import fees versus the free-trade principle was under discussion that "when we buy goods within our country we have both the money and the goods; when we buy goods from foreign countries we have the goods and they have the money."

Were he alive today he probably would add that when we give money to foreign governments to buy goods in countries other than the United States we have neither the money nor the goods, but probably a good measure of hate for our industry and ability that put us in so favorable a position.

The Lincoln principle is still sound and we must not confuse the assistance we are rendering other nations with any profit that we might secure for ourselves.

The United States does not have any monopoly on natural resources, nor on technological ability. Some of the most important contributions to our development have been made by our own foreign-born citizens and through patents and processes secured from enemy countries.

Our position in the world has been reached because, until recent years at least, every boy could rise to the top in the profession or business that he chose to follow. We are great because of the opportunity every man had to improve his position in the community.

It is strange that it is the governmental philosophy of the peoples who are clamoring for our aid that so many of our own people in authority are endeavoring to adopt as the philosophy of this Nation, regardless of our experience.

If we allow ourselves to be diverted on any subject, however important at the time, and allow our wage-living standard to be lowered through imports from the low-wage Asiatic and European countries, then we not only cannot help other nations but we cannot help ourselves.

For myself, I see no difference in the importation of goods produced by cheap labor and the importation of cheap labor itself. The result is the same.

In fact, the importation of the goods is only the first step—the dream of the economic "one worlders" is also unrestricted immigration.

We are now in the most critical period of United States history, and the policies that control our course in the near future may well determine whether or not the form of government that we have known is to endure or whether we shall live in the future under some form of government that takes from the individual all individual freedom.

The Republican Party was born of a crisis. For years it stood as the political symbol of honesty and efficiency in government. We have recently been told on high authority that the party is divided and apparently about ready for oblivion. I do not subscribe to that defeatist view.

What the Republican Party needs is a return to the fundamental philosophy that made it great. What it needs is more men of courage who will stand up and fight for its principles rather than try to ape every demagogue who appears to catch the favor of some group or faction for a moment, or who invents some catchword or phrase which captures the public fancy.

This Nation desperately needs national and international long range policies designed to protect our own living standards and the free-enterprise systems which made us the greatest Nation on earth—while assisting the low-wage living standard countries of the world to help themselves on a business basis.

Progress is a process of evolution and we cannot expect to create a faultless society either by resolution or by revolution.

Everyone hates a coward. Let us have courage to stand up and defend the system, face the issue and to fight for those things that we still retain of the privileges of a free citizenship in this United States of America—the greatest nation of this or any other age.

John Gunther on Postwar Warsaw

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article that appeared in the New York Herald Tribune on February 8, 1949, written by John Gunther, the author of Inside Europe:

(By John Gunther)

Let me drop politics and personalities, except simply to describe the city of Warsaw instead. Warsaw today might well be called the most phenomenal sight in Europe.

First, two blunt figures. Eighty-four percent of all buildings in this great city, the capital of Poland, were rendered uninhabitable during the war. Not merely damaged, mind you. But rendered uninhabitable. And Warsaw, the population of which was 1,300,000 in 1939, lost during the war approximately 700,000 dead. Some appreciation of the enormity of this figure may be gained from the fact that the total war dead of Great Britain and the United States together was only about 555,000. Warsaw, just the city, lost 700,000 killed; the entire United States lost, roughly, 310,000.

BITTER WIT

One Pole we met put it this way with bitter vigor: "You in the west may have the highest standard of living in the world. We Poles have the highest standards of death."

But the point I am hoping to make is not the frightfulness of the destruction we saw in Warsaw, indubitably frightful as that is.

The real point is the remarkable success of the Poles in rebuilding their city, the massive energy and zip they have put into the job, and the electric animation and effervescence they seem to show. Warsaw is a ruin. But it is the liveliest capital in Europe.

Take Berlin by comparison. Berlin has about as much vitality as a mass of putty. The very grass has grown over the streetcar tracks on Kurfurstendamm. People walk slowly, with hunched and sagging shoulders; an almost suffocating dreariness hangs over the community; the food shops are scraped bare; except for the pulsating throb of airlift planes overhead, the city seems almost soundless. And I found much the same sort of deadness in Frankfurt, Vienna, and, in a different political category, Prague.

HUM OF ACTIVITY

But Warsaw. It bounces, hums, and buzzes. Clouds of dust envelop the passers-by. Buildings are going down and coming up. The streets are jammed; the hotels and restaurants are full to bursting. Food is cheap, good, and plentiful, and the shops are tolerably well stocked, though many commodities are of inferior grade. The people are poor—no one would attempt to deny that—but they are rising out of their own ruins by their own efforts, which helps to give them their morale.

Not for a moment would I suggest that the exclusive reason for this is the character of the Polish Government. Most Poles hate Russians and they would not go through the terrific adventure of rebuilding Warsaw for Moscow's sake. The deeper reasons are the buoyant Polish temperament, Polish tradition, Polish history, and Polish romanticism.

"Poland has been destroyed four times. Very well. Let's create it all over again and make it better and make it last." This, in a phrase, expresses the Warsaw spirit. These people are not cowed like the Czechs. They are alive, tenacious, almost gay in the midst of tragedy, and going places, if history will let them.

LITTLE PRESSURE

There is plenty of discontent and opposition, of course. Only a fool would deny that. Conversely, very few signs of overt pressure are manifest. I talked to an American who bitterly hated the regime. He said: "There is no arbitrary use of police power here. The government is detestable, but there are no concentration camps or terrorism. This is the freest of the satellite states. You can go around pretty much as you please."

We arrived at dusk, and took a walk after dinner. I was stunned. I knew Warsaw fairly well before the war. The destruction was so great that I could not find my way to the simplest objectives. Almost all the landmarks I remembered, like the Foreign Office, have completely disappeared. For mile after mile the city looks like a gutted moon.

NOT EVEN SKELETONS

In Berlin, if you stand near Brandenburg Gate, you can at least see the outline of what buildings once were. There, you say to yourself, are the remains of the Hotel Adlon, there is the skeleton of the house I dined in once, there is what was the French Embassy. But in Warsaw it is impossible over large areas to identify any buildings at all, or even to see where street intersections were, because the ruin is total, the destruction is complete.

The worst area is the ghetto, which is literally a heap of rubble. It looks like an empty rocky lot. A few straggly weeds, bearing a few pathetically valiant flowers, grow in what was once the busiest section of the city, and a clump of dusty bushes has spurted out over the area where the biggest synagogue in Europe once stood. Grass grows again. Human beings do not. And never let it be forgotten that of the 3,500,000 Polish Jews who lived in this country before the war, not less than three solid million were murdered by the Germans. The total number of Jews surviving in Poland today is only between 70,000 and 80,000.

PIECEMEAL REBUILDING

In other parts of the city—not the ghetto, which is beyond any possible hope of restoration—we watched the work of rebuilding. The old bricks are used in the new structures, which gives a crazy patchwork effect. Hundreds of houses are only half rebuilt; as soon as a single room is habitable, people move in. I never saw anything more striking than the way a few pieces of timber shore up a broken heap of stone or brick, so that a kind of perch-like room is made available to a family, high over crumbling ruins. One end of a small building may be a heap of dust; at the other you will see curtains in the windows.

Every Pole I met was almost violent with hope. "See that?" a Cabinet Minister pointed to something that looked like a smashed gully. "In 20 years that will be our Champs Elysee."

Much of this furious reconstruction is done by voluntary labor; most, moreover, is done by the human hand. In all Warsaw, there are not more than two or three concrete mixers and three or four electric hoists; in all Warsaw, not one bulldozer! A gang of men climb up a wall, fix an iron hook on the end of a rope to the topmost bricks, climb down again, and pull. Presto!—the wall crashes. Then the same distorted bricks go into what is going up. No time for fancy masonry!

NO RED FLAGS

There are some strange juxtapositions in this bizarre Warsaw of today. This is a Communist-dominated country. But I paused for a long moment before a well-stocked Catholic bookshop selling only religious works. This is a country supposed to be run by severe standards of economic logic. But near my hotel were big posters advertising a national lottery. Never once in Warsaw, incidentally, did I see a red flag, a photograph of Stalin or a Russian soldier.

In 1945 the city was totally without water, transportation, gas, power lines, a sewage system, or electricity. Hardly a cat was alive. The Government, having made the herculean decision to rebuild Warsaw instead of establishing a new capital at Lodz, got to work. The first phase was cleaning up the wreckage, getting a bridge across the Vistula, and restoring the public services. The second was reconstruction of buildings capable of being reconstructed. Buildings damaged beyond repair are destroyed. The third, in progress now, is construction of new elements of the city according to strict plan.

WILD-WEST TYPE

We walked down the main shopping streets one morning—they are rebuilt with one-story lath-and-plaster shacks resembling those of a wild west town—and looked at goods and prices. The great shortages are in clothing (because almost everybody's wardrobe was destroyed) and leather (because almost all the cattle was slaughtered). Most prices were very steep, but the variety of merchandise available was much greater than in Belgrade, Frankfurt, or Vienna.

We saw a girl's sweater at 17,800 zloty ($42.50 at the legal rate of exchange), a silver bracelet at the same price, lipsticks at 525 ($1.32), a coarse soap at 90 (22 cents) a cake, a brand of California apricots at 185 a can (46 cents), a muskrat coat at 75,000 ($1,870), a basket of cut roses at 5,700 ($14.25), a pair of men's shoes at 19,000 ($47.50), and an American fountain pen at 2,500 ($6.25). Incidentally Warsaw was the only iron-curtain capital we saw where American name-brand cigarettes were freely available (at a price), British magazines and French luxury products.

But to revert to the main theme of this article—the rehabilitation of Warsaw after ruin. One of my Polish friends snapped: "War? If we thought war was coming, do you think we'd have bothered to rebuild our capital?"

Nijmegen University, the Netherlands

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1949

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Hon. James A. Farley at the monthly meeting of the Yo-Men of Grand Street Boys Association, New York, N. Y., on February 17, 1949:

There is a controversy going on in The Netherlands whether Nijmegen is the oldest city of that country or Maastricht.

However, there is no controversy about the question of which city suffered the most during the war. Our bombers in February 1944 mistook Nijmegen for a German town and destroyed the heart of the old city, taking a toll of more than 800 lives. The people took it as one of those unfortunate things which happen in every war, and when our Eighty-second Airborne Division liberated Nijmegen in September of that year they were amazed at their cordial reception. It puzzled some intelligence officers, so they investigated and found out that the Germans had tried to stir up the feelings of the population, pointing to the tragedy of the first bombing and saying that that was what they got from their Allies. But the reaction was different from what the Nazis had hoped for as the Dutch retorted: "If you had not started this war on us, this never would have happened. You are the real culprits."

It was the same when the Dutch were forbidden by their occupiers to teach the English language in their schools during the war. I was amazed to find how many people spoke English, but here again the answer was: Because the Nazis had forbidden it they wanted to learn it all the more.

I was in Nijmegen last summer. It was an interesting visit. Nijmegen became world famous due to its association with Arnhem in the glorious and tragic battle of September 1944. Countless soldiers know its bridge, a magnificent single arch across the Waal, the chief branch of the lower Rhine, the biggest stream of Holland. Travelers may remember its skyline, bristling with old and new spires, one of the finest of Europe. And connoisseurs of seventeenth-century art evoke its mysterious carolingian castle towering high above an immensely broad and placid river, on certain grey-brown pictures of Jan van Goyen.

Today the steeples are broken, the skyline has miserably collapsed, the town seems sevenfold beheaded. The old commercial and civic center, once picturesquely sloping down to a crowded riverside, red from bricks and tiles several centuries old, scabby like a ghetto, lies empty and meaningless between the shells of a dozen burnt out palaces and churches; pieces of sky glowing behind broken tracery in the evening; series of open caves gaping between empty sidewalks; street cars gliding hurriedly beyond the broken statues of emperors on the facade of the town hall, through suddenly interrupted rows of patched up houses, to overcrowded suburbs hidden in glorious green. The great church of St. Stephens, a thirteenth century

collegiate church, the plan of which shows the exact shape and even the enormous dimensions of Cologne Cathedral, is a ruin overlooking a cataract of ruins. In 1591 she lost part of her roof and her medieval furniture; in 1672 her vaults through the bombardment of Louis XIV; in 1944 by mistaken bombs her carillon and eversinging belfry, after the Germans had already silenced her imperial bell named after Charlemagne, and tolling majestically over the red tiled roofs, every evening after nightfall.

During the battles of 1944 and the subsequent 6 months' shelling, Nijmegen lost more than half of its buildings, 2,000 lives and nearly all its beauty; its commercial center was totally destroyed. However, there is one monument found to be intact. It was the latest in date of its monuments: the big bridge. During the night of September 18, after the Eighty-second American Airborne Division had landed on the south and west and the Second Army made its thrust upward from the Albert Canal, and Arnhem was at stake, the bridge, then a capital spot in the Allied plan, was saved from a second destruction. In May 1940 it had been blown up by the Dutch themselves. They had it repaired in 1943. But on September 17, 1944, the most perfect airborne invasion in daytime, as the jump was called, took place. Nearly 500 C–47's carried men of the Eighty-second over drop zones just south of Nijmegen in what the high headquarters called operation "market." Fifty-seven miles behind enemy lines the drop was made. The orders were to take the high ground between Nijmegen and Groesbeek, to take the Grave Bridge, a span over the river Maas between Grave and Nijmegen, and to capture intact the all-important gateway to Holland, the big bridge at Nijmegen.

Almost unmolested on the drop the division had to repulse savage counterattacks by the Sixth German Parachute Division. On the second day when the British armored guards arrived, every mission had been accomplished, except taking the big bridge at Nijmegen.

The epic taking of the Nijmegen Bridge will live as long as old troopers gather. Ferried by members of the Three Hundred and Seventh Airborne Engineers, the Five Hundred and Fourth Parachute Infantry made a daring daylight crossing of the swift Waal River. Only 11 of the first 26 boats returned for second trips, but enough troopers reached the other shore to take the northern approach to the bridge. Meantime, the Five Hundred and Fifth had swept past enemy defenses to take the southern approach with the aid of British armor.

Of this action Bill Downs, CBS correspondent, said: "Compares in magnificence to Guam, Tarawa, and Omaha Beach. Should be told to the beating of drums and blowing of bugles for the brave men who made the crossing of the swift Waal possible."

It is for these men that a memorial is going to be erected in the city of Nijmegen. This memorial will be the rebuilt university, destroyed by the Nazis as a matter of revenge for the resistance which professors and students had put up during the war. When the board of this university offered General Gavin and the Eighty-second Airborne Division Association to dedicate the reconstructed building or buildings as a memorial to the Eighty-second and its heroic dead, they were thrilled. And at the first national convention thereafter the association resolved to take this as their official memorial and to sponsor a campaign which the American Committee To Aid the University of Nijmegen was going to start. The War Battle Monuments Commission gave its O. K. and encouragement to the plans. When the committee went to President Truman, the President said: "This is one of the sanest war memorials I have heard of thus far."

I believe it is. On my visit to Holland last year I also visited this university. I saw its ruins, its emergency buildings, and how professors and students are carrying on in places you would not think of as suitable for higher learning. Nevertheless, they do not give up. There is something left of a spirit which never should die in Europe and in the whole world which maintains its heritage of western civilization. It was the great promoter of western civilization, who once for a long while resided in Nijmegen—Charlemagne. His name is given to the university. No civil ruler has done more for education than he had. When our ancestors emigrated to what is now the United States of America, they brought the same civilization over to these shores, and so we may deduct that Charlemagne has also his merits for what we proudly call our American civilization.

Why are we talking so much about western civilization today? We know something about the fiercest menace to this civilization today; don't we? This menace is, I believe, one of the greatest challenges that our western civilization is now called upon to face, and it is for this reason that some outstanding Americans have joined together and taken on the task of helping to rebuild the Charlemagne University in Nijmegen. They think that the type of training given at this university is badly needed to serve as a bulwark against those subversive influences that are infiltrating throughout Europe. The Eighty-second Airborne Division Association is fully behind this undertaking and thinks that their heroes cannot be honored in a better way than by promoting the education of future leaders, who during their years of study will be daily reminded of the example given by their American brethren and of the price the professors and students of this war period had to pay for their loyalty to their conviction.

I wish to tell you a few things of the war record of this university. When the Nazi propaganda spread over Europe it was this university which organized special lectures to refute the errors of the Nazi ideology. During the night of May 9, 1940, the German Army entered Nijmegen. At that time five students lost their lives. On June 26 four professors were imprisoned. One was released in the summer of 1941, but 10 days later, due to previous maltreatment, he died. Two others were sent to the horror camp at Dachau, where they died after 2 years of suffering. Nine more were imprisoned for longer or shorter terms.

The toll of the students was altogether 38 dead as victims of war, resistance, and underground work. The Nazis demanded that the students sign a declaration of allegiance to them. They refused. The university closed its doors. The students were forced to work in Germany, but many escaped and went underground. Among them was the president of the students' association (Baron Joseph van Hoevel tot Westerflier). He built up the students' resistance movement throughout Holland and was one of the council of nine of the student underground. He died in the concentration camp of Neugamme.

There is another interesting point which shows how this university stood toward anti-Semitism. In 1942 the Nazis ordered the students' clubhouse to display a sign: Forbidden for Jews. They refused and promptly the Nazis confiscated the building.

This university has proved its character. It did not yield to nazism—it will not yield to communism. It deserves our help, and I am happy that your great club of the Grand Street Boys has spotted this grandiose plan. I hope you will give it some help, some support, some energy, some time. There are several activities the committee is anxious to have carried out. I wish you would plan your cooperation with some of the officers of the committee.

Let me say this in summation: Europe is not going to be saved by economic help alone; there has to be some contribution in the cultural field, too, for which we Americans should be proud to procure the means as generously as we provide them with economic aid. The Dutch know how precious a legacy they carry. They realize the advantages and responsibilities of their position among the nations of the old continent; they are not emerging from a regretted phase, but putting their hands to another task; not so much planning an unknown and therefore unreal future, but trying to live up to a very real present. Nijmegen being one of their old and natural centers, they feel that its being replanned and rebuilt may be part of remaking the world, and may interest their friends in that country far off to which since September 1944 they associate the very notion of human freedom.

And what makes this project of Americans partly rebuilding this university more attractive is the fact that it honors at the same time the boys of an American division which through special ties is linked up with our city of New York. As you remember the Eighty-second Airborne Division was selected to hold the victory parade on Fifth Avenue on January 12, 1946. New York, which received this most heroic division so proudly, should be no less proud to contribute to its memorial.

Hon. Francis E. Walter, of Pennsylvania

EXTENSION OF REMARKS

OF

HON. HARRY P. O'NEILL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1949

Mr. O'NEILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks of Tom C. Clark, Attorney General of the United States, delivered by Hon. Peyton Ford, the Assistant to the Attorney General, at a testimonial dinner for Hon. FRANCIS EUGENE WALTER, Representative, Twentieth Congressional District of Pennsylvania, Easton, Pa., Thursday, February 17, 1949:

It is indeed an honor to have this opportunity to tell his friends in his own district what we in Washington think and know about FRANCIS EUGENE WALTER.

Whatever nice things I may say about him are not necessary. The fact that you have returned Tad to the Congress with such potent majorities nine successive terms is the most wonderful testimonial that can be rendered him. You know him as a true friend, an able lawyer, and a capable legislator. I know him as a statesman—an untiring, devoted American.

Few men have served longer in the House of Representatives than has this outstanding Congressman whom we are toasting here tonight. This is his seventeenth year in the service of his country as a national lawmaker.

Prior to entering the national field of politics he served his county—Northampton—as solicitor from 1928 to 1933, and his country as a gob and ensign in World War I. In World War II he again returned to the service, this time as a lieutenant commander in naval aviation.

It was only at the direction of his commander in chief—President Franklin Delano Roosevelt—that he left the Navy to return to his post on Capitol Hill, the President of the United States stating that men of his caliber could not be spared from the Halls of Congress.

I have known Tad during my entire career of 14 years in the Department of Justice. We

have worked often together on many matters and problems affecting the welfare of our country. He is a member of several important committees—especially, ranking member of the Judiciary Committee. The latter is one of the most important, if not the most important committee of the House, 52 percent of the business on the floor of that body originating in the Judiciary Committee.

It was Hatton Sumners, the distinguished Texan and former chairman of the Judiciary Committee, who, recognizing Tad's ability, sincerity, and application to work, persuaded him to become a member of his committee. Yes, I should add modesty in my description. Actually I have never met a man with so many accomplishments who is as modest as our honored guest.

I thought I would find in the Congressional Directory something about him—something that would glorify him and I could boast about at this banquet. This is the Government publication that is supposed to print a complete and lavish biography of the Members of both Houses, as the Members themselves furnish the information for their own biographies. Much to my surprise, all I found was four short lines telling the date of his birth, 54 years ago in this fine, progressive city of Easton, that he was a graduate of George Washington and Georgetown Universities, that he was Northampton County solicitor from 1928 to 1933, a veteran of the two World Wars, and that he was elected to the Seventy-third and subsequent Congresses. Nothing about being a student at Princeton or of Lehigh, or honorary degrees conferred upon him.

Not one single word of his many achievements, not one word of the hard, effective work he has done to make our democracy thrive in the face of attacks from within and from without. Not one word of the service that he has rendered humanity as the father of the humanitarian displaced persons legislation that permitted the entry into our glorious land of some victims of war-torn lands. No written record of the services he has performed for war veterans. No mention of the fact that he was instrumental in securing the congressional charters for the Veterans of Foreign Wars and the AMVETS.

Not a solitary note of the fact that he served on the select committee of the House to investigate the feasibility of the plan to aid Europe. Out of this exhaustive and wise inquiry came the Marshall plan which is now working to help stricken European countries on the road to recovery and self-maintenance, and stop the onrushing sweep of communism.

So adept is Tad at hiding his light under a bushel that few know the American Bar Association paid him a special tribute for the lead he took in the adoption of the Federal Administrative Procedure Act by the Congress in 1946. All lawyers know the importance of this act.

To illustrate how faithful and watchful he is about matters in his district I think I'll tell you about an incident that recently occurred.

Confined in the Lewisburg prison is a multimillionaire from New York State. A fantastic story was published to the effect that this particular prisoner was receiving all sorts of courtesies, such as being permitted to leave the institution, get special meals, spend all his daytime in the recreation room. The writer had called it Clark's Country Club.

FRANCIS WALTER heard the story. Incognito, he hastened to visit the prison. As a member of the Judiciary Committee, he wanted to get the facts. A few days later a Congressman rose on the floor of the House and repeated the bizarre story of the millionaire's pleasant sojourn at Lewisburg. Tad waited until his colleague had ended his political tirade, got to the floor and proceeded to refute every reckless and irresponsible allegation that was made. He told them what he had found in the institution; that it was a model modern institution where absolutely no favoritism was shown. His fellow Members applauded him when he brought out the fact that the job of the wealthy prisoner was assistant janitor of a barracks occupied by 33 prisoners.

Yes, Tad is always on the job. You can always depend upon him—which reminds me of this story:

Once the House was desperate to get a quorum. The Speaker despatched telegrams to all absent Members.

One Member, delayed by a flood, wired back:

"Wash out on line; can't come."

The Speaker answered:

"Buy another shirt and come on next train."

Shirt or no shirt, FRANCIS WALTER gets there.

If he had done nothing else than what I have related here, he would have won the admiration and praise of not only his fellow-townsmen but the whole Nation. But he has done tremendously more than what I have spoken about. He is chairman of the House Immigration and Naturalization Committee, ranking member of the Judiciary Committee, and when the leaders of Congress canvassed the membership for a man who would regain the confidence of the American people in the Un-American Activities Committee they unanimously selected FRANCIS EUGENE WALTER.

In him they knew that they had one who would adhere to our American principles and doctrines, one who would exercise judicial wisdom in conducting the necessary investigations, one who would shun premature publicity, who would consider every accused innocent until proven guilty, and one who would be unrelenting in ferreting out those who attempt to overthrow our form of government.

I don't have to tell his fellow-townsmen gathered around this festive board that he is a friend of both the worker and the employer—that he is a warm-hearted person, loving mankind; that he respects all religions and faiths. The coal miners, the operators, the steelworkers and industrialists, the farmers and the consumers, and the small business men that make up this fine, progressive section of Pennsylvania with its nearly 300,000 people know that perhaps more so than I. However, I also want you to know that we in the Department of Justice admire and esteem him as you do, and that no man is more welcome at the White House by our great President, Harry S. Truman, than is your Representative from the Twentieth District of Pennsylvania.

Our freedoms are safe when men like FRANCIS EUGENE WALTER guard the ramparts.

Bless you, Tad, and all your loyal friends.

Excerpts From Jefferson-Jackson Day Address by Hon. Brien McMahon, of Connecticut

EXTENSION OF REMARKS

OF

HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Friday, February 25 (legislative day of Monday, February 21), 1949

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD some excerpts from remarks delivered by me last night at the Jefferson-Jackson Day dinner at New Haven, Conn.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

PARTIAL TEXT OF ADDRESS BY HON. BRIEN M'MAHON, OF CONNECTICUT, AT JEFFERSON-JACKSON DAY DINNER AT NEW HAVEN, CONN., ON THURSDAY NIGHT, FEBRUARY 24, 1949

The projected North Atlantic Alliance, especially the form which it ultimately takes, may be the most far-reaching proposal, and the most important proposal, to come before the Senate at this session.

The exact form of this instrument is now a subject for formal study by the State Department, the Senate Foreign Relations Committee, and diplomatic representatives of the interested powers. I have no wish at this time to attempt a forecast of the ultimate form of the pact or to suggest the precise wording of the treaty. I do wish to make this general observation.

The best pact will be the pact which states in the plainest terms our obligations under the treaty. The weakest pact, and the one most dangerous to our future safety, will be the pact which tries to water down, to hedge in, or to circumscribe beyond easy recognition the commitments of the United States to the other signatory powers. A half-hearted entrance into this alliance may be the worst possible move we could take.

Over a century and a quarter ago we learned one of the great lessons of history—the fact that a nation which states its position firmly and unequivocally thereby wins the respect of the other nations of the world. We learned at the same time that straight talking is the best way to prevent misunderstanding and to prevent war. I refer to the promulgation of the Monroe Doctrine.

The United States was then a fledgling Nation sprawled along the Atlantic seaboard. The pronouncement of President Monroe was a direct notice to the powers of Europe that we would tolerate no interference into the affairs of the Western Hemisphere. In his message to Congress in 1823, Mr. Monroe said that any attempt by those powers to extend their political systems into this hemisphere would be dangerous to our peace and safety. His message said further that such action on their part would be the manifestation of an unfriendly disposition toward the United States.

From the time of its promulgation, there has never been any doubt that this doctrine had for its enforcement the military might of the United States. During the whole of its existence, the Monroe Doctrine has been respected by the strongest governments on both sides of the Atlantic. In our negotiations through the years with Great Britain, with Germany, and with the other powers of Europe, its existence has been uppermost in those negotiations. The Monroe Doctrine, since its inception, has had the full force and effect of a formal treaty.

With little behind him except the moral power of a new and comparatively weak nation, President Monroe drew a line and served notice that any nation which passed beyond that line was an aggressor nation in the eyes of the United States. At that time, Europe was approximately 60 days away by the fastest sailing time. The time lag for voyages to South America was considerably greater.

In our day and time, with Europe only a few hours away by flying time, it would be well if the United States showed some of President Monroe's spunk in defining what we consider to be a threat to our peace and safety. The proposed North Atlantic Alliance, in a very real sense, is a projection of the Monroe Doctrine to new geographical

lines. We should not hesitate to say so in plain words.

The Monroe Doctrine is frequently referred to as a moral commitment on the part of the United States. That it has acquired legal force over the years, no one disputes. In theory, a legal commitment has greater force because it commits the signatory nation to a definite course of action. In actual fact, a legal commitment is no more binding than a moral commitment because it is not enforceable except at the will of the signatory nation. Unless a nation lives up to its pledged word, there is no way to compel it to do so.

In practical terms, the moral commitment has behind it far greater power because it binds the conscience of the Nation. The magnificent part played by the Monroe Doctrine in American foreign policy is an excellent illustration.

I strongly dissent from the view that the constitutional power of Congress to declare war prohibits the United States from entering into a realistic pact or treaty, the purpose of which is to safeguard the Nation's basic security or to clarify our position on international problems which vitally affect our interests. Two decades ago, the United States was a signatory to the Kellogg-Briand treaties in which we formally renounced war as an instrument of national policy. That treaty certainly circumscribed the congressional power to declare war but it was approved by the Senate of the United States.

In our efforts to insure national security, we have gone further. In 1904 the President of the United States and the Senate approved a treaty with Panama which said: "The United States guarantees and will maintain the independence of the Republic of Panama." This was a legal commitment to go to war for Panama which remained in force until 1936, when it was abrogated at the request of the Panamanian government but not at our request. With or without a treaty, would we tolerate the seizure of the Panama Canal by a foreign power?

In the troubled world in which we live today, with weapons existing which may wipe out whole parts of a nation overnight, the guiding principle of our foreign policy and our military defense must be the highest law of all—the law of self-preservation. The Constitution was never conceived by its creators as a static document, the rigid interpretations of whose provisions might some day work to endanger the national security.

We have no formal defense pact with Canada, but if a hostile invading force of dangerous proportions landed in Canada on Monday morning, we would have counter forces in Canada on Monday afternoon, whether Congress was in session to declare war or not. If the Government acted otherwise, it would be guilty of a serious breach of faith with the American people.

The North Atlantic Alliance will be seriously weakened unless it says just exactly what we mean. In the past 3 years, militant communism has overrun 10 nations in Europe, crushing out those precious civil, personal, and religious liberties which were won by hundreds of years of struggle and bloodshed. This pact, if it means anything at all, means formal notification that the United States will not stand idly by if the black night of communism should threaten to fall over western Europe.

A weak pact may convince the devious minds of the Kremlin that we really don't mean what we say. A strong pact will convince them that we do mean business. A strong pact will do more than that; it will be the surest guaranty against further Communist aggression and the safest insurance for peace.

Address by Hon. Robert A. Taft, of Ohio, Before the Pennsylvania Manufacturers' Association

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Friday, February 25 (legislative day of Monday, February 21), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Senator from Ohio [Mr. TAFT] at the fortieth annual meeting of the Pennsylvania Manufacturers' Association, at Philadelphia, February 22, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I greatly appreciate the opportunity of addressing such a distinguished gathering under the auspices of the Pennsylvania Manufacturers' Association. It is a great pleasure for me to see again your distinguished Governor, Jim Duff, with whom I have not had an opportunity to talk since those fateful days in June 1948. I shall never cease to be grateful for what he did then. I see ED MARTIN, and many other of your representatives in Washington, with whom I have enjoyed the closest association, and HUGH SCOTT, the chairman of the national committee.

It is nice to meet Harold Stassen again in his new role as president of a great university. In fact, as I look around, I wonder whether this is a meeting of manufacturers or perhaps of Republicans. In any event, I want you to understand that the speech which I am about to make is a strictly nonpartisan approach to our present problems.

It is because of the last election, however, that, in my opinion, we face today a real crisis in the future of this country. We have presented to us in Congress a program which, if enacted in full, will change the whole character of our Government and of our people. While that program has acquired great force because of the result of the election, I question whether there really is any popular mandate for it or for any single feature of it. I am quite certain that the people did not consider the program as a whole. As a matter of fact, I believe that there was no overriding national issue or national interest in the last election. Only a small proportion of the voters exercised their right of franchise. If we had voted this year the same proportion of the adult population as voted in 1940 in the Willkie-Roosevelt election, we would have had 7,000,000 more votes for the Presidential candidates. As I look over the pattern of that last election, I feel confident that it was determined very largely on local issues and the strength of State and district candidates. Congress, as the representative of the people, must consider the program presented to it not on the basis of any mandate but on the merits of the various proposals.

Broadly speaking, I believe we face now the question whether we shall maintain a government based on liberty or establish a Labor-Socialist government very similar to that controlling the destinies of Great Britain, imposing the wishes of the state on a regimented people with little freedom to move except as the Government permits.

What is this liberty which has inspired this country from its foundation and brought about the great production and high standard of living which makes it possible for us even to aid less fortunate peoples? It is freedom of speech and of the press, as the President said in his inaugural—but it is much more. It is the freedom of the individual to choose his own work and his life occupation, to spend his earnings as he desires to spend them, to choose the place where he desires to live, to take the job that fits him whether some union official is willing that he get it or not. It is the freedom of the local community to work out its own salvation when it has the power to do so. It is the freedom of cities, of counties, of school districts, the freedom of educating one's own children as he thinks best. It is the freedom of thought and experiments in academic institutions. It is the freedom of men engaged in industry to run their business as they think best as long as they do not interfere with the rights of others to do the same. Certainly, there are limitations which must be imposed by the state to protect the liberty of others more and more as our economy becomes complex. But a party which believes in liberty will see that such limitations are only imposed to the extent it is absolutely necessary.

As we look back through history, we see brief periods in which liberty has prevailed, but in the major part of historical time it has been suppressed by emperors and kings, by oligarchies, by plutocracies, by so-called democracies and proletarian majorities. It is hard to gain and easy to lose unless it is kept alive by an aggressive determination that it shall not perish from the earth. Today the battle between liberty and totalitarian government permeates every problem of life. It lies at the base of our battle with fascism and nazism and communism. The American people believe in liberty, but the totalitarian creed so prevalent abroad would be fully established by the program which we now face here at home. What is that program?

1. A planned and controlled economy. We have now had presented to us an economic control bill which clearly accepts the principle that the Government is responsible for every detail of the operation of our complex economic machine which lies at the base of our standard of living. The bill gives the Government the power to fix prices over the protest, maybe, of farmers and other producers and businessmen. It gives the power to fix wages over the opposition of labor. It gives the Government power to allocate materials and ration consumers over the opposition of businessmen, farmers, and housewives.

If these powers are to be given, obviously the power to control rents is to be made permanent. Further powers are sought over the banks, and a wide extension of the Government's power to lend money. Finally, the Government is authorized to go into any business if it feels that the private capacity in that industry is insufficient. Obviously, no private man can ever compete with the Government, and of course Government entrance into an industry would check all private development.

2. The Government proposes to restore a condition in which the bosses of labor unions become also the bosses of industry and of their own members. The Thomas repeal bill removes all responsibility again from unions and restores irresponsible power. Yielding to the demands of Mr. Green, it is proposed that unions be relieved from any legal obligation to bargain collectively, from any liability on their contracts, from any liability in damages to those third parties whom they may injure by secondary boycotts and juris-

dictional strikes, from any legal responsibility to withhold Nation-wide strikes which threaten the safety and health of the people of this country. The repeal bill proposes the restoration of arbitrary power over individual workmen and union members. The Taft-Hartley law reaffirmed the liberty of the individual to work at the job which he found most acceptable, the right not to be coerced by either employer or union, the right not to be called out on boycotts in which he was not interested in order to increase the power of some union leader, the right not to be bossed by Communist leaders, the right to receive his full pay without check-off unless he desired to pay his dues to the union in that way, the right to receive financial reports of the operations of his union. The right to be free from discriminatory and excessive dues, the right to be free from forced political contributions, the right of freedom of speech.

All of these liberties which lie so close to the welfare of the average man and to the welfare of his wife and children are to be wiped out by the restoration of special privileges to labor unions which are enjoyed by no other man or organization in the United States.

3. Now we have a bill to establish a complete welfare state going far toward the Beveridge plan of Government subsidy from the cradle to the grave. It is proposed to increase tremendously the pay-roll taxes on all employees and then put the Federal Government into full control of all welfare operations. One bill proposes the socialization and nationalization of the medical profession. The Government is going to extend the public housing program to a point where the construction of 250,000 public housing units a year will interfere seriously with the development of the private housing industry.

The Federal Government is now going to subsidize all of those people who may be considered needy by some Government bureau including, I suppose, somewhere from ten to thirty million people, and all of this is to be done under a very tight Federal control out of some Washington bureau without regard to expense and without regard to the interest of the taxpayer. It would indeed be the establishment of a welfare state. Organized charity and Government welfare service to the whole population can destroy the freedom and also the character of the people to whom it is extended. It can increase the power of the central Government in Washington until Washington bureaus govern the daily lives of every family in the United States. Incentive and initiative can be paralyzed. We will be ruled by people who take no personal risks and create no jobs. The people will be taxed without realizing it through a deduction from pay roll, and perhaps get some part of those taxes back in the form of Government services and activity which they may or may not want. There is real danger to liberty in the welfare state.

4. Of course, this entire program will tremendously increase the expenses of government and the taxes to be paid. Already the budget has reached $42,000,000,000. The immediate proposals will increase it to at least $50,000,000,000, and the working out of those proposals will reach at least $60,000,000,000 within 4 or 5 years. Domestic expenditures are supplemented by liberality in expenditures abroad which shows no sense of restraint or of the burden on the American taxpayer.

The imposition of such a tremendous tax burden on the people and on the productive machinery of the country is likely to be a serious deterrent to further expansion. Already it is difficult to find new money for investment. As industries become unprofitable, the Government is to step in until the burden on those that remain will be so heavy that a private system cannot continue at all. You can socialize just as well by a steady increase in the burden of taxation beyond the 30 percent we have already reached as you can by direct Government seizure. Of course, the very imposition of heavy taxes is a limitation of a man's freedom. There was a time when he could decide how he would spend the money which he earned in the sweat of his brow. Today the Government takes from him a large proportion of those earnings and decides for him how they shall be spent—perhaps without benefit to him, perhaps in the rendering of services which he does not desire.

This entire program taken together can only mean the abandonment of real liberty in the United States. It can only mean a vast increase in power in the Washington Government which will enable it either to operate itself in many fields where freedom now exists or to direct in detail the manner in which agriculture, commerce, and industry shall be conducted, and in detail the manner in which families shall conduct their daily lives. In my opinion, a totalitarian state of the character which is now contemplated cannot long remain democratic if it is to be effective at all. The American people, at least, in our vast diversified country, will never stand for the socialization of their lives unless it is imposed on them by an overpowering force.

The present Congress has therefore a tremendous responsibility. I believe that its principal task is to prevent changes which would affect the whole nature of our Government and the character of the American Republic. Of course, its job should not be purely negative. It should develop an affirmative program to assure progress within the limits of the principles of liberty and justice for which this Nation was founded. We need the support of the people of this country to withstand the attack on the American people.

Our own program is an affirmative program:

1. The Taft-Hartley law was a bill to prevent the abuses which had arisen in our present system and restore liberty to employers and to individual employees. We believe that we can deal with the economic problems by the traditional weapons of sound fiscal policy and credit control and such other Government operations and public works as are part of the recognized activities of a free government.

Our program is that the Government operate within the present tax burden so long as we must engage in extraordinary foreign expenditures, and that it operate within a reduced tax burden as soon as those expenditures can be reduced.

In the field of welfare, I am convinced that we can make more real progress within the principles of liberty than we can by setting up the Federal Government as a dispenser of bread and circuses. Of course, we are just as much concerned as anyone that there shall be in this country as little hardship and poverty as possible, and particularly equality of opportunity for every child no matter how poor the family or the community into which he may be born. For that purpose I have favored a bill to give Federal aid to education particularly in those States where the average income is so low that a minimum education has not been and cannot be provided without assistance. I have favored a bill for Federal aid to the States to enable them to expand their operations in public health and in the furnishing of medical and hospital care to those unable to pay for it themselves. We have all long recognized the obligation of the local community to give free medical care to the needy, but the system is a combination of private and State activity which has grown up in a haphazard way and in which there still remain gaps. It is absolutely unnecessary to scrap our whole system which has given this country the best medical service in the world, destroy the freedom of the medical profession and the freedom of families to determine the kind of medical care they want. We can retain all the good points of the present system and expand it to give complete coverage.

I have introduced a public housing bill as the only practical method I can find to provide decent housing for the very lowest income groups. But if the Federal Government is going to aid in these fields, it is absolutely essential that its role shall be only a secondary role of advice and assistance. Housing, medical care, education, relief are all the primary obligations of the States and local communities. Federal-aid bills must provide, as our bills do provide, that there shall be no Federal control or interference with the administration by State or local authorities. A country of this size cannot remain free unless we maintain the freedom of our communities within the field which is properly theirs.

In the second place, the Federal Government should not spend its money except for the purpose of eliminating hardship and poverty and giving equal opportunity to the children of the Nation. If that limit is imposed, then these activities are not socialistic. It is not socialism, for instance, to give free medical care to the needy, as we have done in every community for years. It is socialism to dispense free medical care to the whole population, most of whom are fully able to pay their own way. If we give free medical care, why not free food, clothing, housing, and every other necessity of life? Housing activities are not socialistic on the part of any State as long as they are intended to assist those who cannot otherwise obtain decent housing and as long as nine-tenths of the housing industry is in the hands of private builders and paid for by those who can afford to pay. To this extent, housing is just as much a legitimate problem of Government as education or medical care.

Unfortunately, the States have not gone ahead so much with housing on their own, but it is primarily their concern, as apparently your Governor here appreciates. Federal aid in housing should be one of assistance to State and local activity. In short, the Federal Government should promote, advise, and assist in the welfare field. It should not control or interfere with administration or, except in cases of real need, subsidize services of this kind.

The matter of relief is one that is now being cared for by the States, and cared for successfully. I think it is most unfortunate that the new program suggests a direct Federal subsidy as a normal matter. I think we must recognize that in times of great unemployment, State resources are insufficient for relief, as they were in 1933, but I suggest that Federal aid be given to the States so that they may determine their own method of relief, work relief or other remedy, and that it be given to a State only after the relief-case load has reached some percentage beyond the power of the State to handle.

The program which I have suggested attempts to meet the just demand of the American people for the most humane treatment of those who fall behind under the pressure of a productive free economy while it maintains the liberty of the people and the liberty of their States and local communities. Real progress toward human welfare will be much more permanent if it is based on the initiative and interest of the

people in each State. There can be an infinite variety of new methods developed until we find the best. The whole country will not be forced into the strait-jacket of an ideology which controls a few experts in Washington.

The program which I have suggested is an affirmative program. It will require an aggressive battle to defeat those who have been misled into the belief that a central government can cure all the ills of the people and knows better than the people themselves what is good for them, but I am convinced that we are fighting the cause of free government, the cause of the liberty of the people, the cause of our local communities to live their lives as they want to live them, the cause of the American Republic.

Effect of Steel Shortage on Development of Western Oil Industry

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Friday, February 25 (legislative day of Monday, February 21), 1949

Mr. MURRAY. Mr. President, I should like to submit for insertion in the Appendix of the RECORD a radio speech delivered by one of Montana's outstanding lawyers, Cedor B. Aronow. It relates to the critical effect of the steel shortage on the development of our western oil industry, a subject on which the Montana House of Representatives has memorialized the Congress and the President.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen of the radio audience, it is indeed a privilege to be permitted to speak over this fine Montana network on one of the greatest problems hindering the advancement and development of Montana's oil and gas production and in ustry. Montana and the whole Rocky Mountain area has unlimited possibilities for production of oil and gas. Structures that were condemned years ago by one shallow well are now being leased with the hope of being drilled to test deeper horizons. That is, if pipe and casing can be obtained to do this exploratory work. Oil fields that have produced millions of dollars worth of oil from shallow sands are now being tested for production in the lower or deeper strata whenever oil operators can get tubular goods for this development work.

You might well ask what does the oil industry mean to Montana? During the past year there has been produced in the State of Montana, and sold, crude oil of the value of $23,500,000. This new wealth for the State of Montana was brought into being by the oil operators in Montana's oil industry. This amount of $23,500,000 does not include the natural gas which has been distributed and sold to the people of Montana, North Dakota, and South Dakota. Out of the $23,500,000, one-eighth, or the sum of nearly $3,000,000 was paid to landowners as royalty which payment was made to the landowners free and clear of all costs and expenses of production. The school funds of the State of Montana received one-hundred-and-sixteen-thousand-odd dollars for royalties from lands owned by the State of Montana. Again, these amounts do not include royalties paid on natural gas produced in Montana.

Oil wells cannot be drilled without steel tubular goods which includes casing in different sizes, tubing and rods to pump oil from the well after it is drilled, and flow lines to convey the oil from the well to the storage tank and from the storage tanks to loading racks for loading into tank cars or trucks or to the refineries where the oil ultimately goes. I have talked to perhaps 100 oil operators or more, and as the chairman of the Committee on Petroleum, Oil, and Gas, in the House of Representatives, I have listened to the testimony of oil operators and others connected with the oil industry as to the difficulties of obtaining tubular goods in Montana. Every operator that I have talked to has to curtail his development work. That is, the drilling of additional wells, by a minimum of one-half to 90 percent. In other words, many operators have drilling commitments for, let us say, 10 wells and have only sufficient pipe to drill one well.

This means that the State of Montana loses the new wealth which comes into being when oil is discovered and produced. It also means that State lands are not being developed for oil and gas and the school funds of the State of Montana are losing the revenue which they would otherwise receive as royalties from the production of oil and gas on these State lands. Private-land owners, farmers, and ranchers, are deprived of their one-eighth of the production, commonly known as royalty. Further, by the lack of tubular goods for development in Montana, we are being deprived of developing a reserve to take care of the petroleum needs of our people in the West and we must import our petroleum products from other areas and foreign sources, thus draining dollars out of Montana instead of creating new wealth and bringing money into our own Treasure State.

For every wrong or lack of the things that we need, there must be a cause, and in the matter of the shortage of tubular goods there is a cause which we in Montana feel is unfair and discriminatory toward us and the rest of the Western States. During the past 2 years you have read about the development of oil in Arabia by corporations formed in foreign countries in order to escape the payment of income tax in the United States. Our steel tubular goods, which we so sorely need in Montana, have been going for the development of oil fields in the Middle East and in other foreign countries. During the year 1947 there was exported from the United States for development of foreign oil fields 333,500,000 tons of oil-field tubular goods. If we could have had only a small percentage of that for use in Montana, think of the development of oil that could have been in our own State. I have talked to people who have been in Arabia and they tell me that there is shipload after shipload of oil-field tubular goods stacked and rusting and not being used because of political disturbances in the Middle East and war conditions. I have also stood at the railroad depot in Shelby, Mont., and watched trainload after trainload made up of many carloads of oil-field tubular goods going north to our neighbor, Canada. Some one and a half years ago the tremendously prolific LeDuc oil field was discovered in Canada. This is an area that did not have any history of pipe usage and is an entirely new area, but the LeDuc field in Canada is controlled by the Standard Oil Co. of New Jersey, through its Canadian subsidiary, Imperial Oil Co., and they have drilled approximately 70 wells of a depth of about 5,000 feet.

Our average well in the producing fields of Montana is around 2,000 feet deep. Just think what the pipe that went to drill those 5,000-foot wells in Canada could have accomplished if made available for us in the State of Montana.

The testimony of the oil operators has shown also that, although it is impossible to buy oil field tubular goods through the legitimate supply houses at the quoted market price, they are able to go out in the gray market and at more than double the listed market price are able to buy a portion of their requirements. The issue for January of this year of the Independent Petroleum Association of America monthly publication shows that whereas in 1941 oil operators bought 92 percent of their pipe through regular suppliers and used only 8 percent second-hand pipe, that in the year just completed they were only able to buy 39 percent of their requirements from regular suppliers, they had to use 25 percent second-hand pipe, much of which was barely fit for use, and buy 22 percent of their requirements in the so-called gray market. And 11 percent of their requirements came through another version of the gray market and that is tie-in sales. In a tie-in sale you must buy something else which you do not need in order to obtain the product that you must have. Finally, 3 percent of their needs came from the conversion of one type of material into the type needed.

We, the Committee on Petroleum, Oil, and Gas, have introduced a House joint resolution requesting the President of the United States and the congressional delegation from Montana to stop some of the exports of oil field tubular goods in order that Montana may have her fair share of the output by the steel mills of pipe and casing. The lack of casing has caused many of Montana's skilled oil-field workers and drilling contractors to leave the State, as there was no work for them, and go to foreign countries where the development work was being carried on. This is another loss to our State. If you wish to see Montana's oil industry developed, if you wish to see more natural gas developed in order that there will be an ample supply for use by the people of the State, if you wish to see this new wealth created and this industry take its rightful place, then I can only urge you to write your congressional delegation in Washington, D. C., as to the lack of tubular goods in Montana and request them to do something about giving us a fair allocation for Montana.

Thank you.

The National Security Resources Board—Nomination of Mon C. Wallgren

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Friday, February 25 (legislative day of Monday, February 21), 1949

Mr. CAIN. Mr. President, I ask unanimous consent to have printed in the Appendix to the RECORD a radio speech which I have prepared for a listening public in Washington State. The subject covers the missions and responsibilities of the National Security Resources Board, the National Security Council, and the Central Intelligence Agency, together with my announced opposition to the proposed appointment of Mr. Mon C. Wallgren, of Washington State, to be the Chairman of the National Security Resources Board.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This is HARRY CAIN in Washington.

For the past week you have become aware, many of you for the first time, of the existence of the National Security Resources Board. This awareness may have been due, in part, to my current concern with the recent nomination by President Truman of a man, well known to the State of Washington, as Chairman of this Board. This nomination still awaits the necessary sanction of the United States Senate.

Because I am protesting this nomination, I want to take the time this evening to tell you why you ought to know. To do this, I shall try to explain to you the functions and ramifications of the National Security Resources Board and its relative and gigantic importance as a Government institution.

Comparatively new, the National Security Resources Board was established by the National Security Act of 1947 and was approved on July 26 of that year. The Board is comprised of a chairman, appointed from civilian life by the President of the United States, by and with the consent of the Senate; and as members, such heads or representatives of the various executive departments and independent agencies, as may be designated by the President. Included in the membership, as it stands today, is an imposing list of names. They are: The Secretary of State, Secretary of the Treasury, Secretary of Defense, Secretary of the Interior, Secretary of Agriculture, the Secretary of Commerce, and the Secretary of Labor. In other words, the Cabinet. Obviously the National Security Resources Board, comprising such membership as this, immediately assumes top importance in the Government structure.

The functions of this Board are overwhelmingly far reaching. In a single sentence, they are this: to advise the President concerning the coordination of the military, industrial, and civilian mobilization in the event of war. However, we are not at war, but the National Security Resources Board is vested today with responsibilities for which it is working under an authorized budget, for 1949, of $3,000,000. These responsibilities are:

1. Advising the President concerning the industrial and civilian mobilization for the maximum use of the Nation's manpower in the event of war.

2. Advising the President concerning programs for the most effective use, in time of war, of the Nation's industrial and natural resources for military and civilian needs.

3. Advising the President concerning policies for unifying, in time of war, the activities of the Federal Agencies and Departments engaged with or concerned in production, procurement, distribution or transportation of military or civilian supplies, materials, and products.

4. The National Security Resources Board will determine and advise the President, ladies and gentlemen, on the relationship between potential requirements for manpower, resources, and productive facilities in time of war.

5. This Board is vested with the responsibility of establishing adequate reserves of strategic and critical material and to conserve these reserves.

6. The National Security Resources Board shall advise the President on the strategic relocation of industries, services, and economic activities, the continuance of which is essential to the Nation's security.

In other words, in the hands of the National Security Resources Board is placed the final responsibility as to whether this Nation lives or dies, in the event of war. This is the reason, and the only reason, that as a Representative of the State of Washington, certainly a vulnerable spot should war come, and as an American deeply concerned with the national security, that I have taken it upon myself to ask that the Senate scrutinize most painstakingly, the record of the man whose name the President has submitted to be placed in the highly strategic position of Chairman of the National Security Resources Board.

The responsibilities of this man do not stop with the position to which the President seeks to appoint him. Upon further scrutiny, we find that the Chairman of the National Security Resources Board automatically becomes a member of the National Security Council, which was set up under the same act which created the National Security Resources Board. Here we have a membership including the President and the Secretaries of the Navy, Army, Defense, Air Force, and State, and the Chairman of the National Security Resources Board.

The function of the National Security Council of which the National Security Resources Board Chairman is a member, is to advise the President with respect to the integration of domestic, foreign, and military policies relating to the national security, so as to enable the military services and other departments and agencies of the Government to cooperate more effectively in matters concerning national security.

Now we come to a third responsibility in which the Chairman of the National Security Resources Board finds himself involved. By virtue of his office, we find, that under the same National Security Act of 1947 under which NSRB and the National Security Council were established, there was also established the Central Intelligence Agency, which under the act, functions directly under the supervision and direction of the National Security Council. Thus we find the man who serves as Chairman of the National Security Resources Board, a member of the National Security Council, and as such, having a direct hand in the affairs of the Central Intelligence Agency. So that you may clearly understand what is involved here, let me list the functions of this third agency, the Central Intelligence Agency. Briefly they are these:

First, it advises the Security Council in matters concerning such intelligence activities of the Government departments as relate to national security, and makes recommendations for the coordination of these activities.

Second, it correlates and evaluates intelligence relating to the national security, and provides for the appropriate dissemination of such intelligence within the Government, using existing agencies and facilities.

Third, the Central Intelligence Agency also performs such other duties related to intelligence affecting the national security, as the National Security Council may, from time to time, direct.

Fourth, the Central Intelligence Agency, ladies and gentlemen, is also authorized to perform, for the benefit of the existing intelligence agencies such additional services of common concern, as the National Security Council determines can be more efficiently accomplished centrally.

Let us reflect on this last statement. This agency, operating under the direction of the National Security Council, of which the chairman of the National Security Resources Board is a member, may, to repeat, perform such additional services of common concern, which the National Security Council determines can be more efficiently accomplished centrally. The implications here may be of vital concern. The inference is strongly suggested that the functions of Army Intelligence, Navy Intelligence, and the FBI could very well be forced to relinquish to the Central Intelligence Agency any one or all those functions which the National Security Agency, might deem necessary in the interest of efficiency. Helping to make this decision, in a very leading way, will be the man who assumes the chairmanship of the National Security Resources Board.

Now that you have heard the functions of the National Security Resources Board and what the chairmanship of that organization involves, I earnestly hope that you agree that the terrifying responsibilities of this office demand the services of not just any man, not even a man above average, but a man with the finest background, the best education, with unquestioned loyalty and integrity, and the highest intelligence that this land can offer.

Of Arthur M. Hill, the first man to serve as Chairman of the National Security Resources Board, I know little. I have heard no criticism of him, and because he resigned several months ago, we shall not discuss him here.

Since Mr. Hill's resignation, Mr. John Steelman, assistant to President Truman, has been acting chairman, until such time as the President should appoint another man. Dr. Steelman is a highly capable, intelligent man and highly esteemed by many who know him. But his heavy responsibilities preclude his being able to assume permanently the job he is now filling on a temporary basis. Obviously a permanent chairman should be appointed as soon as possible. President Truman has seen fit to submit for this office the name of a very close personal and Army friend, a former Governor of our great State of Washington.

The President's nominee has a unique political record in the State, being the only man, I believe, who has been a Member of the United States House of Representatives, the United States Senate, and Governor of the State. Certainly few men from the State have had the honor of such an appointment as President Truman seeks for him. It, therefore, has been an extremely difficult thing for me to protest, as I have just begun to do, this appointment.

But, in consideration of the pregnant importance of the Board to the lives of every American man, woman, and child, and in the light of the nominee's limited background, I cannot feel that the latter's fulfillment of the responsibilities which are intended for him, will bring honor and achievement to the nominee, to the State of Washington, or to the Nation.

If necessary, I shall carry my protest both willingly and as strongly as I can, which I have placed before the Senate Armed Services Committee, to the floor of the Senate. I shall do this only because I deeply feel that should the President's choice become the Chairman of the vitally important National Security Resources Board, that action might well be responsible for the writing of one of the most tragic chapters in the history of our Nation.

Prospect of National Bankruptcy

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, February 25 (legislative day of Monday, February 21), 1949

Mr. IVES. Mr. President, one of our Members is a very modest and honest individual——

Mr. BREWSTER. Mr. President, such a remark as that has been ruled as being

a violation of the rules of the Senate—a remark to the effect that one Senator is honest.

Mr. IVES. Mr. President, I desire to make the statement that the fact that this Senator has been considered a very honest individual in no way reflects on any of the rest of us, inasmuch as I do not happen to be the individual referred to. He is very modest, also. Recently he received a letter from one of his young constituents in which the young man indicated a great deal of concern over the possibility of the United States going bankrupt. In reply to that letter the distinguished senior Senator from Minnesota wrote a letter, which is comparatively brief, but which is one of the best examples of an explanation of the situation as it is, the outlook as it is, the progress, and the course we should take in meeting the conditions with which we are confronted.

For that reason I should like to ask unanimous consent at this time to have inserted in the Appendix of the RECORD both of the letters to which I have referred.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

SIMPSON, MINN., *February 9, 1949.*

Senator THYE,
Senate Office Building,
Washington, D. C.

DEAR SIR: I am not yet old enough to vote, but was wondering whether or not we, the United States, are going bankrupt?

I should think we would stop helping other countries so much and try to help ourselves. Will this stop us from going bankrupt?

From the following question you may see that I presume that we are going bankrupt.

Sincerely yours,

MARX CAMPBELL.

WASHINGTON, D. C., *February 16, 1949.*

Mr. MARX CAMPBELL,
Simpson, Minn.

DEAR MARX: You ask me in your letter of February 9: "Are we, the United States, going bankrupt?" and you wonder whether stopping help to other countries and trying to help ourselves would save us from going bankrupt?

Marx, the United States is not going bankrupt. A nation only goes bankrupt when its people lose their spirit and character, when opportunity, enterprise, creative ability, and productive capacity are destroyed, or when conflicts and differences within the nation or with other nations remain unsolved and we turn to violence for their solution.

The United States will be bankrupt when young men like you are no longer sufficiently interested to ask questions about its Government. It will be bankrupt when its people care more for their own comforts and pleasures than for peace and justice in the world. It will be bankrupt when it fails to extend help to other nations seeking to rebuild themselves or when it fails to share in its responsibility to others. Yes, it will also be bankrupt when it fails to look out for its own and doesn't try to help itself.

It is true, Marx, we have a huge national debt resulting from the war. We have assumed international obligations that will cost many millions. We have many social and economic problems to solve, the solutions to some of which will cost money.

It is true, too, that we must reduce the dollar cost of our Government so that our people may bear the burden of taxation and our industries and agriculture will have the incentive to expand and develop. And it is true that we must always be ready to ask ourselves the searching questions, such as you have done: Where are we going? Are our policies wise? Are these things we propose to do good for our country and our people?

I hope you will always ask such questions and that never in your life will anyone be able to deny you the right as an American to ask them. I hope you will want to study them and learn what the answers ought to be. I hope also that you will have faith in your country, and faith in yourself, so that you can do your part to help make this land of ours true to its great heritage and worthy of its high destiny.

Sincerely yours,

EDWARD J. THYE,
United States Senate.

On Acquiring a Reputation

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Friday, February 25 (legislative day of Monday, February 21), 1949

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD the Spoken Word, heard over radio station KSL and the Nation-wide Columbia Broadcasting System, from the Tabernacle, Temple Square, Salt Lake City, Utah, Sunday, January 16, 1949, entitled "On Acquiring a Reputation," by Richard L. Evans.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ON ACQUIRING A REPUTATION

(By Richard L. Evans)

Reputations are built on many factors—some of them seemingly unpredictable. Many men have become known for things for which they would never have chosen to be known. Men of many talents sometimes become best known for the talents which they themselves esteem the least. It has sometimes happened, for example, that actors who would like to be known as great dramatic artists have come to be typed as comedians. Likewise there are those whose hobbies catch the public fancy, whereas their professional pursuits are all but unnoticed. A single event in one's life, even though it be seemingly unrelated to all that has gone before and all that follows, may fix a reputation—desirable or undesirable. Often young people acquire reputations of one kind or another early in life; for example, a student, having early in his school career become known as a conscientious scholar, is likely, from then on, to find the going much easier. The reverse is also true. An answer from a student of poor repute may not be well rated even when it is right. This may not be just, in a sense, but it is nevertheless the way it often works. Good reputation is often accepted at face value and tends to open up the way, while poor reputation multiplies difficulties. And young people who, by some thoughtlessness or some careless conduct, acquire a reputation of the kind they would later have cause to regret, are needlessly complicating their own lives and closing doors in their own faces. Fighting through life against an unfavorable reputation, whether deserved or not, is difficult and discouraging. And some things which, in our thoughtlessness, we may have supposed didn't matter much, often cling as stubbornly as nicknames, no matter how we try to shake them. Certainly reputations which are undeserved will not be the basis of ultimate justice or judgment, but the fact remains that our lives are in some ways modified by what others think of us. And once a man gets a rating with his fellow men, once he gets himself classified in the minds of others, it is often difficult to get a reclassification. Therefore, to him who is beginning his way in life, and to all others, there is wisdom in these words from Scripture: "Abstain from all appearance of evil," [1] as well as from evil itself—for the generations have proved that good reputations are exceedingly perishable, while poor reputatitons are almost indestructible.

Drift Toward Dictatorship

EXTENSION OF REMARKS
OF
HON. JOHN W. BRICKER
OF OHIO
IN THE SENATE OF THE UNITED STATES

Friday, February 25 (legislative day of Monday, February 21), 1949

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Drift Toward Dictatorship," published in the Youngstown Vindicator, February 15, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DRIFT TOWARD DICTATORSHIP

Many Americans believe that the world-wide drift is to socialism, if not to communism, and there's no use resisting it. Gen. Dwight D. Eisenhower had something worth while to say to them in a little speech he made Saturday to the first annual Columbia College Forum on Democracy.

Referring to the tendency to accept the paternalistic government as inevitable, General Eisenhower branded it as a "creeping paralysis of thought" and said that it could lead this country into dictatorship.

Such a dictatorship, he said, would be born of "a surrender of our own responsibilities and, therefore, of our own thought over our own lives and our own right to exercise our vote indicating the policies of this country."

The constant drift toward centralized government, concluded the new presiding officer of the Joint Chiefs of Staff, will result in "a swarming of bureaucrats over the land. Ownership of property will gradually drift into that central government, and finally you have a dictatorship as the only means of operating such a huge and great organization. I believe that it is things such as that which we must watch today if we are going to be true to the standards that Lincoln gave to all of us."

With the same thought in mind, Senator JOHN W. BRICKER, of Ohio, has introduced a bill in the United States Senate calling for a study of the increasing centralization of power in the Federal Government, how much of it has been necessary, and how much is

---

[1] Thessalonians 5: 22.

the result of a deliberate purpose to change our form of government.

"I believe the Congress should find out, if it can," said Senator BRICKER in presenting his bill, "what factors have contributed to the centralization of government in Washington and the degree of contribution to each.

"I believe the Congress must carefully examine the ultimate result of the trend toward centralization. Are we faced with an irresistible rush toward centralization—then state socialism—then dictatorship? I do not believe we are. I do not believe that this trend, which, to my mind, will certainly lead to the eventual destruction of the Federal form of government, is irreversible. Again, it is high time the Congress stop and take stock—it is high time to find out where we are going."

Senator BRICKER carried his thought further in a Lincoln Day address in Kansas City. At present, he said, one-third of our national income goes for upkeep of big Government. "We must pare expenses in preparation for the great needs of tomorrow. We cannot stand for $45,000,000,000 annually for the upkeep of Government. If we spend ourselves recklessly, then America will fail in her great mission."

There never was a time when our country was called on to take the leadership of the world as it is today. The survival of freedom and civilization depends upon what we do. We need the highest statesmanship in our foreign relations and also at home. To meet the demands upon us we must avoid extravagance of every kind. Senator BRICKER told the Missouri Republican Club that if President Truman adopts the recommendations of the Hoover commission for reorganization and merger of many existing Government bureaus $3,000,000,000 can be saved annually. This would be a beginning. Beyond it is the larger task of making local, State, and Federal governments do their work efficiently and economically, so that this country will be prepared to meet the emergency that will arise as Soviet Russia constantly takes over more and more of the globe.

Practice Patriotism

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, February 25 (legislative day of Monday, February 21), 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Tulsa Tribune, together with the heading which says: "'Don't spread patriotism too thin.'—Theodore Roosevelt."

There being no objection, the editorial, together with the heading, was ordered to be printed in the RECORD, as follows:

[From the Tulsa (Okla.) Tribune of February 19, 1949]

"Don't spread patriotism too thin."—Theodore Roosevelt.

PRACTICE PATRIOTISM

(From an address before the Tulsa Chamber of Commerce, February 17, 1949)

(By Richard Lloyd Jones)

We have voted to impose upon ourselves greater tax burdens than the stupid king of England dared to do. We have placed in power bureaucrats masquerading as Democrats. We have endorsed wholesale vote buying, compounded confusions and incompetencies. And we look upon it as funny. Most of our voters do not understand, and what is dangerous, do not care.

The Tories of our time are exalted. Their numbers are few, but their work is effective. Like holes in the dikes, they let the devastating seas roll in.

If we are patriots, politics must not mean Democratic or Republican activities. Politics is the people's welfare. It is the public affairs. Are we afraid of ourselves? Are we afraid to talk about ourselves?

What a grand army of civic righteousness we would have if our citizens' organizations enlisted, soldier-like, to save the Republic.

We have masses of men. Many weekly luncheon gatherings. They open their meetings facing the flag. They sing, My Country 'Tis of Thee. And then they are afraid to talk about it.

He is a partisan rather than a patriot who cannot think of the people's welfare in terms larger and nobler than that of the capture of the public pay roll.

Let these collective enterprises emulate the Masonic order of Washington's time. The Masons took a lively and aggressive part in the people's welfare then. They ferreted out the Tories and silenced them. The Knights of Columbus today are enlisted in an organized fight against the Communists in our country. More of this and the Tories of today will fade as they were forced to fade in Washington's time.

We have the manpower right here at home to put the patriot's courage into timid Congressmen who stand in fear of organized forces that assert themselves.

There were no Democrats, and there were no Republicans at Valley Forge. But every suffering soldier there was in politics, with his musket.

Every one of us can remind our Representatives and Senators in Washington today of George Washington's suffering soldiers, and ask what soldiering are they doing for the George Washington cause today.

Today we have so far undone the work of Washington that all our educational and eleemosynary institutions stand stranded. The fountains of endowment have dried up. And we have hailed that arrest as a progressive triumph. At this Washington would weep.

So, instead of standing like an artillery in defense of our freedoms, our educators are carrying their tin cups to Congress. Our once self-reliant sovereign States, self-reliant cities, and school communities everywhere have become beggars, scrambling for a handout.

The time has come for good men to be brave men. For both Democrats and Republicans to shed the cloak of party limitations. Americanize their parties. Make both parties aggressive in defense of the Bill of Rights without which this country never would have been.

Out of the little red schoolhouse, the great America flowered. Out of free enterprise, initiative and encouragement of inventions, America became the benignant land to which all war-wrecked peoples have turned for succor.

Yet we have those who insist on destroying this gift of Washington and Lincoln. And those self-styled broadminded demand that everybody who wants to destroy us be granted the right to go ahead and do so.

Out of 313 signers to a petition demanding that Congress abolish the Committee on Un-American Activities, 124 were college teachers. Twenty-one from Harvard. Eleven were from Yale, New York University had eight. Massachusetts Institute of Technology six. Princeton and Columbia each five. Others scattered. And they all have the backing of the American Association of University Professors.

Apologetically it has been said that these professors were largely innocent. Fellows who liked to see their names in print. So they lent their autographs without realizing what they were signing. Well, if they are that dumb, no college should permit them to teach. It matters not how impressive may be their accumulation of academic decorations, they are not entitled to the badge of educators.

Our book publishers have found a market for treasonous literature. The alien-minded who want to destroy us write books. And we are urged to read them.

We once had magazines, weeklies and monthlies, which took pride in revealing our robust America. Many of these periodicals today are seeking sales through those who look with contempt upon our country.

Such editors should get an avalanche of letters from the men and women who believe in America. Organized encouragement comes to those editors from the punks.

Are we dumb or too timid to be alert and aware of this intrigue? Every one of us can contribute to the arrest of this subtle and seditious menace.

Are we to so soon lose the lessons of our country's story? If we remember, this Republic will come through. It cannot fail. But if we carelessly forget where we came from, if we are to listen to the deniers and mockers, then will continue this growing rot and this dissolution.

Liberty is not cast in bronze. Patriotism is not perched on pedestals. Liberty lives in the hearts of men and women. No constitution, no law, no court can put it there or keep it there. Liberty is the spirit which seeks to understand the minds of other men and women and to respect their rights and freedoms. He is our enemy who denies our constitutional rights. And those rights are now being officially denied.

The time has come when every American should make it known to the judges who sit in our courts that an impatience and an indignation is rising against those cowardly courts that now blemish our heritage by tolerance of those who would destroy us.

America—given to us by Washington, saved for us by Lincoln—is in danger. Washington's foe was the British crown. Lincoln's America was endangered by division. But today we face a greater enemy, apathy. Apathy murdered all the republics before us. It can murder us.

The will of the people is the law of the land. When that will becomes weak, the land is lost. The archives of history are filled with the records of republics that rose out of strong-willed men to collapse when the will was gone. Despotic powers rose to tax enterprise into paralysis and the people into slavery.

What are we Americans doing today to save our country?

If we put our patriotism into practice we could halt this tax raid, restore the sovereignty of our States, build magnificent YMCA's, expand our educational and humanitarian enterprises. This must be done or we lose the last best hope on earth.

However all this talk is futile unless we do something about it. Were this chamber of commerce to adopt emphatic resolutions ordering our Senators and Representatives in Washington to rid us of all the devastating bureaucratic waste, and to stop imposing paralyzing taxes upon the people, the chambers of other cities would follow Tulsa's pattern, and we could prevent the impending national disaster.

Establishment of Wage Scales

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Friday, February 25 (legislative day of Monday, February 21), 1949

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an article appearing in the Anderson (S. C.) Independent of Thursday, February 24. This article quotes the eminent author and psychologist, lecturer, and teacher, Dr. George W. Crane, of Chicago. I believe his observations and suggestions regarding the establishment of wage scales are worthy of consideration by the Members of the Senate and every employer and employee in this country.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DR. CRANE SAYS: "FLUID-DRIVE SCALE NEEDED"

"It is not efficient nor humane," Dr. George W. Crane, the noted psychologist, said yesterday, "that wage scales should be treated as a political football.

"Nor should intimidation be necessary, either on the part of management or of labor unions, to obtain a specific wage."

Dr. Crane, noted author of Chicago, has been a visitor in Anderson for the past week. Sunday he addressed a crowd of 1,600 at the First Baptist Church and last Friday evening was speaker at annual ladies night of the Anderson Rotary Club.

Commencing further on labor-wage problems of today, Dr. Crane said, "Let's adopt a hydromatic or fluid-drive shift in regard to labor-management affairs so wage scales will automatically adjust themselves to the immediate conditions of industry.

"Science needs to be applied to the matter," he emphasized during an interview; "here's how it could be accomplished:

"A differential wage rate should be determined for the major trades, whether in carpentry, plumbing, coal mining, or even the operation of a typewriter by a stenographer.

"The basic rate should be determined by such relevant factors as the amount of intelligence demanded by the job, plus the minimum amount of training or apprenticeship required.

"In addition," Dr. Crane said, "the hazard to life should be equated, for a coal miner might not require the technical training of an electrician, but the hazards of life might be much greater.

"Even the shortness of the working season or seasonal nature of the trade should likewise be considered. And if a worker must furnish his own tools or equipment, that factor might properly be taken into consideration.

"Thus," he said, "a relative wage scale should be set for the major trades. But the specific hourly minimum would need to be determined by a consideration of the commodity-price index at the current moment.

"Once the wages of a carpenter were set, in comparison with the simultaneous wages of a plumber or coal miner, it would be a comparatively simple thing to adjust them thereafter in accordance with the changing commodity price index.

"At periodic intervals, say at 3-month periods, the Department of Labor could show whether workers were being underpaid or overpaid.

"It would then be unnecessary for hundreds of thousands of honest workers to be on strike, thus depriving their families of the weekly pay check.

"For changes in pay scales would be mechanically adjusted to current economic conditions, much as the new hydromatic gear shift on the late model automobiles likewise automatically shifts the gears to meet the immediate need of the car for power.

"At present, men may be on strike for months or even years to gain a wage increase, let us say, of 10 cents per hour. Even when they do obtain it, if they do, their many months off the job during the strike may cost them so much in lost wages that they'll need to work for 5 or 6 years at the higher wage scales just to break even with the board.

"And during those 5 or 6 years, if a temporary recession takes place, obviously they have lost in income despite the 10 cents hourly increase.

"Under this new so-called hydromatic technique for setting wages in accordance with the commodity price increase and the relative merits of one trade versus another, a worker would rarely, if ever, need to lose time from the job. When wage increases were merited, they'd automatically be forthcoming. And when wage decreases were indicated, they'd likewise occur.

"So let's apply as much horse sense and efficiency to our field of human engineering in respect to labor and management as our motorcars."

Veterans' Pension Bill

EXTENSION OF REMARKS
OF
HON. RAYMOND E. BALDWIN
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES

Friday, February 25 (legislative day of Monday, February 21), 1949

Mr. BALDWIN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article which will appear in Army Time. The article is a very thoughtful and helpful analysis of the so-called Rankin pension bill, which is now pending in the House.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BAD LEGISLATION

There is so much resentment, misinformation, and confusion over the form, substance, and implications of the so-called Rankin pension bill that a further discussion in this column is merited.

We believe in economic security for the aged people of the United States, regardless of whether or not they are veterans of any of our wars. We believe also that the Government is moving forward into an era where more and more attention will be given to this aspect of the general welfare.

We believe that aged and ill veterans of World War I are deserving of and should have pensions from the Government they fought to defend when and if such pensions are necessary to provide the necessities of life or otherwise lighten the burden on the aged and ill.

We believe with a deep and abiding sincerity that the needs of the widows and children of veterans of World War II are entitled to early and equal consideration with the needs of all our veterans.

We believe that first things should come first; that if old-age pensions for aged and ill veterans of World War I are a necessity, they should be voted on the strength of their own merits, and not in conjunction with long-distance legislation to provide pensions for War II veterans some 30 years from now, or in conjunction with immediately necessary legislation for widows and orphans.

We do not believe that the needs and plight of widows and fatherless children should be buried in subprovisions of such highly controversial legislation as the Rankin bill, ignored in public discussion of the bill, but doomed to stand or fall on the wholly unrelated issue of old-age pensions for living veterans of both world wars.

We do not believe that now is the time to agitate or antagonize the public, to jeopardize the forward march of all other veterans' legislation, or to create new causes for anti-veteran sentiment, particularly against the young veterans and widows of World War II who must bear much of the onus of "Treasury raiding" while sharing little of the immediate material benefits.

There is every reason to believe that even if Congress passed the Rankin bill in its present form, and even if it were signed into law by the President, the eventual high annual cost would make it a target of the economizers and the law probably would be repealed long before more than a very few World War II veterans could qualify for its benefits.

The Rankin bill is not good legislation because it obscures the immediate good and high lights the long-distance harm.

Ninety percent of the public opposition to the Rankin bill is due to the fact that it would add some $7,000,000,000 to the already high annual cost of veterans' benefits in the remote future of the 1980's and 1990's. On that basis, for the next 30 or 40 years, the veterans of World War II would be required to pay a large share of the freight, but would receive none of the benefits and most of the abuse.

We now have on the statute books an inadequate social-security law which provides small monthly payments for the aged, veteran and nonveteran alike. In addition, existing laws administered by the Veterans' Administration make it possible for any veteran who has reached age 55, and who has a permanent disability—service-connected or otherwise—and who is unemployable, to receive a pension of $60 a month. When the veteran reaches 60, the disability requirement is lowered to 50 percent; when he reaches 65, the pension is increased to $72 and the disability requirement lowered to 10 percent—a rating which almost automatically makes every 65-year-old veteran eligible for a pension.

Why all this apparent concern for the welfare of World War II veterans 30 years or more from now? Were they included in the Rankin old-age-pension bill, as some suspect, merely to win their support for the needs of World War I veterans? Or, as others suspect, were the World War II vets included so that the estimated cost would pyramid to such prohibitive figures that enough opposition would be generated in Congress and elsewhere to assure defeat of the bill?

These are questions which deserve the most careful thought and consideration.

Right now the veterans of World War II and the widows and children of their comrades in arms have more pressing needs than old-age pensions for which they could not qualify for three decades.

Congress should consider the merits of legislation for veterans of World War I separately from legislation for the veterans and widows of World War II. Otherwise the harm which will result may be irreparable.

Saving Our Future

EXTENSION OF REMARKS
OF
HON. EDWIN C. JOHNSON
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Friday, February 25 (legislative day of Monday, February 21), 1949

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an editorial published in the Washington Star entitled "Saving Our Future." This editorial pays a well-deserved tribute to the chairman of the Senate Committee on Interior and Insular Affairs [Mr. O'MAHONEY].

If this Nation desires to maintain its exalted position of leadership among its colleagues, it must give heed to the protection, conservation, and wise use of its natural resources.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SAVING OUR FUTURE

It would be hard to find a more important undertaking, whose success or failure means more to the future of this country, than the one outlined to the Senate Committee on Interior and Insular Affairs by its Chairman, JOSEPH C. O'MAHONEY, of Wyoming.

In opening a series of hearings this week in search of an improved policy for conservation, development, and administration of the country's natural resources, Senator O'MAHONEY remarked that unless we keep strong at home, the peace effort so largely underwritten by this country can easily fail.

Secretary Krug gave some examples of current waste and profligacy in the use of precious resources:

For every 2 tons of coal mined, 1 is left in the ground and lost.

More energy is being wasted through flaring of natural gas in the fields than is being produced by the entire series of dams under TVA.

In the face of declining ore and petroleum reserves, the automobile manufacturers are adding to the average weight of pleasure cars.

The public range has been overgrazed, with resulting loss tomorrow of wool and meat. Twenty-two million acres need reseeding now to halt irreparable depletion.

We do not have the farm land now required to feed the number of people who will be dependent on it a few years hence. Millions of tons of topsoil are carried away by rivers every year. Yet millions of acres can be added to productive land by reclamation and irrigation; millions more can be preserved by proper soil conservation.

We are using up our saw timber at twice the rate it grows. More than a third of approximately 5,000,000,000 acres of commercial forest land is denuded or poorly stocked. We have only 1,600,000,000,000 board feet of timber left out of the 8,000,000,000,000 board feet of three centuries ago.

Senator O'MAHONEY spoke of the necessity for a vigorous policy of conservation on a national scale—not merely in selected regions of the country—if we are to maintain our responsibility for world peace and carry out some of the things we have undertaken. He might have gone much further. Without such a policy our existence as a people, without counting the added devastation of another war, is at stake. We have not gone far in conserving our resources of forest, stream, soil, and minerals. But we have gone far enough to see the potential results in safeguarding our future, maintaining our prosperity, and raising the standard of living for our people that are available to us.

Lifting the minimum wage, adding to the coverage of social-security schemes, tiptoeing into socialized medicine and universal health insurance—all such things have a fetching sound to many people, with or without counting the cost. But they are superficial and merely expedient compared with the fundamentally important issue of conservation, assuring to our grandchildren at least a continuation of some of the bounties that we inherited. The hearings before Senator O'MAHONEY's committee may not be spectacular. But there could be nothing more dismally spectacular than the results of a failure to carry out what the committee has chosen as its objective.

Is CVA-MVA-TVA Legislation Socialistic?

EXTENSION OF REMARKS
OF
HON. ZALES N. ECTON
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Friday, February 25 (legislative day of Monday, February 21), 1949

Mr. ECTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article received from the Pacific Northwest Development Association, of Portland, Oreg., entitled "Is CVA-MVA-TVA Legislation Socialistic?"

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IS CVA-MVA-TVA LEGISLATION SOCIALISTIC?

We must bring this issue of encroaching socialism out into the open. The real issue must not be covered up in bills appearing merely to provide for flood control and the development of natural resources.

The Pacific Northwest is threatened by another Columbia Valley Authority bill, this time the administration's bill which President Truman has directed to be drawn. We do not know the form this bill will take nor the powers to be delegated to the Corporation, but the record of its proponents and their bills is clear.

Most of the proponents of valley authorities deny and even scoff at the idea that these measures are socialistic. Others frankly admit that they are.

WHAT IS SOCIALISM?

The aims of socialism are explained by Dr. Harry W. Laidler, a nationally known social economist who was at one time secretary of the Intercollegiate Socialist Society. In his book Socialism in Thought and Action, he wrote, "The socialist advocates the collective ownership and democratic management of the socially necessary means of production and distribution."

Even these broad objectives are exceeded by the discretionary powers granted the Corporation in S. 1716 and H. R. 5083, identical CVA bills introduced in the Seventy-ninth Congress and similar proposed measures in Eightieth and Eighty-first Congresses. Following are excerpts from the bills indicating the concentration of power in the board of directors:

BROAD POWERS GRANTED IN CVA BILLS

Section 6 (e): The Corporation "shall have power to acquire, by purchase, lease, condemnation, exchange, transfer * * *, or donation such real and personal property and any interest therein, including water rights, and may sell, lease, or otherwise dispose of any real and personal property and any interest therein, as in its judgment may be necessary or appropriate in carrying out the purposes of the Corporation under this act or under any other law of the United States."

Section 6 (i): The Corporation "shall have power to enter into such contracts and agreements and to exercise such powers and do such things as it may determine to be necessary or appropriate to carry out the powers now or hereafter conferred upon it by law."

Section 10 (a): "The Corporation is hereby authorized and directed to construct, operate, and carry out such projects and activities in the Columbia Valley region as will best serve to control and prevent floods, to safeguard the navigable waters, and to promote navigation and the reclamation of the lands * * * the Corporation shall have such powers as may be necessary or appropriate to construct by contract, force account or otherwise, operate, and carry out such projects or activities so as to accomplish the purposes of this act, including, but without limitation, the power—

"(1) to acquire, construct, operate, maintain, and improve dams, locks, reservoirs, levees, spillways, floodways, fishways, conduits, canals, roads, roadways, docks, wharves, terminals, sewage-disposal, water-purification, and other sanitary works, and recreation facilities, and structures, equipment, and facilities incidental thereto;

"(2) to acquire, construct, operate, maintain, and improve such canals, conduits, powerhouses, steam-generating plants, transmission lines, rural electric lines and substations, and such machinery, equipment, structures, and facilities for the storage and transmission of water or the generation and transmission of electric energy as the Corporation deems necessary or appropriate to supply existing and potential markets;

"(3) to develop and provide such methods and conditions of water and land utilization as the Corporation deems necessary or appropriate to prevent and abate floods and droughts."

Section 14 (b): "The allocation of costs, the assignment of reimbursement obligations, and the periods and rates of amortization so determined by the Corporation, when approved by the President, shall be final and shall be used thereafter in keeping the books of the Corporation."

Section 19 (a): "The Corporation shall, without regard to any other laws, rules, or regulations relating to the employment or payment of employees of the United States, except the Veterans' Preference Act of 1944 to the extent that it otherwise is applicable, employ and fix the compensation of such managers, assistant managers, officers, employees, attorneys, agents, and consultants as are necessary for the transaction of its business, define their duties, * * * and provide a system of organization to fit responsibility and promote efficiency. Any employee of the Corporation may be removed in the discretion of the Board."

Section 20 (d): "The General Accounting Office, in the settlement of the accounts of the treasurer or other accountable officer or employee of the Corporation, shall not disallow credit for, nor withhold funds because of, any expenditure which the Board shall determine to have been necessary to carry out the provisions of said act."

Section 21: "The Corporation is authorized to issue and sell or exchange from time to time revenue bonds * * *. The said revenue bonds shall express on their face that they are not direct obligations of the United States, and that the payment of the principal and interest on the bonds is not guaranteed by the United States. Such revenue bonds * * * shall be issued in such manner and amount, and shall be sold at such prices and in such manner as may be prescribed by the Corporation."

CVA BILLS HAVE BEEN BLANK-CHECK LEGISLATION

All CVA bills thus far proposed have been socialistic and even communistic. Under the provisions of these bills, the directors of the Authority Corporation are authorized or given broad discretionary powers to condemn, own, and operate business enterprises that are now owned and operated by private enterprise.

These discretionary powers are subject to the desires of the Corporation directors and are limited only by their interpretation of what is necessary or appropriate to carry out the purpose of the act or any other law of the United States.

Courts have put a very liberal interpretation on the broad powers of the Corporation. They have been unwilling, as demonstrated by the Supreme Court decision (*Tennessee Valley Authority* v. *Welsh et al.*) rendered on March 25, 1946, to question or rule as to whether or not discretionary powers by Government corporation directors are properly or improperly used. Thus, the Authority may enter any business which in the judgment of the directors is "necessary or appropriate." Government's subsidized competition and confiscatory policy of encroachment in fields of private enterprise is definitely socialistic.

SENATE COMMITTEE REPORTS

Criticisms voiced by the Overton subcommittee of the Committee on Irrigation and Reclamation, John H. Overton, chairman, and Joseph C. O'Mahoney, Charles Gurney, and Hugh Butler, members, which reported adversely on the Missouri Valley Authority, are equally valid with respect to a CVA. This committee said, in part: "The creation of an MVA would amount to the welding of economic and political powers resulting in nothing short of autocracy. It would mean the substitution of arbitrary power for democratic processes. It would mean the creation of a superstate, neither Federal nor State, and not contemplated by our Constitution. It would subject the social, cultural, and economic welfare of the Missouri Basin to the dictates and whims of a three-man board, not responsible to the people and largely irresponsible to the Congress itself. It would constitute a virtual abdication by the Congress in favor of government by Federal corporations wielding autocratic powers. It would challenge State sovereignty and destroy systems of laws, both State and Federal, under which western agriculture has grown and prospered. It would throttle in the West the reclamation program which has been prosecuted through the years by an experienced agency and which has met with the approval of the Congress and of the people directly affected. It would permit a three-man board to avail itself of trust funds created for reclamation. It would be an excursion into an unchartered field of vast expenditures of public funds and of experimentation under a board unencumbered by the restraints that a democracy should erect against agencies of Government."

Why have the proponents of CVA thought it desirable to claim exemption from civil-service laws and regulations affecting other Federal employees? Is it because they wish to revert to the spoils system? Or is it to circumvent the loyalty check to which civil-service employees are subject so that the authority may be loaded with communistic sympathizers? Recognition of the Veterans' Preference Act appears to have been primarily for its vote-getting value.

THE TRANSITION FROM STATE SOCIALISM TO COMMUNISM IS HARDLY PERCEPTIBLE

Bolshevik Nicholai Lenin was not being merely cynical when he said, "Communism is government-owned power plus bookkeeping." And David Lilienthal, former Chairman of the board of TVA and now Chairman of the Atomic Energy Commission—the controlling agency for the greatest potential source of power in the world—was equally clear in his assertion: "Those who control energy, control people."

Here is what other men, prominent citizens who have studied and given much thought to valley authority proposals, have to say:

Senator GLEN H. TAYLOR, of Idaho, author of a CVA bill in the Eightieth Congress, as quoted in the CONGRESSIONAL RECORD of September 27, 1945, and the Idaho Daily Statesman of May 31, 1946: "When I see some of the opposition to the various authority projects, I wonder. I will admit that these projects are socialistic. There is no use beating around the bush about it."

H. S. Rauchenbach, until removed during a session of a Republican Congress, Chief of the Research and Planning Section of the Power Division of the Interior Department, was on record as a militant Socialist prior to his employment by the Department. In the book, Socialism of our Times, and the publication, The New Leader, of March 5 and 12, 1927, he wrote:

"Our long aim is the abolition of the profit system for private use; we must force our experts on agriculture, trusts, coal, power, subways, housing, milk, etc., to tell us correctly what the next steps are.

"Between cataclysmic socialism and encroaching controls, the latter will be the only one acceptable to this Nation for a long while. * * *

"* * * one good man with his eyes, ears, and wits about him inside the Department * * * can do more to perfect the technique of control over industry than a hundred men outside."

Senator GLEN H. TAYLOR, of Idaho: "If the country wants absolute labor peace, though, we will have to nationalize those basic industries that control the country's economy. * * * Nationalization or socialization would have to stop somewhere. If I were drawing the line, I would list those basic industries as coal, steel, transportation, utilities, communications, and aluminum, because that's a monopoly. * * * By nationalization, I mean Government ownership."

Norman Thomas, former Socialist Party candidate for President of the United States, in an address made in Nashville, Tenn., in October 1944:

"The TVA exemplifies what socialism might do, and the technique it would use in the process."

Dr. Carl Thompson, one of America's leading Socialists, secretary of the Public Ownership League, and for a long time consultant for the Bonneville Power Administration, released this statement when he was manager of the Socialist Party information bureau:

"States under the direction of this Socialist program, and finally the Nation, will take over one after the other of the public utilities, mines, railroads, interurban electric lines, power plants, telegraph and telephone systems, waterways, forests, and all of this may be done by methods perfectly legal and constitutional."

While employed by Bonneville Power Administration, Dr. Thompson did an effective job in helping to take the power industry away from private enterprise and put it in the hands of government. He also made public talks advocating a CVA and the socialization of basic industries.

Former Secretary of the Interior, Harold L. Ickes, testifying before the Senate Commerce Committee on the MVA bill, S. 555:

"The committee should not underestimate the magnitude of the task that is before it. You have before you not merely a question of establishing a single authority, for eventually the Congress will not do less for one watershed than for another. Therefore, there is before you a major step in the basic reorganization of the Government of the United States as we have known it for the last 150 years."

Gen. Thomas M. Robins, former Deputy Chief, Corps of Engineers, United States Army, in a publication entitled "Development of our Natural Resources":

"It seems clear that establishment of a CVA as proposed in S. 1716 and H. R. 5083 will mean creation in the Pacific Northwest of a socialistic form of government, and would place the social, cultural, and economic welfare of the entire region in the hands of a board not responsible to the people, and, for all practical purposes, not responsible to Congress. Such a form of government was never contemplated by the Constitution of the United States.

"No real need exists for establishment of any more valley authorities in this country. Existing laws and procedure provide for full coordination between the competent Federal agencies now engaged in adequate programs for development of our natural resources under a sound Federal policy. * * * Most serious consideration should be given by all the people of any region to the consequences before giving up all the protection of their rights afforded by existing law and subjecting themselves to an authority unencumbered by any of the restraints that a democracy should erect against agencies of government."

Judge Clifford H. Stone, of Denver, Colo., referring to the Supreme Court decision of March 25, 1946 (*Tennessee Valley Authority* v. *Welsh, et al.*):

"It emphasizes the far-reaching effect of such discretionary power in the hands of an agency charged with the control and development of the water resource of large sections of the country.

"It shows that an authority may expropriate private property whenever the board of directors determine it is necessary to do so in order to carry out the purposes of the act creating the authority."

Hon. John C. Vivian, Governor of the State of Colorado, at United States Senate hearings on S. 555:

"These authority proposals violate policies and laws, both Federal and State, which have been worked out and which have been recognized over the years.

"Authorities are devised as instruments to accomplish a planned economy which bypasses our constitutional system; they represent a welding of economic and political power which side-steps the powers and functions of the individual States and of existing Federal departments; and they are designed to launch the country into an experiment in state socialism."

Majority report conclusion No. 8 on MVA by the Missouri State Commission; L. T. Berthe, commissioner:

"The purposes of the proposed Missouri Valley Authority go far beyond those of

water control and utilization and would invade fields of endeavor which, under our form of government have been reserved for development by individuals, private industry, State or local government, or by long-established agencies, of the Federal Government. Quoting Arthur E. Morgan, first Chairman of TVA: 'MVA would be a powerful instrument for bringing in a new social order.' "

T. C. Compton, president, Pacific Northwest Development Association, states:

"Are we going to continue our rapid drift toward state and national socialism or are we going to maintain our representative form of government as we have known it and progressed under it for the last 150 years? This is the most important question before the American people today.

"The real issue is Americanism versus the clever subversive propaganda of socialism and communism, which for the past several years under the guise of security, prosperity, streamlining government, more projects, etc., has taken us far down the encroaching control road to socialism. Unless the American people become aware of this soon, it may be too late. CVA, as proposed in S. 1716, a 70-page bill, is another method that is being cleverly employed to bring a Socialist form of government to our country."

J. Howard Toelle, professor of mining and irrigation law, Montana State University, Missoula, Mont., at United States Senate hearings on S. 555:

"Finally under various provisions of the bill * * * this Federal corporation is given control over all natural resources of the basin, not over water alone. Thus, TVA has engaged in about 22 different kinds of private businesses. Not only does the measure destroy the balance of the Federal Government in its relation to the States, but it constitutes the entering wedge for federally owned Government-operated enterprise. It would lead to vast bureaucracy dictating our economic and political life. And the strategy is one of infiltration."

Hon. FRANCIS CASE, Member of Congress from the State of South Dakota, at United States Senate hearings on S. 555:

"That provision of the bill alone is far too broad a power to grant to any three men now or ever.

"In conclusion, I would like to say this: There is no desirable end or purpose of S. 555 which I have been able to find in reading it that cannot be accomplished under existing authorizations or supplementary legislation, if desired."

Hon. Sam C. Ford, Governor of the State of Montana, from testimony presented at the United States Senate hearings on the MVA bill S. 555:

"It is my considered judgment that the enactment of S. 555 would create a super-government, placing in the hands of three men power to dictate and control the social and economic life of the Missouri River Basin. It would be a long step toward state socialism.

"The broad powers proposed to be delegated to a three-man board, appointed and serving under the executive branch of the Government, is nothing short of congressional surrender of functions which should, under our Constitution, be exercised by Congress. We are concerned with great natural resources which vitally affect the welfare of the people of the Nation. The economy incident to their development, in my opinion, should never be entrusted to three men with no State and so little Federal control."

Kent Lane, president of the Gering-Fort Laramie irrigation district, from testimony presented at the United States Senate hearings on the MVA bill, S. 555:

"In conclusion, we think that in use of water from the North Platte River, irrigation should always remain first in right and first in use. We believe that we do not need a new agency to tell us how to run our farms. * * * We object to dictatorship in imposing a limit to the size of our farms by armchair conclusions. We object to a superboard, over which no one has control, putting into effect arbitrary regulations, restrictions, directives, or regimentive orders."

H. R. Lippincott, director of the Nebraska Farm Bureau Federation, from testimony presented at the United States Senate hearings on the MVA bill, S. 555:

"I have yet to find a resident of Nebraska who knows the contents of this bill who is for it. In most legislative proposals in our State we can find many people on both sides of the question. On this one there is but one side. We are absolutely against the passage of this bill.

"We do not scare out in Nebraska. But the threat of this bill frightens us as though it were an atomic bomb. We, the farmers of Nebraska, ask this committee to kill it before it ever has a chance to do the damage that we know it is capable of doing."

Guy C. Jackson, Jr., president, Texas Water Conservation Association; from testimony presented at the United States Senate hearings on the MVA bill, S. 555:

"May I say that it is my considered opinion the passage of the authority bills now pending in Congress would change our form of government, taking away from States the power of control of waters and their functions of administration. * * * It would transform our present economy from one in which private enterprise is the major factor into a system of socialism, communism, or fascism."

Everett T. Winter, manager, Missouri River division of the Mississippi Valley Association; from testimony presented at the United States Senate hearings on the MVA bill, S. 555:

"I do not like dictators, benevolent or otherwise. The MVA has been proposed as a benevolent dictator.

"I quote from an article in the Detroit Free Press by Malcolm W. Bingway: 'The story of the rise of nazism in Germany is the story of a people who lost their moral sense in seeking security. It is the story of the world today. It is the story of the horrid appeasement at Munich. It is the story of America whenever men think more of profits and political preferment and comfort than they do of the souls God gave them to make them free.'

"If this bill is passed, we would give up a great deal of our freedom."

United Mine Workers Journal, November 1, 1945, referring to the MVA bill, S. 555:

"What the title page doesn't state is that the act is really asking your Represenatives in Congress to vote for a project which would:

"1. Do great damage to such industries as coal mining, railroads, and electric utilities, which employ millions of workers and pay billions of dollars in taxes to the Government.

"2. Reduce jobs in private industry.

"3. Force workers onto the public pay roll where the Government would have absolute say over the rates of pay, hours of work, qualifications for a job, and other conditions.

"4. Make Government the complete master of 7,000,000 people in the Missouri Valley, including farmers, businessmen, and workers."

BONNEVILLE POWER ADMINISTRATION ADVOCATES CVA

Most active proponent of CVA has been Bonneville Power Administration. Created during President Roosevelt's administration to sell surplus power generated at the Bureau of Reclamation's Grand Coulee Dam and the Army engineers' Bonneville Dam, this marketing agency apparently has ambitions that go far beyond the service for which it was created.

Socialists, organization leaders, and others have been employed as consultants who spread the Authority doctrines. Dr. Carl Thompson has already been quoted. Farm organization leadership and others are employed and used. They often serve as mouthpieces to advance the public ownership ideology of this pro-Federal authority Government agency.

C. Gerard Davidson, now Assistant Secretary of the Interior, was at one time employed by the Bonneville Administration. It was he who drafted the Mitchell bill making Bonneville the Authority which would absorb the functions and resources of all governmental agencies in the region. It was also Davidson who, with Dr. Paul Raver, Administrator for Bonneville Power Administration, advocated that BPA be relieved of the regular procedure relating to appropriations. They seek amendment of the law to permit the Administrator to use revenue from power for anything he thinks necessary or appropriate. In effect, they would establish an authority which could build up prejudices against any industry they decided to take over.

Last December, at a conference in Spokane of Northwest mining people, Davidson declared that Government-owned steel mills in the West may be necessary to overcome eastern objections to western development. He said: "Steel magnates are opposed to any enlargement of our capacity. These men of little faith dread a depression that might leave them with too much steel."

A Bonneville Power Authority or Columbia Valley Authority if created, patterned after TVA, would dominate the economy of the entire region. Its scope of activity would be practically unlimited. In its ever expanding program it would employ, if operated like the TVA, 50,000 men on operations and up to 200,000 more on construction of projects throughout the region. The result would be little short of a regional regimentation.

GENERAL EISENHOWER ISSUES WARNING

Speaking at his installation as president of Columbia University, Gen. Dwight Eisenhower warned against this encroaching menace. He said, "All cherished rights—the right of free speech, free worship, ownership of property, and equality before the law—all of these are mutually dependent for their existence. Thus, when shallow critics denounce the profit motive interest in our system of private enterprise, they ignore the fact that it is an economic support of every human right we possess and that without it all rights would soon disappear. There, demagogery, unless combated by truth, can become as great a danger to freedom as exists in any other threat."

General Eisenhower further stated: "A paternalistic government can gradually destroy, by suffocation in the immediate advantage of subsidy, the will of a people to maintain a high degree of individual responsibility. And the abdication of individual responsibility is inevitably followed by further concentration of power in the state. Government ownership or control of property is not to be decried because of historic inefficiency of governmental management of productive enterprises; its real threat rests in the fact that, if carried to the logical extreme, the final concentration of ownership in the hands of government gives to it, in all practical effect, absolute power over our lives."

DEVELOPMENT ASSOCIATION,
Portland, Oreg.

Proposed Repeal of Taft-Hartley Act

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Friday, February 25 (legislative day of Monday, February 21), 1949

Mr. THOMAS of Utah. Mr. President, on Sunday, February 13, 1949, over the Columbia Broadcasting System, two of our colleagues, the senior Senator from Ohio [Mr. TAFT] and the junior Senator from Illinois [Mr. DOUGLAS] took part in the discussion of the repeal of the Taft-Hartley Act on the People's Platform program. Because of the general interest in the theme, I ask unanimous consent that the transcript of this broadcast be printed in the Appendix of the RECORD.

There being no objection, the transcript was ordered to be printed in the RECORD, as follows:

Mr. COOKE. Certainly no law of Congress in my memory has caused more commotion, more flat disagreement than has the Taft-Hartley Act. And so, Senator TAFT and Senator DOUGLAS, as you reconsider that law in the Senate, I'm asking you here on the People's Platform how would you revise our labor law?

ANNOUNCER. You have just heard Dwight Cooke state the question for today's timely debate on Columbia's People's Platform. Seated with Mr. Cooke in the CBS Washington studios are United States Senator ROBERT A. TAFT, Republican, from Ohio, whose name is on the present labor law, and United States Senator PAUL H. DOUGLAS, Democrat, formerly professor of economics at the University of Chicago and recently elected junior Senator from Illinois.

And now, for our debate on the need for new labor legislation, here is the regular chairman of the People's Platform, Dwight Cooke.

Mr. COOKE. Gentlemen, it seems to me there isn't very much I need to add to the millions of words which have been roared about the Taft-Hartley Act. It was passed by you and your Republican colleagues of the Eightieth Congress, Senator TAFT, over the President's veto. It is approved by business, loathed by the labor unions. And Mr. Truman and your fellow-Democrats, Senator DOUGLAS, are pledged to its repeal, and you're trying to carry out that now in Congress. But as the two of you eminent authorities and Senators join me here on the People's Platform this morning I'm going to ask you not only to state your own powerful convictions but to act as analysts and try to focus for us what's most important, basically, in this very complicated area. Maybe I'd better start out with the real basis of it all. This is supposed to be a country, Senator DOUGLAS, of free enterprise and free collective bargaining; therefore, why not just have labor and business sit down at a table, under free collective bargaining, and work out their own basis of agreement?

Senator DOUGLAS. Well, that was the fundamental purpose of the Wagner Act, which was passed in 1935. It was found that before that time, when workers tried to organize in unions, that commonly the employers would fire them for doing so. And frequently these men would be black-listed through an entire industry or an entire locality. As a result, men in general were afraid to join unions, and consequently unions were weak.

Mr. COOKE. So, as you see it, Senator DOUGLAS, the Government had to step in, to write a balance and make things fair for labor unions?

Senator DOUGLAS. Yes. And the Wagner Act did two very simple things. First, it said that if men joined unions the employers should not fire them or discriminate against them because of their union membership; and, secondly, that if a majority of the workers in a free and fair election chose a given union to represent them, then the employers should sit down and bargain with them. He didn't have to agree with them. All that was required of him was that he should sit down in good faith and try to reach an agreement.

Senator TAFT. Mr. Cooke, I'd like to correct one thing you said in the opening, about the Republicans having passed this law. More than 50 percent of the Democrats in the Eightieth Congress voted for this law and voted to override the President's veto.

Mr. COOKE. I stand corrected, Senator TAFT, although I believe that you and your Republican colleagues had a certain amount of enthusiastic backing.

Senator DOUGLAS. The Republicans furnished the hard core and they were aided by certain Dixiecrat allies.

Senator TAFT. Oh my, many northern Democrats voted too. On the subject of the Wagner Act, Mr. Cooke, of course, we left the Wagner Act in effect. The trouble with the Wagner Act was in redressing the balance it went so far that it gave a complete priority to unions. The Wagner Act operated only against employers, required them to bargain collectively, but not the unions. In effect, it legalized every strike and had the actual effect, the way it was administered, particularly in the beginning, of putting the Government on the side of every strike. With the Norris-LaGuardia Act, it removed all remedy against the most arbitrary acts of the union bosses, whether by the man seeking a livelihood, the union member, the employer, or the public; all but the largest employers were practically at the mercy of the union boss.

Mr. COOKE. So you see, Senator TAFT, a kind of pendulum activity here. First, the Government came in to correct a balance which was too far against labor, via the Wagner Act; then it carried it too far for labor and, therefore, you felt the Taft-Hartley Act had to bring it back into neutral, as it were.

Senator TAFT. That's right. And to get free collective bargaining, collective bargaining must be equal. And that's what the Taft-Hartley law attempted to do. It made the law work both ways. It had unfair labor practices on the part of the employee, as on the part of the employer; responsibility on his contracts for the union, as on the part of the employer; an independent mediation service; a judicial National Labor Relations Board.

Senator DOUGLAS. Senator TAFT speaks as though the situation had developed to the point where you had a huge Goliath of labor threatening and intimidating small employers. This is a very false picture of American industry. What we have in American industry is that manufacturing and other branches are largely dominated by big industrial concerns. And what the Wagner Act did was to build up units of labor, chosen by labor, who were on a greater scale of equality with big industry than before. But even then the unions were weaker than were the big corporations.

Senator TAFT. In a few cases the big corporations are as big as the unions, but in many cases not. In the coal industry you have one union, you have thousands of employers; in the printing industry you have one union, you have thousands of employers; in the teamsters union you have one union, operating all kinds of secondary boycotts, you have almost millions of employers, divided among themselves and forced to do what the union demands that they do.

Senator DOUGLAS. But in steel, automobiles, rubber, chemicals, machinery, and so forth, what you have are giant industrial concerns dealing with unions which are financially and economically still far weaker than are the big corporations with whom they deal.

Senator TAFT. Those unions have been in no way weakened by the Taft-Hartley law in dealing with those big corporations. No one has testified to that effect; no one claims that in those cases there isn't equality now as there was before the Taft-Hartley law.

Senator DOUGLAS. Well, I would deny that, because at every conference table the weapons which the Taft-Hartley law gives to the employers hang over the heads of the unions and directly weaken their bargaining power and directly restrict the agreements which they might otherwise be able to make.

Senator TAFT. Take the United Automobile Workers. How does it do that?

Senator DOUGLAS. Well in a number of ways. In the first place, there is a provision that if a strike occurs and the strikers are replaced by the employers, the employer can then call upon the board for a new election and say that someone else claims that he is the real bargaining agent; and when the board orders this election, the strikers are barred from voting and the replacements, whom the workers regard as strikebreakers, are alone permitted to vote.

Senator TAFT. Well, Senator DOUGLAS, that is a small case, an imaginary case built up. It wouldn't affect the United Automobile Workers for a moment and, as a matter of fact, that one little provision about voting, as you know, I'm quite in favor of eliminating from the Taft-Hartley Act. It never was an essential feature of it, and it's been seized on as a propaganda feature. But as far as I'm concerned it can go out. I regard it as of no importance.

Senator DOUGLAS. Well, Senator TAFT, you may think it's a small feature, but in practice it is not a small feature. It is one of the hidden mines inside the Taft-Hartley law which can explode and in a period of unemployment blast unions out.

Senator TAFT. Well, I'm in favor of amending it anyway. So that's out of this discussion here.

Senator DOUGLAS. I'm delighted that you cede ground on this point.

Senator TAFT. Three weeks ago I introduced an amendment which eliminated that particular question.

Senator DOUGLAS. We're delighted for this concession.

Mr. COOKE. Let's see what happens on a very central point which you've been discussing in your Senate hearings, and that's the place where any labor law and labor-management relations most concern the third party in this problem, the general consumer. And that's, of course, the area of strikes and the question of whether or not the Government should have special power to go to the courts to prevent such strikes.

Senator DOUGLAS. Well, I think strikes can be classified as local strikes, fairly serious strikes, and gravely serious strikes which threaten the national health and safety.

Mr. COOKE. Let's discuss that, because that's the most urgent of the three.

Senator DOUGLAS. Well, I would prefer to discuss the local and the fairly serious strikes, because they are the most numerous.

Mr. COOKE. I'll compromise with you, Senator. Let's discuss all of them then.

Senator DOUGLAS. All right. Well, I will say that in the case of the normal strike, the Taft-Hartley law greatly restricts the powers of unions and directly plays into the hands of employers, for a number of reasons. There's a provision in the Taft-Hartley law which says that "restraint or coercion" upon the part of labor is an unfair labor practice.

Now, I want to make it clear that I'm opposed to violence in labor disputes, I'm opposed to mass picketing. Those tactics are already forbidden by local police ordinances and in many cases by State statutes and certainly by the common law. They can be dealt with on a local level. But here you have Senator TAFT—in all good faith, I'm sure—putting into this act a national restriction on these points, and it enables the National Labor Relations Board, if it should get into unfriendly hands, to restrain peaceful picketing and to prevent more than two pickets, say, operating from a given gate.

Senator TAFT. Well, there isn't any danger that the National Labor Relations Board is going to get into unfriendly hands and it isn't in any unfriendly hands. I don't quite see why, if it's an unfair labor practice for employers to coerce workmen not to join unions, why it shouldn't be an unfair labor practice for unions to coerce workmen into joining unions when they don't want to. Now, that's the provision to which Senator DOUGLAS objects. As to the injunction feature, it's very doubtful whether an injunction could issue or would issue on that provision; it's not like the secondary boycott; it isn't treated like the secondary boycott and jurisdictional strike. And I think that's a question, I agree, whether there should be injunctions in that case. Certainly one of the things we may discuss. And I think it's doubtful under the present act whether it can be done. But I'm more concerned about the secondary boycotts and jurisdictional strikes.

Senator DOUGLAS. I'm delighted that Senator TAFT cedes ground on this point, too. He's beginning to discover that there are a great many things wrong with the Taft-Hartley law.

Senator TAFT. I'm beginning to discover the Taft-Hartley law was an experiment and there are many features which no doubt can be improved in the law. Only that's not what the labor people want. They want repeal of the law, repeal of the whole business. That's the thing we've had to fight. If we can get this thing down to a discussion of merits, even Senator DOUGLAS and I may agree on the merits of particular provisions.

Senator DOUGLAS. Senator TAFT sees only the flowers in the field; he does not see the mines underneath or the concealed pillboxes which can open up at short notice upon labor. In fact, I think the attorneys sold Senator TAFT a bill of goods on this. I'm sure he has the best intentions in the world and wants to do the best thing for the United States of America. But the smart attorneys took him in on this point.

Senator TAFT. Well, the Wagner Act set up machine guns and everything else for labor against the employer and they were freely used.

Mr. COOKE. Well, gentlemen, would you like to look at this national injunction in terms of very serious strikes and tell me whether you think it's full of beautiful zinnias or machine guns?

Senator DOUGLAS. Well, so far as strikes of grave national emergencies are concerned, all that the Taft-Hartley law did was to restrain them for 80 days and to use the injunction as a means of restraining them for 80 days.

Mr. COOKE. That is, the President could go to the courts and ask for a court injunction forbidding the union.

Senator DOUGLAS. That's right. A cooling-off period. I would like to point out that in the Railway Labor Act there are no such injunctive powers, and yet the cooling-off period, so far as that is concerned, has always been put into effect. It has not been necessary to use injunctions to get cooling-off on the railroads.

Mr. COOKE. But we did hav two or three railway strikes.

Senator DOUGLAS. We had one big railway strike, and that was settled by the vigorous action of the President. And if a strike were to occur after the 80 days, under Taft-Hartley, you would still have the problem as to what the President was going to do. And the Taft-Hartley gave him no more added powers than he had before, or no more powers than he would have under the Thomas bill, which we Democrats are supporting.

Senator TAFT. Mr. Cooke, on this question of national emergency strikes, in the first place, I'm very loath to enjoin people from striking and maintaining the status quo, where the issue is an economic dispute; I'm in favor of enjoining secondary boycotts and jurisdictional strikes, which seem to me to have no jurisdiction, which are not disputes between the employees. And so I refuse, certainly, to go along with the proposal, 2 or 3 years ago, 2 years ago, that we enjoin permanently these national emergency strikes, put a provision in the law for that; it would force compulsory arbitration or Government wage-fixing, and I'm against that. I do think that the provision of the Taft-Hartley law which provides that the President may go to court and require the striker, the head of the union, to come in and stand up in court and state his case and then permits the court to enjoin the thing for 30 days, or 60 days, 80 days—I don't much care what the period is—30 days, or 60 days, or 80 days, in order that the Government may make a final effort with all the President's power and all his prestige to settle that strike, I think it's a good provision. I don't say that if the labor people simply say, "we'll wait until it's over" and then go on strike, they can pretty well nullify it. But I think on the whole it's better to have it than not to have it.

Senator DOUGLAS. Well, I would like to point out that, so far as the injunction powers to get the 80-day cooling-off period is concerned, it has not been necessary to use it on the railways to get the cooling-off period observed, and that its employment in other branches of industry would make labor feel that it was being compelled to work for the private profit of employers. This isn't the only way in which the Taft-Hartley law gives great injunctive powers. The counsel of the National Labor Relations Board, who is an independent person and really runs the administration of the Board, has the power to get injunctions to restrain what he believes to be unfair labor practices, even though the Board some months later may decide that these are not unfair labor practices. He is put in as a dictator, a legal dictator, who can restrain actions which later are adjudged to be legal but which, because they have been previously restrained, have gravely crippled labor in the conduct of its activities.

Senator TAFT. Well, I don't see any reason why some Government official isn't just as reliable as some other Government official. In fact, the Board may decide at one time that they have a temporary case and they may reverse themselves later. I think the separation of powers of the Board, between the Board and the general counsel, is very important. I think, if you want to get justice in this country, you can't have the same fellow prosecuting cases and then judging their own case and then enforcing their own decisions, acting as police officer and everything else. Now that, I take it, Mr. DOUGLAS, is complaining of—Senator DOUGLAS. But the main point is this: Are we going to enjoin secondary boycotts? If we only make secondary boycotts an unfair labor practice, it will take the Board about a year to get around to them. And I think the important provision of the Taft-Hartley bill, one important, is the right of someone—here, the general counsel—on a showing of cause that he thinks is a violation of the law—that a court finds to be presumptively a violation of the law. I believe that that's one of the most important provisions of the bill and has done more to stop strikes, unnecessary strikes, unrighteous strikes, of anything we've had in this country for many years.

Senator DOUGLAS. So far as this separation of the prosecuting from the judicial functions is concerned, that had already been effected by the Board inside its own organization for years prior to the passage of the Taft-Hartley law. The attorneys who prosecuted the case were directly separated from the examiners who heard the case. And, as a matter of fact, that similar separation inside the organization had been carried out in the Interstate Commerce Commission, the Federal Trade Commission, the Federal Communications Commission, and so on. It had also been prescribed by the Administrative Procedures Act of 1946.

Senator TAFT. I heard the testimony in '39, and at that time that wasn't so. The Board assumed to be a crusading organization to put a CIO union in every plant in the United States, and it was so testified to. And Bill Green denounced them.

Senator DOUGLAS. But in 1940, that had been altered.

Senator TAFT. They had somewhat reformed, but there's no reason at all why the law shouldn't be such that they can't go back to that particular kind of a practice again.

Mr. COOKE. How about your judgment, Senator DOUGLAS, on this whole question of secondary boycotts and the prohibiting of them helping in the strike situation?

Senator DOUGLAS. Well, I notice that Senator TAFT does not mention the fact that under the Taft-Hartley law it is now illegal for workmen to refuse to work on struck work. Let me take an illustration. Suppose the workers in plant A are on strike, but the employer in plant A sends the material to plant B. Then the workers in plant B, even though they belong to the same union, are not permitted to refuse to work on that work. They must continue to do so, and, if they do work, they can be sued, they can be enjoined, and, in effect, they can be compelled to be strike-breakers. This is another very crucial weakness in the law which Senator TAFT seems to ignore and does not pay proper attention to.

Senator TAFT. The definition of secondary boycott is a difficult one. The Taft-Hartley law is a sweeping prohibition for all secondary boycotts; the President prohibits a very narrow field of secondary boycotts—about 1 in 10 or 1 in 20—where there's a fight between two unions. The great field in between is justifiable, in my opinion. Take the typical case where a teamsters' union comes to an employer and says: Make your employees join the teamsters union. Well, he says, maybe so. He goes and talks to employees who say they don't want to join the teamsters' union. Thereupon the teamsters, over and over again, have called a secondary boycott against that man, with whom they have no relations, refuse to carry his goods; the same thing in declaring "hot" the product of some mill that isn't organized but may pay the best wages in the world. Now those things, I'd say this, if the committee gets down to business and discusses merits, I'm perfectly willing to discuss the particular kind that Senator DOUGLAS objects to. I'm perfectly willing to consider whether that should be excluded or not. Perhaps the definition of the Taft-Hartley Act is too broad. But one thing is certain, the definition of the President's act is so narrow that it will not stop nine-tenths of the secondary boycotts which seriously interfered with the whole course of free commerce in the United States prior to this law.

Senator DOUGLAS. Well, Senator TAFT seems to be softening on this point as well and

discovering some of the booby-traps and mines which we told him at the time existed.

Senator TAFT. Not at all, Senator DOUGLAS. The labor people—we told the labor people, if you can come in and define for us a kind of secondary boycott which is justifiable, we'll make the exception. And the labor people said, no, we don't want any law, we don't want any prohibition of secondary boycotts. They don't even want what the President is proposing here.

Senator DOUGLAS. In this act we say that there shall not be strikes or secondary boycotts by outside unions to try to alter the choice of a bargaining representative made by workers inside a plant. We say that outside unions should not coerce workmen inside a plant in the choice of a bargaining representative, just as we say that employers should not coerce workers.

Senator TAFT. I want to say one thing, the President has accepted many provisions of the Taft-Hartley bill, including this, including the making of unfair labor practices against unions. They say they want to repeal it, and yet the President has come in with many things that are contrary to the whole theory of repeal.

Senator DOUGLAS. There were about 60 features in the Taft-Hartley law and we have taken 4 new features, not precisely like the Taft-Hartley law but which we believe will remedy certain inequities which developed under the Wagner Act.

Senator TAFT. Sixty features of the Taft-Hartley law; about 30 there's no objection to at all. So we might just as well keep those.

Mr. COOKE. Well, let's come to one feature of the law that there's been a good deal of conversation about, and that is this question of Communist affidavits from labor leaders. Should that, Senator TAFT, be continued or should it be expanded so that businessmen as well have to give anti-Communist and anti-Fascist affidavits?

Senator TAFT. Well, I rather think the officers of companies that want to take advantage of the law ought to make the affidavit, just like the labor leaders. Of course, at the time it was put in hastily, on the floor of the Senate. The committee didn't give consideration to it; it wasn't a committee provision. Now, the testimony is that that affidavit has worked. It has weakened all Communist-dominated unions, has driven out many Communist officers, and while there are still some left, apparently it is an effective means of fighting Communists.

Senator DOUGLAS. Well, I am not opposed to that affidavit, provided it is mutual. The present affidavit merely requires union officials to state whether or not they are Communists. It does not require company officials to state whether or not they are either Communists or Fascists. I would not oppose requiring union officials who negotiate collective agreements in which they state whether or not they are either Communists or Fascists. But I would make the penalty fall not against the union or the company which they represent and which may be ignorant of their status but against the individuals themselves.

Senator TAFT. Well, I'm glad to see that Senator DOUGLAS is willing to amend the Taft-Hartley Act and not repeal it, in this respect at least.

Senator DOUGLAS. No. What we say is that we should return to the principles of the Wagner Act and reestablish genuine collective bargaining and only make such changes in the Wagner Act as are necessary to protect both workers and the general public.

Mr. COOKE. I think that brings you back, Senator DOUGLAS, to where you started, in terms of what you believe is the all-importance of the Wagner Act in here. But as you two Senators have gone through, this question of Communist affidavits has been the first place where I've seen a conspicuous agreement. That does not seem to indicate a very quickly settled new labor legislation in the Senate, or in Congress, does it?

Senator DOUGLAS. Well, to my mind, the country will decide and the country should get educated on what the real issues are. What we are striving for—we Democrats and, I hope, some liberal Republicans—is to reestablish the principles of collective bargaining, so that groups of workmen who are weak, individually, can deal with the huge and mighty corporations on terms of greater equality.

Senator TAFT. We left every unfair labor practice against employers in the Taft-Hartley law that was in the Wagner Act. There is free collective bargaining, they have the right to organize, the employer must recognize the union, which was the essential feature of the Wagner Act; we retained all of that; we only put corresponding obligations on the unions.

Senator DOUGLAS. But you so crippled the economic powers of the unions that when they sat at the conference table they were greatly weakened. And also, in a period in which we might have considerable unemployment, the employers could break virtually any union in the land by suing them, by replacing the strikers and having the replacements vote and take the union out of existence, and if the Republicans, or the right wing of the Republicans, were ever to get control of the Nation and control the Labor Relations Board, you would have those terms "restraint or coercion" interpreted so strictly that peaceful picketing would be broken.

Senator TAFT. This is all theory. The Republicans are just as equal, in fact, they are far more fair, between employer and employee than the Democrats today, the left-wing Democrats, who refused to vote for the Taft-Hartley Act last time. And far from weakening the unions, the union membership has steadily increased under the Taft-Hartley Act, until I think there are nearly a million more members today than there were 2 years ago. That doesn't—all of this thing about weakening the union is pure theory. No union in the United States has been weakened. They have only been restrained from doing unlawful things which injured the rights of third parties and their own members and the employers.

Senator DOUGLAS. Any small growth in unionism that has occurred has occurred in plants and shops which were already organized. But in plants and in industries which previously were not organized, the unions have not been able to make headway just because of these powers given to the employers by the Taft-Hartley law.

Senator TAFT. Under the Taft-Hartley Act a union could go into a new plant, if it can persuade a majority of the employees to be for its union; it can get an election, as it always could, and that election can establish it as the bargaining agent for the employer. That's the American way of organizing; persuade the people by reason and justice to join the union, if the union is what they want to join, not coerce them into joining a union, if they don't want to join a union.

Senator DOUGLAS. But the general counsel of the Board is then given the power to get injunctions, restraining unions from some of the union activities, legitimate union activities, which they have previously used in organizing——

Senator TAFT (speaking simultaneously). Except the secondary boycott and jurisdictional strike, which are the racketeering type of strike that the public universally disapproves.

Senator DOUGLAS. You can give such a strict interpretation to the phrase "restraint or coercion" as virtually to prevent peaceful persuasion.

Mr. COOKE. Well, now summing up briefly here, gentlemen, let's start with you, Senator TAFT. In terms of the present Taft-Hartley Act you want it what might be described as slightly modified?

Senator TAFT. Yes; I think there are a number of respects in which the provisions of the law should be studied and in many respects probably changed after study. The hearings to date have served a very useful purpose. They've changed the issue from one of repeal or no repeal to such an intelligent consideration of the many separate issues which are in the bill, and that's what I've been trying to bring about. We found there's no real objection to many of the less-important features of the Taft-Hartley law and there is no sound objection to many of the important features of the law. There are probably three or four important fields where there is a legitimate and clear argument, merits on both sides, which I certainly am willing to discuss.

Senator DOUGLAS. Well, we feel that we should return to the principles of the Wagner Act, which aimed to set up machinery whereby workers could, if they wanted to, choose representatives who would then deal with management, and that we should, instead of beclouding that issue with a whole series of legal prohibitions and restraints, permit workers and employers freely to work out collective agreements with each other in a spirit of good will, instead of turning the whole thing over to the lawyers. That is our fundamental purpose.

Mr. COOKE. Well, thank you both, Senator TAFT and Senator DOUGLAS, for joining me here on the People's Platform today and stating not only your very powerful convictions, as I said earlier, but also trying to clarify this for us and presenting it in the good faith and in the cooperative spirit which I hope will lead to a satisfactory conclusion to everybody in this very difficult area of the Taft-Hartley Act and labor legislation.

ANNOUNCER. You have been listening to Columbia's People's Platform as it discussed the need for new labor legislation. Chairman Dwight Cooke's guests today were United States Senators ROBERT A. TAFT, of Ohio, and PAUL H. DOUGLAS, of Illinois.

Prophecy of Rev. Fountain E. Pitts

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, February 25 (legislative day of Monday, February 21), 1949

Mr. BYRD. Mr. President, because this may be of historical interest to many, I request permission to place in the Appendix of the RECORD a copy of Charles Parmer's syndicated column from Washington, which appeared on Washington's Birthday.

This column tells, from historical records, events in the Congress when the Reverend Mr. Fountain E. Pitts addressed both morning and afternoon sessions, in 1857, 92 years ago.

It is noteworthy that, according to these records, the Reverend Mr. Pitts foretold the United States would be the world's uncompromising representative of popular freedom, that Russia would become the representative of absolutism, and that a confederated republic, under the counsel and example of the United

States, would rise and stand for world peace.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PARMER FROM WASHINGTON

(By Charles Parmer)

Ninety-two years ago today the Reverend Fountain E. Pitts, Methodist pioneer, and the first Protestant missionary to the Argentine, addressed the Congress on the occasion of George Washington's Birthday.

It so happens that the Reverend Mr. Pitts was the great-grandfather of my wife; and among family records are full accounts of that occasion; including this bit of Americana:

A slender volume, entered according to the act of Congress in 1857, with this frontispiece:

"A defense of Armageddon or our great country foretold in the Holy Scriptures in two discourses delivered in the Capitol of the United States, at the request of several Members of Congress, on the anniversary of Washington's birthday, 1857, by F. E. Pitts, of Nashville, Tenn.

"Thou hast magnified thy word above all thy name." (Psalms cxxxviii: 2.)

"Doomed by an edict written in the sky,
The monarchies of earth shall be no more:
Heaven's sealed wonders open to the eye,
In rising glories on the western shore."

A preface states:

"Notice from the National Intelligencer of February 24, 1857:

"Services at the Capitol: In the place of the Reverend Mr. Waldo, Chaplain of the House, Rev. F. E. Pitts, of Nashville, Tenn., appeared agreeably to previous announcement, and delivered a discourse on the fulfillment of prophecy, with reference to the United States. With no leaning to cant or fanaticism, and with no tendencies to a politico-religious sermon, the reverend speaker entered upon his task of unfolding the prophecies, both of the Old and New Testaments.

"The events which he detailed with reference to our own country were made to fit with such surprising chronological accuracy to the predictions, that it was by the almost unanimous desire of a large and attentive audience that his lecture was continued in the afternoon. At the appointed time, 3 p. m., it was no easy task to find a seat in the great Hall of the Capitol, so deeply interested were the people to hear the sequel of the morning discourse." (The great Hall is the House of Representatives.)

The Reverend Mr. Pitts gave this warning shortly after beginning speaking—a warning against fanatics who "have deluded thousands. Whenever, therefore, an interpreter of prophecy attempts to tell when the days of judgment will come, just rest assured he is wise above what is written; for we are taught by the Great Prophet himself, 'Of that day, and hour, knoweth no man; no, not the angels of Heaven, but my Father only.' This divine announcement should always quiet such unauthorized pretension."

Matters of the immediate future are not necessarily hard to predict, based on known factors in a situation, the desires and powers of various elements; long-range prophesy calls for, well, call it inspiration.

The Reverend Mr. Pitts had traveled in many lands—and that in a day when the average American didn't range far from his courthouse. But even with his knowledge of world movements, a bit of inspiration must have prompted this prophecy:

"That of a period of great friendship—during a time of world-stress—between the United States and France."

(A footnote, by a reporter of the day, says that the Speaker thrilled the hearers in the House of Representatives by turning to "a large, lifelike portrait of Lafayette, hanging on the wall, opposite that of Washington.")

As to that prophecy, remember, "Lafayette, we are here."

Then looking far into the future, he spoke of two countries, and the forms of statecraft for which they would stand. The first he named:

"The United States of America, young and vigorous * * * she is the enlightened and uncompromising representative of popular freedom."

As for the second one:

"And there is Russia in gigantic proportions * * * with her millions of warriors * * * occupying one-seventh of the earth's terra firma * * * the representative of absolutism."

All of that has come true. Here is a final prophecy. Looking far into the future, the speaker saw a world organization of nations (we call it United Nations) but this is what the Reverend Fountain E. Pitts told the Congress of the United States on Washington's birthday, 92 years ago, today:

"Henceforth, 'nations shall learn war no more.' Confederated Republic, under the council and example of the United States, will arise in the former 'habitations of dragons,' and the 'deserts' of cruelty 'shall rejoice and blossom as the rose.'

"And, like an elder brother, our Republic will kindly instruct them in the principles of popular freedom."

The tremendous truth of all that, well, shall we be practical and earthy and say, foresight is emphasized when one considers that the Reverend Mr. Pitts spoke when the United States was the only true republic in the world (save Switzerland) in a day of strong monarchy. (He could have been speaking with divine inspiration.)

Knowing that such an occasion took place in the Capitol in 1857 aids one in charting the slow but persistent growth of the movement for popular freedom and cooperation among nations. While other men in other lands were speaking of freedom during the same period, many were forced to do so furtively, in no other Capitol building in the world could such an address, prophesying a future brotherhood of nations, have been delivered. Not in the English Parliament, certainly not in Russia. It was delivered in the Congress of the United States of America.

The world took a step forward that day.

Israel—The Sources of Its Strength

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1949

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address delivered by me before the Bnai Zion, Sunday, January 30, 1949:

In the many years, and they are many, I assure you, of facing audiences on the issue of Jewish national independence in Palestine, it is seldom, indeed, that I face one, as I do today, of whose sympathies and warmth and, above all, understanding I can feel so sure that I do not have to measure my words. It is my knowledge first hand of the significance and worth of the achievements of the Bnai Zion.

I want to jump across some thousands of miles at this point to a brave, inspiring, new republic. Israel, of course. But the line of connection between Bnai Zion and Israel cannot be broken. You, my good people, have made that line—strong, direct, and enduring.

Keep this in mind. Whatever it is I find necessary to say about Israel, I know and I am fully aware of it, that your role, through the Bnai Zion is that not of spectators, mere onlookers, but participants.

Let me tell you that the excitement of my visit to Israel is still with me. I welcome every opportunity, most particularly an opportunity of this kind, to break forth in a torrent of enthusiasm. I refuse to be inhibited on the subject of Israel. I want to transmit my enthusiasm to everybody I talk with. There may be those of you present who have been to Israel, and, if so, you will understand my fever. I want to say without reservation that everyone who contributes, in small measure or large, to Israel's rebirth and development has gained for himself an enrichment and fulfillment that no degree of personal, self-serving success can bring.

Mark you, when I stepped into Israel, I did not step into a country of luxury, of factories producing at furious rate, or of mile upon mile of growing grain and wheat, or of furs and perfumes; in short, of material abundance. No, I stepped into a country at war, with shortages evident everywhere, food, clothing, shelter, a country with bomb-ripped buildings and stricken farms. But if I stopped there, I would be giving a picture completely out of focus, for there is a tempo in Israel, as quickening to the blood as the rhythms of the Hora that no honest description of Israel dare omit. There is no self-pity; on the contrary, there is almost an exultant fever about the people that animates their whole being, the way they walk, talk, jest—and eagerness and a vitality that defy definition. They are fighting a war unaided, striving to win the peace, they are building a country, they are teaching their young, they are welcoming and integrating the immigrants, they are forming a government, they have blueprints and plans, they are in the midst of a hundred and one activities, and yet, over all, there is no feeling, none whatsoever, of a regimented people. This fact has been amply demonstrated by the vigor of the campaign and diversity of political parties in the recently concluded elections. Consider how remarkable that is. Each one remains an individual with his personality and expressions and opinions intact, and all the while they work together for a common purpose.

You will find it hard to believe when I tell you that with all the burdens, the responsibilities, the privations, the dangers and the death, the animosities and indifferences of the world outside, there is today in Israel a joyous people. They feel they belong; no longer surplus, no longer apologetic for being Jewish, no longer alternating between fear and defiance, for this is "their own, their native land."

I think we can sum it up by saying that each one feels he has a reason for living; he's glad he's alive, and that grip on life seeks and finds a diversity of expression, not only in the work, in the everyday pursuits, but in the arts and sciences. Israeli literature is already in the making, in the contemporary sense. The Israelis are experimenting with art forms. I saw an exhibit of soldiers' art in Tel Aviv. It was far from primitive, although still, in the main, imitative of the modern masters. I heard the mature performance of the Israeli Symphony Orchestra, by our own Leonard Bernstein. I listened to a performance of the opera Thais in Hebrew translation.

Indeed, Israel is the fruit of faith.

Knowing of Bnai Zion's inspiring work with the Jewish national fund, you see evidence all about you as you go through Israel. As you travel, you see alternating areas of green and dust; here a patch of resuscitated soil; there a patch of arid strips. This is the work of JNF, you say to yourself with

pride. This is the work of the trees that were planted, the water resources developed. You see the people on JNF land, land redeemed and reawakened by JNF. You see the newly occupied parts of the country, the settlement activities, you see the antimalarial work and the road constructions, the drainage and hydrological processes, and you understand all over again the relationship running from such organizations as Bnai Zion to the Jewish National Fund to the proclamation of the Jewish state.

I saw another piece of the concrete achievements of Bnai Zion in Israel. The Kfar Bnai Zion, parented by Bnai Zion. The settlement, as planned and conceived by Bnai Zion, is a proud testimonial to individual initiative coupled with collective security. The settlement, located between Tel Aviv and Haifa, consists of 30 families, each family living in its own home; each family allotted 15 dunams of land, which the family unit operates as an independent enterprise except for collective buying and selling. Each family has its own livestock, cows, chickens, goats. In less than 2 years' time, from an arid, uncultivated, dour bit of landscape, it has proved itself to be a lusty child, of both promise and achievement. Cabbage, turnips, lettuce, corn, and wheat rise boldly from the soil, yielding two and a half crops a year.

I saw the sturdy, eager youngsters of the Kfar Bnai Zion, straight of limb, happy and secure. At the time of my visit, ground was being broken for the school which would house a kindergarten, schoolrooms, libraries, and a recreation hall. You can well believe me when I say I can hardly recall a more satisfying experience than the one I had when I dug a spadeful of the ground. In many of the settlements, the children live a life apart, eating, sleeping, and studying in quarters remote from those of their parents. In Kfar Bnai Zion, the children are part of the family, living with the family in a way of life familiar to us here.

Individual incentive is a part of the pattern of life in Kfar Bnai Zion, but set within another pattern of collective concern and mutual benefits. Kfar Bnai Zion, not losing sight of the part it must play in contributing to Israel's strength has set aside a tract of land within its settlement for the housing, equipping, and training of refugees. These are the sons of Zion—the Bnai Zion. What Bnai Zion has helped to create in Israel is zionism in action; it is the practical expression of the vision and the hope that brought Bnai Zion into being.

The sources of the strength of Israel. They flow from every corner of the world, from people like you, from the indefatigable spirit of the citizens of Israel. Let me tell you the fascinating story of a brilliant piece of military strategy which enabled the Israeli army to chase the Egyptians out of the Negev. Pretending to be attacking Gaza, the Jews concentrated their main forces and made a secret 40-mile night march along a forgotten Roman road across the desert wasteland. They used chicken wire and roofing paper without which their tanks would have bogged down in the treacherous quicksands. The Egyptians considered such a march impossible because they didn't know of the existence of this ancient road. Fortunately, Col. Yigal Yadin knew all about this ancient and forgotten route because as a young lad he had assisted his father, an eminent archaeologist, in exploring the Negev. The Egyptians had created powerful defenses but their guns were facing the wrong way. King Farouk's forces, stunned by the sudden attack from the rear, fled in confusion. "How can you beat an enemy that performs such miracles?" asked a captured Egyptian soldier.

Israel's sources of strength likewise flow from her statesmen. I have watched them in action at the United Nations. I have seen them at work, turning the wheels of government. The quick wit, the ready answer, the knowledge of history and the steadfast purpose have all been dedicated to Israel. I am happy in the vote of confidence the people of Israel have in the democratic way of life bestowed upon them.

But in counting the sources of Israel's strength, we dare pass over, in easy optimism, the strength of her opposition. True, Bevin's Palestine Policy won grudging approval in the House of Commons this past Wednesday, but it won. True, Churchill called that policy one of folly, futility, and fatuity, but it won. And true, also, that a hundred Laborites abstained from voting and the Conservatives and Liberals, who together gave 204 seats, voted almost unanimously against the Government, but a miss is as good as a mile, and the Bevin policy on Israel carried approval in a 283 to 193 vote.

Mr. Bevin in his speech offered no apologies and admitted no mistakes. He warned that if fighting were to break out again, "I am afraid it would be very difficult to stand by indifferent or inactive." The threat does not have a happy ring.

Was there ever in history such a series of British blunders which has gained them no friends, no political or diplomatic advantage, and which is so contrary to the professed concepts of the Labor government? Because of Mr. Bevin's pet aberration, the citizens of Britain, faced with the severest austerity program known in modern England, must bear the cost of sending British warships to the Mediterranean and the costs of sending British troops to the Red Sea port of Aqaba in Transjordan.

Who has been the gainer in these sulky maneuvers? The authority and prestige of the United Nations have been undermined. Lives, English, Israeli, and Arab, have been lost. The economy of all these countries has been strained to the breaking point. A breach has been widened between the United States and England. It has cost friendship, good will, lives, and money. All because of one man's baffled fury. Had England and the United States firmly adhered to the United Nations decision of November 29, 1947, all this could have been spared.

Here is the clearest example of a monomania which has discarded all reason and all reality. Throughout the peace talks, Britain keeps rearing it's you-know-what head in uncontrollable fear lest stability be restored to the Middle East and negotiations successfully concluded between Egypt and Israel. "What," cries Bevin, "a Middle East without British control. Unthinkable."

Tragically, the shadow of Bevin lies over the whole of the Middle East. He is charged with the direct and personal responsibility for keeping the area in seething unrest. As one of the Conservative leaders stated, "The Bevin policy on Palestine is not only dead; it is in an advanced state of decomposition."

Whatever intelligence is serving British foreign policy in the Middle East, it is sadly amiss. Britain has been steadily losing face throughout the region, and with the shooting down of five British planes, its military face is very much lost and very much red.

The assertion of independence on the part of the United States with reference to Israel is a healthy thing. The British attitude, maneuvers, and blunders are a threat to the peace. In the Bevin obstinacy lies the danger of a conflagration that can spread far beyond the present seat of difficulty. The United States must recognize this, and in self-interest, if for no other reason, and must bring all of its weight to bear, both independently and within the United Nations to stop the course of British mischief in Palestine. British action in Palestine is just as reprehensible as Dutch action was in Indonesia, and there is just as ample justification for the United States not to mince words with Britain any more than she did with the Dutch.

The new State of Israel has succeeded in its election, held under most trying conditions, in again proving its maturity to the world. The elections were held in the most orderly fashion. Arab women, for the first time in history, voted. We can take great pride in the democratic balloting in the midst of an armed truce. It was a gain for all democratic peoples everywhere to find one more ally dedicated to the principles of political freedom. It reaffirms the decidedly western orientation of Israel.

This leads me to the thought that no time must be lost now in extending the provisions of the Economic Administration Act (the Marshall plan) to cover the Middle East area. The existence of the state of Israel is the dynamics that will awaken the whole region to constructive use of its resources for the benefit of all the people. Israel is the sparkplug in the Middle East machinery. The Marshall plan is based on the principle of helping free countries which are ready and willing to help themselves as well. The extension of economic aid by the United States to the Middle East, with Israel as the focal point, will mean the revitalization of an area which civilization has too long passed by and forgotten. It is in the self-interest of the United States to do so, for so long as any blighted area exists, just so long is the democratic way of life subject to dangers and demoralization. Israel, having proven its democratic pattern, merits the strengthening of its structure.

Farm Prices and National Prosperity

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, February 28 (legislative day of Monday, February 21), 1949

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the RECORD an address entitled "Farm Prices and National Prosperity," delivered by me at the annual banquet meeting of the Corn Belt Livestock Feeders' Association at Kansas City, Mo., on February 23, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, ladies, and gentlemen, it gives me a great deal of pleasure to be here with you today. I am always glad to take the opportunity to meet with a group of real producers and discuss our mutual problems. I am a farmer myself, and, unfortunately for me, I have some cattle on feed right now at my farm near Cambridge, Nebr.

In Washington, we spend a great deal of time debating and studying labor relations, development of mineral resources, manufacturing problems, development of power, transportation, housing, and so on. These problems are very important, of course, but none of them can compare with the importance of preserving a stable and productive agriculture. There is only one thing that we really have to have, and that is food. And there is only one place to secure our food supply—most of it—and that is off the farm.

In some foreign countries this elementary truth seems to be much better realized than it is here. I recall a few years ago when I

visited the great country of India. The average man there has hardly anything he can call his own except food, and generally not enough of that. Many of them have no housing at all—they sleep in the streets or in the fields. They have almost no clothing, many children none at all. They simply cannot spare the energy for production of anything except food, the one prime necessity. Aside from the small class of rich people they cannot spare any money for anything other than food.

Here in America we have the opposite extreme. Out of the 60,000,000 people who work only about 8,000,000 are employed on the farm. About one family in seven is a farm family. The farm family not only produces enough to feed and clothe itself but it produces enough to feed and clothe the other seven families that are employed in manufacturing, mining, transportation, Government, trade, and so forth. It would have been completely impossible to build up our tremendous manufacturing capacity if the farmer had not had a surplus of food to sell to the workers in the factories. Our whole economic system simply could not exist without a highly productive agriculture.

Every time we forget that we run into trouble. Back in 1946 we forgot it for a little while. Because of misguided national policies there was no meat for sale to city and town consumers. Those national policies had to be changed so that our people could continue to eat.

If we are to have a productive agriculture we must also have a prosperous agriculture. That is the principal thing I want to talk to you about today. Farmers cannot continue to produce at a loss any more than anyone else. If national policies are adopted which force down agricultural prices the farmer has no choice except to reduce or discontinue his operations. That was brought home to the rest of the country rather forcibly in 1946. At the present time we are faced with several policies which seem deliberately designed to force down the farmer's price. Those policies, it seems to me, carry a tremendous danger, not only to the farmer, but to the Nation as a whole, to the national food supply and to the industries that depend on the farm market for their prosperity. That is what I want to talk about with you at this time.

It happens that as we meet here today, agriculture has just gone through a disastrous slump in the prices of almost every farm product. I believe cattle feeders may have been hurt the worst by this slump. They must normally work on a comparatively close margin, between the cost of their cattle and their feed, and the price they receive when sold. A change in the market of a dollar or two can wipe out the feeder's profits completely, and the slump has already gone far, far beyond that point, as you know. Although producers of other crops do not work on such a narrow margin, they have also been seriously hurt. All the fats and oils and oil-bearing materials, such as lard, tallow and grease, cottonseed oil, and soybeans, have also slumped. Prices for all the grains are down. Just a few months ago, it seems we heard nothing but complaints about the price of butter. Now the price of butter has fallen to the point where price supports are necessary.

In short, the inflation is definitely over for agriculture. Our problem now is to ward off disastrous deflation, not inflation. From experience, we know that when agriculture is depressed, the rest of the country is soon depressed along with it. Under these circumstances, it is bewildering to learn that the administration still desires the authority to restore price ceilings. We don't need to push prices down. They are already down. What we need is something to hold them up.

In this discussion, of course, I shall not try to cover the entire agricultural picture. That would be out of the question. I do want to discuss one or two of our present programs and their relationship to farm prices. The first of these is export controls and the policies that have been followed in administering them.

The handling of export controls on lard is the best example of maladministration by Washington that I have seen. For many months we have had, side by side, a contradictory situation. On the one hand, we have had here at home a mounting surplus of grease and tallow, then lard, then cottonseed and soybeans and other fats and oils. I do not want to bore you with statistics, but during the current crop year, 1948–49, the indications are that domestic production of the three major food fats—lard, soybean oil, and cottonseed oil—is 1,500,000,000 pounds larger than the normal prewar average, an increase of 40 percent. At the same time, there has been a pressing demand in foreign countries for additional supplies of fats and oils. Several months ago a spokesman for General Clay told the Department of Agriculture, and I quote: "There is a perfectly tremendous demand for fats. The need is desperate. The fat crisis is here. We will take anything at any time that will be furnished us." Just a few weeks ago, Dr. FitzGerald, the Food Chief of the Economic Cooperation Administration, told representatives of your organization that he badly needed several hundred million pounds of fats beyond the quantity authorized for export.

What kept us from filling this foreign need? What kept our surplus lard and other fats dammed up in this country? The control on exports was able to maintain an airtight curtain between American supplies and foreign demand. The administration of these controls broke the price of lard down well below the OPA ceiling, down toward prewar price levels.

Just at the time I was preparing the draft of this address, the announcement was finally made that lard and other edible fats and oils had been taken off the so-called positive list of commodities, the exports of which were strictly controlled. This change is welcome, although it is certainly long overdue. It was too little, and much too late. The change was not made until surplus stocks had been built up and the price had been broken. The surplus is still with us. That surplus lard and the other fats and oils are likely to stay at bargain prices for some time before they can be moved into consumption.

Unfortunately, the removal of controls on fats and oils does not solve the whole problem by any means. Fats and oils are only a small part of the picture for the livestock feeder. We cannot accomplish very much by trying to save one agricultural product at a time. Most of you, I expect, like myself, are also interested in the price of both hogs and cattle, as well as wheat and other grains and, perhaps, dairy and poultry products as well. Practically all of these commodities are still under export control. These limits on foreign sales weaken the price structure, either immediately or ultimately, for all agricultural products.

With agricultural prices heading down toward postwar lows, the time has come to remove all limitations on exports of agricultural products, except those needed for our national security. These export controls have been used to beat down the prices of agricultural products. In one section of the Export Control Act, it is stated that the purpose of the program is to reduce the inflationary impact of abnormal foreign demand. Translated into plain language, that apparently means that it is intended to push down commodity prices. The administration of the program has been in the hands of those who apparently think along such lines. That is confirmed by what has happened to lard. On the basis of our experience, there is every reason to fear that the controls on various other agricultural products will continue to be miserably handled, as the spokesman for the administration, Senator MAYBANK, of South Carolina, frankly admitted had been done in the case of lard.

The whole problem of maintaining a sound agricultural price structure goes a great deal further than the handling of export controls. Surveying some of the events of the last few months, there appears to have been something like a pattern of policy designed to push down agricultural prices. One good example has been the policy followed by the Army, the Economic Cooperation Administration, and other agencies of using our money to buy a portion of their needs of wheat, meat, and other commodities from offshore sources.

You livestock feeders are probably familiar with the fact that our Army has been buying beef and other meat from the Argentine. You may be interested in the figures on such offshore purchases during last year, which I just secured a few days ago. For troop issue overseas, the Army bought offshore in 1948 over 11,000,000 pounds of fresh and chilled beef and over 9,000,000 pounds of canned meat, chiefly canned beef from South America. In addition, the Army bought about 4,500,000 pounds of lamb and something over a million pounds of poultry for troop issue from offshore sources. For Greek relief, the Army also purchased from offshore sources over 5,000,000 pounds of fresh and chilled beef, over 14,000,000 pounds of mutton, and over 5,000,000 pounds of various canned meats, especially mutton. Altogether, these purchases constitute a very substantial proportion of the meat procured by the Army for overseas during 1948.

When business that should belong to the American producer is placed with foreign suppliers, of course, the effect on American prices can be disastrous. We have seen what has happened to livestock markets over the past few weeks. In all fairness, I do not believe we should blame the Army too much for this policy. In determining its procurement policy, the Army generally follows the forecasts and the suggestions of the Department of Agriculture. The Agriculture Department has predicted a rising trend in livestock prices. On the basis of this forecast, the Army, no doubt, felt that domestic producers did not need the business. In other words, it traces back to a very unfortunate prediction by the Department of Agriculture. This prediction is typical of the inflation psychology that has dominated most administration officials for a long time. I do not believe the mistake was intentional, but it was certainly disastrous for us.

I am glad to say that the Army has at least temporarily discontinued its purchases from Latin America. Some days ago I made a formal request of the Department of the Army that they announce a firm permanent policy of making all their meat procurement from domestic sources, but I have not yet received a definite reply to this request.

There is another important case of offshore procurement of an agricultural commodity by an administrative agency for which there is no excuse. I refer to the decision by the Economic Cooperation Administration to buy 120,000,000 bushels of wheat from Canada for shipment to Europe. When Congress enacted the legislation authorizing the ERP this question was foreseen, and Congress was careful to write into the act language which definitely required the procurement of surplus agricultural commodities only within the United States. That requirement has been ignored and the clear language of the act has been violated. Canadian wheat was purchased while American wheat has accumulated in the hands of the Commodity Credit

Corporation. For months the price of wheat has been at or below the loan rate, which means that it has been well below parity.

Temporarily, while the Commodity Credit Corporation is making price-support loans at 90 percent of parity to wheat producers, it might seem that it makes very little difference to the wheat farmer what is done with his wheat so long as he can always dispose of it to the Government at support levels. That is not the case. When surpluses of wheat in the hands of the Government become too heavy two things happen to the wheat farmer. First of all, he may have acreage allotments or marketing quotas imposed upon him, and those controls will carry us back to the old regimentation system of the 1930's. Secondly, when stocks of surplus wheat reach a certain point, the price supports offered by the Federal Government decline from 90 percent of parity to 70 percent or 60 percent. Under present conditions that would mean a drop of 50 or 60 cents a bushel in the support level on wheat. If the present policy of permitting wheat stocks to build up is continued that can happen by next year.

It appears to me that if we are to put up the money for European recovery, we have the first right to supply the goods to be purchased with that money—at least where we have heavy surpluses of the particular commodity available. That was certainly the intent of Congress.

I hope that cattle feeders will not feel that I am talking about something that is of no interest to them when I discuss the problem of wheat prices. Even if some livestock feeders do not grow wheat for sale I believe we all have a common stake in maintaining a fair price level for all agricultural products. If wheat goes down to depression levels I do not believe that cattle can be kept up to a fair price.

The precise effect of the Government withdrawal from domestic grain markets is strikingly revealed by the experience during the last few weeks. During a recent Senate investigation the Secretary of Agriculture categorically denied that the price slump was due to Government withdrawal from the buying side of the market. He declared point blank that the Government had not withdrawn from purchases of domestic wheat. That is a half-truth.

It is perhaps true that the Government continued to buy wheat. The break in commodity prices was started by the break in the corn market, however. That break in corn can be laid directly at the door of Commodity Credit Corporation. During the week ending February 4, Commodity Credit purchases of corn were cut 93 percent below the average purchases for the month of January. The same thing is true of Government purchases of flour. Commodity Credit Corporation reduced its purchases from 20,000,000 pounds during the preceding week down to 4,000,000 pounds during the week when commodity prices broke, the week ending February 4.

When wheat and corn went down cattle and hogs went down, too. It is clear that we have reached the point where the decisions of one man can make or break the prices for our principal agricultural products. In my judgment, that is a very dangerous situation. During the last few weeks we have seen just what can happen when that situation is permitted to exist.

Unfortunately our Government still appears to be obsessed with the idea that the important problem is inflation. Too many administration leaders appear to feel that agricultural prices must be forced down. It is taken for granted that wage rates must not be reduced. Apparently it is felt that lower agricultural prices would relieve the pressure for higher wages. The events I have discussed make it appear that there is a regular pattern in administration policy directed toward that end.

In my opinion, agriculture cannot afford to accept such a policy without a fight. We know too well from experience that when agricultural prices collapse the farmer's costs and the price of things he must buy do not go down in proportion. Wage rates are very inflexible. The prices of all sorts of industrial goods tend to remain very stable, even when demand drops off sharply. Taxes and interest on debts probably do not go down at all. However, a slump in the farmer's income is frequently the signal for a general depression. We went all through that in the 1930's, and we must not let it happen again.

The agricultural areas of the Nation are as well represented in Congress as any other single group. I believe that you men who produce the Nation's food supply have a right to demand that your representatives in Congress express your point of view. Certainly the representatives of industry, labor, and other groups are not at all hesitant about expressing their needs and bringing their demands to the attention of the public. There is no reason why agriculture should not express its views and claims. We know that agriculture prices are not too high. Prices of most agricultural products, in fact, are below parity, and parity is nothing more than a minimum goal of fairness for the agricultural producer. I know of no reason why farmers and their representatives should not point that out on every possible occasion.

I do not pretend to have the final solution to this question. I have already mentioned one or two things that I believe we should press for. First of all, I believe we should insist that American Government funds should not be used to buy foreign agricultural products when American producers are in position to supply those needs. The farmer pays his share of the taxes for these programs. ERP and Army procurement should not be used to break down farm prices here, while other countries get the markets. If these other nations wish to sell their products, let them make their own contribution to European assistance out of their own pockets. As mentioned, I have already asked the Army to establish a firm policy of procuring its meat requirements here. Although the Army has not yet given me a definite answer, it has at least discontinued purchases of Argentine beef for the time being.

Secondly, I discussed the effect of export controls on our own agricultural prices. Those controls cut off foreign sales and back up the surpluses here. It is time to get rid of export controls on agricultural products when farm prices are falling. These export controls have been used as effectively as the old CPA in pushing farm prices down. We cannot afford to have our agricultural price structure sacrificed to a system of Washington regulations and controls. Many of us in Congress have protested and fought against this policy. We have made some headway, but there is a long way yet to go.

If I have discussed our national policy so frankly, it is because I want to represent the farmers of my State and other States to the best of my ability. I hope my thoughts have been of some interest to you and have given you something to think about. I happen to know that your splendid organization is doing a first-rate job of representing you and your problems, and I am sure it will continue to do so. I hope you will not hesitate to pass your ideas along to me from time to time and to give me the benefit of your suggestions. We all have a common stake in agricultural prosperity, and I want you to feel that I will always be glad to be of any possible assistance in defending the farmer's rightful place in the economic picture.

Jefferson's Contribution to Religious Freedom

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES

Monday, February 28 (legislative day of Monday, February 21), 1949

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Jefferson's Contribution to Religious Freedom," delivered by me at the Pi Kappa Alpha banquet held at Williamsburg, Va., last Friday evening.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am proud to be a member of this organization, founded at the University of Virginia shortly after the War Between the States to promote fellowship and cooperation between the young men of the South who faced the problems of a new era.

While membership in a college fraternity means more in college than at any other time, promoting friendships with brothers in other colleges as well as our own, it likewise proves a bond of fellowship throughout adult life.

The principles of brotherhood and good will, which are the foundation of fraternalism, are likewise the foundation of any successfully functioning free society. I would therefore like to focus your attention tonight on the most fundamental principle of a free society which had roots in the past history of William and Mary.

I would like to ask you to think back to the year 1760, when Virginia, in population as well as area, was the largest of the Colonies and Williamsburg, its capital, was the finest city south of Philadelphia, with a population of a thousand people.

The marvelous restoration work which has been done here makes it easier for the visitor to picture this city as it was in the eighteenth century; but the emphasis, quite properly, is on the fine and beautiful aspects of our early colonial life. We may easily forget that the main street of this city, with the capitol at one end and the College of William and Mary at the other, in 1760 was only a broad road, dusty in summer, muddy in winter, and unlighted at night. The houses along it were mostly of cheap frame construction, unheated by a furnace or stove, and there wasn't even a match to light a fire quickly.

Into these surroundings, which now seem primitive to us, came in the early fall of that year a 17-year-old, half-orphan boy. He enrolled in the college under the name of Thomas Jefferson.

While other educational institutions have excelled in contributions to the physical sciences, the most notable contribution of William and Mary has been in the fields of the humanities and the social sciences. It was appropriate, therefore, that this institution should have enrolled the boy who was to become the greatest political philosopher our Nation has produced.

The potential value of the things for which a college fraternity stands is indicated, however, by the fact that the influence of the college on the young Jefferson probably was less than that of three friends he made during his college days. One was Francis Fauquier, Governor of the Colony. Another was George Wythe, subsequently a signer of the Declaration of Independence and law tutor of John Marshall and Henry Clay. The

third was Dr. William Small, a Scotchman, professor of mathematics at William and Mary, later to be known as the great Dr. Small, of Birmingham.

These four, all mature men except Jefferson, met once a week for the 2 years Jefferson was at William and Mary, and the conversation at those dinner meetings shaped and molded the future life of Thomas Jefferson. From Fauquier, the polished British gentleman and world-traveler, Jefferson imbibed a fine European culture which was his lifelong standard. From Dr. Small came his ambition to study the sciences and from the self-taught lawyer, Wythe, he learned the fundamentals of American democracy.

On this foundation Jefferson built his own political philosophy. He summed up that philosophy with a rare sense of permanent values when, in writing his own epitaph, he asked to be remembered as the author of the Declaration of Independence and of the Virginia statute for religious freedom, and as the father of the University of Virginia.

In penning the Declaration of Independence he voiced the hopes and aspirations of all oppressed and down-trodden people. That was his first contribution of freedom to mankind—freedom of the person. In presenting his bill to the Virginia Legislature for a system of general popular education with a State university as its capstone, Jefferson said his purpose was to qualify the citizenry to understand their rights, to maintain them, and to exercise with intelligence their part in self-government. Later he said: "If a nation expects to be ignorant and free, it expects what never was and never will be." Thus he sought to promote a second freedom—freedom of mind.

In drafting his statute for religious freedom and fighting for its inclusion not only in the laws of Virginia but in the Federal Constitution, Jefferson fought for the third freedom—freedom of conscience.

It is these freedoms—of person, of mind, and of conscience—which have made us a great as well as a happy Nation and they are the freedoms which now are threatened in our world-wide struggle against the aggressive forces of communism.

And, because the anti-God ideology of communism is the dominant feature of that system seeking to destroy the Christian religion as a prelude to the enslavement of the individual it will pay us to recall Jefferson's ideal of religious freedom and his contribution to it.

The importance of Jefferson's contribution to this cause has sometimes been underestimated because of a misunderstanding of his personal attitude toward religion and the established church. Political opponents during his lifetime tried to picture him as an atheist and an enemy of the church. The extent to which they succeeded is indicated by the fact that when Jefferson became President certain pious women in New England buried their Bibles in their gardens, fearing they would be confiscated by Government agents.

On the other hand, Jefferson had a devoted following among the dissenting clergy in Virginia. A certain Baptist elder named John Leland, for example, went to Massachusetts and preached sermons so full of praise of Jefferson that his congregation made a cheese which weighed 1,600 pounds and Leland drove it to Washington in a sleigh in the winter of 1801. Jefferson offered it to the Democratic and Federalist Congressmen alike, but the Federalists didn't want any part of either Jefferson or his cheese.

Those who understood Jefferson's views on religion realized that he was not an enemy of the church. His fundamental tenet was that a man's religion is his own concern, not any other man's and certainly not the Government's concern, except to the extent of guaranteeing the individual's right to his own mode of worship.

Jefferson's interest in the Bible was demonstrated by the fact that when he was President he took the direct quotations attributed to Jesus out of their context and arranged them for his own convenience in a blank book to which he gave the title "The Philosophy of Jesus of Nazareth." Later he went a step further and made up a book in which he put down in parallel columns the sayings of Jesus as they appeared in varying texts of the Bible. Jefferson called this book: The Life and Morals of Jesus of Nazareth, Extracted Textually From the Gospel in Greek, Latin, French, and English.

The conclusion he reached from his studies was indicated by a letter to a friend in which he said: "There never was a more pure and sublime system of morality delivered to man than is to be found in the four evangelists."

But, when he got beyond the phase of moral philosophy and into that of pure theology, Jefferson found difficulties which he summed up thus in a letter to a minister:

"When I was young," Jefferson wrote, "I was fond of the speculations which seemed to promise some insight into that hidden country, but observing at length that they left me in the same ignorance in which they had found me I have for very many years ceased to read or think concerning them, and have reposed my head on that pillow of ignorance which a benevolent Creator has made so soft for us, knowing how much we should be forced to use it. I have thought it better, by nourishing the good passions and controlling the bad, to merit an inheritance in a state of being of which I can know so little, and to trust for the future to Him who has been so good in the past."

His acknowledgment of the existence of a supreme being was indicated also in other correspondence in which Jefferson referred to himself as being "of a sect by myself, so far as I know," and said that each person's convictions or principles "are a subject of accountability to our God alone." The limited knowledge we have as to Jefferson's personal beliefs may be explained by his statement, made in 1815, that "I not only write nothing on religion, but rarely permit myself to speak of it, and never but in a reasonable society."

To understand Jefferson's reluctance to enter into debate on religious subjects and to appreciate the importance of his contribution to the cause of religious freedom, which permitted those who came after him to profess or practice any form of religion without fear of persecution, we must consider the conditions which prevailed in Virginia and in the other colonies in his day and time.

While some of the other American colonies were founded by groups fleeing from religious persecution, the Virginia settlers brought no such grievance. They patterned their social system on the one they had left behind in England and naturally made an established church a part of it.

The economic indiscretions of the colonial governors of Virginia, which set the stage for the Revolution, were duplicated by their attitude in the field of religion. Thus, under Virginia's first code a blasphemer suffered a thrust of a bodkin through his tongue, violators of the Sabbath were whipped and the death penalty might be imposed for uttering doubts about the Trinity. Slavery for varying periods was imposed as a penalty for failing to attend church on Sundays and holidays.

The first group of Puritans to migrate to Virginia was driven from the colony. Quakers also were expelled and warned of imprisonment if they returned once or twice and punishment by death if they returned a third time.

The first real challenge to the rule of the established church came after the arrival of the Scotch-Irish Presbyterians in 1683. Possessing the fighting qualties of the Irish and the tenacity of the Scotch, this group was allowed to settle in the Valley of Virginia because they promised to hold the western frontier against the Indians. In return they demanded the right to worship God according to the principles of their education.

By training and temperament the Scotch-Irish were enemies of arbitrary government in either church or state, and they became supporters of Jefferson in his fight for democracy. But, while these Presbyterians obtained some legal concessions and kept just within the bounds of the law, a more direct challenge to the established order was offered by the crusading itinerant preachers of the Methodists and Baptists and some of the forms of persecution characteristic of the early days of the colony were revived and applied to them.

It was this situation which Jefferson had to deal with when in 1776, shortly after writing the Declaration of Independence, he found himself a member of a Virginia Assembly Committee on Religion which had been carefully packed with a majority of defenders of the established church.

In notes which he prepared before going to Williamsburg for the Assembly session, Jefferson expressed his belief that the legitimate powers of the church were exhortations, admonitions, and advice, and ultimately expulsion or excommunication," which he considered "the utmost limit of power." He wrote too that "Each church being free, no one can have jurisdiction over another one, not even when the civil magistrate joins it." Jefferson also argued that "No man has power to let another prescribe his faith. No man can conform his faith to the dictates of another. The life and essence of religion consist in the internal persuasion of belief of the mind. External forms of religion, when against our beliefs, are hypocrisy and impiety."

The speeches Jefferson made in the Assembly and the proceedings in the conference rooms were not recorded but the arguments he offered for the separation of church and state and in support of his Ordinance of Religious Freedom are suggested by the quotations I have given from the notes he made in preparation for these debates.

Jefferson found two strong allies in George Mason, who had stated his views on religious freedom in the Virginia bill of rights, and James Madison who was later to make his own notable contribution in framing the Constitution of the United States. He met opposition from others including Patrick Henry, who favored a compromise under which a general tax would be imposed for support of churches but the individual taxpayer might designate the denomination to which his contribution should go. Edmund Pendleton, who had himself sent Baptist ministers to jail, presided over the Assembly and was described by Jefferson as his most dangerous opponent.

After 3 months of struggle in the packed committee, petitions which had been pouring into the Assembly were referred to the committee of the whole house and debate there led to adoption of resolutions which went far toward accomplishing Jefferson's purpose. These resolutions outlawed criminal penalties against dissenters, admitted the reasonableness of their objections to being taxed for a church to which they did not belong and opened the way for repeal of such taxes.

A committee on which Jefferson served then drew a bill which was a compromise, making concessions to religious liberty but leaving a connection between church and state. It had the effect of separating church and state, however, because with dissenters exempted the tax burden for support of the church in some parishes would have been unbearable and since that time a tax for religious purposes never has been levied in Virginia.

Jefferson was dissatisfied, however, because although dissenters had been relieved of

making payment for support of the church, the state was left with the power to regulate religious assemblies.

The struggle was renewed in 1779 when the legislature ordered the framing of a bill for religious freedom. Since he was then serving as governor, Jefferson could not personally lead the fight this time but he gave to Madison, as his spokesman, the ordinance he had drawn and which he classified in his own mind as having an importance comparable with the Declaration of Independence.

Defenders of the established church tried to win the dissenters to their side by denouncing Jefferson as an enemy of religion and offering as an alternative to Jefferson's bill a proposal that "the Christian religion shall in all times coming be deemed and held to be the established religion of the Commonwealth."

The struggle continued until 1786—10 years after he had written the Declaration of Independence. Then, finally, while Jefferson was serving as United States Minister in Paris, his ordinance was adopted.

Accepted with few changes from the language in which Jefferson wrote it, the law set forth in burning language the argument for religious freedom and concluded with the provision that "no man shall be compelled to frequent or support any religious worship, place, or ministry whatsoever, nor shall be enforced, restrained, molested, or burthened in his body or goods, nor shall otherwise suffer, on account of his religious opinions or belief; but that all men shall be free to profess, and by argument to maintain, their opinions in matters of religion, and that the same shall in no wise diminish, enlarge, or affect their civil capacities."

Several of the other colonies followed the lead of Virginia by putting clauses for religious freedom in their constitutions and the influence of Jefferson's statute was felt in other parts of the world where copies were distributed and studied.

When the Constitutional Convention met at Philadelphia the year after the Virginia statute was adopted, Madison tried unsuccessfully to have a clause included in the Constitution proclaiming the principle for which he and Jefferson had fought so long in Virginia.

He failed then but renewed his fight in the First Congress when amendments to the Constitution were considered. As a result the first amendment proposed by the Congress for ratification by the States became a monument to Jefferson's effort.

It began with the now-familiar statement that Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof.

This amendment, repudiated by all totalitarian states, accepts the assumption on which democracy depends, that man is a reasonable creature. It denies the doctrine and practice of coercion of opinion and affirms the view expressed by Jefferson in his Notes on the State of Virginia, when he wrote: "It is error alone which needs the support of government. Truth can stand by itself."

That was the Ebenezer of all of our freedoms and on that rock we have built a great Nation. I have taken a solemn oath to support and defend that amendment and all other parts of our Constitution and with God's help I shall never knowingly vote to undermine it.

I glory in the training in Jefferson's freedoms which you young men and women are receiving at Jefferson's alma mater for "who knoweth whether thou art come to the Kingdom for such a time as this."

Address by Hon. William Langer, of North Dakota, at University of North Dakota Founders' Day Dinner

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Monday, February 28 (legislative day of Monday, February 21), 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech I delivered last Saturday evening before the Alumni Association of the University of North Dakota.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is indeed a privilege to be invited to address this distinguished group of fellow North Dakotans on this founders' day anniversary.

We are all proud of the great tradition of citizenship, service, and achievement of our splendid university of North Dakota.

Yet, no group of North Dakota folks ever gather just to talk about the glories of the past. We never assemble anywhere merely as a mutual admiration society. On the contrary, we are the kind of folks who are constantly looking forward, eager to learn how we can better serve the people of our State and Nation.

Tonight, I want to devote my few remarks to the matter of improving the educational opportunities of the youth of North Dakota, a problem, in the outcome of which we all have so much at stake.

As you know, there was a time in North Dakota, when we spent more for the development and care of our cattle and hogs than we did for the education and care of our children. So far as the Nation as a whole is concerned, recent figures showed that the American people were spending more money throughout the country for cosmetics and beer than for the education of American youth.

Those days have passed in North Dakota, when we failed to meet our obligations to our youth; indeed, in recent years the cry has been raised that, because we had more normal schools and other institutions than other neighboring States, such as Iowa, we had too many educational facilities.

However, the truth is, as we all know, that we still do not have enough. We knew that this claim that we have too many educational institutions has been due to the lack of money with which to support them, as they ought to be supported and expanded, to keep up with our growing needs.

This brings me to one of the most intriguing and important questions that has faced the American people for a long time, namely, the matter of tidelands oil.

Some years ago, off the coast of California, within and beyond the 3-mile limit, billions of barrels of oil reserve deposits were discovered. For years now the State of California has been leasing these properties and deriving a percentage of the income for purely State affairs.

A few years ago, the question finally arose, as to whether or not that oil belonged solely to the State of California, or whether it belonged to the Federal Government, and the American people as a whole, and why the State of California, which was using the proceeds from these leased oil deposits for educational purposes, should be the only State so to profit from these natural resources.

Finally in October 1946, the decision was made by the United States Government to litigate the matter to find out what the holding of the Supreme Court would be as to whether these oil reserves did or did not belong to the United States as a whole and whether or not the inland States were to share the anticipated profits with the tideland States.

On June 23, 1947, the Supreme Court ruled that these vast oil reserves were rightfully the property of the United States Government and of the American people as a whole, and that, as lessor, 12 percent of the income was to go into the Federal Treasury.

On October 27, 1947, in issuing its order and decree to clarify its findings, the Supreme Court stated:

"1. The United States of America is now, and has been at all times pertinent hereto, possessed of paramount rights in and full dominion and power over the lands, minerals, and other things underlying the Pacific Ocean lying seaward of the ordinary low-water mark on the coast of California and outside of the inland waters extending seaward 3 nautical miles and bounded on the north and south, respectively, by the northern and southern boundaries of the State of California. The State of California has no title thereto or property interest therein."

Strangely enough, about the time this opinion was handed down oil was discovered 40 miles off the coast of Texas, in the Gulf of Mexico.

The Texas Legislature thereupon passed a law saying that these oil deposits belonged to Texas and that the profits would be used to provide funds for educational purposes. The same thing happened in Louisiana, where the legislature claimed all the oil reserves that extended 100 miles out into the Gulf.

Competent experts have estimated that these reserves in the Gulf of Mexico alone amount to at least 10,000,000,000 barrels, worth $27,000,000.

Then, in a recent article in Life, Dr. E. L. DeGolyer estimated that 100,000,000,000 barrels in oil reserves may ultimately be discovered on the continental shelves of the United States.

It is perfectly obvious that the tremendous wealth represented by these oil deposits will pour hundreds of millions of dollars into the treasuries of the inland States, as well as of the tidewater States, which means that hundreds of millions of dollars can be used by the State of North Dakota to improve and expand the educational facilities, to increase the salaries of teachers and give them a decent wage, to provide school-lunch programs, and to set up a loaning fund to enable the young men and women of North Dakota to go to college by borrowing the necessary funds and repaying them later in a revolving fund.

Strangely enough, it is North Dakota that took the lead through the Bank of North Dakota in 1933 to enable any child that wanted to borrow money from the Bank of North Dakota to do so out of the fund of $150,000 that was borrowed by the State Board of Administration, of which Mrs. Jennie Ulsrud was president. One thousand and two hundred children took advantage of that loan fund, up to the amount of $300 per year, at 1 percent interest, the amount to be paid back whenever in the dim and distant future, after graduating from college, that they could afford it, and every one of you remember the pitiful tales that the newspapers of North Dakota put out—that that money was a political fund and that it never would be repaid.

Well, now, after 15 years have gone by, I am happy to say that 95 percent of the money loaned has been repaid by these students—boys and girls who today are teachers, lawyers, and doctors—men who got a splendid education in agriculture because they were able to get these loans.

Only last week a young man came down with the Farmers Union group. His father is a member of the legislature from Slope County. This young man is 25 years old, is the oldest son, and his political views are directly opposite to those of his father. He took me aside with tears in his eyes and thanked me for having helped give him the opportunity to go to college and get a splendid education.

It is my personal conviction that such educational opportunities ought to be strengthened and expanded. You will be interested to know that 1 week before the election I wrote a letter to President Truman in which I told him that I totally disagreed with the Republican platform adopted at Philadelphia which provided that these enormous oil reserves should be recognized as the property of the respective adjoining individual States. I complimented the President in having directed the Attorney General to bring a lawsuit involving the California oil reserves.

I have been down in Texas and watched the big oil companies spending millions upon millions of dollars in developing these oil reserves, which I believe belong to the American people as a whole.

In keeping with this conviction, I contacted Mr. Bernard J. Golding, one of the most brilliant attorneys in the Southwest, and asked him to bring a lawsuit for an injunction to keep these big oil companies from developing and exploiting those Gulf of Mexico reserves.

I then had Mr. Golding come to Washington and draw up the papers. We consulted with the firm of Keenan, Kanfer, Wiener and Murphy. And after an all day meeting, it was decided that a letter to the President would be more effective because a United States Senator would have no authority to bring this kind of an action.

I could not bring action as an individual and since Gov. Fred Aandahl, on February 27, 1948, telegraphed his opposition to the Federal ownership of these termendous oil deposits, it meant I also would be opposed by his attorney general at the time, Mr. Nels Johnson.

As events have turned up, action has come through President Truman's instruction to the Attorney General who is now requesting permission to bring this action into the Supreme Court. In my judgment, that permission will be granted, the same as in the California oil case, and the findings will be the same.

I have already asked permission to file a brief in the Supreme Court of the United States, setting up North Dakota's position and that of all the other inland States whereby the interests of our school children and our taxpayers will be protected.

I am satisfied that permission will be granted and I am going to file that brief.

There cannot be any doubt whatever that these tremendous oil reserves already discovered off the coast of California and in the Gulf of Mexico will continually be added to by new discoveries off the coast of Alaska and the Arctic Ocean. I want to make it very clear and that is that the position of the Supreme Court concerning the ownership of these properties, the position which I endorse wholeheartedly, does not include a claim to any oil rights in waters that lie under navigable rivers and harbors.

It is obvious that the billions of dollars represented by these reserves are part and parcel of the total wealth of natural resources which belong to the American people. An equitable distribution of the income derived from the production of this wealth is the only honest and fair-minded way to make these benefits available to the American people as a whole. We of the inland States, particularly of North Dakota, cannot find a more deserving cause to underwrite with our share of this great national wealth than that of providing the educational facilities and opportunities to keep pace with the growing needs of our rapidly expanding society. The greatest task that we confront as fellow North Dakotans and as fellow Americans is to pass on the wisdom and experiences of our generation to the next.

I am confident that the vast majority of the people of North Dakota will join with me that we may do everything in our power to meet this challenge and to keep the traditions of our great American heritage alive through the finest educational facilities and the finest teaching staff that a proud and grateful State and Nation can provide.

Tax Reduction, Revision, and Repeal

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, February 28 (legislative day of Monday, February 21), 1949

Mr. WILEY. Mr. President, yesterday it was my pleasure to participate in a radio interview with a distinguished Washington commentator, Mr. Charles Parmer, on his regular Sunday program, which, incidentally, was his one hundred and ninth Parmer-From-Washington broadcast.

I ask unanimous consent that the text of our broadcast be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

TAX REDUCTION, REVISION, AND REPEAL

Mr. PARMER. We have in our studios today United States Senator ALEXANDER WILEY, of Wisconsin. Senator WILEY is no newcomer to this microphone. Our listeners have heard him deliver vital messages on this program in the past on the theme of Government decentralization, a department of peace, and other inspiring messages. Senator WILEY is now ranking Republican member of the Senate Judiciary Committee and formerly served as its chairman. In addition, he is second highest ranking Republican Senator on the powerful Foreign Relations Committee. But our senior Senator from Wisconsin is not going to discuss either judicial or foreign problems with us today. What are you going to talk about, Senator?

Senator WILEY. Well, Charlie, we are going to discuss today one of the most important problems facing the American people today—tax reduction, revision, and repeal.

Mr. PARMER. Why do you regard it so important, Senator, as compared with some other issues?

Senator WILEY. The answer to that one, Charlie, is a quote which all our listeners have heard. It came no less than from the United States Supreme Court. The quote is: "The power to tax is the power to destroy." I repeat, "The power to tax is the power to destroy."

INITIATIVE BEING DESTROYED

Mr. PARMER. What's being destroyed, Senator?

Senator WILEY. Charlie, the thing that is being destroyed is the initiative of the American people, their enterprise, their desire to build, to create new jobs, new wealth, new products. The reason their initiative is being destroyed is because we Americans today are groaning under the heaviest tax load in our peacetime history. I say it is time to call a halt.

EXCISE-TAX-REDUCTION BILL

Mr. PARMER. Well, Senator, in addition to what you say, I think that our listeners will be interested to know that as a man of action you have already taken steps to put your principles to work. You have already introduced a bill which would lop off $650,000,000 in excise taxes a year. Will you tell us about that bill, Senator?

Senator WILEY. I would be delighted, Charlie. The bill's number is S. 1029. Its purpose is to end the wartime levels of excise taxes on a vast number of items like furs, jewelry, cosmetics, telephones, telegrams, admission fees, photographic apparatus, ladies' handbags, purses, leather goods, entertainment, and scores of other items.

Mr. PARMER. Senator, why did you introduce that bill?

Senator WILEY. Charlie, the basic reason is that, after all, we are at peace and our United States Government made a solemn promise to the people that when the war was over, we would cut the heavy wartime tax rates—rates like 25 percent on some items and put them back to prewar levels like 5 percent or 10 percent of value. I feel that a promise made is a promise that should be kept. Moreover, I feel that Uncle Sam is not so poor that he must exorbitantly tax the lotions and powders that mothers use to handle babies, for example. Uncle Sam isn't so poor either that he requires the taxation of countless other items which the Treasury Department calls luxuries but which are absolute necessities.

OPPOSITION TO PROGRAM FOR MORE TAXES

Mr. PARMER. Wait a minute, Senator. You are talking about tax reduction and repeal, but the President is talking about more taxes. He has asked Congress for $4,000,000,000 in higher taxes.

Senator WILEY. That's right, Charlie, and I feel that the administration is absolutely wrong in recommending higher taxes at this time, especially in view of the slight recession that we have run into, the unemployment. Now is the time for lower taxes, not higher taxes. Moreover, the more taxes that we give to the administration, the more fantastic spending programs the administration is going to recommend. We used to think that the New Deal had gone crazy with its program of tax and tax, spend and spend, elect and elect. Well, the New Deal was a measly piker compared to the cockeyed idea of adding more taxes and spending more and more that the Fair Dealers are glibly recommending.

Mr. PARMER. Well, Senator, last year you Republicans cut taxes by $4,000,000,000. Do you regret that move?

Senator WILEY. Absolutely not. The people recognize that that move was one of the many sound actions taken by the Eightieth Congress. Moreover, as the Treasury's figures prove, tax reduction actually helped encourage business. The result is that last year we collected $3,000,000,000 more in total taxes than we did the previous year. Many times in American history we have seen how wise tax reduction results not in a decrease of Federal revenue, but ultimately in an increase. The reason is that when you cut taxes you encourage initiative, you encourage corporations to expand, to add new machinery, new plant facilities, new jobs that create wealth, and through wealth we have a wider tax base to secure necessary revenue.

Mr. PARMER. Well, Senator, that seems to be the story then on the excise-tax reduction bill you have recommended, but where do we go from here?

MAKING TAXES CREATIVE, NOT DESTRUCTIVE

Senator WILEY. I think the best answer to where we go from here, Charlie, is in a single sentence: Reform our entire tax structure so that taxes become not a hindrance, not a nuisance, not a burden, but a creative stimulus to our free-enterprise system.

Mr. PARMER. Let's get specific. What do you mean?

Senator WILEY. Well, let's take the single instance of using taxes in order to meet one of the most pressing problems facing the Nation's communities today. I refer to the stream-pollution problem, with wastes fouling more and more streams and rivers throughout the land.

Mr. PARMER. What are you going to do about this stream-pollution problem, Senator?

DEDUCTING ANTIPOLLUTION EXPENSES FROM TAXES

Senator WILEY. Plenty. Tomorrow at noon, when the Senate meets, I am going to drop in a bill which will encourage businessmen to take steps to curb pollution by adding new facilities and machinery to their plants so as to eliminate wastes. The costs of this deduction would be permitted to be deducted as ordinary expenses in the year of construction. Right now businessmen can only deduct their depreciation charges on capital improvements to end pollution. The result is that our businessmen who own plants (which have a lot of waste products which cause pollution)—our businessmen are not encouraged to solve the pollution problem. Why? Because capital improvements take money, and Government isn't giving them sufficient credit in the tax set-up to meet the pollution problem.

Mr. PARMER. What does the Government think about your idea, Senator?

Senator WILEY. Well, in the last Congress there were bills for this objective. The Interior Department endorsed them, but the Treasury Department opposed them.

Mr. PARMER. Why does the Treasury Department oppose the idea, Senator WILEY?

Senator WILEY. The answer is, Charlie, that the Treasury Department feels that to give businessmen meeting the pollution problem this special feature would be giving them a distinct advantage over other taxpayers. Well, that's true to a certain extent, Charlie. But, after all, the pollution problem is a distinct problem, an extraordinary problem, and we have got to take extraordinary steps. That's why I recommend that we change our tax laws to encourage businessmen to meet the pollution problem. You know, Charlie, there is such a thing as creative taxes in place of destructive taxes. That is what I am recommending today and every day.

ENCOURAGING NEW TAXES

Mr. PARMER. Can you give us another instance of what you mean, Senator?

Senator WILEY. Absolutely. Take the housing picture. We are still faced with a critical housing shortage throughout the Nation. Our veterans who fought for us in fox holes are being required in many instances to live in rat holes, in makeshift barracks or huts, or to double up with their families. What are we going to do about it? Well, there is a lot of housing legislation pending before the Congress. I wouldn't try to comment on all of those complicated housing bills. But I do say that if we were to creatively revise our tax laws we would do this. We would permit builders to take a large depreciation on their property in making out their tax returns. After all, the value of their property is vastly overrated because of high building costs. Let them take the higher depreciation until the book value of the property is down to a fair value.

You know, Charlie, I'd be glad to fight for legislation with such a provision in order to stimulate housing construction.

SUMMARY OF RECOMMENDATIONS

Mr. PARMER. Senator, time is getting short and so perhaps we had better summarize what you said today.

Senator WILEY. Fine. This is the essence of what I am recommending: (1) Reduce nuisance excise taxes that were set during the war. (2) Repeal completely those taxes on items on which Government shouldn't impose taxes at all, like taxes on baby powder or lotions, and a lot of other necessities. (3) Survey this whole tax field as I have proposed in Senate bill 810. Find out where the Federal Government and where the States are duplicating taxes. Cut out this duplication. Give the States and localities a chance to collect their own revenues, so they won't have to run to Uncle Sam for grants every minute of the day.

(4) While you are surveying taxes, survey this whole question of tax-exempt property. You know, Charlie, one of the reasons our cities are going broke or having such difficult financial problems is that so much of their property is tax-exempt completely. Washington, D. C., is a good example. The Federal Government has more and more property here which is tax exempt, with the result that the District of Columbia can't meet its obligations because it can't fairly tax the property. In Madison, Wis., the capital of my State, 30 percent of the property is tax exempt, and a good deal of that is Federal property. We cannot allow that condition to continue if we are to enable our States and localities to meet their obligations.

(5) Change our tax laws so that we encourage businessmen and others to meet the pollution problem, to meet the housing problem and other urgent problems. Yes; I say give them a tax advantage, make an exception of their case. That exception is necessary if we are to meet these problems. (6) Tell the administration in no uncertain terms that we are going to turn down flatly its cockeyed ideas of $4,000,000,000 more in taxes. We want less taxes, not more taxes; less Federal spending, not more spending. We want the adoption of the Hoover Commission reports, to cut down Government overhead, eliminate needless bureaus. Thus it won't be necessary for the Congress to add more weight to the tax burden on our people. We have got to get away from the idea of socking and soaking the middle-class taxpayer, particularly the little fellow who is the backbone of our whole system, the little fellow whom the Fair Dealers want to smack so hard that he will lose his business and join the proletariat. Well, Charlie, that is part of my over-all tax program.

Mr. PARMER. Thank you, Senator. Now, Senator, I was down at the White House this morning. The word is that the President feels like going out, making a campaign to the people; that is, on his legislative program—public housing, Federal aid to education, general health program; all of that will call for a bit of taxation. What do you say to that?

Senator WILEY. I've already commented on this cockeyed notion of more taxes. As for the President going out to the people, that is, of course, in the exercise of his own prerogative. I should say that the opposition party would welcome such a situation. It would again give the opposition the opportunity—which it muffed in the last campaign—to argue out the issues; to again put out the facts, and tell a few of the things that weren't told in the last campaign. I think it would be a good idea to have a post-campaign campaign so to speak.

Mr. PARMER. Well, will you lead it?

Senator WILEY. Will I lead it?

Mr. PARMER. Yes, you.

Senator WILEY. I'll be glad to engage in it, of course, and do my part. My whole theory and idea of politics is not to confuse, but to bring light into a picture. If the people will reason this out, will cut out the wild talk, the false propaganda, the loose concepts, the repetition of lies, the people will be benefited. However, if we go into a class war, figuratively speaking, or if we go into a mere propaganda campaign, or engage in an ideological scrap without reference to the facts, we won't get anywhere. Therefore, let's keep it on a high level if we do have this second opportunity.

Mr. PARMER. Senator WILEY, I'd say you are for tax reduction.

Senator WILEY. Charlie, I certainly am.

Mr. PARMER. Thank you, Senator ALEXANDER WILEY, Republican, of Wisconsin. I know that you in turn would be glad to hear from our listeners and get their reactions to your ideas.

Ladies and gentlemen, you have just heard United States Senator ALEXANDER WILEY, senior Senator from the great State of Wisconsin, who has discussed with us today one of the crucial problems facing the American people—tax reduction, revision, and repeal.

The Reciprocal Trade Act

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, February 28 (legislative day of Monday, February 21), 1949

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement made by me before the Senate Committee on Finance on House bill 1211, which is presently being considered by the Finance Committee. House bill 1211 is a bill to repeal the act of 1948 extending the Reciprocal Trade Agreements Act for only 1 year in modified form and to reenact the previous Reciprocal Trade Act for 3 years from June 12, 1948.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE RECIPROCAL TRADE ACT MUST BE RESTORED

At Philadelphia last July, the Democratic Party drafted a national platform which contained this unequivocal statement:

"We pledge ourselves to restore the reciprocal trade agreements program formulated in 1934 by Cordell Hull and operated successfully for 14 years—until crippled by the Republican Eightieth Congress."

This bill, H. R. 1211, as reported by the House Ways and Means Committee and as passed by an overwhelming vote of the House on February 9, is the vehicle for carrying out that pledge. It repeals the Eightieth Congress act and extends the previous act for 3 years from last June.

The Democratic House in the Eighty-first Congress has done its part on this issue, and I am sure the Democratic Senate in this Congress will do likewise.

As chairman of the committee which drafted that platform, I realize, of course, that not every pledge in the Democratic platform has the complete and enthusiastic backing of every Democratic Member of Congress. The platform, however, does represent the convictions of the majority of the delegates to our convention on every issue, and the almost unanimous opinion of the

party's representatives in Congress on most issues.

This is one of those issues on which our party has stood united and strong over the years since the first Roosevelt Administration.

All of us in the Democratic Party have welcomed the support of a great number of outstanding Republicans and of the great mass of the Republican rank-and-file of voters on the issue of reciprocal trade, which is recognized as an integral part of the bipartisan foreign policy, a foreign policy which is slowly but steadily winning the battle for a decent world in which men can be free.

As I listened to the debate in the Senate last year on the crippled reciprocal trade bill which was then before us, and as I have reread that debate from time to time since then, I became convinced that the responsible spokesmen for the bipartisan foreign policy on the Republican side of the aisle in the Senate were struggling desperately to save as much of the original act as possible but were forced to go along with this crippled bill out of a fear that any attempt to strengthen it—as the then Senator BARKLEY and just about all of the Democrats sought to do—would result in a stalemate with the House leaving us with no reciprocal trade act at all.

This fear was indicated in the speeches of nearly all of those Republicans who have joined with us in a genuine defense of the bipartisan foreign policy.

The situation is entirely changed now. The House has given us a good bill—a bill which conforms in almost every detail with the original Cordell Hull program, a bill which adopts the principles which we attempted to put back in the act by means of the Barkley amendments of last year, all of which were defeated on strictly party-line votes.

Every Democratic Senator, I firmly believe, who was here last year and who supported the Barkley amendments will support this bill as it came from the House this year. And the new Democratic Senators who ran on the Democratic platform are, I am sure, committed to the forthright pledge it contains on the reciprocal trade program.

The folly and fallacies of the bill passed last year by the Republican Eightieth Congress became obvious shortly after the bill was enacted. The State Department attempted to enter into negotiations with other nations for new trade agreements, reciprocally reducing tariffs and thereby stimulating international trade and thus stimulating one of the greatest avenues to the achievement of world peace.

It discovered, according to information which I obtained from the Department from time to time over the summer and fall, that it found great reluctance on the part of many nations even to join in initial conversations for the simple reason that the act under which these agreements were to be negotiated had a life of only 1 year—and that first 9 or 10 months of that year would be consumed in preliminary procedures required under the truncated act.

Sure enough, after a number of nations did indicate a willingness to discuss reciprocal tariff reductions on a variety of products, the whole matter had to be turned over to the Tariff Commission for these seemingly endless investigations and studies in regard to so-called peril points. The Republican act of 1948 required that the Tariff Commission be given 4 months for this research.

Thus, under this present act, it will be about April 1 before the State Department and the nations with which it has held preliminary discussions on new agreements can again sit down and resume negotiations on specific tariffs. That means that the 1-year program authorized by the Republican Eightieth Congress would be expiring soon after negotiations started.

I am afraid that if the same party which had been in power in the Eightieth Congress had succeeded in capturing the Eighty-first Congress, the reciprocal trade program which was so badly battered in the Eightieth Congress would have been dealt the final death blow in the Eighty-first.

Most Americans genuinely concerned about our bipartisan foreign policy recognized that fact regardless of their political affiliations or views on domestic issues.

Throughout the Eightieth Congress, there was an obvious feeling of tension among supporters of our foreign policy that isolationism as reflected in such a large group of the majority party of the Eightieth Congress would destroy the careful groundwork which had been laid for world peace and world decency.

This tension evaporated completely when the new Congress was elected. The American people were sure that this Congress would give more than lip service to the bipartisan foreign policy but would implement it with legislation and, when necessary, with funds.

That is what we in the Democratic Party intend to do and that is what we will do.

I therefore sincerely urge that those Republican members of this committee and of the Senate who believe in the bipartisan foreign policy, as many do, join with the majority party in reporting out this bill favorably, without any of the unlamented provisions of the bill enacted last year, and help us to put this program back into operation along the lines it followed so successfully for 14 years.

Farm Price Supports and Economic Stabilization

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, February 28 (legislative day of Monday, February 21), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I have prepared on the matter of price supports and economic stabilization.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

FARM PRICE SUPPORTS AND ECONOMIC STABILIZATION

"Let the farmer be the goat."

Nobody says that out loud. Perhaps few people admit, even to themselves, that such a thought is in their minds. But that is the essence of oft-repeated objections to the farm price-support program.

Those who object to farm price supports have now "discovered" that the program is "inconsistent" with the Administration's economic stabilization policy. Last summer it was "discovered" that Congress could do nothing effective about high prices "because supports hold up farm prices."

Like flying saucers and pink elephants, these discoveries are more apparent than real.

The truth is that farm prices came down a lot last year, while industrial prices went up.

Does that sound as if farm price supports were holding up the cost of living?

Last summer, when all the noise was made by those who opposed the President's anti-inflation program, the high-priced foods that worried consumers—milk and butter, for example, and chicken, pork, beef, and other meats—were above the price-support levels and, obviously, were not being held up by the price-support program. In fact, beef and veal were not even covered by the price-support law. Furthermore, on farm commodities that were dipping down to the support level there was such a wide spread between the farm price and the retail price of food derived from those farm products that no logical person could possibly blame the supports. For example, bread went up while wheat was going down almost a third in 9 months, and it didn't seem quite sensible to blame price supports for that. The support price for eggs out in the country had little relationship with the prices city consumers paid for eggs, which were in abnormal demand because of the meat shortage. Potatoes, of course, were supported at a higher level than they will be from now on, but they represent a very small part of the cost of living. If growers had received only half as much, potatoes would have cost the average consumer about $1.50 less per year.

At the very time the storm of criticism broke, price supports were actually holding down the cost of living by encouraging farmers to produce at record levels, assuring them that they would not have to go through the economic wringer. Farmers were willing to produce so much—not because supports were holding up prices but because the Government's commitment of support took some of the gamble out of the future. Farmers knew that if their prices tumbled to support levels, they would stop there instead of going on down as they did in the days before price-support programs were devised. This was proved in the market break of February 1948 and again, it appears, this month.

We all know that farm prices dropped 50 percent within 12 months back in the early 1920's, and this laid the groundwork for a major depression that hurt all of us.

Today the price-support system will help prevent such a disaster. On the other hand, price supports do not prevent farm prices from coming down gradually. The support level automatically comes down if prices paid by farmers come down. It should also be remembered that when farm prices come down to support levels, farmers are getting less than parity—less than fair prices.

Far from being inconsistent with a policy of economic stabilization, the farm program is an integral part of such a policy.

In the American free-enterprise economy, one of the most difficult problems is how to maintain balance between the farm and nonfarm segments. This is the lesson of history, and it is true today, as we can readily learn if we will only let our eyes see the facts spread out before them.

In 1948, despite our price-support system, farmers got an average of 20 percent less than in 1947 for their crops. They got 7 percent less for their livestock and livestock products. The average of all prices received by farmers went down 13 percent. On the other hand, prices paid by farmers went down less than 2 percent, and this drop in average was due mainly to a big drop in prices paid for feed. In other words, most of the drop in prices paid by farmers was due to a drop in prices to farmers, the producers of feed.

Industrial products as a whole went up in 1948, and some important basic items went up 40, 50, and 60 percent.

Let me put this another way. Agriculture last year set a new record in output—the sixth in 9 years—and prices went down. In industry, shortages of basic materials held production of most goods well within the bounds of demand, and prices kept on going up. Recent production statistics show drastic cuts in the manufacture of washing machines and vacuum cleaners. Some automobile manufacturers have issued statements

warning that they are cutting or may cut production.

Thus, the stage is being set for a possible reenactment of the old tragedy of falling farm prices and rising or steady industrial prices. The hope that the old drama of the past will not be repeated lies in our farm program, which we already have and will improve, and in other measures embodied in President Truman's stabilization program. Some of those measures are already in effect, and I am sure we will have the good sense to add those which are now pending.

Whenever I hear or read statements which boil down to "let the farmer be the goat," I remember that goats sometimes are used in packing plants to lead sheep to slaughter.

In the past when we have let the farmer be the goat, he has perforce led us all to the merciless slaughter of depression. And unlike the "Judas goat" of the packing house, the farmer is the first to go on the block.

Not only in justice to the farmer but also in its own self-interest, the public needs a strong economic stabilization program, including effective farm-price supports.

The Meaning of Intellectual Freedom

EXTENSION OF REMARKS
OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, February 28 (legislative day of Monday, February 21), 1949

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD excerpts from an address which I delivered at the thirty-fifth annual meeting of the American Association of University Professors held at the Statler Hotel, Washington, D. C., February 26, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE MEANING OF INTELLECTUAL FREEDOM

Intellectual freedom, like all freedoms, is not absolute. On first thought, it seems that nothing can control the wanderings of the mind. With a simple task to perform, requiring full mental employment, our minds seem to jump to every corner of the globe when we want to concentrate on the paragraph in front of us. However, freedoms have limitations. The mind itself can no more wander into the realms of the unknown than can we earthbound creatures take a hop, skip, and jump to the moon. Still all things made by man are conceived by the mind first. Religionists say that all things in creation were first spiritually created before they were physically created. I do not know what either of these two propositions actually mean. But our own experience shows us that those things which men have said could not be done actually have been done because one or a few men have thought they could be done.

The great Arctic explorer Peary is the first man I met who seriously got me interested in aviation. He did it by explaining how much more could be done by the many directional freedoms an airplane has over anything that moves on the surface of the earth. I accepted his thesis as true. From that day on I was sure men would fly. Then I read an article, I think in the old North American Review, which said that men can fly, but they never will, because while they can get off the ground they will never be able to land again and remain alive. Thus flying in my mind became not a problem of getting up in the air and staying there but of getting back again if flying were to become useful. Then came the time when men had proved their ability to get up in the air, to stay up, and to come down, but the world was not doing much about it. At that time I felt wholeheartedly that the only way to make flying successful was to give Government a sanction to go into this field with a strong and vigorous program, and I introduced the Army air base bill. This idea met with no enthusiasm in the Army generally because the leaders said aviation must always be an auxiliary force. Six years after that we found ourselves in war. Everybody was doing everything that could be done. Lethargy was removed from the minds of men, and because the ultimate end was destruction men followed the old habit of civilization in their thoughts, forgetting all the rules of good government, and expended all of their energies for waste and destruction. That is the way of war. Men never think straight when their minds are dominated by fear and hate. Yet under the stress of war, fear, and hate, some of our greatest scientific inventions have come into being.

At the beginning of the war we were building planes, tearing them to pieces, putting them in boxes, and then shipping them to some place like Egypt. When the planes arrived at their destination they had to be taken out of a box, put together again before they could fly, and, of course, in each case we forgot to send a monkey wrench along with the boxed plane. It was at this time I made a suggestion in a speech delivered at the banquet when Tom Beck, of the Crowell-Collier Corp., received the Hawkes award in New York. I pointed out how wars in the past had been won by new ideas, and I suggested that from that night on our slogan for sure victory should be "airplanes direct from the factory to the battlefield." The practical-minded, the men in the know, and the newspapers discounted the idea. However, it was not long before little girls were flying the planes from the factory to the battlefields, landing at airports which were built solely for ferrying purposes.

Now, I do not know how to fly. I have never been interested in aviation from a scientific, personal standpoint. If I have had any training in my life, it has been in government. But here comes the real key to the practical aspect of the science foundation bill and the problem you have given me tonight, the meaning of intellectual freedom. In the field of science, in the field of intelligence, the untrained idea might go quite as far as the deduction sometimes reached from conclusions drawn wholly from knowledge which has been gained from actual experience. Therefore there must be a sort of intellectual freedom of the mind which at least keeps the skeptics from throwing out all ideas excepting those which come from their own caste thinking and experience. In other words, caste thought produces good Brahmans, but it does not produce good democrats (spelled, of course, with the little "d").

The man in the exact sciences who thinks there is no room for social science in a science foundation bill may be curbing that thought which may go further in making the exact sciences contribute to the ultimate good of mankind than anything else. I am utterly opposed to letting the practical, the trained, those "who think they know" be the sole rulers of this world, despite the fact that I am the author of the soldier education bill.

In my reading of history I have not found what was the original motive behind most of the good things that have happened to man in the development of our culture and our civilization. I would point out, however, that I have been told that the old gentleman who contributed as much to the development of the loud speaker for radio as anyone was a religious zealot who believed in the "second coming" so literally that he thought that, if the Master were to come again, He would want to speak to all of the people in the world. Therefore something ought to be done to make it possible.

Now intellectual freedom may be a bad thing. The ability which man has acquired to reproduce voices from all parts of the world has probably brought as much confusion to the thinking of man as it has contributed to his comfort and to his joy. It has been said that Mr. Edison, when told that probably he could be given a device which would cure his deafness, decided that being deaf was not so bad after all for his purposes.

Many a time as a missionary, carrying a message which I believe to be the truth, I realized that if anyone accepted my message there would be no peace in his heart again and in the hearts of his neighbors toward him. Truth in the guise of a new idea is an upsetter, not a leveler of life's pathway. Yet who dares stop an enlargement of truth. It is in the ultimate that truth makes man free, not in the process of its realization. Jesus said, "Think not that I am come to send peace on earth: I come not to send peace but a sword. For I am come to set a man at variance against his father, and the daughter against her mother," etc.

Freedom never means license even in the realm of thought. There is as much danger that will come from absolute and complete intellectual freedom as from any of the other freedoms. Good taste must find a place in the use of all freedoms. There is a great risk in any one of the freedoms, as has been said so many times. The man who is free to dig in his garden may accidentally turn up an earthworm which may give him other ideas and instead of digging in his garden he may go fishing. What is really the matter with us is that we are as much afraid of intellectual freedom as we are of any other kind. It is the fear of change that bothers most men. They want to be free to do anything in their way. Throughout the whole of Christendom most everyone repeats the Lord's prayer which suggests that the Master's Kingdom come again. But nearly everyone prays with the faith that it won't happen until after next Thursday because if the Kingdom came before that day it might interfere with the meeting of the sewing club.

In my own State it took us nearly 75 years to appreciate the beauties of our canyons. The worth of scenery does not dawn on anyone seeking a spot to plant needed food. The average monk, as he traveled through the Alps during what we call the Dark Ages in European history, thought so much about heaven that he did not notice earth, excepting for once in a while to cuss the difficult roads or become a bit impatient because his mule became exhausted. We are that way today.

The thinking through and analyzing of present-day problems is harder than writing Utopias. It is easier to hold out the hope of heaven than to correct an ill on earth. Fighting the devil seems to be no hazard at all if we may judge from health and accident premiums. A minister of the gospel gets the lowest rate. It is hard to get a new idea. It is harder still to express it. But it is harder than that to get it published. But the hardest of all hard things in relation to anything new is to get someone else to accept it.

All thoughtful persons condemn what we call sloganized thinking. But thinking in and of itself is not enough. It is the slogan that puts the thought over.

In the war days the ideas that came over my desk for ways to win the war were so many that there was hardly a day that went by that I didn't refer something to the committee that was handling those ideas. I

remember one idea coming in in the form of what I called a mathematical formula. I smiled and said to someone that here's a guy who is going to win the war by a formula. Then I heard of Mr. Einstein explaining what he had worked out to the President. Had Mr. Einstein brought the other fellow's mathematical formula personally to me instead of the man himself sending it through the mail it might have had a better chance. But the point is—are we big enough to lay aside the notion that there is an aristocracy of good thinking?

I told of the soldier education bill at the last international conference I attended, and I mentioned that 2,000,000-odd leaders would be created through that act. I thought the whole world understood what American democracy meant, and it was with that enthusiasm I spoke, only to find myself almost completely squelched when one of the leaders of one of the finest little oligarchies in the world asked me after the speech: "What is America going to do with all their leaders?"

I remember writing a sentence during Hitler's first year wherein I said: "Hitler removes the responsibility for thinking from the people. He knows what is for their best good, and they leave it to him. But that is not the way free men live and work." The weakness of the German people was shown, for when Hitler fell the German people fell. And that people is still today without leadership. Intellectual freedom, above all things, means that there is no place for the single will in the state, in the association, or in the group if democracy is to work. It is hard for us to see sometimes that liberty means everything if men are to be men, but to those who are thoughtful about the development of man in the course of civilization this thesis is crystal clear.

We say now that Washington was great because he was not afraid of counsel and discussion; in fact he went out of his way to seek it. When members of clubs, labor unions, employers' associations, or even the Congress of the United States find themselves in the midst of discussions, sometimes individual argument and the discussion itself slip to a level which makes no one pround, but out of it come great things. Out of it we find democracy seeking the truth. Out of it come that unity and stability which reflect so well our democracy, a unity which is attained after harsh discussion. We call it freedom of speech. It is much more than that. It is man learning how to live with his fellow men, learning how to reason out his problems, and learning how to gain understanding.

As I pointed out in the first of my remarks, intellectual freedom can never be any freer than the bounds of its physical, mental, political, and economic environments. If we are to attain the ultimate which a free mind should offer, we can do it only when the bounds which pin us down are made less narrow. There are not many freedoms; there is in reality only one freedom, for the many are so closely related. Perhaps it is better to call it man's free agency. If we could once attain the freedom from fear of what our neighbor may think, we may go very far. The sad part of this whole portrayal is that those who realize and know that Socrates drank the hemlock because he had a new idea that did not fit the notions of his contemporaries and that Jesus was hung on the cross because he too was not appreciated by the people of his time are the hardest to budge in their own communities and in their own environments. It is easy to be a martyr if one imagines he lived 2,000 years ago. But it is just as hard to go down to one's grave and take with one an idea which would have helped mankind unnoticed, not recognized, and socially lost as it ever was. This is the trial that he who accepts the invitation of intellectual freedom must face.

The Role of the Lawyer in Government

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Monday, February 28 (legislative day of Monday, February 21), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The Role of the Lawyer in Government," delivered by the Honorable John W. Snyder, Secretary of the Treasury, before the Federal Bar Association in Washington, D. C., on February 16, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The role of the lawyer in government has become increasingly important in recent years. The growing complexity of our national problems in both the domestic and the international fields, which has made necessary a great expansion in public administration, has placed ever increasing demands on those with legal training.

Since the time of the establishment of the Interstate Commerce Commission, Congress has recognized the desirability of delegating to special administrative bodies the power to administer specialized activities of the Government. The Federal Communications Commission, the Civil Aeronautics Board, the Securities and Exchange Commission, and many others, now are accepted as part of our everyday life along with the older established agencies. And each of these many agencies, in greater or less degree, has an influence on the economic welfare of the Nation.

The work of the lawyer in the administrative agencies of the Government is concerned largely, of course, with the conventional aspect of legal work—with the analysis, the interpretation, and the application of specific laws dealing with such matters as taxation, commerce, shipping, agriculture, labor relations, natural resources, and a wide variety of other subjects. More in the public eye, perhaps, is the conduct in the Federal courts of prosecutions by the Government for violation of law, or of defense of the Government from suits brought against it.

Of increasing importance, however, particularly from the viewpoint of its influence on the national welfare, is the rendering of legal advice in the formulation of important policy decisions.

The legal training of the lawyer contributes to a balanced judgment in selecting constructive actions to be taken and suitable means of carrying out these actions. It enables him to aid in the planning and organizing of effective management programs. It leads to skill in suggesting methods of coordinating the efforts of personnel.

Because of the wide variety of tasks that fall to them as legal specialists, many Government lawyers are inevitably drawn into the broader stream of general administration.

Thus the effectiveness of a Government lawyer's work must depend to an important degree on an understanding of the problems of the various Government agencies, and on a broad knowledge of the effect which important policy decisions may have on the national welfare.

From this viewpoint, I should like to tell you about some major problems of the Treasury Department and the policies we are following in meeting these problems. I shall confine my discussion to the important matters of fiscal policy which come before me as Secretary of the Treasury, centering around the management of our large public debt.

The Treasury Department has many responsibilities, but its primary one is that of maintaining confidence in the credit of the United States.

In any nation, economic development will be slow, uncertain, and dangerous unless it is based upon a foundation of national confidence. This fact has been made clearly evident among the nations of the world today, where even moderate differences in national confidence have been plainly reflected in their economic progress.

To maintain our position of economic leadership, the people of this country must continue to have confidence in their future, in the security of their jobs, in the safety of their investments, in the soundness of their banking system. Above all, national prosperity must be predicated upon the financial soundness of their Government.

I feel this to be particularly essential today, not only in the interest of our own economic position, but because the people of all the democratic countries of the world rely upon the United States as a bulwark of economic and financial strength.

This objective has involved two separate lines of action: to develop a sound fiscal policy, and to manage the public debt in such a way as to assure the Government's credit.

A sound fiscal policy must be based upon a revenue system that will meet the cost of prescribed Government functions, and provide adequate funds to reduce the public debt.

The correct management of the public debt has been a task unprecedented in our history. The national debt was expanded by the requirements of war financing to a peak of $280,000,000,000 in early 1946. Though it has since then been reduced appreciably, the debt still exceeds $250,000,000,000.

The visible evidence of this debt, of course, is in the bonds, notes, and other Government securities held by individuals, banks, insurance companies, and other institutions. Its most painful feature to many of us is the interest cost of close to $5,500,000,000 annually, which is nearly 15 percent of present Federal expenditures.

One-third of the Federal debt is held by the banking system; one-fourth is held by individuals, largely in savings bonds; another one-fourth is held by insurance companies, business corporations, and other nonbank investors, and about 15 percent by Federal agencies and trust funds.

Before the war, the public debt was less than 25 percent of all public and private debt. Now, it constitutes some 55 percent of the total debt of the Nation. The large proportionate size of the Federal debt makes it the dominant factor in determining interest rates on private debt and the return on private investments. Thus, the prices of Government bonds and other securities have a far greater effect on the interests of all of us than they had in former years.

Because the Federal debt is so intertwined in the financial and economic structure of the Nation, its management is a matter of grave responsibility. This responsibility, by law, must be exercised by the Secretary of the Treasury himself.

Since I came to the Treasury in June 1946, I have felt that stability in the markets for Government securities would encourage business confidence during the reconversion period and would aid materially in promoting our industrial development.

Therefore, during my tenure of office, the Treasury has directed its efforts toward maintaining such stability. In cooperation with

the Federal Reserve, we have sought to maintain bond-market stability in both directions—to keep bond prices from going up too fast and to keep them from going down too sharply. Beginning in the spring of 1947, we took various actions to control an incipient boom in the bond market. When conditions changed and selling pressure on bond prices developed, we stabilized the market through purchases of bonds. In recent months the pressure has again been upward and we are again selling bonds to stabilize prices.

It may be reasonably said that the bond-stabilization program has contributed materially toward promoting financial and business confidence and has helped to stabilize our entire economy. The present situation contrasts markedly with that after the First World War, when a severe decline in Government-bond prices was a factor contributing to a business collapse within 2 years after the war ended.

The responsibility for the management of our huge national debt is not mine alone; it is the responsibility and concern of the entire Nation. The burden of the interest cost is with us year after year. At $5,500,000,000 annually, it amounts to some $10,000 a minute, and it will continue, regardless of whether business is good or bad.

It is essential that we provide in our budget program for a consistent policy of debt reduction. It is particularly necessary in our national financing to follow the sound business policy of reducing the debt in prosperous years.

Now we are enjoying the greatest prosperity in our history. If any time were propitious for reducing the Federal debt, this should be it. Yet, because of the tax reduction last year, the prospect is actually for a budget deficit of $600,000,000 in the current fiscal year, and an even larger deficit next year.

The President has asked for a tax increase of $4,000,000,000, a part of which would be applied toward reducing the debt. It is highly essential that this increase be granted.

There has been some tendency recently to argue that reduction of the debt should be postponed until the business outlook becomes clearer, in view of recent downturns in agricultural prices, and some softening of business in certain lines.

These developments, in my opinion, represent no more than a further readjustment in our national economy to normal buyers' markets and normal competitive conditions. Several such readjustments have occurred previously in the 3 years since the war ended, with only temporary effect on production and incomes. They are part of the essential process of reestablishing the economy on a sound basis for a further advance.

We hear of some increase in unemployment, but the important fact is that the total number of persons employed in the United States during January was at an all-time high record for that month.

We hear of some reduction in farm incomes and of a disappointing Christmas season for retail stores, but the important fact is that total personal income in both November and December rose to new all-time highs.

We hear of some slackening in residential construction, but heavy construction is continuing at a very high level. Heavy construction contract awards in January exceeded all previous records for the month. The great demand for steel from many sources is keeping the steel industry operating at peak rates. The output of steel in January broke all previous records.

There is every reason to believe that the economic situation remains basically strong. It is true that the urgent demand for many products due to wartime shortages has now largely disappeared. Salesmanship and quality are now needed for selling goods. But this is merely part of the inevitable process of getting back to normal. It paves the way for promising developments in many kinds of consumer goods which have been awaiting a return to fully competitive conditions. I see great opportunities for business in the years immediately ahead.

Your work as lawyers in the Federal Government places you in a peculiar position of responsibility, a position not ordinarily shared by those in private practice.

I refer to the fact that the lawyer in Government represents not only the Government agency that employs him, but should also represent the interests of the people at large, from whom the Government derives its sovereign powers.

The record which he establishes in any given case must withstand scrutiny not only as an example of faithful and honest discharge of duty to employer, but on the broader basis of how well it fits into the whole picture of traditional Government justice and fair play.

This is rightly so, for if he is one-sided, if he seeks to use the law or regulatory power arbitrarily or autocratically, if he disregards the rights of a single citizen or any group of citizens, or if he shows a disposition to seek out the merits of only one side of a controversy, the public will be quick to condemn.

The more the Government lawyer appreciates the potentialities of his role as protector of the citizen and of the agency alike from the dangers of an arbitrary, one-sided approach, the greater will be his influence in making the law serve right and justice. The more, too, will he earn respect from the people for his profession and the better will he sustain both effective public management and democratic Government.

Our traditional concept of Government is one of laws, not of men, which is merely another way of saying that we prefer a democratic process to an autocratic or dictatorial form of government. The Constitution and Federal Statutes are the tools with which you work primarily, and the training you receive in these wide fields is a source of strength to the whole country. Many of you, like your predecessors, will leave the Federal Government to enter private law practice, to enter the legislative bodies of your State, or the Congress—or to enter into the stream of industry and commerce. But wherever you go, or wherever you may be, I know that you will take with you this rich experience gained in the crucible of a working democracy.

To those of you who will remain in the Federal service, and to those who will follow in your footsteps, I urge you to give serious thought to the great responsibilities which face us now, and which will face us in the future. Your continued attention to the vital legal machinery of the Federal Government is a source of pride and satisfaction to all who know of your contribution to the democratic process.

Program for Democracy by Farmers Union Grain Terminal Association

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, February 28 (legislative day of Monday, February 21), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the RECORD a report of the resolutions committee adopted at the eleventh annual stockholders meeting of the Farmers Union Grain Terminal Association, at St. Paul, Minn., relating to a program for democracy.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

REPORT OF THE RESOLUTIONS COMMITTEE AT THE ELEVENTH ANNUAL STOCKHOLDERS MEETING OF FARMERS UNION GRAIN TERMINAL ASSOCIATION, ST. PAUL., MINN.

Members of resolutions committee: Ervin Schumacher, Drayton, N. Dak., chairman; R. W. Redlin, Crosby, N. Dak.; Jeff H. Tikkanen, New York Mills, Minn.; Wallace Weir, Ulm, Mont.; August E. Zamow, Watertown, S. Dak.

PREAMBLE

The year 1948 is the eleventh year of GTA. Our achievements in the year that has just drawn to a close are most encouraging. The very things that many critics said we couldn't do—have been accomplished.

However, there is a lot of building left to be done. We shall strive constantly and vigorously for an agricultural position consistent in every way with other members of this Nation's economy.

We are sincerely grateful for the loyalty and devotion of our members, our employees, and our leaders; all have contributed in wonderful measure to the success of GTA.

Our task is to strive constantly by every action and deed to be worthy of continued confidence and support.

We should dedicate ourselves to the building of a bigger and far greater cooperative, whose sole purpose is to serve its members better.

Working toward this goal, your committee recommends the adoption of the following resolutions:

RESOLUTION 1—THE 100-PERCENT-PATRONAGE GOAL

We congratulate the member associations which this year joined the honor roll of those which are marketing their grain 100 percent through the GTA.

We desire to call to the attention of such member associations which do not now market all of their grain through GTA, to study once more the advantages of so doing, in order to increase the proportion of grain marketed cooperatively at both the local and regional level.

It is clearly a matter of good business for every association to use fully the marketing facilities they own. The objective of 100-percent patronage by all of the members of GTA must be a continuing objective and it should be realized more fully during 1949.

We recommend that GTA keep an honor roll and that it inaugurate a policy of issuing annual citations to all member associations which ship 100 percent to GTA.

RESOLUTION 2—A SQUARE DEAL FOR FARMERS

Taking note of the increasing frequency of forecasts that a depression is inevitably ahead and the seeming acceptance of a philosophy that such a depression cannot be prevented, this convention goes on record that in its opinion depressions are preventable just as peace is attainable. We note, too, the general acceptance of a belief that farmers must suffer a depression as the first step in a general depression. Again we desire to reaffirm our belief that agriculture need not be crucified and the millions of people who devote themselves to the production of food and fibers need not be sacrificed to a whimsical economic cycle.

A depression in agriculture will lead inevitably to unemployment, to lowered national and individual incomes. We urge that first consideration should be given to providing a framework within which agriculture can function securely against a serious depression.

We believe that support prices, soil conservation, and the ever-normal granary, constitute the basis of an effective program in fighting an agricultural depression. We feel that assurance of an adequate share of the national income to American agriculture is a major weapon to prevent depression.

We, therefore, recommend that:

The new Congress enact legislation in 1949 which will first provide a new parity formula which is fair to farmers and to the consumers of the Nation. We recommend that support prices be established pursuant to this fair parity formula under which farmers shall be assured not of fractional parity but of 100 percent of the parity prices. These prices should be consistent with the objective of abundant production.

We believe that in the new legislation, account should be taken of the family-type farm which is occupied by its owner. We cannot ignore the social significance of farm families living under conditions where they have an opportunty for decent living standards, including adequate health protection, good housing, and reasonable educational opportunities for farm children.

We believe, too, consideration should be given by Congress to the establishment of a commercial wheat area, similar in principle to the commercial corn area principle first enacted by Congress in 1936. This principle would assist farmers largely limited to wheat production to continue supplying the Nation's needs for wheat in abundant measure.

RESOLUTION 3—A NATIONAL GRAIN STORAGE PROGRAM

We deplore action of the Eightieth Congress in restricting the authority of the Commodity Credit Corporation to lease or build storage. We believe that the Eighty-first Congress has an outstanding opportunity to correct this by enacting policies which will provide the Nation with an adequate grain-storage program.

Such policies should contemplate the stock piling of grain as a national food defense measure, and to assist in keeping an adequate supply so as to reduce the dangers of scarcity. This will help to assure fair and stable prices to consumers; it will provide insurance against drought and other weather disaster.

The farmer, however, should not be expected to finance the cost of this type of national food insurance. He should not suffer in the market place because his willingness to produce abundantly has eliminated scarcity.

In addition to support price legislation to protect the farm, authority should be granted to the Commodity Credit Corporation under which it is authorized to make long-term, self-liquidating loans, at a low rate of interest, to producers and associations of producers so as to supplement the present limited storage facilities. Existing facilities are inadequate if we are to stock-pile wheat, corn, and other grains adequately to meet any crisis ahead.

The storage program should enable farmers, where this is the wise course of action to expand farm storage. This is often true in the case of corn. This program should also enable associations of producers to expand substantially local, subterminal and terminal storage of corn, wheat and other grains.

The plan of financing should be patterned after that so successfully employed by the Rural Electrification Administration. Thus, the REA idea would assist farmers and the Nation, as a whole, in meeting the urgent storage situation with full ultimate repayment of capital, with interest, to the Government.

RESOLUTION 4—BANKS FOR COOPERATIVES

We strongly favor legislation which will enable farmers, through their cooperatives, to acquire the capital and control of the Central and District Banks for Cooperatives over a period of years. Legislation was introduced in the Eightieth Congress, but rejected by it, looking toward the attainment of this important objective.

The Banks for Cooperatives, together with the other agencies of the Farm Credit Administration, have been helpful to agriculture and its institutions.

But, as a result of inflation, lowering the value of the dollar, the Banks for Cooperatives must have an increase in their capital if they are to perform the functions for which they were established.

RESOLUTION 5—INTERNATIONAL WHEAT AGREEMENT

We are mindful of the refusal of the Eightieth Congress to ratify the proposed international wheat agreement, which would have been an important step forward in the field of international cooperation, as well as in assuring this Nation of a reasonable share of the world export market for wheat in future years.

We endorse the effort of the Honorable Charles F. Brannan, Secretary of Agriculture, to renegotiate an agreement and we urge that in event a satisfactory agreement is negotiated that it be supported by the Congress of the United States.

We feel that such an agreement should insure a supply of wheat for years to come for the many nations which depend upon imports of wheat, while at the same time facilitating the orderly sale by countries capable of producing wheat for export.

Through international cooperation lay many of our hopes for the future; such cooperation will not be achieved in single large slices of achievement, but in achievement bit by bit.

The international wheat agreement is an important contribution, looking toward more international cooperation and world peace.

RESOLUTION 6—THE TAXATION OF FARM COOPERATIVES

We are aware that there will be no let-up in the effort of the National Tax Equality Association to injure cooperatives.

This association in seeking national legislation to tax farm cooperative savings before the distribution of such savings in the form of patronage refunds.

Such a proposal is clearly unconstitutional. Congress has rejected it on several occasions. However, we believe that all farmers who are members of cooperatives or who benefit from cooperatives established in their area, should be alerted to the activity of NTEA.

The general public, too, is being misled into the belief that farm cooperatives are tax dodgers. This is in complete contradiction to the findings of the United States Treasury Department.

It is our belief that the effort of the NTEA is not truly inspired by any concern for the National Government revenues, but that its campaign is maintained to destroy farm cooperatives because of the competition they are providing in the marketing of farm products.

RESOLUTION 7—THE FARMERS UNION HERALD

The Farmers Union Herald is a welcome and valuable visitor to 200,000 farm homes in the Northwest. It is an outstanding source of information for us. It has improved steadily over the years.

We commend the Herald's alert and aggressive editorial policy and urge it be continued. We favor further growth and expansion for the Herald. It deserves GTA's fullest support and the support of every one of our members and the members of the other Farmers Union regional cooperatives which sponsor the Herald.

RESOLUTION 8—STATE ORGANIZATIONS OF THE FARMERS UNION

We favor continued financial support of the State organizations of the Farmers Union in the States in which the GTA is operating. The State organizations, as well as the National Farmers Union are advancing steadily and understanding and appreciation of the objectives, the methods, and the significance of cooperative endeavor among the rank and file of farmers.

These organizations also are fighting the political battle on many fronts, State, and national. On these fronts the enemies of farm cooperatives have concentrated in their efforts to destroy the teamwork of farmers because they fear and dislike the competition which farm cooperatives are at last providing in the farm marketing and supply fields.

We believe these Farmers Union organizations should be supported financially by all cooperatives, regional and local.

We recommend that all member cooperatives pay educational funds to their Farmer Union State organizations and that they consider the use of some type of a dues-check-off plan to help the Farmers Union maintain a stable membership.

RESOLUTION 9—ASSOCIATED INSTITUTIONS

We commend the work of the Terminal Insurance Agency, the Farmers Union Grain & Supply Co., and the Great Plains Supply Co. They have strengthened the cooperative movement in the Northwest and have been of great usefulness to farmers. We commend our board of directors for aiding the growth of these institutions during the past year, especially by the purchase of a wholesale lumber house, the Minot Builders Supply Co. We avor further expansion of these valuable activities. We also endorse the Grain Terminal Foundation.

RESOLUTION 10—REGIONAL DEVELOPMENT

We favor strongly development of the resources of the Missouri Valley for the benefit of all the people. We favor the establishment of a single responsible authority to assure both full and unified development.

We also urge action to establish the St. Lawrence waterway and the Columbia Valley Authority.

RESOLUTION 11—NATIONAL FEDERATION OF GRAIN COOPERATIVES

GTA has and should continue to work closely with other regional grain-marketing cooperatives. The problems of the farmers in other regions are much the same in their basic character as those in the area which GTA serves.

The regional grain-marketing cooperatives, working through the National Federation of Grain Cooperatives, now in its tenth year, have demonstrated an unusual capacity for teamwork and interregional cooperation. The National Federation of Grain Cooperatives has served a most valuable purpose in facilitating this development.

We are always interested in assisting cooperative marketing efforts everywhere in the Nation, and we favor the continued support of the National Federation of Grain Cooperatives.

RESOLUTION 12—APPRECIATION OF CIVIC SUPPORT

We note with satisfaction the welcome that is extended to GTA institutions and personnel in all sections of our region.

As our program is understood, it has gained in civic appreciation. The right of farmers to market their own products cooperatively has come to be accepted as a matter of course among enlightened people generally.

We are glad to see this welcome and to note that GTA and its affiliates have earned an important place in community affairs and civic undertakings everywhere.

We are highly appreciative of the understanding and support of such outstanding publications as the St. Paul Pioneer Press and Dispatch and to the intelligent and reliable reports of its distinguished associate editor, Mr. Alfred D. Stedman.

We appreciate the fine welcome which has been given to us this year and in previous years by the city of St. Paul; its officials, its citizens, its businessmen have made us welcome. Its hospitality has been outstanding.

The secretary is instructed to send a copy of this resolution to the mayor of the city of St. Paul.

Military Order of the Carabao

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, February 28 (legislative day of Monday, February 21), 1949

Mr. MARTIN. Mr. President, last Saturday night the annual dinner of the Military Order of the Carabao was held in Washington. I ask unanimous consent to have printed in the Appendix of the Record a very interesting editorial entitled "Order of the Carabao," published in the February 19, 1949, issue of the magazine Bataan. The editorial explains the significance of that organization.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ORDER OF THE CARABAO

One of the many evidences of the excellent relations existing between the people of the Philippines and the people of the United States is the existence of the Military Order of the Carabao.

This organization is composed of commissioned officers of the military services of the United States who have served in the islands.

The editors of Bataan felt that they could honor this organization in no greater way than by dedicating an issue of the magazine to it. Consequently, this February 1949 issue of Bataan salutes the very famous Military Order of the Carabao.

Many may wonder why this group selected the carabao—the Filipino beast of burden—as its "patron saint." We are well aware of the fact that Filipinos are known throughout the world for their courage, their love of freedom, their devotion to the United States, their strong desire to make the Philippine Republic the greatest in the Orient, and their tremendous pride in being the living example of American democracy in the Far East.

But Americans, even while they are being serious, look at things in a humorous way. While visitors to the Philippines are impressed by the qualities mentioned above, they all remember with affection the carabao.

Our beast of burden, we will admit, is not very attractive. His bulky body is strikingly marked with a cow-shaped head, topped by long borns, covered with wrinkles. These horns, which are flattened and triangular in shape, extend outwards and backwards toward his shoulders. His ashy black body and extraordinarily broad feet do not make him the most attractive animal in the world. Yet he is the Philippine beast of burden and a symbol of the islands.

Perhaps the officers who formed the order felt that this animal was symbolic of their affectionate, sentimental feelings toward the Philippines.

The carabao does not like to work during the hottest hours of the day. For this we do not blame him. In fact, we share his reluctance. This feeling is probably that of many members of the military order. However, we and the order cannot go along with the carabao in the way he spends these torrid hours each day.

For when the sun is white hot, the carabao immerses himself in mud and rests with his head and horns above the surface.

While the carabao wallows each day, the members of the Military Order of the Carabao wallow but once a year. This is at their annual celebration held in Washington each year. It is reminiscently called the Annual Wallow of the Military Order of the Carabao.

At it, only the best in food and wine is served, high lighted with Philippine cigars.

All the good times in the Philippines, mellowed by the years, are recalled by members of the order. But each year a member is selected to be honored.

This year's prize wallower is Gen. Carl Spaatz, until recently Chief of Staff of the United States Air Force.

General Spaatz, who has been honored by his own Government and many foreign governments for his brilliant service in the two world wars, was commander in chief of the United States Strategic Air Force against Japan. Following this assignment, and before the recent one, he was commanding general of the United States Army Air Forces.

Any words of tribute that we could give to General Spaatz would be anticlimactical to those of the wallow. Therefore, we second the tributes and wish him Godspeed on his way.

To the Military Order of the Carabao, we express our deepest gratitude for their interest in the Philippines and their continued example of friendship for Filipinos.

Progress in Israel

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, February 28 (legislative day of Monday, February 21), 1949

Mr. KEFAUVER. Mr. President, I have read with interest three articles by Alfred A. Strelsin, noted engineer and industrialist, relative to the industrial progress being made and the ambitious program being considered for the new state of Israel. I ask unanimous consent that the three articles be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Dallas Evening Press of December 3, 1948]

OIL REAL REASON FOR STRUGGLE TO CONTROL NEGEV—AMERICAN INDUSTRIALIST IN EYEWITNESS ACCOUNT OF FIGHTING

(What is the real reason for the all-out international struggle for control of the apparently barren region of the Negev in southern Palestine? How did Israeli forces smash the Egyptian Army in the showdown for this area in a battle of which little has so far been told, but what may come to rank as one of the most decisive in recent times. Herewith is an eyewitness story of that fight and the author's account of the reasons it was fought. Alfred A. Strelsin is an American industrialist, engineer and writer who has just returned from a 4 weeks' tour of Israel.)

(By Alfred A. Strelsin)

NEW YORK, December 3.—The value of Israel as a military ally to the West was demonstrated during the climactic 48 hours of the battle of Negev. It helped me, as I was watching it from the air, to understand some of the miracles of the Bible.

When my observation plane first arrived over the Negev, all was quiet and calm throughout the desert. In huge military camps, the Egyptian Army was visible on the eve of battle. On its camouflaged airfields the formidable Egyptian air power was deployed, ready to strike a mortal blow.

A few hours later, all this was a heap of unrecognizable burning rubble, a twisted and upturned mass, underneath which Egypt's dream of middle eastern domination was hopelessly buried.

Western military observers, following the intricate tactical maneuvers as they unfolded, declared that both the Israeli military plan and its execution was worthy of an army far senior to Israel's fledgling military forces.

"No West Pointer could have improved on that plan," a high-ranking American officer declared.

This plan was drawn up by a young archeologist who now doubles as chief of operations of the Israeli Army.

According to UN observers, Egypt committed more than 20,000 first-line combatants and large numbers of supply troops to this action.

I saw them in a number of so-called offensive hedgehogs, designed and planned by the German tactical adviser of the Egyptian general staff, a 55-year-old ex-aide of Marshal Rommel, now known by the cover-name Hassan Salame.

This was the flower of the reorganized, revamped, reequipped army of Egypt, carefully trained in the western desert.

But just 48 hours after the first shot of the Negev battle was fired, these hedgehogs were pockets in which major contingents of a defeated army were hopelessly trapped.

When the smoke of the battle lifted it was revealed that this modern military miracle was the handiwork of about 2,500 Israeli first-line combatants, supported by no more than 2,000 second-line troops and supply forces.

The ratio of combatants was easily 8 to 1.

The political victory of Israel was as great as its military triumph.

What was the shooting and shouting about?

What is the inside story of the Negev?

When the Israeli Army penetrated into the mysterious desert it found three eloquent reasons for Anglo-Arab determination to keep this arid land from Israel.

The three reasons were three secret oil sites—one in Jebel Usdum near the Dead Sea, the other two at Huleiqat and Kurnub near Gaza.

These oil sites were in that part of the Negev which has long been closed to all Israeli exploration and colonization. It was, in a sense, the Tibet of Palestine.

The existence of these oil sites was long suspected by the Israeli authorities.

I have in my possession photographs showing one of these secret sites in various stages of prospecting. They reveal a derrick standing over the Huleiqat well where workers, sworn to secrecy, have brought in a first well at 2,200 feet.

All above-ground installations had later been removed. The holes were capped and the sites camouflaged. Apparently the camouflage was ineffective, for the Israeli Army found the sites without much difficulty.

Here told for the first time is the full chronological sequence of the story behind the story.

It all began on March 22, 1946, in London, with the ceremonial signing of a treaty of alliance between Britain and Transjordan recognizing Amir Abdullah as the sovereign of the new kingdom.

A special annex of 10 articles attached to the treaty established Britain as the sole military protector of Transjordan.

The treaty was accompanied by nine notes exchanged between Foreign Secretary Ernest Bevin and Prime Minister Ibrahim Pasha Hashim, of Transjordan. Eight of these notes were published simultaneously with the treaty. The ninth remains unpublished to this day. It is what diplomatic parlance calls "secret protocol."

This secret protocol assured the new King of Transjordan, first, that his aspirations for greater Syria would be supported by Britain; and, second, that the Negev would be transferred to his kingdom, should there be a change in the status of Palestine within the 25 years' duration of the treaty.

Simultaneously the Iraq Petroleum Corp. invited King Abdullah to "enter into agreement aimed at the eventual exploitation of his kingdom's oil resources."

Shortly afterward an agreement was concluded between Transjordan and the Transjordan Petroleum Corp.

The deal surprised insiders of the oil world. All experts knew that Transjordan had no oil deposits in commercial quantities. On the other hand, it was equally known that the Negev contains appreciable deposits.

There was, therefore, an immediate connection between the secret protocol of the Anglo-Transjordan treaty and Transjordan Petroleum Development Corp.'s agreement with King Abdullah.

The oil company was not bidding for Abdullah's nonexistent oil wealth. It was staking out a claim against the day when, under the secret protocol, the Negev would become part of Transjordan.

The promising deal was completely shattered by the boom of the Davidkas (a large mortar), Israel's world-renowned homemade secret weapon, which helped to decide the Negev battle. The oil wealth of the desert was an important stake, to be sure. But it was by no means the decisive factor for Israel.

The Israelis knew that the transformation of Negev into a fertile plain was scientifically possible. Innumerable soil analyses were made in the Weizmann Institute at Rechoboth, and in other Jewish agriculture laboratories, proving beyond a doubt that the Negev's neglected soil was fully salvagable, with proper irrigation.

Several test wells were drilled and their water analyzed, with positive results.

A network of meteorological pilot stations had been established throughout the Negev. They yielded the astonishing information that the climate of this mysterious desert was better than that of Jerusalem.

In Tel Aviv and Haifa, as well as in the United States, engineers have drafted blueprints for settlements, agricultural stations, experimental farms, factory sites, and a gigantic irrigation project from which Transjordanian and Palestinian Arabs would benefit as much as the Israelis of the Negev.

Possession of the Negev is also essential for Israel to retain control of the Dead Sea, with its priceless chemicals, including potash and bromide, which American technique and money have helped them develop.

And, above all, the new state perceives in the Negev the only space available for the settlement of Europe's Jewish DP's and the new Jewish victims of the Arab lands.

These were the stakes of the battle for the Negev.

[From the Dallas Daily Times-Herald of December 6, 1948]

ISRAEL BELIEVED SET TO JOIN WEST NATIONS

(By A. A. Strelsin)

NEW YORK, December 6.—I am able to disclose on the highest authority that, in two daring diplomatic and political moves, the provisional government of Israel has definitely commited the new state to the Western World.

First, in a secret meeting of the state council, in which the new state's foreign policy was discussed and resolved, the government proclaimed this commitment in these significant words:

"Israel regards itself as a western nation. Its destiny lies with the west."

This pronouncement was made in the presence of the council's only Communist member, which was akin to broadcasting it to the eastern bloc.

CONSCIOUS OF RISK

I was told by one of the leaders of the Israeli Government that they were conscious of the calculated risk involved in their sweeping prowestern policy statement in the face of the consistent UN support Israel was receiving from the east.

Second, even before the council's secret meeting in Tel Aviv, spokesmen of the Israeli Government, in direct conversations with Soviet diplomats in Glen Cove, Long Island, advised the U. S. S. R. of their determination to stay in the western orbit.

As of today, the vast majority of the Israeli people backs the government's western orientation.

But should the gyrations of the west continue, the Israeli provisional government stands to lose its most effective military ally and only bulwark against communism in the Middle East.

These are the major conclusions of my exhaustive investigations on the spot, covering all the military and diplomatic fronts of the Palestine war, from Paris to the southern Negev.

SPECIAL STUDY

I made a special study of charges of communism frequently raised against Israel. My investigations extended from the armies in the field through the farms and factories in the hinterland to the very doors of the Soviet Legation in Tel Aviv. My knowledge of the Russian language facilitated this particular investigation.

My own investigation proved that such charges are based on deliberate falsifications.

They are used as weapons of psychological warfare waged by men who know best that the Jewish community of Palestine has always been and is bitterly opposed to communism.

These charges are coordinated and master-minded by an organization called the Middle Eastern Intelligence Center, located in Cairo.

The present leadership of Israel is traditionally anticommunistic and was, for more than 25 years, the favorite target of the Comintern's most venomous abuses.

Despite the consistent Soviet support of Israel in the UN, Zionism continues banned in the Soviet Union.

WIDE RANGE OF TALKS

I interviewed all the top members of the Israeli Government, from Premier David Ben-Gurion to Fritz Bernstein, secretary of commerce. I talked with dozens of Israeli soldiers and officers, from the top-ranking brigadier to privates in advanced field posts.

They all dwelt on the problems of tomorrow's Israel and all asked how Israel could best interest United States capital and know-how to join in the building of an industrial democracy along American lines.

David Ramez, leader of the Histadruth, the Israeli federation of labor, told me in no uncertain terms:

"Industrialists need not worry about social unrest in Israel, about strikes or lack of cooperation on the part of our workers.

"We want to build a modern, prosperous democratic country and we all realize that this can be accomplished best through American know-how and with the modern American production methods. Israel is too small to become a purely agrarian country. Its prosperity depends on a happy wedlock between industry and labor."

[From the New York Sunday Mirror of December 12, 1948]

ISRAEL AWAITING PEACE FOR "TVA" IN HOLY LAND

(By Alfred A. Strelsin)

American engineering skill that made the TVA a successful reality and turned southern California into an agronomist's dream has completely blueprinted the economic salvation of Palestine in terms of irrigation and hydroelectric power.

Patterned after the TVA in fact as well as in name, the projected Jordan Valley Authority (so named after the Holy Land's main water source) would spark-plug the most far-reaching reclamation project on earth. It would solve virtually all of the region's economic questions—including the burning problem of the Jewish and Arab refugees uprooted by the present war.

Though promoted by Israeli initiative, it would benefit the neighboring Arab peoples and the new stateless refugee Arabs of Palestine as much as Israel.

A string of irrigation projects could turn 700,000 acres of neglected land into fertile fields—seven times the area now under irrigated cultivation in the whole of Palestine. New hydroelectric plants could produce 800,000,000 kilowatt-hours a year—more than four times the total peak energy produced in the whole of mandated Palestine by hydroelectricity, steam, and Diesel power.

It would speed and facilitate exploitation of the vast mineral resources of the Dead Sea and give employment to thousands in newly developed industries. It could provide an economic base for more than 3,000,000 new immigrants and improve the living standards and earning capacity of old-timers and newcomers alike.

It would provide abundant power for factories and farms at prices but a fraction of the rates charged by the utility companies under the mandatory administration. Above all, it would resettle the fugitive Arabs for whom the neighboring Arab countries seemed reluctant to provide shelter, and thus eliminate the No. 2 headache of the region.

The JVA is no pipe dream of starry-eyed engineers. Neither is it a potential bubble of money-mad promoters. It is the carefully thought out, painstakingly calculated, completely blueprinted plan of the world's foremost soil conservationists, energy experts, and project managers.

Men like James B. Hays, project manager of TVA; John L. Savage, chief engineer of the United States Bureau of Reclamation, and Walter C. Lowdermilk, chief of the United States Soil Conservation Service of the Department of Agriculture, vouch for the feasibility, practicability, and profitability of the project. In fact, they are its creative architects.

The JVA is projected to cost no more than $250,000,000 even at today's sky-high construction prices.

The idea of JVA was conceived by Dr. Lowdermilk in 1939, while he was making a plane survey of Palestine in quest of a solution of America's own acute erosion problem. He was struck by the similarity between the Holy Land's and southern California's topography, and by the evident prospect of applying to Palestinian soil the reclamation and irrigation techniques which have already turned California's Imperial and Central Valleys into garden spots.

Lowdermilk perceived still another similarity. Like California, Palestine has more land than water. But the peculiar topographical features of the Holy Land suggest the source for additional water.

Lowdermilk was startled by the extraordinary difference in altitudes between the Jordan Valley and the Mediterranean, only 23 miles apart. It would be relatively simple, he thought, to divert the sweet water of the

upper Jordan into a network of irrigation canals and introduce sea water from the Mediterranean to compensate the Dead Sea for the loss of these waters.

Anyone standing at Naharayim, at the junction of the Jordan and Yarmuk Rivers, where the hydroelectric plant of the old Palestine Electric Corp. is located, must marvel at the scientific skill of engineers who can produce so much energy from so little water. The average total annual flow of the Jordan is in the vicinity of 1,000,000,000 cubic meters, sufficient to have produced more than 170,000,000 kilowatt-hours' electricity in 1944 in the Naharayim plant alone.

The advocates of the JVA project enlisted the support of David Lilienthal, then head of TVA, who assigned his chief engineer, Col. T. B. Parker, to outline the necessary engineering studies.

A commission on Palestine surveys was set up and a group of experts recruited to carry out the engineering investigations, both in the United States and in Palestine.

The staff worked over 18 months in America, then spent 6 months in Palestine studying conditions on the spot. Refusal of the mandatory power to permit the project, followed by the present war conditions in the Holy Land, plus lack of capital, has prevented the implementation of the JVA.

As soon as peace returns to Palestine, the proponents of JVA will place before the United States Congress a plan to finance the project with funds lent by the Export-Import Bank or by the International Bank for Reconstruction and Rehabilitation, on a self-liquidating basis, plus interest.

They will argue that the JVA project should save a great deal of the money that America will otherwise be called on to dole out to the Arabs of the Near East for economic rehabilitation—never to be repaid.

Federal Aid to Delaware

EXTENSION OF REMARKS

OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Monday, February 28 (legislative day of Monday, February 21), 1949

Mr. WILLIAMS Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Wilmington (Del.) Journal, of December 9, 1948, on the subject of Federal aid to the State of Delaware.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A story published in this paper under a Washington date line the other day said that the Federal Government is giving Delaware $1,384,000 this fiscal year for airports, hospitals, school lunches, wildlife, and so on. The way the story reads, it sounds mighty generous of Uncle Sam.

. But, wait, a minute. Where did Uncle get the money he is handing out so liberally?

Well, he got it from taxes, of course. Washington collected $323,000,000 in income taxes alone from Delaware firms and individuals in the year ending June 30, 1947. The Federal Government's gift to Delaware amounts to less than one-half of 1 percent of Delaware's contribution to the Federal Treasury.

We don't object to that—too much. But would you call it a gift when you pay a man $10 to do a job and he lets you have 4 cents back? We don't.

One-Hundred-Dollar Dinners for Privileged Few

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, February 28 (legislative day of Monday, February 21), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "$100 Democratic Dinners Bring Out Privileged Few" written by John M. Cummings and published in the Philadelphia Inquirer of February 27, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WASHINGTON, February 26.—In the gold-plated program of the Democratic Jefferson-Jackson victory dinner in this town the other night there appeared as part of a creed for democracy these paragraphs taken from President Truman's message to the Congress on the state of the Union:

"The strength of our Nation must continue to be used in the interest of all our people, rather than the privileged few. It must continue to be used unselfishly in the struggle for world peace and the betterment of mankind the world over.

"This is the task before us.

"It is not an easy one. It has many complications, and there will be strong opposition from selfish interests."

A reasonably large number of the privileged few, which is to say folks who can pay $100 for a meal supposedly honoring the memory of the Democratic Party's patron saints, greeted President Truman warmly and listened to him intently at the two feasts, one in the Mayflower Hotel, the other in the Statler. It took the combined feeding facilities of the two establishments to accommodate the segment of the privileged few which turned out.

They heard the President relate that the progress of the administration's program is being impeded in Congress by the same old special interests. This unidentified and mysterious force was belabored by Mr. Truman during the campaign last year.

As he went up and down the country denouncing the Republican-controlled Eightieth Congress as the tool of the special interests and promising all things to all people, he asserted time and again that if he were given a full term and a Democratic Congress everything would be lovely and happiness and prosperity would be the reward of the people.

Mr. Truman was elected. With him was elected a Congress Democratic in both branches. And now it appears the special interests, the privileged few, have the Democrats by the throat.

Close by the President as he spoke were living symbols of the Democratic victory. At one dinner he shook the hand of Senate Majority Leader SCOTT LUCAS; at the other he pumped the paw of House Majority Leader JOHN MCCORMACK.

No major part of the President's program, whatever it may be, has been enacted into law by the Congress. The Taft-Hartley law, which most of us thought would be out the window within 2 weeks after the Democrats took over, is still the law of the land. Recently he tossed into the lap of Congress a welfare and social-security program virtually the same as the one handed the Republicans in the special session, he called last summer immediately after his nomination in Philadelphia. And in accepting the nomination he remarked that the entire program for the special session could be enacted in 15 days.

By inference if not by actual accusation the Republicans are blamed by the President for the failure of the Congress to rush through important legislation at lightning-like speed. They, of course, are the time-tested tools of the special interests, they are the privileged few.

Even as the President spoke, members of his own party were scheming to scuttle his civil-rights program. Southern Democratic Senators, defying the President, decided at a caucus to launch on Monday a filibuster against a move to tighten the rules covering debate.

Before the $100-a-head diners had finished the steak, they heard President Truman say he is thinking of stumping the country in an effort to get action from Congress. He would deliver speeches along the lines of those with which he regaled the country in last year's campaign, but this time the purpose would be to build a fire under a Democratic Congress rather than one controlled by Republican agents of the special interests and the privileged few.

With the exception of Vice President Barkley who was in California, President Truman at the victory dinner was surrounded by the men responsible for Democratic action on Capitol Hill. Not only were the elected leaders of the Senate and House there, but Senator MCGRATH, chairman of the Democratic National Committee, was on deck.

The truth of the matter is that this Eighty-first, or Democratic Congress is not jumping whenever the President cracks the whip. This may be good for the country or it may be bad. It all depends on the individual viewpoint.

But the country isn't going to be fooled. It isn't going to be misled into believing that the Republican, or minority, party or some privileged few or special interests have the Congress in its grip. The responsibility is on the party in control. Only a few months ago Mr. Truman was busy trying to convince the country that all the woes and shortcomings of his administration were directly traceable to the Republican-controlled Congress.

Now he would like to have us believe the tail is wagging the dog. If the good burghers of the country fall for this one, they'll fall for anything.

Filibuster in the Senate

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, February 28 (legislative day of Monday, February 21), 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the RECORD two editorials which appeared this morning regarding filibustering in the Senate, the first in the New York Times, the second in the Washington Post.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times of February 28, 1949]

NO TIME FOR COMPROMISE

If present plans are carried out a score of United States Senators, at noon today, will

attempt to paralyze the legislative branch of our Government until this small minority, representing a small minority of the Nation's population, many of its Members elected by a small minority of the adult citizens of their constituencies, has enforced its will. This group proposes to stop all legislation, to hold up all authorizations and appropriations, including those for the national defense, and to hinder all Executive action which depends on congressional approval.

For what purpose will these gentlemen rise? What is the justification for the incalculable harm they may do their country? Let us look back into Senate history. Thirty-two years ago a "little group of willful men," as President Wilson called them, talked to death a bill to arm American ships against submarine attacks. The resulting scandal led the Senate to adopt rule No. XXII, which stipulated that by a two-thirds vote debate on "any pending measure" could be limited to an allowance of 1 hour for each Senator. Under this rule cloture has been applied four times. Last August Senator VANDENBERG, then Presiding Officer, reluctantly decided that even this feeble weapon could not be used on a motion to take up a measure. The Senate will have before it today an amendment designed to fill this gap. Even if this amendment is adopted, or if Vice President Barkley holds that rule No. XXII can be applied to motions, a minority of one-third-plus-one of a quorum present can still keep a motion or a measure from being put to a vote.

If this modest step is a limitation on freedom of debate, as Senator RUSSELL and his followers insist it is, what of the freedom of Senators who wish to get on with the business for which they were elected? What of the freedom of both great parties to keep their campaign pledges? What of the freedom of the public to get done what it wants done?

No amount of specious reasoning, not even the presence of men of character and intelligence among the prospective filibusterers, can conceal the real nature of what seems to be about to take place. This is a plain case of a minority arrogantly assuming, as it has done before, the right to veto legislation—in this case Mr. Truman's civil-rights program.

Compromises have been proposed. No less a person than the Democratic leader, Senator LUCAS, has indicated an amiable willingness to suspend the battle occasionally in order to pass needed legislation. We believe the vast majority of the American people will agree that this is no time for either compromise or defeatist postponement. The question is whether we are to have some approximation of majority rule on Capitol Hill. More than that, it is whether our national legislative system can be made to work properly in a time of crisis. That issue had better be settled now.

[From the Washington Post of February 28, 1949]

ACID TEST

At noon today Majority Leader LUCAS will move to take up in the Senate the proposed change in the rules making it possible to cut off a filibuster at any time by a two-thirds vote. The motion is certain to encounter a filibuster. Southern Democrats rightly look upon this effort to facilitate the limitation of debate as the first step toward enactment of the President's civil-rights program. Indications are that they will resist it with all the wind and laryngeal fortitude they can muster. The fight will thus doubtless become a severe test for the Truman administration.

If the filibuster runs on week after week, the possibility of enacting Mr. Truman's Fair Deal into law will be seriously impaired. The administration is said to fear, and not without good reason, that if the struggle becomes acrimonious it may lose many Southern votes for other parts of its program. Yet that is a chance it has to take. If the right of unlimited debate against taking up a bill is not curbed now, talk-fests will have to be faced later when the calendar will be crowded with important measures awaiting action. There seems to be no easy escape from the dilemma. Even if Vice President Barkley reverses Senator Vandenberg's ruling and holds that the present cloture rule can be applied to debate on motions to take up a bill, he may not be sustained by vote of the Senate. Senator Taft thinks the rule should be changed by amendment and not interpretation. If most of the Republicans agree and the administration holds to its purpose, the filibuster can go on indefinitely.

It will be an acid test for the Democratic Party as well as the administration. Presumably the voters returned that party to power because of disgust with the record of the Eightieth Congress. But if the performance of Congress is not improved, what will the voters say in 1950 and 1952? Democratic leaders in both the North and the South will have to find ways of working together or risk a critical loss of public confidence. The dissidents cannot be expected, of course, to swallow the President's program whole. But at some point there will have to be a meeting of minds if the country and the Democratic Party are to be saved from tragic failures. The impending fight over the elementary issue of majority control in the National Legislature is certainly not an encouraging prospect.

Nomination of Hon. Mon C. Wallgren, of Washington

EXTENSION OF REMARKS

OF

HON. HARRY P. CAIN

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, February 28 (legislative day of Monday, February 21), 1949

Mr. CAIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD several editorials bearing on the nomination of Mon C. Wallgren to be Director of the National Security Resources Board. These editorials have been received from Detroit, Mich.; San Diego, Calif.; Portland, Oreg., and Washington, D. C.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Detroit Free Press of February 25, 1949]

GRAVY FOR AN OLD PAL—WALLGREN

At the risk of being called a s. o. b. by the President of the United States for daring to disagree with him we insist this is requisite and necessary for a free discussion of vital national problems.

One of them in his merry-Andrew clambake crony, the highly perfumed ex-Governor of Washington, Mon C. Wallgren.

It is Mr. Truman's grim determination to place this pool parlor hail fellow all wet in charge of the most important position in the Federal Government as we prepare for possible war. That is the directing head of the National Security Resources Board.

Upon this man will depend our preparation.

If war should come and your son is killed in battle because of lack of desperately needed supplies, it will be no comfort for you to know that the President of the United States permitted such gross inefficiency in order to find a political job for one of his elbow-bending pals.

Wallgren admits he is without qualifications for the job.

This man who will attempt to direct the whole industry of the United States and integrate it—as William S. Knudsen did so brilliantly—into one vast machine shop, is an optician whose educational background consists of a night-school course in bookkeeping.

If war comes—the most hideous possibility in the history of the human race—our fate will depend upon this professional good fellow back slapper and story teller.

He will be pretending to hold down the most responsible job in the Nation with the possible exception of the Presidency itself.

It is blandly and unblushingly conceded that Wallgren is totally unqualified for the post.

But his defenders point out that he can always call on the Budget Bureau for anything he needs to know.

If the Budget Bureau has experts who can serve as Edgar Bergen to Wallgren in the role of Charlie McCarthy, why not appoint one of them to head the National Security Resources Board in the first place?

For one thing, how is Wallgren going to know what to ask the Budget Bureau? A man so hopelessly unqualified for a job can't even know what information he needs.

However, that plainly is not a consideration with either Mr. Truman or Wallgren. The idea is to do something nice for an old pal out of work, and to let the old pal in turn take care of some of his friends who'd like a cut of the big dough being kicked around Washington so freely—the dough you're handing in to the internal revenue collector this month, to be specific.

Wallgren, you see, has been out of work since January 1, when the people pried him loose from the pay roll. His one term as Governor of the State of Washington expired. He was so bad that he was defeated despite the fact that otherwise Washington voted Democrats in and supported Mr. Truman.

Actually, during the campaign Wallgren's presence on the ticket was considered a hazard to the President's chance of carrying Washington.

Already, with his confirmation being fought in the Senate, equally unqualified friends of Wallgren are being led up to feed at the trough which the National Security Resources Board affords. There is some mystery as to who hired them, or at least that's the pretense.

But all three came from Wallgren's State.

They are a former laborer, a former bookkeeper, and a former printer who left their vocations to dabble in politics and got shuffled out.

But not for long!

Now they're to get $50 a day as consultants to the Security Resources Board as it goes about the task of coordinating this country's industry and energies to meet the threat of war.

But don't raise your voice about any of this. The President might swear at you. After all, Mon is his buddy and that's all the qualification you need to get a job guiding the destinies of the United States in these perilous years. As Mr. Truman so bluntly says:

"No s. o. b. is going to tell me—"

[From the San Diego (Calif.) Tribune-Sun of February 25, 1949]

MISTAKEN VIEW

President Truman's contention that high-salaried offices in the Government are his to be spread among his friends regardless of competency is based upon a mistaken view. His appointment of Mon Wallgren, former Washington State Governor, is an example.

Mr. Wallgren never has distinguished himself in public service. At one time he was a United States Senator, and it was while serving in that capacity that he met the President. Later he was elected to the governorship, from which the voters ousted him last autumn.

During his incumbency at Olympia Mr. Wallgren had his State in constant turmoil. He ran a machine-dominated system which often was involved in charges of corruption. Although those charges were not proved, the voters were convinced that Mon Wallgren was not the man to be their governor. Illustrative of the disregard in which he was held, the voters elected Democrats from the top of the ticket to the bottom, except for governor. Here they rejected Mr. Wallgren in favor of a Republican.

This was the verdict of people who know him. He was not good enough to be chief executive of one of the 48 States of the Union, and yet President Truman claims to believe he could fill the $14,000 chairmanship of the Security Resources Board.

Oddly enough, and brazenly enough, there has been no claim that Mr. Wallgren is competent for the position to which he has been nominated. Even Mr. Wallgren himself has not made such claim. If he is confirmed for the position he seeks, it will be one of the boldest pieces of political pap within the generation.

Even so, the matter might be endured were the duties of the Security Resources Board not so important. But this Board will be entrusted with vital preparations for the Nation's defense. It cannot be run on the basis of politics in its worst form, and that is the kind of politics which Washington State knew under Mr. Wallgren's reign.

The people have a right to something infinitely better than his appointment promise.

[From the Washington Post of February 27, 1949]

BAD AND GOOD

What is the use of trying to reorganize the executive branch of the Government? Members of the Hoover commission may well wonder as they read of some of President Truman's latest appointments to high and responsible office. In one of its first reports, the Hoover commission said, "We cannot entrust the Government of today to second-rate men and women." The President continues to violate this principle, although he professes to want efficiency and competence in his administration team.

A case in point is the nomination of former Senator Mon C. Wallgren to head the National Security Resources Board. This is a revival of "government by crony" which, we thought, went out of fashion with Warren G. Harding, though Harding did not, as Mr. Truman has done, defend the system as a new dispensation in political philosophy. The President has every right to appoint men he knows and trusts, but he also has an obligation to appoint men with executive ability and knowledge equal to their new duties. He has not lived up to the obligation in the case of Mr. Wallgren, or in the far more flagrant choice of Cornelius Vanderbilt Whitney as Under Secretary of Commerce.

Mr. Whitney is likeable, charming, generous, but by no stretch of the imagination a fit appointment for the managerial post in a crucially important department. The Department of Commerce is intimately concerned with the maintenance of the country's economic stability. Mr. Morris Ernst is constantly insisting that only this Department can safeguard the integrity of small business. It is directly related to the development of our foreign economic policy. Only last Friday, Secretary of State Acheson said that to this Department would go much of the responsibility for the programing of point 4 of the President's inaugural address, yet the Department of Commerce has been virtually gutted of its leadership since Mr. Harriman, Mr. Foster, Mr. David Bruce, and many lesser officials went to the ECA in Paris.

In shining contrast to the Wallgren and Whitney appointments are the choices made in the State Department since Dean Acheson became Secretary. Here, at least, fitness has ruled. Many more appointments will have to be made if the Hoover commission's proposals are carried out, but those already announced are first class: Mr. Ernest Gross and Mr. Dean Rusk as Assistant Secretaries, Mr. Philip Jessup as Ambassador at Large, Mr. Merle Cochran as Ambassador to Pakistan—a tribute, incidentally to Mr. Cochran's resolute course as member of the Good Offices Commission in Indonesia—and two appointments from the ranks of journalism, Mr. Mark Ethridge as member of the Conciliation Commission for Palestine and Mr. Erwin Canham as alternate delegate to the coming United Nations General Assembly.

Since all of these are Presidential appointments, Mr. Truman can claim a share of the credit for them. He has proved in the past that he knows how to disregard political debts and personal friendships in finding the right men for important posts. He likes to read American history, and he must know how past Presidents have handicapped themselves by choosing weak advisers. Why, then, does he persist in spoiling his record by appointments of the Wallgren and Whitney variety?

[From the Washington Times-Herald of February 27, 1949]

THESE CHARMING PEOPLE

(By Austine)

Of course, every word or group of letters uttered by a President causes ears to perk. A Presidential phrase used to Lyall Beggs, national commander, Veterans of Foreign Wars, didn't rate as widespread publicity as some other remarks. Harry, the President, was describing HARRY CAIN, the Senator (now fighting Mon Wallgren's appointment as Chairman of the National Security Resources Board). Truman spluttered that CAIN was acting as if he was bitten by a goose. That the President was annoyed, Beggs gathered, but he's a little puzzled on one score.

How does a goose bite, anyway?

[From the Portland Oregonian of August 11, 1945]

REPUBLICANS NEED NOT APPLY

Since taking office, Gov. Mon C. Wallgren of Washington has been ruthless about kicking out Republican heads of State departments, regardless of their records for efficiency, and replacing them with Democrats. That is more or less common practice, incident to the construction of a political machine designed to retain the party in power. But the Governor has gone off the deep end, if quoted correctly in a United Press dispatch of August 4.

The Governor told his news conference that State departments are working shorthanded to hold jobs open for veterans. There will be many State jobs for veterans who are independent in their political thinking, said the Governor, "but those veterans who have been active in the Republican Party need not apply—they should wait for their party to get back into power."

Governor Wallgren, who implies that the Democrats won the war singlehanded, proposes to carry partisan politics to a shameful low. The good people of Washington who voted for him should see that he doesn't carry out his intention. Neither Democrats nor Republicans, we think, will approve political discrimination in employment of the men who have fought for them. As Mrs. F. I. Hodges of Albany says, in a letter on this page, the Governor's statement is "a blot on the State of Washington."

NO JOBS FOR G. O. P. VETS

To the EDITOR: It is unbelievable that in considering jobs for veterans the Governor of any State would be so lacking in patriotism that he would consider the political thinking of the veteran before giving him a job.

It is a blot upon the State of Washington that Governor Wallgren has said, "Many jobs for the veteran who is independent in his political thinking will be assured. Those veterans who have been active in the Republican party need not apply—they should wait for their party to get back into power."

I believe that the men who have fought this war should be given preference in jobs because of their service and their qualifications for the job. Whether Republican, Democrat, black or white, all have served their country alike, and should be rewarded alike.

Mrs. F. I. HODGES.

ALBANY, OREG.

The Administration's Legislative Program

EXTENSION OF REMARKS

OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Monday, February 28 (legislative day of Monday, February 21), 1949

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The President Can't Shift the Blame," published in the Philadelphia Inquirer of February 26, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE PRESIDENT CAN'T SHIFT THE BLAME

President Truman's threat to stump the Nation in an effort to whip Congress into line is a frank admission of the extent to which the administration's legislative program has bogged down.

Coming less than 8 weeks since the Eighty-first Congress, with comfortable Democratic majorities in both House and Senate, convened, it is a startling confession of the weakness of the party's leadership both in the White House and on Capitol Hill.

It is now apparent that the honeymoon of Mr. Truman and Congress, widely predicted after last November's surprising election, has not taken place and that the President has abandoned hope that it ever will. His threat to pressure Senators and Representatives into rubber-stamping his complex and costly batch of proposals by taking his case directly to their constituents has aroused resentment which, understandably, only widens the breach between the executive and legislative branches.

Just what Mr. Truman can hope to gain by this declaration of war is difficult to imagine. The only predictable result is an intensification of political bickering that will militate against bipartisan agreement on even the soundest projects advanced by the White House.

Of all Presidents, Mr. Truman should be aware of the value of maintaining good working relations with Congress and of avoiding even the appearance of dictating its actions.

His failure to win cooperation of the Eightieth Congress, which he called the second worst in the Nation's history—reserv-

ing the No. 1 position for the Congress that impeached Andrew Johnson—was spectacular. Much of his effort during the preelection campaign was devoted to shifting the blame for the shortcomings of his administration to the Republican-controlled Congress when his own divided party was in large degree at fault. It is apparent that he now plans to return to that strategem and make the Democratic Eighty-first Congress a whipping boy.

It was late in the session of the Eightieth Congress that Mr. Truman directed his fire against the legislative branch and not until the opening of the Presidential campaign did he tour the country denouncing it, and certain of its Members, for failure to carry out the wishes of the White House.

He shows no such commendable restraint now. He has turned his guns against the Eighty-first Congress before the most vital and far-reaching portions of his program have even reached the floor of House or Senate.

A great deal of Mr. Truman's attack, at a dinner in Washington, was directed against special interests, although he never made it clear just what they are. It would appear that the general public which insists on retention of adequate safeguards against the disastrous effects of national strikes becomes a special interest when it opposes outright repeal of the Taft-Hartley Act.

Taxpayers who view with increasing alarm the tremendous total public expenditures involved in the mass of administration proposals for social betterment, national defense, and foreign aid becomes special interests when they point out that the national economy would be impaired by such an acute financial strain.

The fact is that Mr. Truman and his advisers blundered badly in failing to give the administration's far-reaching legislative program more full and painstaking consideration before dumping it into the lap of Congress.

The serious mistake must be corrected if the Nation is to be spared the expensive maladjustments which invariably follow enactment of unsound legislation.

It is the task of Congress to perform this invaluable service, and it will not be made easier by Mr. Truman's intemperate attacks upon everyone who opposes any portion of the program he has submitted.

Filibuster

EXTENSION OF REMARKS

OF

HON. MATTHEW M. NEELY

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, February 28 (legislative day of Monday, February 21), 1949

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an able and praiseworthy editorial entitled "Filibuster," published in the Charleston (W. Va.) Gazette of February 19, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FILIBUSTER

Regardless of the civil rights issue, nothing can be honestly said in favor of the filibuster that has for years been a childish and unfair device to delay and often kill legislation proposed in Congress.

Now we have the ludicrous threat to filibuster to death the proposal to outlaw the filibuster. The proposed change in the rules would limit debate so that a bill or resolution could be brought to action in a reasonable time. By every conception of what is fair and right this impediment to orderly transaction of the business of Congress ought to be discarded.

The filibuster in itself accomplishes nothing in the way of debate. The person who has gained the floor for an indefinite period determined only by his physical endurance, utters nothing whatever of value in his address. His purpose is solely to kill all the time that can be allotted to the measure.

The ludicrous figure of the filibusterer is typical. Nearly all the Members of the body leave. Only a few may be seen reading newspapers or even dozing. No one pays any attention to what the speaker says. Often he reads from long technical pamphlets on subjects in no way related to the subject at issue, sometimes even resorting to the encyclopedia for material.

It is ridiculous that any deliberative body would allow such a device to kill time. Congress is there to do the will of the people. Always it has before it for consideration many highly important matters. What Congress does often shapes the course of history and determines the welfare of the Nation. Its time is of great value and to waste it by the petty custom of the filibuster is to mark Congress as lacking in intelligence.

It is generally conceded that the civil rights issue is being attacked by powerful interests and that the fight is not at all the fight of the people of the South. These interests want to preserve the cheap labor market that has existed in the South ever since slavery. The issue is not the right of all freemen to vote, but to prevent the poorer and underpaid class voting against their exploitation. White supremacy is not the issue.

The Democratic Party has stood and still stands for the poor man, and in no other section of the country is he quite so poor as in the deep South. President Truman declared for civil liberties that would elevate the poor of the South to a class of properly paid workers. The President is now fighting for the supporting legislation, and the Democratic Congress, with the exception of those southern Democrats who have always stood for the subjugation of labor, stands for civil liberties.

It will be an eternal disgrace if this Democratic Congress allows the special interests of the South to kill the civil liberties issue by the use of the filibuster. It will be to the everlasting credit of this Congress if it will right now outlaw forever the filibuster device for impeding legislative progress.

Federal Rent-Control Law

EXTENSION OF REMARKS

OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. HÉBERT. Mr. Speaker, the New Orleans Property Owners' Association is composed of several hundred property owners of the city of New Orleans, who feel they have been aggrieved by the administration of the Federal rent-control law, and have organized for the purpose of combating any further rent control.

At a meeting of the organization held on February 16 in New Orleans, Government figures were studied by the association, and the membership unanimously passed a resolution protesting against further rent control. A copy of this resolution has been sent me by Mr. Scott, president of the association, with the request that I insert it in the CONGRESSIONAL RECORD in order that it might be available to the Members of this House for their study and consideration if and when the proposed extension of the Rent Control Act comes to the floor for disposal.

Following is the resolution:

Whereas the rent-control law was passed as an emergency war measure and should have been terminated when all other emergency war controls were terminated; and

Whereas the continuance of this law is an unjustified encroachment upon the rights and privileges of property owners; and

Whereas the continued application of this unfair and discriminatory law is causing extreme hardship on the part of the property owners because a large percentage of the property owners are dependent upon the rents collected for their livelihood; and

Whereas the majority of the landlords so dependent upon rents collected are widows, aged and infirm people, as well as minor dependents of deceased relatives; and

Whereas the present costs of maintenance, repair, and operation of rental property dangerously reduce and in many cases wipe out the net revenue justly due the property owners; and

Whereas in no case do current revenues permit the property owners properly and adequately to maintain and repair their properties; and

Whereas depreciation of inadequately maintained property accelerates rapidly with each day of occupancy; and

Whereas property owners are arbitrarily deprived of just and adequate returns on their investments; and

Whereas enforcement of rent controls is in effect depriving property owners of the rights and privileges granted them in the Constitution of the United States; and

Whereas such denial of constitutional rights is tantamount to confiscation of property without due process of law; and

Whereas the continued enforcement of rent controls, now that all other controls have been terminated, constitutes class discrimination; and

Whereas this discrimination is greatly emphasized by the farm price-support program which guarantees return to the farmers while depriving property owners of just returns; and

Whereas the United States Government through the Department of Labor has encouraged, aided, and abetted organized labor in its drive to increase wages many times over during the same years that property owners were restrained from increasing rents thereby again emphasizing class discrimination; and

Whereas in both examples of rank discrimination herein exposed the beneficiaries are represented by powerful vote-controlling lobbies; and

Whereas such deliberate official Government discrimination suggests and promotes class distinction, discord, and hate; and

Whereas the function of providing and maintaining adequate housing is as important as providing food and clothing, both of which have been decontrolled and permitted to return to their normal status, while rent controls have been retained; and

Whereas the grave injustice done the property owners is graphically revealed and proven in exhibits A and B attached herewith; and

Whereas exhibits A and B are a tabulation of statistical data compiled and issued by

the United States Department of Labor, the Department of Commerce, and other Government agencies and bureaus; and

Whereas the accuracy of the data so compiled is, therefore, not open to question; and

Whereas the tables in exhibits A and B forcefully indicate the extent to which rent controls unjustly penalize property owners; and

Whereas there is no legal or moral justification for the continuation of rent controls: Therefore be it

Resolved, That the property owners of the city of New Orleans hereby urge the Congress of the United States to immediately terminate all controls over rental property.

EXHIBIT A

Percentage of increase and index of rents, cost of building, furnishings, and insurance during period of rent control

	Index		Percent of increase		
	1939	1942	1948	1939–42	1942–48
Rents	100	106.5	113.2	6.5	6.2
Building costs:					
Labor	100	[1] 117.3	276.8	17.3	136.0
Material	100	[1] 111.0	174.6	11.0	57.3
Total building costs	100	[1] 113.1	222.0	13.1	96.3
House furnishings	100	125.8	197.4	25.8	71.6
Insurance [2]	100	113.1	222.0	13.0	96.3

[1] These figures are for 1941; 1942 not available. Source: Table F5. Number and construction costs of new permanent nonfarm dwelling units started, by urban or rural location, and by source of funds; U. S. Bureau of Labor Statistics data prepared by New Orleans Association of Commerce, research department, Arthur S. Graham, director; break-down of building costs into material and labor was made according to the Federal Housing Authority estimate that labor amounts to about 60 percent and materials to about 40 percent of total costs at the present time.

[2] Increase in insurance cost indicated has no relation to changes in premium and applies only to increased amount of insurance required to cover present high replacement costs and also to comply with coinsurer requirements of insurance companies in order to qualify for full coverage on partial losses. Because Government statistical bureaus do not tabulate repairs and maintenance costs and because new building and replacement costs are relative to repairs and maintenance costs the index of building cost and percentages of increases shown above are used to indicate the increase in cost of maintenance and repairs which has occurred since rent control has gone into effect. Increases in cost of maintenance and repairs would be even larger if more recent statistical data were available.

EXHIBIT B

	Index			Percent of increase		Average percent increase cost of repairs by trade, 1942–48

[1] Labor only.

All-Out Controls

EXTENSION OF REMARKS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1949

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the New York Times of February 17, 1949:

ALL-OUT CONTROLS

A few days ago Government officials were testifying before a Senate committee on the administration's labor bill. Since that measure would abandon the prerogative granted the President under the Taft-Hartley Act to seek court injunctions in the case of strikes threatening public health and safety, the witnesses were asked how the administration proposed to deal with situations of this kind in the future. Their reply was that the President doesn't need specific statutory authority, since he already possesses inherent powers which he can invoke if such emergencies ever arise again.

But if the administration is extraordinarily coy and diffident when it comes to asking for authority to deal with labor crises, its inhibitions disappear as if by magic when the question is one that concerns industrial prices, profits, and production. Such problems it approaches with sublime confidence and with a singular eagerness for responsibility and authority. We have had numerous examples of this attitude in the past, but the so-called "Economic Stabilization Act of 1949," just introduced in Congress, makes all previous illustrations look like practice performances.

Superficially, this measure appears to be merely a repetition of the recurrent requests of the President for power to deal with certain material shortages that have carried over from the war. Actually, it goes far beyond that. The implications of the proposed legislation can be grasped only by understanding the philosophy on which it is based. Fortunately, the economic advisers to the President, who are obviously its principal architects, have thrown more than a little light on that point in the last few days. Dr. Leon H. Keyserling has warned us that business decisions must not, in the future, be swayed by psychology. Said he, in testifying recently before the Congressional Joint Committee on the Economic Report: "An industrial price, or profit or capacity policy which gears itself, not to the requirements for stability and growth throughout the economy, but rather to the expectation of economic decline, tends to bring on the very calamity which it fears." And he added: "No one industry or business can afford to act alone in the interest of stability."

Now, either this means nothing at all or it means that Dr. Keyserling believes that the Government is a better judge of how much should be produced by a given industry than is industrial management itself, guided by such signposts as prices, costs, and profits. These observations weren't without meaning. If any confirmation of this fact had been required, it was furnished in subsequent testimony by another Presidential adviser, John D. Clark. Dr. Clark has declared that the President must have the powers now requested, including the right of the Government itself to become a producer. And he has added: "The enlargement of productive capacity is so essential to continued maximum employment and production that neither the concealed dangers in any given plan nor the required scope of Government intervention should prevent action that will be effective."

The bill which would give legislative effect to this philosophy was prepared under the direction of Secretary of Agriculture Charles F. Brannan, and according to its author its immediate purpose is to meet the problem created by "critical shortages of some essential materials and inadequacies of production capacities, together with pronounced and continued increases in some price levels." * * *

The so-called Economic Stabilization Act, offered now, 3½ years after the fighting war came to an end, proposes, without even the justification of mounting living costs, to give the President a measure of control over the economy never previously granted a Chief Executive of the United States in peacetime. It would authorize the President to fix prices and wages, to put into effect priorities and allocations, and to use Government funds to expand production in key industries through direct Government construction. The administration could fix prices if a commodity's cost has risen, or threatens to rise with reference to December 1948. But this measure differs from earlier control programs in that it aims, not at controlling inflation, but at controlling one segment of prices, namely, those of industrial materials and products. Although maximums are mentioned for agricultural prices, the administration would enjoy abundant leeway in dealing with these by such hedge words as "parity" and "comparable" prices. Wage increases would be forbidden in price-controlled industries, unless a sort of peacetime War Labor Board, which would be set up under the legislation, should find them necessary—but at least a half dozen formulas are provided by which the necessity clause could be automatically invoked.

As a combination of political expediency and arrogant economic planning, this measure seems calculated thoroughly to alienate the support of every legislator who believes that the American system of free enterprise is not a philosophy that you doff with a change in the weather, a change of seasons or even a change in the political complexion of the administration.

Health Insurance Facts

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

Monday, February 28 (legislative day of Monday, February 21), 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Health Insurance Facts," from the Oregon Teamster of January 27, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HEALTH INSURANCE FACTS

The United States Congress is studying proposals for compulsory national health insurance. Opponents of such legislation, including the American Medical Association and individuals and groups who fear that this would be another step in the direction

of socialism, advance many objections to health insurance.

It is claimed that medical and health services will require a greater national expenditure than under the present system and the costs of administering the program will be too high.

Those who oppose national health insurance are sound on their first argument. It will cost more but of course a lot depends on the definition of cost. The failure to spend more money for health actually costs our Nation a great deal in terms of sickness, disability, and death.

Every year 325,000 people die. Some of these could be saved. Every year we lose 4,300,000 man-years of work. Every year we lose $27,000,000,000 in national wealth through sickness and partial or total disability.

National health insurance could substantially lower these costs of bad health to the American people.

The second charge, that the costs of administering the program will be too high, or at least higher than the administrative costs incurred by private groups or State medical societies sponsoring voluntary prepayments plans, does not appear to be valid.

According to available records, the administrative costs of Blue Shield, Blue Cross, and similar plans are about 13 to 15 percent of the total income.

This may be compared with the only example of compulsory hospitalization insurance in operation on the North American Continent in the Province of Saskatchewan, Canada, which has been conducting such a program for the past several years.

It is a fact that the cost of administering Saskatchewan Hospital Services Plan, which covers over 90 percent of the people in that province, is only 8 percent of the total income. The reasons for the lower cost in this Government program are not hard to find. A large part of the administrative cost of Blue Cross and other voluntary plans goes for soliciting and keeping members and for promotional purposes. This extra cost is unnecessary in a government plan.

American Policy in the Far East

EXTENSION OF REMARKS

OF

HON. ZALES N. ECTON

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, February 28 (legislative day of Monday, February 21), 1949

Mr. ECTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Harvard Law School Record of February 9, an analysis of Chinese-American affairs by Prof. Roscoe Pound, who recently returned from China where he served as adviser to the Ministry of Justice.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

American policy in the Far East ought to take into account more than China. It should take account of China, Korea, and Japan in one comprehensive and consistent policy—even one comprehensive Asiatic policy. Indeed it should be part of a world-wide policy of at least ranging ourselves with the constitutional governments which are endeavoring to set up democracies operating under law. Economic unification of the world, the bringing of every part of the world to our back door by radio and aerial transportation require that a foreign policy look at the world as a whole. It should look at this land or that with respect to the whole and as to the effect of what we do or leave undone upon the picture of the whole world.

Such has not been the American policy as to China since the war. Our policy has been one of consistent and insistent pressure upon the National Government of China to compromise with the Communists where no compromise was possible. Before the Chinese constitution was adopted, abrogation of the frame of government under which China had been unified in a national government was demanded and today, while the national government is functioning under a constitution, summary throwing over of that constitution is a prime item in the Communist demands. If any proof was needed, what has happened in Czechoslovakia is proof that no middle way is possible under Communist domination. It shows no less that Communists with Russia behind them will accept nothing short of complete domination. Witness what has been happening in Yugoslavia. Coalition of a constitutional government operating under a bill of rights with Communists is impossible except on the terms in which Mark Twain characterized the Biblical prophecy of the lion and the lamb lying down together—the lamb inside.

Our policy has been in effect to undermine the morale of an exhausted and war weary people by insisting that it could have peace only by yielding to the Communist demands by compromise amounting to abdication. We must remember that recent China has been long and severely afflicted by war. One might begin with the Opium War in 1840 when a western power forced opium on the Chinese government of that day. Aggression went on for a generation, and in 1885 France sliced off a great territory. There followed continual and increasing extortion of cessions and concessions by European powers and successive insurrections. At the time of the Boxer Rebellion the European powers and the United States intervened. There were no less than 11 insurrections in 25 years before 1911–1912 when the monarchy collapsed. Then followed a long struggle from 1912 to 1928 with the war lords. In 1931 the Japanese set up a puppet regime in Manchuria and began a series of aggressions culminating in the invasion in 1937 and 8 years of occupation of a large and richest part of the country. With the expulsion of the Japanese and while reconstruction was going on the Communists set up a civil war. All this weakened the will of the people to resist, and we have made it weaker by persistent calling upon the Government to give in. It must be remembered also that during the war, without the knowledge or consent of the Chinese people, we undertook to give away not a little of Chinese territory.

CHINESE COMMUNISM

I hear it said that Chinese communism is only a mild socialism, distinct in all but name from the Soviet brand. The conclusive answer to this can be seen in emphatic pronouncements from Chinese Communists themselves as to the place of communism in China in the world Communist regime promoted in Russia. Even more an answer is to be found in what has happened in Poland and in Czechoslovakia. What so-called liberation by communism means is brought out by Bernard Goldstein, the only leader of the Jewish community in Warsaw at the time of the liberation by Russia. Goldstein was a Socialist. But this was not enough. He tells us that he soon found that the liberation was but another destroying tyranny.

What speaks for itself is the flow of refugees by tens and hundreds of thousands from the Communist-occupied areas to national centers where the Government has found shelter for them, fed them, and provided work for them. There is no such flow into the liberated areas; it is only out of them.

Communist demand for abrogation of the constitution means abrogation of the bill of rights. The bill of rights in the Chinese constitution is not a mere preachment. It is safeguarded by an independent Judicial Yuan—an independent coordinate department of government—in which the grand justices have the ultimate power of interpreting the constitution and are authorized to enforce the express provisions of the constitution that executive acts and ordinances and legislative acts in contravention of the constitution are null and void. Demand that this excellent modern constitution, put into effect at the end of 1946, be thrown over before it has had a fair chance to operate, and while the Government was in the throes of reconstruction after a long hard war on its own soil, is but an example of what Communists do the world over in setting up despotic military regimes intolerant of individual rights and repressive of all freedom of belief, opinion writing, and teaching.

AMERICAN PRESSURE ON THE CHINESE NATIONALIST GOVERNMENT

For 3 years in which I served as adviser to the Chinese Ministry of Justice, I saw the effect of constant pressure from America on the Chinese Government while it was struggling with a huge task of reconstruction. It was setting up a constitutional government and putting the constitutional organization in operation thereunder. It was restoring the courts and judicial organization and the administration of justice, disrupted by the Japanese. It was restoring the educational system and rebuilding educational institutions. It was restoring and rebuilding penal and correctional institutions, often torn down and everywhere left seriously impaired by the Japanese occupation. It was reconstructing the process of administration. It was rebuilding bridges, railroads, roads, and lines of communication and transportation destroyed or dislocated by the Japanese during 8 years of holding the greater part of the country. Within a year from the time the National Government got back from Chungking the work of reconstruction had made marvelous progress. I conducted a thorough survey of the administration of justice in three provinces and six cities, and could report to the ministry that the courts, the codes, and the correctional institutions were functioning well, and in spite of many difficulties growing out of the Japanese occupation the administration of justice in eastern China would bear comparison with the administration of justice on the continent of Europe and in America. There has been a tendency in America to be unreasonable in what was expected of the National Government in China. It was impossible to expect 100 percent constitutional democracy and 100 percent perfect administration of justice of a country of continental extent and 400,000,000 population which had never known democratic political institutions nor justice, according to law in the western sense. It was impossible to expect this perfection to be achieved in a generation after the revolution of 1911–12, two thirds of which was taken up with fighting to establish a National Government against the war lords and in standing out against Japanese invasion and occupation, and the remaining time largely taken up in resisting the Communists. When looked at on the background of those difficulties the work of the National Government since 1928 deserves all praise.

We must bear in mind that China had to suffer more and fight longer than any other of the allied countries or German-occupied countries in the last World War. What the Government had to do was to set up a well-organized, modern, constitutional democratic state operating according to law.

When this was done it could go about making fundamental economic and social reforms. But to try these while endeavoring to set up constitutional government might have defeated both. Chinese popular habits of thought and conduct which had crystallized for ages were not to be remade over night. As I have put it before, form had to come before reform. Let us not forget that we have serious problems of race prejudice and discrimination and of class relations in this country which we have left unsolved for much more than a generation. We do not consider our polity inefficient or reactionary because we have not solved them.

COMMUNIST CLAIMS AS TO SOCIAL REFORMS

I have heard it said that explanation of the progress made by the Communists in China is to be found in neglect of the National Government to take up and push certain fundamental social reforms undertaken and carried forward by the Communists. I have heard it said that these are four: Education of the peasantry, agrarian reform, the youth movement, and the advancement of women.

I suspect that Communist education of the peasantry is simply indoctrination in communism. Over a large part of China the National Government has had to do over again much of what it had achieved in the way of popular education. As to education of the peasantry, I have in my possession some charts which I found in more than one place which were used for teaching good agricultural methods and how to read at the same time. One institution in Soochow is devoted to the training of teachers to carry forward this mode of instructing the peasants. It will not do to say that the Government has been doing nothing for peasant education.

I have heard it said repeatedly that the Chinese peasant is under a feudal system of land tenure. Nothing could be more mistaken. The difficulties of the Chinese peasant do not arise from feudalism or from large estates that need breaking up. As far back as the third century B. C., the Chinese abolished feudal tenure and primogeniture. The agrarian problem in China grows out of the very success of that reform which caused the land to be divided and subdivided endlessly. The trouble is not too large estates but minute farms too small to sustain a population sometimes denser in rural areas than in cities of the West. This has been aggravated by the introduction of a Western law of inheritance which makes for increased subdivision. Where there had been a household inheritance, a system borrowed from Continental Europe has introduced a modern individual inheritance. When an owner of a small tract dies leaving five children instead of the household succeeding, the inheritance must be divided into five. This makes against use of the implements we use, and yet the Chinese farmer gets a larger yield from an acre than cultivators of Europe or America. Next to minute subdivision of the land his troubles arise from the complete dislocation of transportation and so of distribution during the Japanese occupation.

As to the youth movement it has gone forward in the domain of the Government quite as much as elsewhere in the world. The Communists have no exclusive claim in this respect.

As to the advancement of women, subdivision (7) of article 26 of the Constitution provides for election by women's organizations of delegates to the National Assembly or National Peoples Congress, the body which elects the President and Vice President, and has power of amendment of the Constitution. At the session last spring in which the constitutional Government was organized a number of women sat as delegates. Also a number of women have been elected as members of the Legislative Yuan, and in the course of the survey of the administration of justice in eastern China I found women judges in many of the courts. In each of the cities which I visited I found a woman judge sitting in domestic relations cases and cases of juvenile delinquency. I doubt very much whether the Communists have done anything comparable to what the Government has achieved in this connection.

I have heard it said that while the Government was carrying on the war, the Communists were reaching the people through a program of social reform. What this really comes to is that while the Government was exerting itself to the utmost to set the country free from the Japanese occupation, and since the war has been exerting itself to the utmost with difficult problems of reconstruction, the Communists have been active in indoctrinating in communism and in destruction.

OBJECTIONS RAISED TO STANDING BY THE NATIONALIST GOVERNMENT

Let me speak briefly of the objections which are raised to our standing by a government which we treated as an ally during the war—a government which is one of the United Nations. It is said frequently that the Chinese officials and public men are reactionary. In my experience what is said to be their reactionary attitude is simply one of inquiry whether measures proposed to be borrowed from the western world are applicable in China. It does not take long for an adviser of one of the ministries to learn that much which he has been inclined to urge at first sight needs thorough examination to be assured that it can be made to work under the conditions in which it must be applied. Much is said about corruption of Chinese officials and public men. I inquired very carefully as to corruption in the administration of justice, conferring with bankers, businessmen, industrialists, members of chambers of commerce, and newspapermen. In no case could I get anything specific. Under the monarchy corruption was notorious. There was a general feeling that under the courts as they are today nothing but a tradition of suspicion could be shown. One newspaperman suggested to me that the pay of the judges was so inadequate that it stood to reason they must be corrupt or they could not live. In fact I found the judges with inadequate salaries eke out their meager salaries by teaching law. This is something which such lights of our American bench as Joseph Story and Thomas McIntyre Cooley did and many other judges have had to do in American judicial history. It is said also that the Chinese officials and public men are ignorant and inefficient. Association with them for 14 years has convinced me that this is quite unfounded. Let me name a few with whom I had especially long and close association. Dr. Wang Chen-hui, head of the Judicial Yuan, is a D. C. L. of Yale and barrister of Gray's Inn. He is recognized as an outstanding jurist everywhere. His translation of the German Civil Code into English is regarded as a classic. Dr. Hsieh Kwan-sheng is a Docteur en Droit of the University of Paris, author of a history of Chinese law in French, published in France. He did signal work in keeping the machinery of justice going during the war and his experimental court at Chungking to try out the draft code of civil procedure was a real contribution to the science of law. Dr. Su, the Minister of Education, a Doctor of Philosophy of Berlin, is a learned scholar and liberal administrator of great good sense. His judgment as to what is practicable in legal education in China has been of real value for reconstruction. Judge Y. H. Kuo, president of the High Court of Shanghai, would be a notable judge anywhere. Just before leaving I made a report on his draft of a statute on conflict of laws. It is a masterly piece of work much better than the draft prepared for the Pan American Congress of codification of law for the Western Hemisphere. No American city has a better court than his.

I have heard complaint that the Chinese officials do not take advice. On the contrary, I suspect they sometimes have relied too much upon advice from experts from the Western World unacquainted with the conditions to which their advice was to be applied. At any rate, I have found that the Chinese officials give marked attention to advice so far as money is available to carry it out. Where they do not it is usually because of lack of money to do what ideals indicate. Under the constitution the legislature controls the funds and officials can do no more than appropriations allow.

Complaint has been made in this country that the Government ignores minority parties other than the Communists. These minority parties, however, are made up of leaders with few or no followers as it was demonstrated at the time of the first elections under the constitution when the majority party agreed to withdraw its candidates in certain districts and leave a free field for the minority parties. Very generally candidates ran by petition and defeated the candidates of these parties at the election. Moreover one of the leaders of a minority party which has probably the most following is listed by the Communists as a war criminal along with the leaders of the majority party.

I hear it said also that the Government has been guilty of gross violations of the constitution. As to this it should be noted that the constitution was not in force until the end of 1946 and the Government was not fully organized under it until the spring of 1948. Much of what I have read is based on conditions during the war which, of course, were abnormal. In the second place, it must be remembered that civil war is still in progress. We in America have not been too scrupulous to enforce the Bill of Rights or adhere to the strict terms of the Constitution in times of civil war or even of world war. President Lincoln was accused of violation of the Constitution during our Civil War. The action of our Government toward citizens of Japanese birth in California or its setting up of military rule in Hawaii and superseding of the courts there during the last world war served to remind us that a bill of rights is sometimes embarrassing to a government under the stress of war. But certainly it is not for the Communists to preach adherence to a constitution.

Again, it is complained that the Government employs a secret police. But we maintain a secret service and certainly the FBI do not go about in uniform. Moreover, the third degree has had a high development with us even in time of peace. When war is in progress and a fifth column is active a government cannot confine itself to a uniformed police. Detectives in plain clothes are an everyday matter even in time of peace.

What can the Communists show in the way of constructive achievements even remotely to compare with what the Chinese National Government has done under the greatest of difficulties in the way of building up a constitutional regime and in reconstruction after 8 years of enemy occupation?

WHAT COMMUNIST DOMINATION OF CHINA WILL MEAN

Will Communist domination mean a country with which we in America can have commercial relations such as we have had increasingly for 100 years? Will it mean a country with which we can have the cultural relations which we have maintained increasingly for more than 50 years? One has only to look at the pronouncements of the Chinese Communists as to American relations to answer these questions.

What, then, are we to do in our relations with a Communist regime? For one thing, I submit we must bear in mind the effect of

what we do on Korea, on Japan, and indeed on all Asia if not on continental Europe. We must remember the effect of what we do on the remnant in China for the situation need not be more despaired of than when the Japanese occupied the best part of the land. If we give continued aid and comfort to the Chinese Communists by our attitude toward even the remnant of the national government we shall be undoing what we have been striving to do toward maintaining democratic constitutional government in other parts of the world.

Keep Uncle Sam Solvent

EXTENSION OF REMARKS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1949

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following broadcast by Henry J. Taylor on Monday evening, February 14:

KEEP UNCLE SAM SOLVENT

The Government is pouring out money these days, and some people feel they may as well ride the gravy train. But I think the gravy train will be our funeral train if we don't watch out.

If we want to keep our jobs, we've got to help keep this country solvent. Some place along the line we must do a little choosing. We can't spend everything, spend everywhere, be as blind as bats, and still not go broke.

Most politicians, left to their own devices, will bankrupt anything. That's the record. I'd like to mention tonight some of their plans for spending at our expense. You may find it difficult to believe these plans, but they should be revealed to the public. For if America goes broke, the public goes broke. You go broke. I go broke.

NO WORLD POWER WITHOUT HOME POWER

Our Washington spenders and taxers say that they want to put the world on its feet. But unless some limits are defined, they will try to put so many people in the world on their feet that they will knock us all off our own feet here at home. Then what will happen to our security and to world security? What will happen to world prosperity and to world peace?

The future of the peace of the world depends, uniquely and entirely, on what happens inside the United States. Our world power depends on our home power. If our home power is lost, our world power is lost.

THE RUSSIANS' BET

What are the Russians betting on? They are betting we will knock ourselves out in our own gymnasium.

Listen to Lenin. He laid this important idea right on the line. Lenin said, "Some day we will force the United States to spend itself into destruction."

How can our political spenders be so blind as not to see that this is Russia's fundamental aim? They preach security from the cradle to the grave, as well as unlimited taxing and spending to achieve it. But though we were cradled in liberty, we may well get a grave in bankruptcy.

UNCLE SAM EVERYBODY'S SANTA CLAUS

Although we have less than 7 percent of the world's population—and have already undertaken enormous military commitments to maintain world peace—we are now to charge right into even wider and wider plans, to give nearly everything to everybody, any place and every place, or go broke in the effort.

For example, the newest spending plan will reveal that we are to be taxed for (1) schools and highways in Cuba; (2) railway expansion in Mexico; (3) flood control in Brazil, a new global boondoggle on the Amazon River; (4) industrial development in Colombia, Peru, Ecuadro, Bolivia, and Chile; (5) water power in the Argentine; (6) industry in Africa, India, Pakistan, along with Rhodes; and (imagine this) a beautiful belt of hotels. Apparently Uncle Sam wants to stop being called Uncle Sap and start being called Uncle Statler.

TAX RELIEF FOR OFFICEHOLDERS ONLY

Meanwhile, officeholders are still being added to the public pay roll here at home. The Federal pay roll alone has reached $9,000,000,000 a year.

Moreover, top Government employees have voted themselves salary increases, along with amazing and highly questionable tax-exempt allowances. They've given themselves tax relief that separates their own tax burden from the burden carried by all other citizens.

But I, for one, think that there's a certain amount of immorality in this—to say that taxes must go up, then vote themselves enormous exemptions from taxes and vote those taxes onto the backs of you and me.

What does the bill add up to? What does it mean to every man and woman who is working at a tax-paying job?

THEY CAN TAX UNITED STATES INTO A BUST

Assuming that the people give the tax-exempt spenders all they want to spend, the Government in the next 18 months will consume $66,000,000,000. Ten years ago the spenders broke all records when they spent $14,000,000,000 in the same period in which they now propose to spend $66,000,000,000.

This increase alone is at the rate of about $1,400 in new burdens against every American family in your land and mine. It comes on top of a burden we already carry—the largest mountain of debt ever placed on a people in the history of the world.

Do you wonder I say that our Washington spenders must watch their step or they will tax us into a bust? This country's present prosperity is a very touchy thing. It won't stand much more kicking around from Washington, D. C.

The proposed increase in taxes really amounts to $7,000,000,000. It's not $4,000,000,000 more—it's really $7,000,000,000 more, when the full charges are added. That's the simple truth. Yet, not one penny of tax increase would be necessary if waste were cut—as it should be cut, could be cut, must be cut.

PEOPLE EVERYWHERE ARE WORRIED

I have just been out in Illinois and Iowa and Kansas—in the heart of the farm country. I talked with farmers, storekeepers, country bankers, and a good many housewives. I talked with anxious workers in railroad yards, where railroads are now being forced to lay off a number of men. Saturday and Sunday I was in upper New York State, around Buffalo and Lockport, and tonight I'm here in Michigan. In all these sections, the same thing applies.

Whether Washington knows it or not, people are worried. Instead of a Roman holiday, this should be a day for very sober action in Washington, D. C., with respect to taxes, labor laws, and everything else.

The working people of the country foot the bill. They have a right to insist that the money they earn should not be thrown around like water.

TIME FOR COMMON SENSE AND PRUDENCE

Taxes should come down—not go up. This is something for public opinion to take hold of—and now. The politicians should be told that the party is over.

This is no time for any more hey, nonny-nonny and hotcha-cha. This is no time to be wasted into oblivion and taxed into a bust. Times are too serious for that. This is no time for global boondoggling, or for boondoggling at home, either. This is no time for anything but common sense and prudence on the part of our tax-exempt spenders and taxers.

TAKE HEART

As good citizens, we should be too proud of this country to preach our indifference about a matter of this kind, or to be outshouted. We are not indifferent—and we need not be outshouted.

The future of our homes is at stake. As the spending and taxing of this country go, so goes the country and so go we all.

But take heart. The great days of this country are by no means done. If our high-taxers sober up in time, and give the average workingman a chance, we will find that we have not even glimpsed the borders of our individual and national achievement. We will still have a real chance to go ahead.

If we did not believe this, we could not be believers in America. Because that faith is America—and America is your land and mine.

National Health Service

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 28, 1949

Mr. MILLER of Nebraska. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the Washington Sunday Star of February 27, by Reginald Hale-White, M. D. It gives the doctor's view on how the National Health Service is operating in Great Britain.

DOCTORS OBJECT TO LOW PAY AND OVERWORK IT CAUSES—TRIVIAL COMPLAINTS CLOG THE CLINICS AND CONGESTED SURGERIES CAUSE DELAYS FOR BONA FIDE CASES

(By Reginald Hale-White, M. D., vice chairman of the British Fellowship for Freedom in Medicine)

LONDON.—The Fellowship for Freedom in Medicine was founded as the outcome of grave anxiety caused by the uncontestable and alarming decline in the quality of doctoring in the British Isles since the National Health Act came into operation in July 1948. It aims at restoring and preserving freedom and professional standards in the medical services of this country. It is concerned also to safeguard freedom in all matters pertaining to medical education, and to protect medicine from becoming a state monopoly. The fellowship is committed in principle to state medical services covering the entire population. There are right means and wrong means of achieving this end. The means adopted by the government have produced chaos.

That standards of doctoring have deteriorated is certainly not the fault of the profession. The blunt fact is that doctors are now desperately overworked. Why? Mainly because the bureaucrats who devised the National Health Service either have no knowledge whatever of human nature or pretend that nothing of the sort exists. The natural inclination of most people when told they can have something for nothing is to ask for rather too much of it. If, when the state

took over British railways it had been announced that everybody must contribute a pound a year and could then travel ad libitum, millions would have been journeying to land's end for no reason at all. That is precisely the kind of thing that is happening under the National Health Service.

DESERVING CASES SUFFER

It is not uncommon nowadays for the urban general practitioner to have a queue of 60 at each of his surgeries (daily consultation sessions at his own rooms). Before the introduction of the service the average attendance per surgery would be a dozen to a score. Of the 60 registered patients in the doctor's queue now it often turns out that perhaps half are not really ill at all. Their complaints are trivial. They have been attracted by the prospect of free treatment and free medicine. The surgery is increasingly regarded as a state gift shop. People drop in to get a prescription for a truss, or a sleeping draught, or a roll of medicinal cotton wool. The harassed doctor is often tempted to make out prescriptions not because they are needed, but to save time.

The longer the surgery queue, of course, the harder the lot of the really ill, who, if they happen to be at the wrong end, have to wait until the more superficial cases in front have had their trivialities attended to. Insofar as the scheme is insuring treatment for those who previously could not well afford it, the fellowship rejoices, but in the present congested state of the surgeries it is often the deserving cases who get the worst deal. Most general practitioners hold two surgeries, one in the morning and one in the evening, with home visits between. In the old days, when private practice went hand in hand with a limited State health-insurance scheme (for wage earners of relatively modest means only), this routine worked smoothly and efficiently enough. Nowadays it has become slavery. In trying to cure other people, the doctor is in danger of killing himself. What is more serious, he no longer has the time for careful and considered diagnosis—the ground work of all medicine.

EXAMINES ENTIRE FAMILY

The 9 a. m. surgery, which once lasted for perhaps an hour and a half, commonly goes on till noon. The 5:30 p. m. surgery may not be over till 10 p. m. The home visits which complete the general practitioner's day used to average, perhaps, 10 minutes each. The national health service has changed all that. Not only is the wage earner (or professional man) entitled to free medical attention, so also are his wife and children. This, I agree, is a wholly admirable provision, but, more often than not, it means that the doctor, once he puts his head around a patient's door, cannot get away in under half an hour. He is usually asked to examine the entire family. In one way and another, he is on the stretch for 13 hours a day. After bedtime there are the usual birth and emergency calls. Should there be any odd half hours of spare time, these are devoted to the endless clerical work which the scheme entails. Every surgery now has its filing cabinet of record cards. On these every illness of every registered patient is entered—for inspection, if need be, by authorized government officials. There are also stacks of official forms. The doctor has to issue two certificates before a sick man can stay away from his job for a fortnight and a third authorizing him to return when better. There are forms to fill for people who want free milk, extra milk, exemption from jury service, extra allocations of coal, free transport to the polling booth, and other benefactions. The rulings and schedules of the Ministry of Health have to be studied with care. If, distracted by pressure of work, the doctor makes out a prescription for a nerve food which happens not to be on Whitehall's latest free list, the patient is duly supplied by his druggist, but it is the doctor who must foot the bill.

Many doctors find that the desk and administrative work which the service has piled on top of their purely professional duties is too much for one brain and one pair of hands. They have almost given up hoping for the Government's promised local health centers, at which doctors were to have found all the secretarial and nursing aid they needed. There were to have been hundreds of these centers up and down the country. They would, in part, have supplemented, in part supplanted, the surgeries of some 25,000 doctors, mostly in the towns. As outlined by Mr. Bevan, the Health Minister, the project was in many respects alluring. Upkeep of private surgeries has always been a heavy item in the private doctor's overheads. Unfortunately, the entire scheme had to be shelved because of the shortage of building labor and materials. Nobody could have been more acutely aware of these shortages than the health minister himself, whose department has charge of Britain's entire housing program. Plans have only just been completed for the first local health center. It is not expected to be built for 3 or 4 years. Is it surprising that practitioners should feel a little cynical when promise and performance are compared?

For the secretarial help which was to have been provided at the health centers the average general practitioner relies upon his wife. It is she who, unpaid, types for him, answers the telephone, opens his door, helps with the form filling, enters up his home-visit diary; all this on top of family and household work, which are a whole-time job in themselves.

RETURNS INADEQUATE

The provisions of the act are such that it is easy to misjudge what doctors earn. For example, it is pointed out that the individual doctor may have up to 4,000 patients on his list. In some urban areas a man might be able to undertake this maximum number if he happened to be fatigue-proof. It is a fact that a few doctors are earning more than they did before. But a more typical list would be one of about 2,000 patients. A list of 2,000 patients would keep most men busy; in the case of rural practitioners, very busy. The capitation fees for 2,000 patients come to about $6,400, from which at least 30 percent must be deducted for expenses. This leaves the doctor with about $4,000 a year, on which he has to pay income tax. His net income is undoubtedly an inadequate return for very hard work, following a long and expensive training. He cannot possibly live or educate his children in a manner commensurate with the services he gives.

The doctor may, if he wishes, of course, stay out of the scheme, and depend for his living on private patients. Or he may be half out and half in, combining private with State service. Such, at least, is the theory. In many districts, however, private practice is dying out. When the National Health Service was being formulated, Mr. Bevan blandly assured the country that private practitioners would be at liberty to carry on as before if the scheme did not interest them. Actually his measures are putting the private men out of business—and seem deliberately designed to do so. The fellowship is constantly getting evidence on this point. Of two letters recently received from doctors, one says: "My private practice has completely disappeared." The other says: I now have three private patients left." The fact is, that while many patients prefer to avoid NHS queues and to consult their doctors on a fee-paying basis as before, few are prepared to pay into the bargain for drugs which everybody else is getting nominally free of charge. The private patient is as entitled as the rest to free pills, medicines, spectacles, false teeth, and what not. After all, he pays his contribution under the scheme like anybody else. But the laws tells the private patient, "No, you must pay for these things twice over; firstly as taxpayers and health service contributor; second over the druggist's counter." Here is an anomaly that cries out for reform.

REMEDY FOR DISASTER

However, the paramount question is: How does the general public fare? They gain in the matter of free dentures, spectacles, and such like; but when their appetite for such benefits has been satisfied they will find at what cost these good things have been purchased. There will be a service run by overworked and tired doctors who cannot give the time or thought necessary for good work. The public will find their doctors fast becoming civil servants who are more responsible to Whitehall than to their patients. That treasured, though undefinable thing, doctor-patient relationship, does not permit of third-party interference; and it is already going fast. In short, the service will be entirely soulless.

This disaster can only be remedied by far-reaching amendment of the act. Matters of pay can be settled by regulation. One suggestion is that the capitation fee should be much higher for, say, the first 1,500 patients, thus discouraging large lists. Another suggestion is that each patient shall contribute a small sum for each item of doctor's service in addition to his weekly contribution. In this way frivolous misuse of the service would be stopped.

But, urgent though the financial aspect may be, there are matters of even greater importance. The dictatorial powers of the minister must be limited; private practice, the only safeguard against state monopoly, must be encouraged and the doctor must once again be given the chance of serving his patients according to their needs and his conscience, and not according to the edicts of the ministry.

Veterans' Housing

EXTENSION OF REMARKS

OF

HON. WESLEY A. D'EWART

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. D'EWART. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

House Joint Memorial 9

Joint memorial of the house of representatives and the senate of the State of Montana, to the Congress of the United States, to the honorable United States Senators JAMES E. MURRAY and ZALES N. ECTON, and to the honorable Representatives in Congress, MIKE MANSFIELD and WESLEY A. D'EWART, relating to veterans' housing

Whereas we have been informed that Raymond M. Foley, Federal Housing Administrator, has told you that the Nation needs some 18,000,000 new dwellings in the next 10 years; and

Whereas a portion of that need for new housing exists among veterans in the State of Montana; and

Whereas many of the citizens and the residents of the State of Montana believe that the need for furnishing assistance to these veterans in building homes for themselves and families is of paramount importance to the welfare of this State: Now, therefore, be it

Resolved by the house of representatives (the Senate concurring), That this legislature respectfully petition the Congress of the United States to pass legislation at the earli-

est possible moment which will aid and assist veterans in building homes for themselves and their families; be it further

Resolved, That immediately upon passage a copy of this memorial be forwarded to the Honorable JAMES E. MURRAY and the Honorable ZALES N. ECTON, Senators from the State of Montana, and the Honorable MIKE MANSFIELD and the Honorable WESLEY A. D'EWART, Representatives in Congress from Montana, by air mail.

Protection of New England From Economic Discrimination

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 28, 1949

Mr. PHILBIN. Mr. Speaker, under unanimous consent to extend my remarks in the CONGRESSIONAL RECORD I include therein recent editorials entitled "A Goal To Unite New England" and "Local Industry Menaced" from the Fitchburg Sentinel concerning the basing-point system and the importance of uniting New England behind a constructive economic program.

It is very interesting for me to note that these excellent editorials stress the need for close and effective cooperation between various industrial, labor, and civic groups in order to promote sound and lusty economic conditions in New England.

I personally do not think too much emphasis can be placed upon the present importance of united action to protect New England from economic discrimination and to revitalize our industries and consequently extend employment and business opportunities. Our working people depend upon healthy and thriving industries. That is why it is of paramount interest at this time through a union of private and public-interested groups to map a program which will prevent further recessionary trends and reestablish our industry and economic system on a secure foundation.

LOCAL INDUSTRY MENACED

Associated Industries of Massachusetts has laid before the Senate Trade Policies Subcommittee the results of its study on the basing-point system and a Supreme Court decision which has thrown the traditional system of differential freight rates into confusion. Associated Industries has declared in favor of a bill filed by Senator JOHNSON of Colorado, which is similar to one filed in the House by Congressman PHILBIN; and the observations of the Massachusetts manufacturers are parallel to those made by Mr. PHILBIN when he spoke on the measure before the House.

Chief objective is to clear away confusion resulting from the Supreme Court decision and to protect Massachusetts capital and labor by making certain that previous freight-rate differentials will be guaranteed by congressional action. Roy F. Williams, for Associated Industries, reminds the Senate committee:

"Massachusetts has no mines or other deposits of basic raw materials. We, therefore, must import all the raw material we must use in our industries and pay the freight from distant points, and at rates that are constantly rising. It is of the utmost importance to us if we are to survive as an industrial State that our freight bill be equalized with that of our competitors."

Associated Industries conducted a questionnaire survey of 1,800 manufacturers in this State and on the basis of the study concluded that if the present situation is not clarified not only will Massachusetts plants lose profits, but Massachusetts workers will lose jobs and some Massachusetts industries will be liquidated, or forced to move out of the State closer to supply and markets.

As Mr. PHILBIN urged, appeals should be addressed to our Senators and Congressmen that the Philbin or Johnson bill, or some similar measure, be passed. Here is a proposition on which all elements of the Massachusetts population should be able to come to quick agreement and reveal a united strength before Congress.

A GOAL TO UNITE NEW ENGLAND

Congressman PHILIP J. PHILBIN of our third district has filed a bill whose subject matter is too complicated to produce a flood of letter-writing to Congress, but is nevertheless of utmost importance to every family in Fitchburg and all of New England. He urges careful study of it by local government units, labor, management, and various organizations concerned with the welfare of New England.

It has to do with freight-rate differentials and the so-called basing-point system. Under traditional practices New England manufacturers were able to compete in prices with manufacturers in distant parts of the United States with the basing point system which in general permits freight absorption by sellers and shippers and insures relatively equal competitive advantages for all regions and sections in the national market. It is obvious to the most casual observer that such a system is vital to the survival of many industries in New England, which must draw their raw materials from distant regions and must sell most of their output outside New England.

A decision by the United States Supreme Court threw this traditional system into confusion and uncertainty. Mr. PHILBIN's bill aims to remove the confusion, and at the same time to protect business and the consumer against illegal conspiracies, combinations, and agreements in restraint of trade, monopoly, and unfair trade practices and competition.

In a speech before the House on his bill Mr. PHILBIN remarked:

"It is asserted by business groups, economists, and experts who have studied the broad, intricate ramifications of this question that irreparable damage will be done to our industry and widespread unemployment will directly ensue unless our New England industries are able to compete on an equal price basis with competitors in the national field. The available evidence indicates that with basing points eliminated freight costs will increase, industries will be crippled and liquidated, or required to move to other localities."

The decision of the Supreme Court, if allowed to stand without rectification by Mr. PHILBIN's bill or similar clarifying legislation, would result in literally cruel punishment economically of New England for no fault other than being located at the extreme northeast corner of the Republic, removed from sources of raw material and from the markets for its output.

Through war and peace, New England has supplied for centuries the sinews of national strength by its manufactured products, made possible under the traditional basing-point system with its freight-rate differentials. Is this great workshop of the Nation, a vital part of the arsenal for democracy, to be penalized now "under tortured concepts of various and wholly desirable trade-regulatory laws?" The answer lies not only with Congressman PHILBIN and others in Washington, but also with the chambers of commerce, industrial and trade organizations, mercantile groups, labor, management, and everybody concerned with the problem of keeping New England economically sound and lusty.

Mr. PHILBIN hopes that all such individuals and groups will appear before committees of the Congress to urge a careful study and every prompt remedial action necessary in a situation which could have such dire consequences to New England.

Too often those who have the welfare of New England at heart feel that they are stymied in their efforts to protect its interests, that they are fighting against inevitable economic and social trends; but in this instance there is offered a specific issue on which they may draw the sword and go forth to battle for New England. May Fitchburg and the Montachusett region be found in the vanguard of battlers seeking to erase the uncertainty and confusion caused by the Supreme Court decision.

Visit of Speaker Rayburn to Tennessee

REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, February 28, 1949

Mr. EVINS. Mr. Speaker, on Thursday last, February 24, our beloved Speaker of the House of Representatives visited Tennessee, with a number of our colleagues in Tennessee, and addressed a tremendous Jackson-Jefferson Day dinner.

As we all know, the Speaker is a native of Tennessee, and his return to his native State was a welcome and happy occasion. He spoke to an overflow crowd, and although I was not present I received a telephone call in the midst of the occasion that 400 people were on the outside waiting to get in, and they asked me if I could do anything at all to get them inside.

I ask unanimous consent, Mr. Speaker, that your able address be included at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee [Mr. EVINS]?

There was no objection.

ADDRESS OF HON. SAM RAYBURN, SPEAKER OF HOUSE OF REPRESENTATIVES

Chairman Evans, Governor Browning, Senator Kefauver, my colleagues in the House of Representatives, who have done me the honor to journey down to Nashville to see me, my fellow Democrats of the great State of Tennessee:

It is a happy privilege that I have this evening in coming back to my native soil, the soil of the great volunteer State, and I would be untrue to myself and to the blood that courses through my veins if I did not say that I am deeply touched and greatly honored that my kinsmen and the descendants of the friends of my father and mother from Roane county have come out to greet me this evening. In those hills of East Tennessee, a rugged country, rugged men and women grew to manhood to serve their day and their generation.

IN POLITICS 42 YEARS

I have been in politics for nearly 42 years. Twenty-two times the people of my county have honored me by supporting me. Nineteen times the people of a great congressional district have honored me by choosing me as their spokesman in the greatest legislature upon all this earth.

I have served in the House of Representatives with more than 2,300 men and women. Many of them have left me there and gone to what Senators call the upper body. There is no upper body in Washington. We are coordinate and of equal power.

Sometimes people say that men in public service have deteriorated in ability. Looking back over these 36 years with all of these men I have served with in the House of Representatives, and the many, many Senators that I have known, I say to you that the Members of the Senate of the United States and the House of Representatives today are men of as high character and as great ability as any Members who ever served in these Congresses that I have been a member of.

RICH IN HISTORY

Tennessee, rich in history, has today in the Senate and in the House of Representatives men of as high character, as noble purpose, and of as great ability as this or any other State ever sent to that high council.

And so I am glad to come to Tennessee and before their friends and constituents attest for your Representative in that great body. I also am proud to come to Tennessee and to this great outpouring of Democrats to give you greetings directly from our great leaders.

As a Republican the other day described in a Lincoln Day dinner the greatest political tornado that had struck the United States in a century, Harry S. Truman. It was his courage, his fighting spirit, his never-say-give-up that led us to victory in November.

TALKED IN NINE STATES

Now I have talked in nine States. Senator BARKLEY, probably the greatest campaign speaker in America, talked in many States. Some people tried to tell us that we had something to do with the election of Harry Truman, but I say to you that 95 percent of the credit belongs to the fighting President of the United States.

I am glad to come to Tennessee because I am a Democrat, without any apologies here or elsewhere for being a Democrat. Some people wonder at my success in politics, being elected all of these times. I have been elected because I have played the game as a regular Democrat every election year. I never saw a Democratic platform, State or National, that I endorsed every plank in but in no Presidential election, nor in 1948 was I going to let one plank in the Democratic platform drive me out of the Democratic Party.

ROOM ENOUGH IN PARTY

There is room enough inside our party for everybody who believes in government, who believes in fair play, who believes in equal opportunity, yea, who believe in liberty and in democracy. The State of Tennessee has given to the Nation many of its great, and it would have been enough if Tennessee had done no more for civilization than to have given to it the imperishable name and fame of Andrew Jackson. Tennessee gave to America and to the world the greatest Secretary of State since Jefferson in the person of Cordell Hull.

CALLED RUBBER STAMPS

Oh, we are called rubber stamps in Washington many times. I was in that position where I many times was called a rubber stamp because I went along with everything Roosevelt wanted. Well, that wouldn't have been so bad. But each Monday morning the Speaker of the House, I should say the Vice President, the Speaker of the House, the majority leader in the Senate, and the majority leader in the House sat down with President Roosevelt, as we do now with President Truman.

For an hour or more there we thresh out the program and the policies. When the decision was made up by a majority of that meeting I went along because I was on the team, and if I couldn't have gone along with a majority, I'd have gotten off the team.

So I say to our Democratic friends that were a little wayward in the last election that there is room enough back under the tent for all who believe in the policies of Jefferson and Jackson. I'm proud to be a Democrat because I know something about the history of our mighty Nation.

MOUNTAIN PEAK DEMOCRATIC

The mountain peak in American politics, since Washington belonged to no party, has been Democratic. Many forward-looking men have all been criticized severely; they've been called Socialists, they were first called Populists, and then they coined the word Socialist, and now in some sections of the country and in some groups, if you are a friend of the people, they want to call you a Communist. Let me tell you a few of the reasons why we should be proud to be Democrats:

Thomas Jefferson was the greatest Democrat that ever lived at any time in all the history of the world. He was a Democrat because he believed in the capacity of the average man and woman under proper leadership to govern themselves. He was called a radical.

JEFFERSON CALLED RADICAL

The Tidewater farmers of Virginia called him a radical and a Socialist. They said he has gone off with the Rednecks and the hillbillies of the mountainsides. We do not remember the name of any Tidewater farmer, but we do remember the name and glory in the fame of Thomas Jefferson.

Jackson was cartooned as no other man in the history of American politics was cartooned, but his detractors—long since their names have passed into the shadows and they are not known.

PEOPLE CALLED ON PARTY

Take every hour in American history when forward-looking statesmanship has been needed, when we were upon bad and sad times, the people of the country have called upon the Democratic Party to lead them.

We have to go back only a few years, at the end of the administration of Woodrow Wilson our country was at the highest peak of prosperity it had ever known in all of its history. It took three Republican Presidents only 12 years to bring our country from that high state of hope and prosperity to the lowest point of poverty, unemployment, want and nakedness that the people of the United States have ever known.

AVOIDED CANDIDATES' NAMES

And do you know something, it was a funny thing, we talk about Jefferson and Jackson and Cleveland and Wilson and Roosevelt and Truman; do you know something, that neither Mr. Dewey, in the campaign of 1948, nor any Republican orator from coast to coast asking the American people to put them back into power, called a name of a single one of the last Republican Presidents of the United States.

What did we find when we came into power in 1933? Fourteen million people unemployed, walking the streets of the towns and cities, the byways and highways of the countryside looking for work, and willing to work, but no work to do.

We went into that terrible thing with a Republican President and a Republican Secretary of the Treasury, they did nothing but wring their hands and say, "Please, people, be patient, prosperity is just around the corner."

COULDN'T FIND PROSPERITY

But nobody had a neck long enough to look around that corner and find any prosperity coming. If those 14,000,000 unemployed men had a wife and only one child that made 42,000,000 Americans that had no buying power at all, because they had nothing to buy it with. Add to that the 33,000,000 people on the farms of the country, who were selling the products of their toil at a price so far below the cost of production, their buying power had vanished or been reduced to the very vanishing point, that made 75,000,000 American people who had no buying power, or practically none.

FACTORIES CLOSED

What happened?

Other factories closed turning others upon the street. Fifty-seven hundred and seventy banks and trust companies throughout the United States closed their doors, and at that time this socialistic thing that we put into effect guaranteeing bank deposits was not in effect.

You who had money in the bank at that time, you who owned stocks in banks know what happened. We came into power, we went to doing something about it, we started to spending a few million dollars to put people to work, a great public building program, farm-to-market roads, price supports and things like that, and some of them said, "Oh, we are upon evil days, we are spending the country into bankruptcy."

PUT PEOPLE TO WORK

Our national income in 1933 was $39,000,000,000. We started putting people to work. We put price supports under farm products. We went about the business of doing something about it. Our national income started up, banks began to open again, factories threw open their doors because people had something to buy their products with.

We thought that if we could get the national income up in the neighborhood of $90,000,000,000 we would be very rich, and we would have been.

We got the national income up to nearly $90,000,000,000, and the war came on.

INCOME WENT UP

The national income went up greatly during that time and they said, "Well, when this war is over we're going to have another depression, it always follows war." A depression followed the First World War because people in charge of government had no vision, no plan, and not the courage to put it into effect if they had it.

We didn't have a depression after this war was over. Our income didn't fall off. We spent $350,000,000,000 fighting the war in 5 years, yet the country wasn't bankrupt. Our national income in 1946, not a war year, was $176,000,000,000.

NOT A WAR YEAR

Nineteen forty-seven wasn't a war year, but our national income was $217,000,000,000. Nineteen forty-eight was not a war year, but our national income was $20,000,000,000 more than it was in 1947.

That's the way the Democratic Party has sent the country into bankruptcy. And some people still want to change. I visited the President down in Key West a few weeks ago and they said they wanted me to meet the press.

There were a hundred of them down there. They represented everything from coast to coast and from the lakes to the gulf. They asked me what I thought about conditions and I said I think we are all right.

We are prosperous, the most prosperous we ever were. More people are employed—not 14,000,000 unemployed people but nearly 60,000,000 Americans gainfully employed at good wages.

I think we are going to get along all right. I think our income is going to remain up. The backlog of buying power that the American people have built up under our law I think is going to stay. I don't think there is going to be a permanent recession even, much less a depression.

They ask "But what about Wall Street?" They've all got the jitters. Well, I said my answer to that is that it seems like some people in the world just love to be scared and try to scare somebody else. Let me say this to you. In my humble opinion watching affairs in Washington over more than a third of a century, there is nothing in our economy at this time, Mr. Businessman, Mr. Banker, Mr. Farmer, or anyone else who is interested in the affairs of government, there is nothing fundamental in our economy today to bring about a recession that will hurt much or anything like a depression.

WHY ARE THEY SCARED?

You know, these very people that are scared, I wonder what they are scared about. Their income is greater than it ever was. Their factories are humming from coast to coast, all over the land. Their profits were greater in 1947 than they ever were, and they were greater in 1948 than they ever were.

Are they scared of profits? Are the bankers scared of the biggest deposit lists that they ever had in the banks in all the history of this or any other town or city in the United States of America.

I want to say to you that I think that even though times look bad, and they do, times are bad—we are living in a dangerous age. I think we are nearer a permanent peace and a world accord than we were a few months ago. That's a prophesy only, but that's what I think.

Let me ask you just a question or two. When this depression wes on, did the Republicans do anything? No. Did they do anything to bring about employment? No.

FAILED TO AID FARMER

The farmer selling the product of his toil at a price far below the cost of production, they gave him no buying power. Did they do anything like that? Did they ever know a Republican Congress in the history of all America who thought of price supports? Did a Republican Congress ever think of appropriating millions of dollars, yea, billions now, to bring the comforts and conveniences of rural electrification to the farm homes of the country?

Did they ever think of the great problem of soil conservation, our major domestic problem, in my opinion, because I know if we keep on allowing this rich topsoil to run into the creeks, the rivers, and into the sea, that even our generation will be looking for some fertile spot somewhere within the confines of the United States to raise what we eat and what we wear?

COULD SPEAK TWO HOURS

I could stand here for 2 hours and say to you Democrats of Tennessee the things that in the last sixteen-and-more years we have done for the ordinary plain American citizen, things that gave them bread and meat and clothing no Republican administration ever thought of.

So we are glad to report to you this progress, this great prosperity under the leadership for more than 16 years of Democratic Presidents and Democratic Congresses, except that do-nothing, good-for-nothing Eightieth Congress that was controlled by the Republicans, and their blunderings, their mistakes, made it certain that we'd reelect Harry Truman and a Democratic Senate and a Democratic House.

HAPPY TO BREATHE AIR

I see that time is almost gone. Let me say to you people from Tennessee again how happy it is to me to breathe the atmosphere of this great Commonwealth and tread its sacred soil; and to you and each of you, until I may greet you again, it is my fervent hope, and it shall be my constant prayer, and with your able Senators and your able fine young Representatives in the House of Representatives, I shall labor in the years to come with them and for you that you may enjoy to the fullest measure the rich blessings of health, of prosperity, and one day, under God, a permanent peace.

The North Atlantic Treaty

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Felix Morley from Human Events for February 16, 1949:

THAT NORTH ATLANTIC TREATY

(By Felix Morley)

In his statement of February 9, condemning the vicious persecution of Cardinal Mindszenty, Secretary of State Acheson took occasion to attack all governmental procedures in Communist Hungary.

Mr. Acheson noted that in Hungary: "Parliamentary opposition, an element indispensable in the democratic process, has been ruthlessly eliminated." Then he added: "The people of the United States * * * are sickened and horrified by these developments and fully comprehend the threat they constitute to free institutions everywhere."

There is no question that the American people are sickened and horrified by the action of the Communist tyranny in Hungary and elsewhere. But a good many Americans also remember that it was our own Government, with Mr. Acheson even then prominent in its councils, which acquiesced in the Soviet occupation of Hungary, to say nothing of Communist infiltration of Poland, Czechoslovakia, Yugoslavia, Albania, Romania, Bulgaria, and much of Austria and Germany as well.

So it is somewhat naive, to say the least, for Mr. Acheson, who served the Roosevelt administration well, to be critical now of the results of our earlier ardent flirtation with communism. It is only a little over 5 years since President Roosevelt, on December 24, 1943, told the American people that "I got along fine" with Stalin. This stalwart Communist dictator, Mr. Roosevelt said further "is truly representative of the heart and soul of Russia; and I believe that we are going to get along very well with him * * * very well indeed."

It is not Stalin who has changed in the interim. In 1944, as 20 years earlier when he pledged himself to the cause of atheistic world revolution at Lenin's bier, Stalin was working to destroy all democratic processes. And if Secretary Acheson is really surprised by the present logical application of Stalin's philosophy in Hungary, the blame for retarded education cannot fairly be placed on the Kremlin.

II

Short of another war—this time to destroy Soviet Russia and rebuild a powerful Germany—there is little we can now do to save the helpless millions of people whom we have turned over to the tender mercies of communism. But Secretary Acheson, however shortsighted in the past, has currently made an observation of great cogency. It is his statement, already quoted, that: "Parliamentary opposition [is] an element indispensable to the democratic process."

The Secretary of State thereby passes much-needed criticism on the so-called bipartisan foreign policy, which has so far meant in effect that parliamentary criticism in this field is eliminated here as completely as in Communist Hungary. Mr. Acheson is to be congratulated for thus indirectly denouncing the pusillanimous Republican leadership in Congress. And it may be hoped that the words of the Secretary will encourage the most careful congressional scrutiny of the so-called North Atlantic defense pact, now under preparation in the Department of State.

The precise content of this projected treaty, on which the great minds in the Department of State have been working for months, is still a carefully guarded secret. These officials are quick to denounce infringement of the democratic process under the Soviet tyranny. They are much more cautious about open covenants openly arrived at when it is a matter of upholding the democratic process at home.

The Department of State, however, has prepared the groundwork for this treaty carefully. It bases its legal case on two earlier governmental actions. One of these is the adoption of the United Nations Charter, in which it is stated (article 51):

"Nothing in the present Charter shall impair the inherent right of individual or collective self-defense if an armed attack occurs against a member of the United Nations until the Security Council has taken the measures necessary to maintain international peace and security."

A second justification for the projected North Atlantic treaty is found in the so-called Vandenberg resolution, adopted by the Senate on June 11, 1948. In principle this indorsed association of the United States by constitutional process in collective-security arrangements within the United Nations framework. In debate on the resolution (May 22) Senator VANDENBERG assured the Senate that no European alliance would be underwritten without specific congressional approval.

The Department of State is trying manfully to turn the Vandenberg resolution, and article 51 of the Charter, into two pillars for the support of the North Atlantic treaty. It can only be done by a tour de force. The projected treaty is clearly designed as a military alliance of some members of the United Nations directed against other members (the Soviet bloc) of the United Nations. And to assert that the UN Charter ever contemplated such a travesty is absurd on the face of it. The Vandenberg resolution, on the other hand, specifically stated that subsequent treaties must be in accordance with the Constitution of the United States, and that provision undermines the contemplated alliance.

III

Among the powers vested in Congress by the Constitution is that of declaring war. Section 8 of article I says flatly: "The Congress shall have power * * * to declare war."

From the viewpoint of an autocratic administration, willing to make war an instrument of national policy, this is a most unfortunate provision. One of the great assets of a dictatorship is absolute control of foreign policy, including the right to declare war at what seems to the dictator the correct psychological moment. That comes when people have been so conditioned by governmental propaganda as to believe that an act of aggression by their leader is really an act of national self-defense. This was the Hitler-Goebbels technique, and they were good at it.

The constitutional provision that only Congress can declare war is not very much of

a safeguard against the will of a President determined to go to war, as we learned in 1940–41. But it does raise difficulties. It means that a state of war cannot be imposed on the American people automatically, and to that extent it hampers the Executive will. Naturally enough, the other parties to the projected North Atlantic alliance are not interested in the liberty of the American people. If we cannot preserve self-government it is not the business of others to give us lessons on the subject. So Great Britain and France have stipulated, very naturally, that in the proposed military alliance we should go to war automatically if they are attacked.

That request is currently causing headaches for the Department of State. It is a reasonable enough request, under the age-old pattern of European thinking. The very essence of the European alliance system is that if one ally goes to war, the others automatically become belligerents. But the men who wrote our Constitution had the temerity to despise what George Washington called entangling alliances. So they put into the Constitution that awkward little provision about Congress. Secretary Acheson, believing as he does in the desirability of congressional opposition, can scarcely wish to circumvent it.

IV

But Secretary Acheson, with the enthusiasm of a new appointee to a post of command, has been making his difficult job even harder than it needed to be. It wasn't easy to work out a binding military alliance confined to ourselves, Canada, Britain, France, and the Benelux nations. The Dutch, for instance, have pointed out that if the Netherlands decides to smash the Indonesian Republic, and if we are an ally of the Netherlands, then we too should line up against those aggressive Javanese natives.

All that has been tough for the Department of State. Yet Mr. Acheson has proceeded to enlarge the problem. Even before the alliance in its original design was concluded he sought to bring the Scandinavian countries into it. And there he has met a diplomatic defeat which would seem crushing if our diplomacy were not so well accustomed to reverses.

The obstacle encountered by this diplomacy, when it sought to bring Scandinavia into the projected alliance, was the traditional neutrality of Sweden. The hard-headed Swedes, like the Swiss, successfully sat out the last two wars. They are perfectly willing to sit out a third in the series. And it is difficult for us to tell the Swedes that since the establishment of the United Nations, the concept of neutrality is meaningless. The obvious retort is that the United Nations, as our diplomacy set it up, has even less meaning. Only Americans are fooled by our feverish effort to build an alliance against Russia within the framework of the United Nations.

The wholly intelligible Swedish plan is for a Scandinavian neutrality pact, embracing Norway and Denmark. If we could offer the Norwegians and Danes an automatic guaranty of military aid, we might be able to seduce them from the side of Sweden. But section 8 or article I of the Constitution prevents. And—again thanks to Mr. Roosevelt's trust in the "stalwart" Stalin—both Norway and Denmark are far too open to Russian occupation to invite that fate without even a "moral commitment" from us.

Secretary Acheson is not unique in sketching out policies which look magnificent, but wither away before the cold winds from Russia. Where Mr. Acheson differs, from his immediate predecessors at the swinging tiller of the Department of State, is in his frank tribute to the value of that parliamentary criticism which he rightly calls indispensable to the democratic process.

It now seems certain that the State Department planners will get this criticism, and nobody is likely to call it premature. Of considerable significance in domestic politics is the fact that the first real rumblings of opposition to the proposed North Atlantic alliance come from Senator TOM CONNALLY, the old-fashioned Democrat who now sits as chairman of the Senate Foreign Relations Committee.

Is Compulsory Health Insurance Practical?

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. MILLER of Nebraska. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include my opening statement on radio station WOL, the Washington Forum broadcast, which I made on Friday, February 25, 1949.

IS COMPULSORY HEALTH INSURANCE PRACTICAL?

Is compulsory health insurance practical? My answer is "No," for the following reasons:

1. It would mean an assembly line of medicine, unable to deal with serious cases. The rich would still get good medical care, but those under the bill would find an inferior type of medical service.

2. It would mean a big bureaucratic, political machine with so much paper work involved that the doctor would probably have ink on his fingers instead of iodine.

3. It would be expensive, wasteful, and time consuming. It would probably require 8 or 10 billion dollars to operate, with some 2 or 3 hundred thousand additional Federal employees. The proponents would make you think you are getting free medicine, but my friends, Uncle Sam can give you nothing until he first takes it from you. From your pay check would come the money and the Government would direct your medical care.

4. It would destroy all the present services of the insurance company's voluntary plans, such as the Blue Cross, Blue Shield, and industrial types of health plans. There are now 52,000,000 Americans under some type of insurance against illness.

5. It is not practical because it is compulsory health insurance, which means regimentation not only for the doctor but the patient. The program could not be administered in this great country in a manner pleasing either to the patient or the doctor. It would bring a third party—a politician—between you and your doctor. It would bind up your family's health in red tape.

6. It is not practical because there would not be enough doctors, nurses, dentists, or hospitals to take care of the people under this plan.

7. It is not practical because the Federal Security Administrator would prescribe the rules and regulations under which the practice of medicine and the care of the sick should be carried out. It would destroy the most humanitarian concept of all time—the traditional American freedom. Why destroy a successful medical system, the best the world has ever seen, and substitute for it a system that has failed every place it has been tried?

8. In every country that has adopted socialized medicine—and all the socialistic and communistic countries have adopted this system—it has been demonstrated that patients stay in hospitals two or three times as long as in private or community hospitals. England and Germany found that the days lost by sickness of those insured increased steadily. The hours lost in England because of sickness is 50 percent more than in those countries who are not compelled to receive medical care under government supervision.

9. I have carefully examined socialized medicine in Germany and England on three different occasions. The type of treatment given was appalling. It would not have been tolerated in the United States. There is just no personal interest in the patient. The doctors there fail to take postgraduate courses. Germany and England were the happy hunting grounds for quacks. Medical education became static; research was curtailed. There was no initiative or desire to get ahead.

10. No, my friends, compulsory health insurance is not practical. The practice of medicine under our free institutions has advanced the healing art until it is the envy of the whole world. New methods of treating diseases and many new drugs have been discovered under our system. Here freemen with great minds have made progress. There has been a ceaseless probing and searching of the unknown for the purpose of curing disease. Why try to revolutionize the medical practice, medical schools, hospitals, and technical research when they are doing such a good job?

Socialized medicine is political medicine. It would regiment, pigeonhole, and blueprint the physician and the patient, making them do a mental, physical, and ritualistic goose-step with the tune being played in Washington.

I am sure that you will all agree that there comes a time in the lives of all of us when cold, hard facts of science do not prevail. The people want a personal service, with sympathy, cheerfulness, understanding, and confidence in the doctor. No amount of scientific efficiency can take its place in the dark hours of sorrow and trouble so common in the experience of all of us. These are intangible things, and I have found, as a physician, that through the troubles and difficult situations of life, fame will die, honor perishes, but loving kindness is immortal.

I believe we should enlarge our public health program to include more preventative medicine, the building of hospitals, public health centers, and for research. If the States need some Federal aid, it should be granted, but the administration should be under their own local control. They should accept their responsibility for the care of the indigent and other individuals needing medical care. We can enlarge our Federal program with aid through the States in research on cancer, mental health problems, heart disease, tuberculosis, and dental defects. The problems of health and medical care will then be solved in our own good American way.

Post Card Postage Rate

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times:

"X" MARKS THE SPOT

First it was the surrey with the fringe on top, which flourishes now only in Broadway shows. Then it was the model T Ford, suc-

cessor to the surrey, the passing of which was immortalized in the New Yorker magazine piece Farewell, My Lovely. The Second World War gave the coup de grâce to the 5-cent cigar, of which the late Vice President Marshall spoke so eloquently. Must the penny post card now follow these into limbo?

Representative HALL's impassioned plea to Congress not to permit the Post Office Department to raise the post-card rate from 1 to 2 cents must twang a responsive chord in many a heart. Is nothing sacred? What diversion is the postman plodding his weary round to have if the scribbled notes from wandering loved ones are enclosed in sealed envelopes, which may very well be the case if the differential between the postal card and the sealed letter is reduced to only 1 cent? Is the American public to be deprived of its vicarious tours with acquaintances which it heretofore made via the colored post card where "x" marked the writer's room in the imposing resort hotel?

Let air-mail rates go up and down. There will be no loud complaints. There is no great difference between 5 cents and 6 cents. At least not the difference there is between 1 penny and 2. We suggest to Postmaster General Donaldson that he search for some other means of securing the revenue that would take his Department out of the red ink. But spare, sir, the penny post card. It is, as Representative HALL says, an American Institution, with a capital "I."

Americanism of George Washington

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 28, 1949

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news release:

Speaking at Upton last night before the combined Kiwanis Clubs, Congressman PHILIP J. PHILBIN, of Clinton, called for "the revival of the militant Americanism of George Washington." Pointing to current dangers in the world and Nation, PHILBIN declared that there was no panacea short of faith in fundamental American principles, courage, and hard work that will solve present problems. His remarks follow in part:

"It is appropriate that we should reverently pause today to consider and laud the memory of the first great President of the United States, George Washington. He and the early founders who worked with him, by idealism, faith in democracy, courage, and sacrifice shaped the free institutions which we enjoy today. These institutions did not grow overnight. They came from long struggle, hardship, and bloodshed. They came from vision, imagination, courage, and hard unremitting work.

"The Nation has grown and expanded greatly since that time. It has developed unbelievable industrial techniques, scientific inventions, managerial and labor skills which enable us to enjoy the highest economic and social standards ever attained by man.

"But the basic values and principles which underlie this great Government and this unparallelled productive system have not changed. They are immutable truths which are as valid today as when first proclaimed. They are at once the guide and safeguard of our freedoms. If we seek to reshape or abandon them under the pressure of socialistic, of communistic doctrines destructive of democratic ideals, Americans of present and future will be the sorry losers. We have solemn obligations, not to ourselves alone but to future American generations to transmit the God-given liberties which we have inherited, preserved, and strengthened for the enjoyment and benefit of posterity.

"Let us therefore in the spirit of Washington militantly oppose every attack upon American institutions. Let us courageously expose and weed out the termites endangering us from within and be ready to deal with the tyrants that may assail us from abroad. The American people of every rank who desire to protect the integrity and glory of America and everything it means must enlist in the struggle now or choose the other alternative of standing by indifferently while an organized minority destroys our democracy and dragoons us into the totalitarian state."

Touching upon relations with Russia, the Clinton Congressman expressed the hope that patient, far-sighted statesmanship on both sides could avert war. "However," he declared, "the situation is grave. Some early settlement must be reached to keep the peace. In this atomic age no one nation can be permitted to obstruct the cause of peace. In the light of present conditions the United States has no choice but to maintain commanding armed strength to guard against aggression and fulfill international commitments, nor has the Nation choice in the matter of pressing immediately for a world dedicated to enduring peace. If efforts in this direction are delayed until aggressor nations possess the atomic bomb in significant military quantities, the situation will be even graver than today. Now is the time to have a definite understanding with Russia; in fact, we should have pressed this aim long ago. It should be sought in a moderate, patient spirit, but also with unyielding firmness and determination to safeguard our freedoms and security and insure a free peaceful world. There can be a limit to patience."

PHILBIN discussed the current recessionary trends in business and employment at some length and stated that these trends appeared to be something more than seasonal.

"Here, again," he said, "the Nation must get down to fundamentals. Social advancement is necessary and desirable, but it must be accomplished sanely and prudently and without placing oppressive tax burdens upon business and our working people."

Billion-Dollar Industries Plead Right to Pauper's Oath

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 28, 1949

Mr. BURDICK. Mr. Speaker, the Peoples Lobby Bulletin, published at Washington, has some very significant facts which should be called to the attention of the people of this country.

BILLION-DOLLAR INDUSTRIES PLEAD RIGHT TO PAUPER'S OATH

The procession last month, of business tycoons and their professional apologists, before the Joint Congressional Committee on the Economic Report, bodes no good for consumers.

Prof. Sumner H. Slichter, of Harvard University, thought that in the past few years corporations had overstated their profits by at least several billion dollars, through including high pricing of inventories, and neglecting to appreciate the reduced purchasing power of the dollar. He also stressed the higher costs of replacement of plant and equipment.

Prof. Seymour Harris, also of Harvard, Stanley Ruttenberg, director of research, CIO, and others, claimed profits are too high, Prof. Harris holding they should have paid more taxes, and Mr. Ruttenberg, that they should have paid a higher wage scale.

Eugene Holman, president, Standard Oil Co. of New Jersey (who is working to grab the oil resources of the Middle East), told the committee:

"Profits are not something taken out of the stream of economic activity for the benefit of a few. They are the means by which our productive facilities expand." He gave some figures on his company:

"On the basis of including minority interest the consolidated accounting profit was $145,000,000 in 1940 and will be about $474,000,000 this year"—that is three times as large.

Enders M. Voorhees, chairman the finance committee United States Steel Corp., cited figures of the Bureau of Labor Statistics showing that from 1940 to September 1948, iron and steel prices increased 72 percent, and prices for all commodities 115 percent, while prices of farm products increased 179 percent and of foods 161 percent.

In the 20 years 1928–47 inclusive, he said, United States Steel Corp. receipts from customers were $22,363,900, while dividends paid were $1,013,000, or 4.5 percent of sales and $153,200,000,000 were reinvested in the business.

A return of 3 percent of sales used to be considered good.

Dr. Emerson P. Schmidt, Director of Research, United States Chamber of Commerce, said that while national income since 1939 had increased by $148,700,000,000; wages and salaries had increased by $85,500,000,000, farm income $20,000,000,000 and net corporate profits $15,300,000,000.

Dr. Schmidt, well trained in the economics of the Chamber of Commerce, did not report that these figures show that since 1939, national income has increased 205.1 percent, wages and salaries 187.1 percent, farm income 229.9 percent, and net corporate profits 306 percent.

COMMITTEE SHUTS OUT LOBBY

November 29, People's Lobby, Inc., asked an opportunity to present the consumers' viewpoint, but was informed, December 12, that it was Senator FLANDER's intention to make these hearings a series of case studies, rather than to have generalized statements such as your organization is prepared to present.

Generalized statements the Lobby wanted to present are unpleasant to profiteers, as the following samples show.

In 1938, corporations paid out 86 percent of their earnings in dividends, and as most dividends go to people with substantial incomes, this meant larger returns to the Government through progressive tax rates, than the yield of a small uniform profits tax.

In 1947 and the first half of 1948, less than 40 percent of all corporate profits, after taxes, were paid out in dividends.

This practice provides corporations and all business enterprises and their stockholders, much more effective social security, than the paltry payments to most Amercians. If corporations finance their expansions and new equipment out of profits—the fruit of

high prices consumers pay—they reduce fixed charges for interest, while stockholders can get their smaller but uninterrupted dividends, even when, in hard times, corporations don't make much profits.

Net profits after taxes in 1948 were about $20,300,000,000—compared with $5,000,000,000 in 1939—which is 12 percent more than in the prosperous year 1947, and 2½ times profits in 1929.

Dollar totals of business have increased enormously since 1940, but the percentage return on sales after taxes, for all corporations in 1940 and 1948 (estimated), also show marked improvement for all industries, except communications and public utilities and mining.

The percentages for 1940 and 1948 are:

All industries (except finance and real estate), 4.6 and 5.4.

Wholesale and retail trade, 1.7 and 2.9.

Transportation, 2.3 and 4.1.

Communications and public utilities, 14.0 and 9.7.

Manufacturing, 5.8 and 6.4.

Mining, 11.7 and 11.5

Other industries, 3.9 and 5.6.

EFFECTS OF ARMAMENT SPENDING ON NATIONAL ECONOMY

Dr. Edwin G. Nourse, Chairman, the President's Council of Economic Advisers, warned the Joint Orientation Conference composed of business and civic leaders, that if the armed forces spend much more than at present, a return of direct controls over business—and price controls, rationing, allocations, and controls over labor supply, will be forced.

This Conference, called by Secretary of Defense James A. Forrestal, was held at the Pentagon Building, and was attended by Army, Air, and Navy leaders.

Dr. Nourse revealed his social approach in his statement:

"A full perspective on our problem of national and international security requires that it be seen from the point of view of its impact upon the civilian economy."

He quoted from the Council's quarterly memorandum to the President, April 9, 1948:

"The last 2 years have given us a fuller measure of the productivity of our resources when aggressively used. We were not staggering under the load of $11,000,000,000 for our protective forces, and the rise in this item to fourteen or fifteen billion dollars will not swamp our economy nor require us to pass from free enterprise to regimentation.

"Some rather systematic and vigorous discipline, however, must be exercised to redirect our economic effort so as to meet the new goal in an orderly and economical manner."

Dr. Nourse said:

"If prospects for peace had improved, or even not grown worse, throughout 1947 and 1948, our ability to adjust our economy to the requirements of sustained peacetime prosperity would progressively have been put to the test in one industry after another, as each passed from a condition of scarcity to one of abundance, from a sellers' market to a buyers' market—or true competitive enterprise.

"If the practitioners of communism had not thrust us back into the danger of war, we would soon have been thrust forward into the difficulties of peace. * * *

"Even if the defense program were limited to $15,000,000,000, the expenditure of that amount would exceed by at least three billions the present annual rate of cash outlays for national defense. If to this are added further increases, to a level of eighteen or twenty billions, there are bound to be important repercussions on the operation of the economy."

With commendable candor, Dr. Nourse told the brass hats not to go berserk, and put responsibility directly upon Government and the people—in his conclusion:

"If any moral is to be drawn from the objective analysis of this problem, it would go to these points.

"(1 That those who are entrusted with our foreign relations must be wise as serpents and harmless as doves so that the need for military effort shall be held or reduced to the lowest point; (2) that those who are entrusted with the military effort display the prescience and the abnegation that will direct every dollar to the point of greatest effectiveness, and forego every outlay based on traditional practice, corps prides, or dispensable ceremony; (3) that the Government stand ready to introduce those measures of finance and control which minimize the disturbing effects upon the economy; and (4) that the people at large face the necessities of the situation, make the sacrifices, and accept the disciplines which are entailed."

"The people at large" want to know why it is a choice between "the danger of war" and "the difficulties of peace."

President Truman's Statement as Reported Unbecoming to Dignity of Office of the President

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. REES. Mr. Speaker, under unanimous consent granted me by the House, and following a statement I made earlier in the day, I am including herewith an article from the Washington Star by the well-known editorial writer, Mr. David Lawrence, concerning Mr. Truman's expression because of a criticism by a radio commentator and columnist. You will observe Mr. Lawrence does not uphold the columnist but believes the language used by the President is improper and out of place.

The article follows:

TRUMAN BLUNT WORDS SEEN AS UNFORTUNATE SLIP OF THE TONGUE—AIDE COULD NOT OFFEND ARGENTINE BY REFUSING TO ACCEPT DECORATION

(By David Lawrence)

President Truman's use of the term "S. O. B." in a public gathering at which women were in attendance has stirred Washington. Mr. Truman did not, of course, say what he meant by the initials—he might have meant "Son of Beelzebub"—but most people here feel he made an unfortunate slip of the tongue for which he should be forgiven.

Certainly Mr. Truman isn't the type of man who uses language of that kind normally. He was provoked to indignation by newspaper criticism. Some Presidents can take adverse comments, and some cannot.

The particular episode which angered Mr. Truman had to do with criticism of the acceptance by his military aide, General Vaughan, of a decoration from the Argentine Government. It is true that President Peron, who bestowed the decoration, is a dictator and that many people in the United States have been alienated by the course of events in Argentina, where liberty has been trampled upon.

AIDE COULD NOT REFUSE

But a Presidential aide could not publicly offend the Argentine Embassy, which offered the decoration, without seeming to reflect the position of the President of the United States. Just at the moment, friendly relations are being maintained with Argentina for a host of practical reasons. To accept the decoration was a step taken as the best way to handle a delicate problem. To have refused it would have caused an international incident and unnecessary embarrassment for the United States.

But Mr. Truman wasn't discussing the merits of the case in his address to the Reserve Officers Association. He was indignant at the newspaperman and radio commentator, who, of course, was well within his rights in raising the question as to the meaning of the decoration and its acceptance by the President's aide.

Again and again Mr. Truman has shown little tact in handling critics. He should have ignored altogether the criticism about the Argentine decoration. There is no rule that requires the President to defend all members of his official family from criticism. In a democracy and with a free press, it is natural that many things distasteful to a President will be printed, and he can reply with vehemence, too.

DIFFICULT TO CORRECT

To use improper language, however, is a grievous error which is sometimes difficult to correct. Many people, for instance, have been arguing for a long time that, in books and plays, words in common usage—even if vulgar or profane—should be printed because they have been so widely used as to become part of the vocabulary of people in various walks of life.

Perhaps these debates on what is or is not proper to permit in books and plays will be affected now by the precedent established here this week. It will be contended that if a President of the United States uses a term, it certainly has something approaching official sanction.

It would be regrettable, however, if the impression created upon the youth of the land is that language hitherto deemed improper had suddenly been given sanction through usage by a President of the United States in a public meeting.

The only way out for the President, it was suggested on many sides, was a public expression of regret and apology. Such a step never hurts a public man.

Farmers' Income Causes Prosperity or Depression for Entire Nation

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. PATMAN. Mr. Speaker, I am inserting herewith a very fine editorial that appeared in the Texarkana Gazette, February 24, 1949, on Income of Farmers. It is as follows:

INCOME OF FARMERS

Announcement by the Department of Agriculture that the average farm income per person was $909 in 1948 does not confirm a popular impression that agriculture has been a bonanza for those engaged in it. In spite of good crops and high prices they earned only $75 a month on an average, about normal weekly wages for a city mechanic.

Those on the land have fared better in recent years, but it is not fair to judge their economic situation as a class by the earnings of some of the larger landowners, or

the fact that many in the Wheat Belt have had profitable harvests.

The backbone of agriculture is the small farmer, the man on a hundred acres who is subject to the vagaries of wind and weather and market trends. Their best efforts through the years cannot bring more than an average existence.

The title "rich farmer" is largely a misnomer. He may have more security than the wage earner in the city, but he is not rich as a class. Not so long as his earnings are $75 a month.

Over a period of decades it has been determined that the prosperity of the Nation depends upon the prosperity of the farmer.

INCOME PER CAPITA OF PERSONS ON FARMS AND OF PERSONS NOT ON FARMS

During the 1935–1939 period average persons living on farms received $243 per capita income annually, while persons not living on farms received $603 per capita annually. In 1946 persons on farms received $774 per capita, but persons not on farms received $1,300. In 1947 it was $851 to $1,453, and in 1948 a person on the farm received $909 annually compared with the person not living on the farm receiving $1,569.

LEON KEYSERLING TESTIMONY

Mr. Leon Keyserling, as Vice Chairman of President Truman's Council of Economic Advisers, February 8, 1949, appeared before our Joint Committee on the Economic Report, composed of seven Members of the Senate and seven Members of the House of Representatives, and testified concerning the future outlook for our country. He presented a number of charts to illustrate his points. I am inserting herewith a part of his testimony relating to the farm income. It is as follows:

The most important of these changing relationships has to do with the prices of farm products and foods on the one hand, and the prices of industrial products on the other. As the same chart 15 shows, since the middle of 1939 the price rise has been 175 percent for farm products, 143 percent for foods, and 91 percent for other than farm products and food. However, since mid-1946, when the most rapid increases in the over-all average of wholesale prices have taken place, the increases in farm products and food have assumed a diminishing importance and the increases in industrial products an increasing importance. Thus, since the middle of 1946 the wholesale price index for all commodities has risen 42 percent, for farm products it has risen 22 percent, for foods 45 percent, and for industrial products 45 percent. Since the middle of 1947, the rise has been 8 percent for all commodities and 16 percent for industrial products, while foods have risen only 1 percent and farm products have declined 4 percent. And since the beginning of 1948, as chart 16 shows, the index for all commodities has gone down about 3 percent, but this has reflected a decline of almost 14 percent for farm products and almost 9 percent for foods, while industrial prices have gone up about 3 percent.

JUSTICE TO FARMER REQUIRED

These sharp and divergent trends of agricultural and industrial prices seem to me to be of high and unfavorable significance. It is no answer to say that the prices of farm products and foods have increased more since the prewar year 1939 than other prices, because we would all admit that the farmer was very disadvantageously positioned in 1939 and that this was not good for the economy as a whole. Even if farm prices were relatively too high in 1947, the trends since then show clearly how quickly agricultural prices respond to changes in conditions of supply or demand. Actually, I believe that recent trends show the clear emergence of the farm problem in its more traditional aspects. This problem is to maintain farm prices and incomes in a high enough relationship to other prices and incomes to do justice to the farmer, to further the desirable objective of bringing his standards of living into a closer proximity to those of other groups, and thus to maintain his share of demand for the products of industry and contribute to the full prosperity of the country at large.

In 1919, as chart 17 shows, net income derived from agriculture was at the unusually high level of 17.9 percent of total national income. By 1921, it sank to 9 percent, and in 1932 it was only 7.4 percent. Consistently the farmer has lost ground fastest when the economy has run downhill, because he is less favorably positioned in the economy than other groups. By 1946, net income derived from agriculture had risen again to 11½ percent, but this percentage dropped slightly in 1947 and dropped at a faster rate in 1948.

This loss of relative position by the farmer hardly seems desirable when, as chart 18 shows, the per capita net income of persons on farms was estimated at only $909 in 1948, contrasted with $1,569 for persons not on farms. This is far better than the 1935–39 average when the figures were $243 for farm individuals and $603 for nonfarm individuals, but it is by no means good enough. Nor is the loss of ground by the farmer to be justified by use of the mistaken theory that the demand for farm products has been abnormal during the past few years and should decrease in future years. If we maintain maximum employment and production throughout the economy as a whole, we shall need even higher farm output—though with some changes in composition—in the years ahead to keep industry running at full speed and to satisfy the dietary requirements for good standards of nutrition for all American families.

BRING INDUSTRIAL AND FARM PRICES INTO BALANCE

Our objectives for agriculture should not be to let forces drive farm incomes still lower in relation to other incomes, but, rather, to bring the two into better balance. This can be achieved consistently with a somewhat lower cost of living if the farmer is helped to improved efficiency through a variety of agricultural measures, if the prices of durables and the incomes of those producing durables are not allowed to continue their disproportionate increase, and if there is a reduction of the spread between what the consumer pays and what the farmer gets through more attention to distributive costs and distributive profits. As chart 19 shows, the farmers' share of the consumer dollar spent for a typical market basket has declined from 54 percent in 1946 to 53 percent in 1947, to 52 percent in 1948, and the marketing margin has correspondingly risen.

PRICE OF FLOUR LOWER—PRICE OF BREAD HIGHER

From January through November 1948, the prices received by farmers for farm food products dropped almost 10 percent, while the retail prices of farm food products declined only 3 percent. From January through October 1948, the farm price of wheat dropped about 30 percent, the price of flour at the mill and the miller's margin after allowance for change in value of feed byproducts dropped by about 20 percent, but the price of bread rose slightly and the baker's and retailer's margins increased 15 percent. This is but one example of what I have already called the revival of the farm problem in its more traditional aspects.

The prime problem of prices and incomes rising out of line with other prices and incomes is not now in the farm area, but, rather, in the industrial area. As chart 20 shows, since the beginning of 1948, the wholesale price index for other than farm and food products has risen by about 3 percent while, as I have said, the wholesale prices of farm and food products have been declining sharply. In fact, the weekly figures for the last week in January 1949, which are not shown on the chart, indicate that wholesale prices for other than farm and food products are at their all-time peak.

Here's Further Proof That the American Farmer Has Been Handed a Makeshift, Ineffective Program

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. GROSS. Mr. Speaker, I have for years advocated that prices for that portion of farm products used in domestic consumption be based upon costs of production plus a reasonable profit. Surpluses, if any, would command prices paid in the world market.

It becomes more obvious each day that the present program provides neither equity nor justice to the American farmer. It is bogged down by red tape, misunderstanding, and worse.

Mr. Speaker, at this point I would like to present the following newspaper article:

(By Thor J. Jensen, farm editor, Mason City (Iowa) Globe-Gazette)

About three dozen farm editors and reporters walked into a press conference with United States Secretary of Agriculture Charles F. Brannan at the National Farm Institute in Des Moines, hoping to get the answer to just one question:

"Do you favor rigid, 90 percent price supports for farm commodities or do you favor the 60–90 percent flexible supports called for in the 1948 congressional farm bill?"

The flexible versus rigid support battle has been raging for months. The American Farm Bureau Federation fought a stiff battle at its national convention and finally came out for the Aiken flexible supports.

The National Farmers Union, the Grange and, at its St. Louis session recently, Production and Marketing Administration directors went on record for rigid supports and a change in the 1948 law.

TWO THOUSAND AT INSTITUTE

Approximately 2,000 people interested in agriculture attended the institute and every one of them knew that the administration's views on price supports will weigh heavily when Congress begins work on the farm bill. Every one hoped to hear what those views would be—hoped to hear it from Secretary Brannan.

Here is what they got:

"This is not the occasion for full-length discussion of the best possible farm program."

Reporters at the institute read that from the Secretary's manuscript before noon Saturday in advance of his Saturday evening headliner speech. They read further:

"A well-rounded farm program must provide reasonable income protection for farm

producers, and that means that we must have an adequate price-support program."

WHAT IS ADEQUATE?

To be sure, to be sure. But there was nothing to define adequate.

So the reporters went to an afternoon press conference with Secretary Brannan to try for that definition. They tried for more than an hour, by direction and by indirection, and when they gave up had discovered just one thing:

The United States Secretary of Agriculture did not know that he is to support the price of hogs at 90 percent of parity through 1949.

Farmers, by the way, are well aware of that support because it can mean the difference between a price equal to the cost of production or an outright loss when their spring pig crop goes to market next winter.

MAY GLUT MARKET

What Congress does about supports after January 1, 1950, will decide whether or not the hog market sees the worst glut in history next December. It would be understandable if the Secretary was giving the matter considerable thought now. He is sending to Congress his recommendations on a permanent farm program in about 30 days, he said.

Unfortunately, the Secretary's unawareness of the problem could not be passed off as a temporary lapse of memory because he recalled that he is to support eggs and milk but even after consulting with his aide could not remember about hogs.

Secretary Brannan, as it happens, was a Denver attorney and came to the Cabinet by way of the Farm Security Administration, so he has had little personal experience with or interest in hogs.

PEAK NOT REACHED

The question the Secretary was asked was: "Suppose we have a bumper 1949 corn crop and price supports on hogs die next January, then what?"

His answer will be of little comfort to farmers who make their living raising hogs. It was: "We haven't yet reached anything near the peak of potential consumption. If prices go down, consumption will go up."

Secretary Brannan admitted that PMA releases advocating rigid supports have been called to his attention. "We will not countenance any unauthorized conduct on the part of any of our field staff," he said.

GAVE STERN ANSWER

He also gave a stern answer when one reporter suggested that the PMA St. Louis meeting had put the Department of Agriculture on record for rigid price supports.

"They did not speak for me," countered Brannan.

But when a reporter came out bluntly and asked his views on rigid price supports, the Secretary answered:

"That's a long speech and, incidentally, one I'm not going to make today."

He was very pleasant in his conversations with the group but the reporters are still waiting for information.

Proposed Tax Legislation

EXTENSION OF REMARKS

OF

HON. LEO E. ALLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. ALLEN of Illinois. Mr. Speaker, I insert herewith in the CONGRESSIONAL RECORD an editorial appearing in the Rockford Morning Star, Rockford, Ill., dealing with the over-all Truman legislative program and, specifically, the tax phase thereof:

THERE'S A LIMIT

It is a little difficult to fathom Mr. Truman's legislative strategy—assuming that he wants his $4,000,000,000 tax boost. For he has set before Congress an overload of legislation on which he wants prompt action—legislation topped off by a social-security measure so sweeping and costly that Congress may be tied up for months debating it.

Democratic leaders in both Houses are cocking fishy eyes at the business of hiking taxes. Several have said flatly that the Nation's economy could not now assimilate the poison of new taxes. Yet, Mr. Truman has reasserted his demand for a tax increase, which would bear largely on business, but which would also punish the middle bracket of income-tax payers.

Right now, the legislative machinery is grinding on labor-law revision, the Reciprocal Trade Agreement Act, rent-control extension, housing, and social security, to say nothing of the antifilibuster and other proposals for expediting several items of legislation which the South opposes. Debate on the Atlantic pact is in the offing. Work on these measures will consume months of law-making time before a tax measure can actually get under way.

It may be that Mr. Truman intends to let tax legislation go over until near the end of the present congressional session and then to attempt to stampede Congress into a quickie tax bill. But in the interim—if there is action on social security in the Presidential pattern—individual taxes will have been sharply increased through SS taxation. A worker now paying 1 percent of his wage or salary on a maximum of $3,000 of his annual income, or $30, would under the Truman proposal, by next January 1 pay 2 percent on all income up to $4,800 per year. For an $80 per week worker, the tax would have risen from $30 per year to $83.20—no mean increase.

Meanwhile, industry and business would have to match that increased sum, and you can't raise taxes to that degree, even SS taxes, without reflecting the increase in the price of everything. Moreover, other groups of workers, now outside the social-security system, would be drawn in, and SS taxes paid by these groups would also contribute to higher costs.

There are limits to what even the welfare state can stand in the way of taxes. These multibillion SS taxes, topped by the four billion program that Mr. Truman wants, would cause more than an economic setback; they would heave us into a first-class depression.

Military Justice

EXTENSION OF REMARKS

OF

HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. DAVIS of Wisconsin. Mr. Speaker, my attention has been called to a letter signed by Maj. Paul S. Davis—no relative or acquaintance—which appeared on the editorial page of the Washington Star. I take this means of calling the contents of the letter to the attention of the members of the House, and particularly to the members of the Committee on Armed Services:

MILITARY JUSTICE

To the EDITOR of THE STAR:

As a reserve officer in the Army with several years' wartime experience in the Judge Advocate General's Department, I should like to comment on the proposed "Uniform Code of Military Justice" recently introduced in Congress (S. 857 and H. R. 2498). Your recent editorial (February 12) suggests that it combines the best features of existing laws in each branch of the service, and some other current comments give the impression that it would improve court-martial procedures throughout all the armed services and benefit accused personnel. In fact, however, this bill, if enacted, substantially would curtail the rights now given by law to accused personnel of the Army and Air Force. It would discard many of the constructive changes made in the Army court-martial system since 1916 and particularly in 1948.

Specifically, the following changes would restrict the rights now given to the accused in the Army and Air Force:

(1) Under the present law a general court martial must have a trained lawyer as law member who rules on all legal questions. Under the proposed code the law member would no longer sit as a member of the court but would be limited to ruling on evidence and other matters during the trial and advising the court on legal questions. Thus the accused would lose the important safeguard of having an informed lawyer present at all times during the deliberations and voting of the court in closed session.

(2) The power of immediate commanding officers to impose so-called company punishments would be vastly increased. In the Army and Air Force a commander now can impose only minor punishments such as extra fatigue, reprimand, or restriction or hard labor without confinement for not more than 7 days. Soldiers and airmen need not accept such punishment. If they do not believe themselves guilty, they may demand trial by a court martial. The proposed code would authorize commanders to impose on enlisted men forfeiture of one-half month's pay, confinement for 7 days, confinement on bread and water for 5 days, or reduction in grade. Furthermore, unless specifically authorized by departmental regulation, a soldier would no longer be able to refuse punishment and demand trial.

(3) The right of a soldier to have enlisted men sit on the court trying him, conferred by the 1948 amendments, would be made subject to decision of the commanding officer as to physical conditions or military exigencies.

(4) A summary court martial (consisting of one officer) would have complete power to try any non-commissioned officer, even one of long service with the highest rating, and could reduce him to the lowest grade. As the law now stands the higher grades of non-commissioned officers can request trial by special court martial and thereby insure that the case be heard by at least three officers and an adequate record made.

(5) Reserve personnel during inactive-duty training periods might be subjected to courts martial for absence, tardiness, or other alleged offenses during training periods and could be placed on active duty without their consent in order to stand trial and suffer punishment.

(6) Under the present Army and Air Force law soldiers may be confined in a penitentiary only for very serious offenses, such as wartime desertion, mutiny, or crimes of a civil nature for which penitentiary confinement is authorized by other Federal laws. The proposed code would authorize penitentiary confinement for any offense, no matter how minor, thus potentially branding a soldier with a penitentiary record even for an insignificant military offense.

Apparently the proposed bill adopts many provisions of the Naval Code of Justice, which has not been substantially revised since 1862, and attempts to impose them on the Army and Air Force. The 1948 amendments to the

Army system were made after 3 years of careful consideration by Congress during which hearings were held and all points of view considered. The new Manual for Courts Martial has just gone into effect, and the Army and Air Force should have a chance to give the new law a fair trial. If more changes are desirable, they can then be made in the light of experience.

I am not sufficiently familiar with naval problems to know whether the Army system could or should be fully applied in the Navy or to express an opinion as to what changes, if any, should be made in the present Navy code. But whether or not uniformity of procedure between the services is an ultimately desirable goal, it certainly should not be achieved at the cost of destroying wholesome safeguards now existing in the Army and the Air Force system of military justice.

PAUL S. DAVIS,
Major, JAGD (Reserve).

House Joint Memorial 1, Legislature of the State of Idaho

EXTENSION OF REMARKS
OF
HON. JOHN SANBORN
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 28, 1949

Mr. SANBORN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorial from the House of Representatives of the thirtieth session of the Legislature of the State of Idaho:

House Joint Memorial 1

A joint memorial to the honorable Senate and House of Representatives of the United States in Congress assembled

We, your memorialist, the Legislature of the State of Idaho, assembled in its thirtieth session, do respectfully represent that—

Whereas the Corps of Engineers of the United States Army has favorably recommended the construction of a series of four dams with locks to provide slack-water navigation from the mouth of the Snake River to Lewiston, Idaho; and

Whereas the site locations are, namely, Ice Harbor Dam, at mile 10.2 above the mouth of the Snake River; Lower Monumental Dam, at mile 44.7; Little Goose Dam, at mile 72.2; and Lower Granite Dam, at mile 113.1; and

Whereas these dams are to be enduring structures, constructed for the welfare and benefit of the people of the United States; and

Whereas the names and works of many of our early explorers and missionaries are indelibly written into the history and development of the Snake River and the entire Pacific Northwest: Now, therefore, be it

Resolved, That the name of the Ice Harbor Dam be changed to Whitman, to commemorate the deeds of Dr. Marcus Whitman, who was martyred in the performance of his missionary works among the Indians of the Northwest; that the name of the Lower Monumental Dam be changed to Lewis, honoring and perpetuating the name of Capt. Merriwether Lewis, who led the first expedition to explore and open the Northwest country; that the name of the Little Goose Dam be changed to Clark in honor of Capt. William Clark, who so ably assisted Capt. Merriwether Lewis; and that the name of Lower Granite Dam be changed to Spalding, honoring and commemorating the name of Rev. Henry Harmon Spalding, who, after 1836, taught the Christian faith and better ways of living to the Nez Perce Tribe of Indians until his death; and be it further

Resolved, That the secretary of state of Idaho be hereby authorized and directed to send copies of this joint memorial to the President of the United States, to the Senate and House of Representatives of the United States of America, and to the Senators and Representatives of Idaho in the two Houses of Congress.

This joint memorial passed the house on the 20th day of January 1949.

JOHN HOHNHORST,
Speaker of the House of Representatives.

This joint memorial passed the senate on the 31st day of January 1949.

DONALD S. WHITEHEAD,
President of the Senate.

Siena Heights College and Mother Mary Gerald Honored

EXTENSION OF REMARKS
OF
HON. EARL C. MICHENER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 28, 1949

Mr. MICHENER. Mr. Speaker, located at Adrian, Mich., in the district which I have the honor to represent in Congress, is Siena Heights College. This is one of the finer girls' schools in the country and is under the supervision of the Sisters of St. Dominic.

Pursuant to permission given to me by the House, I am including an article from the Adrian (Mich.) Daily Telegram, which is as follows:

SCHOOL RECOGNIZES CONTRIBUTIONS MADE BY DOMINICAN ORDER—OLD WORLD PAGEANTRY MARKS PRESENTATION OF DEGREE AT COLORFUL CEREMONY

The University of Santo Domingo of the Dominican Republic Wednesday conferred upon the Rev. Mother Mary Gerald, O. P., mother general of the Sisters of St. Dominic, the honorary degree of doctor of philosophy. The honor was in recognition of the contribution to Christian education and culture in the Dominican Republic made by the Adrian Dominican Community under the leadership of its mother general.

The Reverend Mother Mary Gerald is the mother general of the Dominican Sisters, who, numbering some 1,500, teach in six archdioceses of the United States and Santo Domingo and 18 dioceses including San Juan and Ponce, of Puerto Rico. She has been visiting schools in Florida, the Dominican Republic, and Puerto Rico, and returned to Santo Domingo for the presentation ceremonies. She is expected to return to Adrian in about 2 weeks.

There will be further investiture ceremonies attached to the honor at Siena Heights College during the Pan-American Day celebration in April.

The University of Santo Domingo was founded in 1528 by the Spanish Dominican Fathers who later were forced to leave the island because of war and devastation. It is the oldest institution of higher learning in the New World. In special solemn convocation with all the colorful pageantry of the Old World the university convened to do honor to the head of a community that traces its source to the earliest roots of the Order of St. Dominic, founded in the thirteenth century.

Colegio Santo Domingo, a school for girls in Ciudad Trujillo, city first built by Columbus, is the first institution built outside of continental United States by the Adrian Dominican Sisters, who besides staffing the school, teach at the National University and carry on a program of social and catechetical instruction throughout the island.

The college was built in 1946 under the direction of Mother Mary Gerald at the instigation of the archbishop and the President of the Dominican Republic.

Fighting Constitution—Atlantic Pact

EXTENSION OF REMARKS
OF
HON. LAURIE C. BATTLE
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 28, 1949

Mr. BATTLE. Mr. Speaker, the proposed Atlantic Pact is one of the most important issues facing us today. On February 25, 1949, the Washington Post had an editorial entitled the "Fighting Constitution" and an article contributed by Messrs. Cox, Cutler, and Brown, entitled "Atlantic Pact." Both of these discussions are excellent and I would like to have them printed in the RECORD with my recommendation that every Congressman, public official, and private citizen read them. The Washington Post and Messrs Cox, Cutler, and Brown are hereby congratulated on their splendid contribution toward the clarification of this important issue.

[From the Washington (D. C.) Post of February 25, 1949]

FIGHTING CONSTITUTION

Objections to the proposed Atlantic pact on constitutional grounds seem to us to be a bugbear. The issue was threshed out in great detail before the Senate gave its approval to the United Nations Charter. That Charter, it must be remembered, contemplated the establishment of a UN military force that could be used at any time by the Security Council to put down aggression. American troops were to become a part of that force under a simple act of Congress. As such, they were to go into action, in case of necessity, at the direction of the Security Council without any declaration of war by Congress. The United States consent would be given only by the executive branch as expressed through our UN representative.

If the signing of the Atlantic pact should be followed by creation of a joint defense system in the Atlantic area, the international force could properly operate under a similar arrangement. The result would not be to supersede the power of Congress; rather, Congress itself would make the decision to act jointly with our allies in setting aside a portion of our armed forces to participate in the international force. The power to commit the Nation to all-out war would still remain in Congress, although, as a practical matter, probably it would always come to the support of the international force, as it has always done in the past in the case of wars initiated by the President in defense of American interests.

If no international force should be created under the Atlantic Pact the United States could go to the support of its Allies under aggressive attack in either of two ways. The President might decide on his own initiative that the assault against one of our allies was an attack against the United States and act immediately to repel it. The authority of the President to resist attack is well established both in constitutional theory and in

history. As Mr. Oscar Cox points out in a communication on the opposite page, the question of what constitutes an attack upon this country is not a judicial issue. It is a question for the President's discretion.

In the exercise of that discretion in the case of an attack upon an ally, however, a conscientious President would doubtless ask for a declaration of war before ordering American bombers to take off. That would avoid any possibility of the President being left with a war on his hands and no support for it in terms of funds, equipment, and regimentation of the national economy. While the founding fathers did not create, as Charles Evans Hughes pointed out, an imposing spectacle of impotency, they divided the power to make war successfully between the Executive and Congress, and the two branches must pull together to give a real impact to our military might.

In no event can it be assumed that our constitutional system does not lend itself to defense pacts of the type contemplated. If it is to be understood that the President would call upon Congress before moving to implement the treaty in case of aggression against an ally, Congress would be under the strongest sort of obligation to act with appropriate speed. We do not think that Congress would be any more likely to dishonor its obligation than would the legislative body of any other democratic power.

[From the Washington (D. C.) Post of February 25, 1949]

ATLANTIC PACT—A COMMUNICATION

The proposed Atlantic Pact raises grave issues of high policy for the United States. It is extremely difficult for any nation to lay down precisely the conditions under which it will commit itself now to use armed force in the future. Such problems must be faced squarely by those who have the responsibility for conducting our foreign affairs.

These issues are far too important for anyone to take refuge in the comfortable but erroneous theory that they need not be faced because our Constitution does not legally permit them to be faced. Whether the United States should give any commitment to use military force, and upon what conditions, are very hard questions indeed. But the questions are questions of policy and not of legal power. It is clearly demonstrable that the United States is legally under no greater disability than any other sovereign nation to make a solemn commitment with another state that each will use armed force to repeal an attack on the other.

The debates in the Constitutional Convention, the provisions of the Constitution itself, and the subsequent conduct of the Nation have clearly established the following:

1. The President and the Senate are authorized to enter into treaties of alliance with other nations involving commitments to defend each other against invasion or attack.

2. The President, as Commander in Chief of the armed forces, has the power to make war to the extent necessary to repel sudden invasion or attack. What constitutes an invasion or attack is for the President to determine, either in advance by a formal declaration of policy such as the Monroe Doctrine or by the making of a treaty with Senate approval, or at the moment when it occurs. Throughout our history, all three methods have been used to extend our concept of what constitutes an attack on the United States.

3. When and if the President makes war to repel an attack, the Congress has the power to declare war in support of this act, or not to do so as it sees fit. Whether the President acts pursuant to a Senate-ratified treaty or on his own initiative, Congress is, of course, under strong moral compulsion to stand behind him. But despite the position in which Congress would thus find itself, the framers of the Constitution never indicated that the legal power of the President and the Senate to take such action is or ought to be limited.

I

One of the major purposes for creating the Union was self-defence. The Constitution attempted to give the most ample powers necessary for this purpose. As Hamilton said, "The means of security can only be regulated by the means and the danger of attack. They will in fact be ever determined by these rules and by no others. It is in vain to oppose constitutional barriers to the impulse of self-preservation."

In the minds of the framers, an important means of self-defense was the power to make treaties of alliance involving solemn commitments between nations to defend each other against attacks by third parties. The constitutional debates do not indicate that the treaty-making power was to be limited to such innocent topics as commerce, navigation, or the standard of weights and measures. The whole flavor of the intense discussion of the treaty-making power in the convention debates and in the Federalist papers shows full appreciation of the fact that treaty-making involved great powers that could be used to save the Nation.

Solemn treaty commitments to defend others against attack or invasion were not unknown to the framers of the Constitution. Under the Articles of Confederation, the United States in 1778 entered into a treaty with France for this very purpose, guaranteeing to the King of France, against all the world, his continued possession of French territories in North America. Article VI of the Constitution specifically reaffirmed this obligation to France by providing that "all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land."

This pledge was made in the very same document which gives to Congress the power to declare war. It proves specifically that, in the minds of the framers, considerations might exist—and in fact did exist under a treaty already made—which would morally oblige the Congress to declare war.

Similarly, article IV, section 4, of the Constitution states that "the United States shall guarantee to every State in this Union a republican form of government and shall protect each of them against invasion." Here again is a specific commitment, contained in the Constitution itself, that under certain considerations, the Congress is morally obliged to exercise its power to declare war, in order to protect the States against invasion.

It was because treaties were recognized to be such grave affairs that the framers debated at great length whether the President alone should be allowed to make them, whether the Senate alone should be allowed to make them, and whether the approval of the House of Representatives should be required. In support of the proposition that the approval of the House should be required, it was argued that treaties were the supreme law of the land and binding on the Congress and should, therefore, be approved by the entire Congress in advance.

The argument was rejected after James Madison had pointed out in the debates the inconvenience of requiring a legal ratification of treaties of alliance for the purposes of war. The conclusion is inevitable that in committing the treaty-making power to the President and to the Senators, the framers knew they were giving to these men, and to these men alone, the power to commit the United States to make war to the extent of repelling attacks against our treaty allies.

II

The Constitution states significantly that the Congress shall have power to declare war. An earlier draft had given the Congress the power to make war, but "make" was changed to "declare" during the debate of August 17, 1787, on motion of James Madison, of Virginia, and Elbridge Gerry, of Delaware, for the specific purpose of leaving to the Executive the power to repel sudden attacks. The change was supported by Roger Sherman, of Connecticut, on the ground that the Executive should be able to repel and not to commence war.

It has never been contested that the President has the power to use armed force in order to repel invasions or attacks. This means that the President has the power to "make" war, even though Congress has the power to "declare" war.

The President's power to use military force to repel an attack has been exercised on numerous occasions in our history, the most recent, of course, being the Sunday of Pearl Harbor. When the Japanese planes began shooting on our fleet, the Navy did not have to wait for instructions from Congress before shooting back. Significantly, when the President subsequently asked Congress to declare war, he asked for a declaration that since the Japanese attack on December 7 "a state of war has existed." The Congress thereupon resolved that "the state of war * * * which has thus been thrust upon the United States is hereby formally declared," and authorized the President to employ the entire resources of the Government to bring the conflict to a successful termination.

Since the President can himself repel an attack, the crucial question is what constitutes an attack. This is a poltical question for the President to decide. It is not a legal question. *The Prize cases* (2 Black 635, U. S. Sup. Ct., 1862).

Throughout our history it has been the policy of our Presidents to regard an attack against the vital interests of the United States in the same manner as an attack against its physical territories. In 1823 President Monroe declared that "any attempt on the part of other powers to expand their system to any portion of the Western Hemisphere is dangerous to our peace and safety" and "the manifestation of an unfriendly disposition toward the United States."

In 1904 Theodore Roosevelt obtained Senate approval of a treaty which said categorically that "the United States guarantees and will maintain the independence of the Republic of Panama."

President Wilson asked for war against Germany in 1917 on the ground that Germany had "committed repeated acts of war" against us, even though these acts had been committed far from our shores. In 1922 Secretary of State Hughes signed the Nine-Power Pact, with Senate approval, in which we gave a commitment and obtained similar commitments to respect the territorial integrity of China.

In 1941 President Roosevelt authorized American naval craft patrolling out to the middle of the Atlantic to "shoot on sight" when German naval vessels were encountered. In 1947 President Truman requested and obtained Senate approval of the Rio Pact, which stated the principle that an attack on any American state would be regarded as an attack on all the American states. Today the President and the Senate are considering whether, when, and how to announce that an attack against western Europe will be regarded as an attack on the United States.

It thus appears that our Presidents (and the Senate) have steadily broadened our notions of what constitutes an attack and that they have employed the treaty-making procedure, just as President Monroe employed his famous message to Congress, as a useful means of defining, for the benefit of other nations, precisely what we would regard as an attack on ourselves. And once the President has decided that an attack has been committed, this legal power to repel

that attack with armed force is clear. For example, if an attack is committed against an American nation—defined in the Rio Pact to be an attack against the United States—the President, if he thinks the situation requires, has clear power to repel such an attack by armed force, before asking Congress to declare war.

When the situation permits, any President will undoubtedly prefer to consult Congress first. But there may not be time to indulge this choice. "There frequently are occasions when days, nay, even hours, are precious," said John Jay in 1788. "As in the field, so in the Cabinet, there are moments to be seized as they pass, and they who preside in either should be left in capacity to improve them."

III

When the President finds it necessary to repel an attack without waiting for Congress, it is, of course, for the Congress to decide whether to follow that action by a declaration of war pledging all the resources of the Nation to a military conclusion of the dispute. The Congress can decide that the President acted hastily or improperly, and decline to declare war. Or, as has always proved true in the past, it can decide that he acted properly and back his action by a declaration of war.

The problem does not become essentially different when the President's action in repelling an attack is taken pursuant to a treaty commitment rather than in the absence of any such commitment. The President has power to repel an attack, treaty or no treaty. Once the President has exercised this power, the Congress is under strong compulsion to support him, treaty or no treaty. In this respect the treaty itself makes little difference. In either case, the Congress can be compelled to take action only by its own conscience. There is no national or international tribunal which can force it to support the President.

It is apparently true that Congress has never failed to take legislative action required by a treaty commitment. A serious and inescapable question of policy, therefore, arises each time the President and the Senate consider whether and how to engage the good faith of the United States in any treaty commitment to repel an attack against another nation. But the question is not one of legal power under the Constitution.

The President and the Senate have the power to make such treaties and the President has the power to use armed force to carry them out. While the making of such a treaty creates the possibility that Congress may be confronted with a fait accompli, it also creates the possibility that a potential aggressor may be deterred from attacking. It can hardly create the second possibility withour creating the first. That is the nub of the problem—not whether the President and the Senate can take action, but whether they should take action, and of what kind.

When the Constitution was being debated many people argued that the powers of making treaties and repelling attacks were too great to be lodged in the President and the Senate. It was pointed out that these powers might be abused and that officeholders might be corrupt or inept. But the framers expected the President and the Senators to be men of the highest character and achievements, fully capable of facing and making great decisions. "With such men," to quote John Jay again, "the power of making treaties may be safely lodged." This argument was accepted by the American people in 1789. Nothing in our past or current history indicates that their judgment was erroneous.

OSCAR COX,
LLOYD N. CUTLER,
PHILIP B. BROWN.

WASHINGTON.

Manganese

EXTENSION OF REMARKS
OF

HON. WILBUR D. MILLS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. MILLS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by J. Carson Adkerson, president, American Manganese Producers Association, and printed in Made in America Monthly of November 1948:

WANTED! A MANGANESE POLICY

(By J. Carson Adkerson, president, American Manganese Producers Association)

Manganese today overshadows all strategic materials in our planning for national security. Without manganese, the "starch" in steel, our steel mills would close. There is no known substitute for manganese in the manufacture of steel.

In case our stock piles are used up, foreign sources of supply cut off, and we do not have our own deposits developed and in operation, Elmer W. Pehrson, Chief, Economics and Statistics Division, Bureau of Mines, says: "I feel if we ever get to that stage in regard to manganese, and if we are in a real war, we might just as well acknowledge that it is over."

We have enough manganese ore in the United States to last from 100 to 300 years and longer, but most of the deposits are undeveloped. It takes time to develop mines and get them in production. It cannot well be done after an emergency starts. As in the case of copper, lead, and zinc, manganese ores, both foreign and domestic, are low grade. Manganese ores have to be concentrated and processed. After being processed, domestic ores are higher grade than foreign. But it all takes time.

Domestic manganese developments should proceed during peaceful years when we have time, labor, and equipment.

Development of domestic deposits was underway in 1930 when the Soviet started dumping manganese in the United States. They undersold domestic producers regardless of price. Many domestic mines were forced to close. Then in 1935, under the reciprocal trade agreements, the manganese tariff was cut in half. As a result a number of domestic mines were abandoned and allowed to collapse.

During World War II many new domestic mines started developments. Few were fortunate in getting their plants completed and were able to continue in operation. Others had the market for the lower grade ores withdrawn without warning and were left holding the bag. Many lost their shirts and have never been paid even their cash expenditures.

In 1947 Congress passed a premium price bill intended to stimulate domestic production of manganese and other strategic minerals. The bill was vetoed by the President. On account of unfavorable Government policies producers are afraid to again stick their necks out. In 1948 the tariff was again cut in half.

Proper foresight and wisdom on the part of the State Department in the precious prewar years, 1935–1940, would have dictated a 50-percent increase rather than a decrease in the duty on manganese ore. This would have announced to producers that the Government encouraged rather than discouraged further development of manganese deposits in the United States. Instead, the officials of the Department, while other nations were preparing for war, pursued their single-minded policy of sacrificing our own national defense to what proved to be a utopian dream of peace and foreign trade.

Today we consume approximately 1,500,000 tons of manganese ore a year and produce only 130,000 tons.

According to estimates recently given before the House Public Lands Committee we now have in the national stock pile approximately 1,840,000 tons of manganese ore; a little more than 1 year's supply. For security we need an additional 8,638,000 tons in stock pile and a going nucleus of a domestic manganese mining industry. Stockpiles in the hands of consumers today amount to approximately 676,000 tons. During the second quarter of 1948 consumers were compelled to draw heavily on inventories; receipts at consumers' plants were 24 percent less than the quantity used; imports during the period dropped 21 percent from the first quarter and amounted to 272,975 tons. Of this the U. S. S. R. furnished 38 percent.

Receipts from India, which amounted to 45[illegible],644 tons in 1947, are now curtailed because of recent disturbances in that land. Major operations in Cuba during the recent war years supplied the United States with a total of more than 1,000,000 tons of manganese ore. These deposits are now exhausted and the machinery dismantled and gone.

How long shipments from Russia will continue is anybody's guess.

There is no surplus supply of manganese ore available in the world today. New sources must be developed. Foreign or domestic, we should get every ton of manganese ore available in the world as speedily as possible, and stock-pile it in the United States until our position is secure. This ore is more valuable than our gold at Fort Knox. If developed in foreign countries, however, there is no assurance that these sources may not fall into the hands of an enemy and be turned against us. Russia today is supposed to have several times the number of submarines Germany had at the beginning of the last war. The cost to the Nation, the excessive number of manganese ships sunk, and the number of seamen who lost their lives in a desperate effort to get manganese from far-off countries during the last war is a story yet to be told.

Developments in the United States can be carried forward in less time and offer greater security.

Manganese stands in a category all its own. Dependence on foreign ores has led the Nation into a blind alley, escape from which may again be costly in lives and money.

There is no place in the manganese industry for conservation advocates. Ores conserved in the ground are of little or no use in an emergency. Development and production increases rather than decreases our known reserves of manganese ores. At the beginning of World War I, in 1914, our total known reserves of manganese ore in the United States were less than 1,000,000 tons. Since 1914 we have mined and shipped more than 2,500,000 tons of high grade ore (35 percent manganese and above) and more than 7,500,000 tons of low grade (10 to 35 percent manganese) from this 1,000,000 ton reserve.

If a strict policy of conservation had frozen our manganese developments in 1914 we might still have less than 1,000,000 tons in reserve. Through mining, production, and metallurgical research since 1914 the country has enjoyed the shipment of more than 10,000,000 tons of ore and our indicated reserve of manganese has been multiplied a hundredfold.

Billions are now proposed for mining developments abroad—nothing for domestic.

We have the manganese; we have the processes; we have the know-how, the labor,

equipment, and the money to do the job and make the United States safe in an emergency. What is now needed is a policy—a determined policy to bring forth domestic production. Action must be speedy, positive, and lasting.

Is There a Real Danger of Fascism in the United States?

EXTENSION OF REMARKS
OF

HON. E. E. COX

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. COX. Mr. Speaker, hour after hour and day after day the Kremlin in Moscow is broadcasting millions of words of hate against these United States. What is the theme of this barrage of slander? It is that the United States is a Fascist country, bent on a war of aggression against the Soviet Union. This has been going on for years.

On Monday last the gentleman from Texas [Mr. PATMAN] extended his remarks in the RECORD at pages A962 to A967, a total of five pages, and comes forward with the amazing proposal to reprint at an estimated cost of $35,000, 100,000 copies of a pamphlet which tends to substantiate these ridiculous charges of the Russians, intimating that there is a real danger of fascism in this country. I hold no brief for totalitarianism be it red, black, or brown. But I say creating the impression that we are confronted with a Fascist danger is not only feeding grist to the Communist propaganda mill, but is diverting our attention from the real and main danger, namely, the menace of international communism.

The resolution in which the gentleman from Texas expresses an interest would have us fight the battle against Hitler and Mussolini all over again. It simply would revive a dead issue. We need to keep our eyes on the ball, the red ball of communism.

The gentleman from Texas refers to Richard Sasuly and Bernard Bernstein in his remarks attacking General Draper and I have the records of these men before me. The gentleman from Texas quotes these men as his authorities for criticizing the policy of the American Military Government in Germany and the attempt to tie-in leading American business firms with fascism.

Mr. Speaker, I am confident that the gentleman from Texas did not know who these men are, and that if he had known he would not have used their words as the basis for what he said.

Richard Sasuly and Bernard Bernstein are followers of the Communist Party line and have been for years.

Richard Sasuly and his wife, Elizabeth Sasuly, have many Communist affiliations and have also received much space and praise in the Daily Worker. Richard Sasuly has been praised by the Soviet Government directly as reported in the New York Times for February 11, 1948, at page 20. Not only that, Mr. Speaker, but both Richard Sasuly and his wife have been guests in the Washington home of Nathan Gregory Silvermaster, charged with being a wartime spy for the Russians while employed in the United States Government and who only recently, when appearing before a Committee of this House, refused to answer the question, "Are you now or have you ever been a member of the Communist Party?"

Bernard Bernstein has also been praised by the Moscow New Times and was a speaker before the Congress of American Women, a Communist-front organization, at which time he attacked the Congress of the United States and defended Soviet Russia.

Mr. Speaker, as part of my remarks I wish to have included in the RECORD, the Communist records of these persons:

Richard Sasuly

Reds Building Up Free China Fable

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York World-Telegram of February 26, 1949:

REDS BUILDING UP FREE CHINA FABLE

(By Clyde Farnsworth)

SHANGHAI, February 26.—If you don't look too closely, the Soviet Union and the Chinese Communists and their fellow travelers will prove the Chinese Reds are strictly on their own.

The ostensible independence of Mao Tse-tung and his followers will be the keynote of the new democracy which is now being laboriously installed in North China and which later may be imposed upon most of China.

The strange case of Anna Louise Strong is probably a case in point. So is the dickering of the Russians and Chinese Nationalists for a new understanding in the Chinese northwest.

Added to the careful preservation of diplomatic relations between Russia and the Chinese Nationalist Government, and published hints from Peiping that the Russian consulate has or may cease functions in that Chinese Red capital, these circumstances suggest a deliberate casting of Mao as a Chinese Tito—by mutual consent.

Miss Strong has become one leading foreign apologist for Mao and his new democracy.

Weeks before Miss Strong was expelled from Russia as a spy it was reliably reported she was coming to China to cover the Chinese Communists' activities—and she probably was en route to North China when she was detained.

It will be interesting to note whether the Chinese Communists in face of Moscow's denunciation of Miss Strong will admit her to Red China if she leaves the United States. It is a fair bet she will be welcomed by the Chinese Reds though the New York Daily Worker probably won't print her dispatches.

Free Trade Undermines Federal Revenues

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by Paul T. Beardsley, of Sloan, Iowa. Mr. Beardsley is a prominent farmer of my congressional district, who has given much thought and study to questions of trade and commerce as they relate to our agricultural economy. His splendid statement tends to show how a free-trade system may ultimately undermine our Federal revenues.

FREE TRADE UNDERMINES FEDERAL REVENUES

(By Paul T. Beardsley)

The Constitution ordained Congress to be trustee of the peoples economic freedom in one sentence. The charge to coin money and regulate its value and to establish a standard of weights and measures cannot be fully discharged until monetary values are regulated in the public interest.

Tariff, parity, and minimum-wage legislation are all monetary acts. As the record now stands, Congress has legislated tariff eradication under pressure from tory internationalists and parity-price and wage-support legislation under pressure from nationalist groups, farmers, and wage earners. These laws are in sharp conflict and set up dislocations that result in both price and wage disparities, our only cause for economic depression.

The tory theory of free trade was invented by the British to cheapen the costs of raw materials they must buy in ratio to national productive deficiencies. It sets up world supplies against British demands in speculative trade price-fixing procedures. When we fall victims of tory propaganda we finesse ourselves out of the value of our abundance.

The economy of the United States is 98 percent self-sufficient. It has an average production volume constancy of 97½ percent. Some 95-percent-plus of our markets are domestic subject to our own management laws. Therefore, our economy can be designated as 97½–98–95. Intelligent management of our 97½–98–95 economy dictates the vital need for monetary stabilization. We can achieve an average of 97½–98–95 stability by setting up domestic supplies against domestic demands, and that means constant prosperity.

In 1937, under the benefits of reciprocal trade we imported 50,000 head of Canadian cattle. These imports, a fraction of 1 percent of domestic production, broke our cattle prices $2 to $3 per hundredweight. The average loss in value of 1,000-pound cattle was approximately $25 or 25 percent of the then average value of $100 per head.

If we duplicate with present values of approximately $200 for cattle, a 25-percent loss will extend to $50 per head. The average national inventory of 75,000,000 cattle times $50 adds up to $3,750,000,000 contraction in domestic values.

Of course, this is a paper loss unless or until cattle move to market. But it is an inventory loss taken into consideration in income tax accounting. A $50 per head loss will wipe out all cattle-production profits upon which Federal income taxes are a levy. If all cattle producers use the accrual method of income-tax accounting, and most of them do, the loss is equal to the national average of income-tax payments of 15.67 percent in ratio to earned national income (1945–48 inclusive) times $3,750,000,000 or $293,812,500 contraction in Federal revenues. Congress can reduce this estimated loss by all factors of legal and illegal adjustments that creep into the great mass of income-tax returns and then compare the answer with the $5,000,000 value of the Canadian cattle to arrive at the monetary effect of its policies.

In 1939, we reached the apex of imports of Polish cured pork, stopped by war. These imports have been revived and if they attain prewar volume, the impact on Federal revenues will be disastrous. The Department of State can never justify its dual policy of syphoning needed meat supplies out of Europe with the Marshall plan free exports of meats to combat communism. If we needed the Polish pork we might justify taking the food out of the mouths of our peace-loving friends in Europe, but every Member of Congress knows we can produce all the pork we can consume.

The 1939 imports broke domestic hog prices $10 per head. The 1934–39 average Chicago top hog price was $11.30 per hundredweight, extending to a value of perhaps $25 per hog. Therefore, the $10 loss was a 40-percent loss. If current Polish imports again contract domestic hog values 40 percent the loss will average $18 per head compared to $45 current values. If Congress wants to do a simple problem in arithmetic, multiply the present hog population by the $18 per head estimated loss times the 15.67-percent average conversion of profits to Federal revenues and find income taxes contracted in excess of $175,000,000, probably several times the value of the imports.

Tory policy includes the artificial imposition of world supplies, as a surplus factor, to the other artificial surplus situations arising from market conditions at harvest time and inventory accumulations in ratio to underconsumption caused by price collapse in our speculative commodity markets. We have never built an enduring surplus, except perhaps in cotton, potatoes, and one or more other items. To say we have too

much production is tantamount to an admission we have too much real wealth.

Giving consideration to the fact that each dollar of farm income underwrites $7 in national income, reported by Wilken, each $1,000 sale of cotton, potatoes, etc., extended to $7,000 national income, subject to the income-tax levy of 15.67 percent, therefore develops an average of $1,069.90 Federal revenues when parity or profit prices are present. Therefore, the rate of conversion of raw materials into dollars is fully as important as the tax rate in developing revenues.

It is much more scientific to follow the logical nationalistic policies in developing the revenues needed to pay all costs, including the costs of liquidation of any surplus, than to follow tory tactics in permitting artificial surpluses to develop depression prices and wages.

These same conclusions apply to all types of imports that displace domestic enterprise to the extent of depressing prices so low there are no profits available for conversion into Federal revenues. If the spokesmen for industries adversely affected by tariff reductions would present Congress with a prospectus of revenue losses caused by imports displacing potential profits, the tory apparatus could not continue the illogical propaganda that reciprocal trade was in the public interest. The seven turns in our national economy, not including official and unofficial auxiliary services, are:

1. Raw-material production.
2. Transportation to manufacturer.
3. Manufacturing.
4. Transportation to wholesaler.
5. Wholesale sales.
6. Transportation to retailer.
7. Consumer sales.

When finished goods are imported domestic profits begin on the wholesale level bypassing the first four turns. The unearned profits of those whose enterprise is relegated to the levels up to the wholesaler are not available to be taxed. If the imports contract prices of an entire dometic industry to the low point of finessing the people engaged therein, out of profits, the losses in Federal revenues will exceed the dollar value of the imports that caused the dislocations.

Importers set up landed costs of imports, as costs of sales, in income-tax accounting. Therefore, Federal tax levies apply to the profits made on imported goods beginning with the wholesale level, are three-sevenths of the potential taxable earnings of domestic industry. The tory theory of free world trade and free enterprise being synonymous does not prove itself when considered in the light of the truth regarding the actual and natural operation of our 97½–98–95 service capitalism.

There is no measure of free enterprise for farmers priced out of profits. There is no measure of free enterprise for workers disemployed in ratio to contraction in farm market buying power. There is no measure of mass benefits of free enterprise when the Federal tax levies fail to develop sufficient revenues to balance the budget.

Congress, the trustee, set up world supplies added to domestic supplies by virtue of reciprocal trade legislation. Then Congress tried to stabilize the value of our goods and services by enactment of the parity and minimum-wage laws. These latter laws are monetary acts regulating the domestic value of goods and services jeopardized by free-trade legislation. They did not conform to the intent and purpose of the tory apparatus whose objective is profits made in monetary and market manipulation. Therefore, the tories prevailed upon the Eightieth Congress to enact a sliding-scale parity law to insure the tory objective of fluctuation of values in the face of an average of 97½–98–95 actual stabilization.

The next tory objective will be a sliding-scale minimum-wage law to effect a fluctuation in wage values in harmony with price values. If Congress is going to let the Reciprocal Trade Acts and the sliding-scale parity laws remain on the books, it logically ought to enact a sliding-scale wage law, then naturally nationalistic United States will have the full benefits of internationalistic policies.

How can Congress discharge its trusteeship of the people's economic freedom in enactment of legislation designed to finesse the people out of earnings essential to private and public solvency, while appropriating $45,000,000,000 of the people's future earnings?

Progress Report on the Cooperative Sea Lamprey Investigation on the Great Lakes

EXTENSION OF REMARKS

OF

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. BYRNES of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include a progress report on the cooperative sea lamprey investigation on the Great Lakes prepared by Dr. John Van Oosten, Chairman, Great Lakes Sea Lamprey Committee.

This report was prepared at my request, through the cooperation of the Director of the Fish and Wildlife Service, in order that Members might be informed as to the progress that is being made in the eradication of this vicious destroyer of our lake fish. As can be seen from reading the report, there are still many problems that must be solved before this menace to our commercial fisheries can be removed.

The report follows:

PROGRESS REPORT ON THE COOPERATIVE SEA LAMPREY INVESTIGATION ON THE GREAT LAKES

(Dr. John Van Oosten, Chairman, Great Lakes Sea Lamprey Committee)

In 1946 Congress passed a resolution directing the United States Fish and Wildlife Service to prosecute "investigations of the abundance and distribution of sea lampreys, experiments to develop control measures, and a vigorous program for the elimination and eradication of sea lamprey populations of the Great Lakes." Soon after the adoption of this resolution I drew up a detailed plan of action and on September 10, 1946, organized the Sea Lamprey Committee at St. Paul, Minn. On November 14 and 15, 1946, this Committee met at Ann Arbor, Mich., to discuss and integrate the investigational programs of the various Great Lakes States, the Province of Ontario, and the Fish and Wildlife Service.

The research program adopted by the Committee covered the following broad objectives:

1. A survey of streams to determine the presence, location, and size of the lamprey runs and to determine the characteristics of streams used by spawning lampreys.

2. An investigation of various phases of the life history of the lamprey to discover vulnerable stages subject to control measures.

3. Experiments with weirs, traps, nets, electric screens, bright lights, electric shockers, flumes, dredges, bulldozers, poisons, baits, predators, parasites, or other possible control methods.

4. A survey of the extent of lamprey attacks and their effect on the abundance and marketability of Great Lakes fishes, especially lake trout.

5. A study of the possible utilization of lampreys as a source of food, oil, or vitamins.

6. The enlistment of aid from sportsmen's clubs, 4–H Clubs, Boy Scouts, and others in reporting lamprey spawning runs and in collecting specimens for identification purposes.

7. A review of Russian and other European literature on the life history, utilization, and control of sea lampreys.

Michigan agreed to allot as high as $10,000 per year, Wisconsin $5,000, and Ontario $10,000 for the work, whereas the Fish and Wildlife Service expected to receive $20,000 or somewhat less. The remaining States agreed to obtain, when possible, information on spawning runs and scarring of fish. Michigan, Wisconsin, and Ontario started or resumed their lamprey program in the spring of 1947, but because of a delay in the appropriation of funds the Fish and Wildlife Service could not begin work at that time. It was not until August 1947 that members of the Service's Great Lakes staff working on other fishery problems were temporarily assigned to the lamprey study and not until December 1948 that a full-time Federal investigator was employed for the project.

In 1947 and 1948 field work was conducted on Lakes Huron and Michigan; in 1948 it was extended to Lake Superior. The Service's investigators interviewed fishermen, examined catches of lake trout and other species for lamprey scars, collected biological data, and surveyed Lake Superior tributaries to locate spawning runs. It was not until October 1948 that the Federal weir trap costing nearly $13,000 was installed on the Ocqueoc River, a Michigan stream on which the major biological investigations of the lamprey have been conducted in United States waters. Michigan investigators concentrated on an intensive biological research not only of the lampreys in the Ocqueoc River but also of those in the nearby Carp Creek, both of which streams flow into northern Lake Huron northwest of Rogers City, Mich. Weirs and/or traps to capture adult and young lampreys were installed on these two streams and on Carp Lake River, and extensive surveys of many other Michigan streams were made to locate lamprey spawning runs. Wisconsin men performed some biological work, operated a weir trap on Hibbard Creek in Door County, and surveyed streams. Ontario scientists likewise studied intensively the life history of the lamprey in a number of tributaries flowing into the North Channel of northern Lake Huron and in which weir traps had been installed. Ontario streams were also surveyed to determine the extent and size of lamprey spawning runs, and commercial catches of fish were examined to ascertain the severity of scarring. The remaining Great Lakes States have contributed very little to the program so far because of the scarcity of lampreys in their waters.

The preliminary conclusions reached or results obtained so far on the main points of interest may be briefly summarized as follows:

1. The lamprey problem apparently is not acute in the United States waters of Lakes Ontario and Erie where the species has long been a resident. No definite information is

available for the Canadian waters. Lampreys invaded Lake Superior too recently (verified in 1946) to have created a problem there. No noticeable decrease in the United States lake trout (the species preferred by lampreys) catch has yet occurred.

2. In Lake Huron the lake trout has all but disappeared from the commercial catch. From an average annual United States yield of 1,831,898 pounds over a long period of time (1879–1935), the catch has fallen to 12,300 pounds in 1947 and to about 5,000 pounds in 1948. Each successive year since 1939 broke the record low.

3. In Lake Michigan the trout catch has just begun to show a sharp progressive decline. Over the period, 1879–1945, the average annual take was 6,026,790 pounds. In 1946 the yield dropped to 3,974,000 pounds, in 1947 to 2,425,000, and in 1948 to about 1,163,000 pounds. Each of the last 2 year's production broke the record low.

4. The percentages of United States fish scarred by lampreys were determined by inspection to be as follows:

Lake Huron: Lake trout 82 (1947); whitefish 4 (1947), 7 (1948).

Lake Michigan: Lake trout 69 (1946), 67 (1947), 53 (1948); whitefish 2 (1947), 7 (1948).

Lake Superior: Lake trout 1 (1948).

The percentage of scarred trout increased progressively with size as the following data from Lake Michigan indicate:

Length:	*Percent scarred*
5.0 to 16.9 inches	0.5
17.0 to 18.9 inches	13.6
19.0 to 21.9 inches	45.4
22.0 to 24.4 inches	67.0
24.5 to 35.4 inches	80.0

The number of scars per trout averaged about 2.5 and varied from one to nine. The presence of scars indicate that fish may survive attacks by lampreys. No precise data on the mortality of attacked Great Lakes fish are available. Commercial fishermen have reported finding as high as several hundred scarred and dead trout in a gang of nets immediately after a severe storm. Experiments just completed by Prof. D. A. Webster, of Cornell University, indicated that mortality may be heavy. Out of 13 small-mouth bass attacked by lampreys in aquaria all died—12 with the first attack. One fish measured 18 inches; the others varied from 6 to 8½ inches in length. Three of the five attacked suckers succumbed—two with one attachment; whereas three of the six rainbow trout died—two with one attack. The suckers ranged from 10 to 14½ inches in length; the rainbows from 14 to 18 inches. None of the yearling rainbows were injured. The length of attachment varied from a few hours to about a week, the lamprey frequently adhering to the host after its death. Sometimes two holes were punctured during a single attachment. The data suggest that most fish die during the first attack.

5. The presence of mature or spawning sea lampreys was verified in 92 Michigan streams and reliably reported in 18 additional ones—a total of 110. They covered every major watershed on Lake Michigan, nearly all of them on Lake Huron, and five Lake Superior tributaries. Lampreys have also become established in two inland lakes, Burt and Mullett, and were present in Lake Charlevoix and Pentwater Lake—all in Michigan. In Wisconsin the few lamprey spawning runs discovered so far were all restricted to the Door County area in the northern part of Lake Michigan. No sea lampreys were reported taken in Indiana and Illinois streams or in the Lake Superior tributaries of Wisconsin and Minnesota.

6. Spawning runs varied in size and in the same streams with the years. Records show, for example, that the Little Thessalon River, a Canadian tributary of the North Channel, produced at least 11,286 adult lampreys in 1946, but only some 5,442 in 1947, and a similar number in 1948. Carp Creek in Michigan yielded 1,617 adult lampreys in 1947 (entire population); in 1948 the number was 2,938. Hibbard Creek in Wisconsin produced 596 in 1947. Records for the Ocqueoc River in Michigan are too incomplete to give reliable data on the size of the population, but in 1944 some 3,366 lampreys were removed, and in 1945 about 4,600; in 1947 the population was estimated to number between 8,000 and 9,000.

7. The Great Lakes sea lampreys from streams apparently cannot be utilized for the market. Preliminary analyses indicate that both their vitamin A potency and oil yield are much too low for commercial exploitation; lampreys may possibly be used for reduction purposes. A small quantity can be sold to biological supply houses. Cooking tests failed because of the extreme susceptibility of lampreys to fungus infection and softness of body. A Canadian canning test, however, showed some promise of success.

8. The larvae of the sea lamprey cannot as yet be distinguished from those of native lampreys. Such identification is necessary to avoid spending time and money on the destruction of apparently harmless forms.

9. Much of the known life history of the sea lamprey from inland lakes in New York, based on the work of early investigators, was found to be applicable to the Great Lakes form. Great Lakes sea lampreys may begin to enter streams as early as April and as late as July for purposes of spawning. They do not feed in these streams. The factors that decide their choice of streams have not yet been determined, but they seem to avoid polluted tributaries and they must have adequate amounts of gravel for their nests and a certain amount of current flowing over them. The peak of spawning occurs sometime between late May and late June, the time depending largely on suitable water temperatures. After spawning the lampreys die and rapidly decompose. If prevented from reaching suitable breeding grounds they die without spawning. Females of average length (17.4 in.) produce about 62,000 eggs; the number varies with the size of the lamprey from about 24,000 to more than 107,000. The larvae burrow in the soft bottoms of streams where they live from 3 or 4 to perhaps 5 years. They then change to the adult form at a size of about 6 to 8 inches and during the period from late September to perhaps late April. After transformation they descend to the Great Lakes and begin to prey on fish. The spawning adults range from 12 to 26 inches in length and average about 17 inches; they average about 6 ounces in weight. Adults have been taken in the Great Lakes from depths as great as 90 fathoms (540 feet). They do not seem to concentrate in these lakes except at spawning time. It is believed that the lampreys remain in these lakes from 1½ to 3½ years before returning to the streams to spawn. It seems obvious from the above life-history notes that attempts to control the lampreys must be directed principally at those stages of the life cycle that occur in streams.

10. Weirs and traps were effective in taking both adult and young lampreys in streams. Hoop nets were not satisfactory. The latest type of electric shocker was only partially successful in flushing the larvae; it did not kill them nor drive them completely from their burrows. Other methods of control (see item 3, p. 1) have not yet been tested. It is probable that a combination of methods must be employed to eradicate or control the sea lamprey in most streams. Efforts must be concentrated on major runs.

Some very pertinent questions concerning the sea lamprey still remain to be answered.

1. Why do lampreys enter certain streams and not others with apparently similar characteristics? What is the basis of their selection?

2. Do lampreys usually return to the parent stream? If so, what factors guide their return?

3. Are streams absolutely essential for spawning or can lampreys spawn in the Great Lakes and inland lakes when diverted from streams or blocked by dams? And would the eggs hatch or larvae survive in these lakes? What happens to those lampreys that are blocked by dam near river mouths?

4. Do all transforming lampreys return to the Great Lakes or do they readily become residents of inland lakes?

5. What percentage of the eggs and larvae survive?

6. Can eggs or larvae be destroyed in streams in large enough numbers to eradicate the species?

7. Can adults be captured in the Great Lakes in sufficient quantities to affect their abundance? Do the nonspawning adults concentrate anywhere?

8. Can the electric screen prevent spawning lampreys from entering streams?

9. Will blocking or destroying a major run of spawning lampreys, such as the one on the Ocqueoc River, materially affect the abundance of Great Lakes fishes?

10. How deadly is the attack of lampreys to the Great Lakes fishes? Do most of them succumb to the first attack?

11. How can we distinguish the larvae of the sea lamprey from those of native lampreys?

12. How long do the sea lamprey larvae remain in streams and how long do adults live in the Great Lakes?

13. Can we develop a method of tagging or marking live lampreys?

ANN ARBOR, MICH., *February 10, 1949.*

Dr. Joseph F. Thorning

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. MANSFIELD. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to draw the attention of the Congress to the following announcement by that splendid friend of the United States, Ambassador Mario Esquivel, of Costa Rica. Don Mario Esquivel, by his tact, talent, and magnificent spirit of cooperation, has endeared himself to all the people he has met in Washington. His most recent announcement, which follows, is gratifying to all who believe in the good-neighbor policy, liberty, and democracy:

WASHINGTON.—Ambassador Mario Esquivel, of Costa Rica, announced today that Dr. Joseph F. Thorning, associate editor of the Americas and World Affairs, had been invited to San José to receive an honorary degree

from the National University of Costa Rica and to give a series of lectures about the life and achievements of Francisco de Miranda, the precursor of South American freedom. In making the announcement, Ambassador Esquivel described Dr. Thorning as "a dynamic worker for the good-neighbor policy and one of the best-informed scholars in the United States on the history and culture of Costa Rica. Through his labors, he has effectively contributed to the growth of the inter-American ideals of mutual friendship and understanding among our peoples."

Interviewed at the editorial offices of World Affairs in Washington, Dr. Thorning expressed his "gratitude for the gracious invitation of Ambassador Esquivel, Dr. Fernando Baudrit, rector of the National University of Costa Rica, and the members of the university council who no doubt wished to show their good will toward the editors of two quarterlies that are dedicated to the cause of inter-American friendship and world peace."

At the same time, the Maryland educator, author, and lecturer added that "this most recent gesture of friendship indicates, once more, that the Republic of Costa Rica is 100 percent pro-American and anti-Soviet. Wherever the cult of Miranda and Simón Bolivar flourishes, the love of liberty, democracy and true independence is strong. By studying the lives of the precursor and the liberator, the young people of Middle America are bound to foment their attachment to these principles."

Rural Electrification

EXTENSION OF REMARKS

OF

HON. WESLEY A. D'EWART

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. D'EWART. Mr. Speaker, rural electrification had its record year in 1948. In Montana and throughout the Nation, the mileage of lines constructed, the number of farms connected, the purchase and use of power, the allocation of loan funds, and the advance of construction funds were greater than anything REA had ever experienced.

The remarkable progress made in the United States during the last few years is brought home by the fact that on January 1, 1934, only 743,954 farms had central-station service, or less than 11 percent of all farms. On June 30 last, 4,019,476, or 68.6 percent of all farms, were receiving this electric service. In the 6 years from December 1941 to December 1947, the kilowatt-hour use of electricity per farm doubled to 117 and is still going up.

REA Administrator Claude R. Wickard presented some interesting statistics in his annual report which should be of interest to every Member of Congress and every rural dweller in America. Mr. Wickard said rural America moved further and faster into the power age during the year ending June 30, 1948, than in any previous period in history, and went on to prove it with these figures:

Four hundred and twenty thousand new consumers connected, 43 percent more than previous high.

Forty percent increase in power consumption over previous high.

One hundred and twenty thousand miles of line constructed, one-fifth of 12-year total.

For Montana, for the year ending December 31, 1948, the record is as follows:

Funds as advanced for construction	$8,000,000
(This is about one-half of the total funds advanced in the 11-year program.)	
REA loans approved	$7,000,000
Miles of line energized	4,301
New consumers connected	5,000
(This compares with 5,633 miles energized and 15,000 consumers connected in 11 years.)	
Funds allocated Dec. 31, 1948, but not spent	$7,000,000
(This will build 5,000 additional miles and connect 9,000 consumers.)	

It is encouraging to note that with funds provided by the Eightieth Congress, most of the present plans of Montana REA cooperatives can be completed. As of January 7, 1949, REA cooperatives had applications pending for $7,873,000. Mr. Wickard advised me that Montana's share of 1949 authorizations would be about $9,000,000. Since the fiscal year began, REA has allocated about $1,640,000 of this share. The remainder of Montana's share is roughly equal to the total of all of Montana's requests for funds. This should be encouraging to Montana farmers and ranchers who are awaiting REA service.

It is gratifying that Montana has been able to do so well in its rural-electrification program during the past year, in view of high prices, shortage of material, and lack of manpower. There has been no shortage of either administrative or loan funds at any time, despite dire predictions made last spring.

I would like to quote from Mr. Wickard's report to the Secretary of Agriculture on REA's 1948 program:

One of the most significant aspects of the program during 1948 was the greater assumption of responsibility on the part of REA borrowers themselves.

It is the policy of REA to encourage borrowers to become self-reliant—looking ahead to the time when they will own their systems outright. It is a function of REA to assure repayment of its loans, but, as rapidly as borrowers achieve sufficient operating stability, REA management assistance is being withdrawn. This policy is consistent with the directives of the Congress.

As borrowers gain in experience and financial security, REA's work is concentrated on the unusual and more complex problems confronting its borrowers.

But by the end of June 1948 more than half of REA's borrowers were preparing applications for new loans and routing proposed lines without REA assistance. During the fiscal year, 123 cooperatives, which had acquired the necessary experience and equity, operated virtually without management service from REA. REA personnel was available, however, for consultation on complex problems.

I believe REA members will be interested in a brief summary of the development program being carried on by the Bureau of Reclamation, the United States Army Engineers, and other Federal agencies in cooperation with the States and the people of the Missouri River Basin.

For the current fiscal year the Eightieth Congress gave more funds for the development of our soil, water, and mineral resources in the Missouri Basin than ever before in the history of our country. In addition to these projects previously put under construction, such as Hungry Horse and Fort Peck, five new projects were authorized for construction. They are Canyon Ferry, Lower Marias, N-Bar-N, Moorhead Dam and the Missouri-Souris project. Preconstruction and planning surveys, studies, and research went ahead on 15 other Montana projects. The Hardin unit, known as Yellowtail Dam, is ready to start construction as soon as the Bureau of the Budget will give it the green light. That Bureau has taken the position that with so many new projects started last year, no new ones should be put under construction during the coming fiscal year.

In addition to the actual engineering work outlined above, the National Park Service, Geological Survey, Fish and Wildlife Service, Bureau of Mines, Bureau of Land Management, and Bureau of Indian Affairs have been making studies and cooperating in the work so that the development of all the resources of the basin will proceed in a carefully coordinated and well-rounded program in which no essential resource will be neglected.

The Department of Agriculture through the Forest Service, Soil Conservation Service, Rural Electrification Administration, and experiment stations is taking an increasingly large part in these studies and in the field work.

During the year a new electric generator was put into operation at Fort Peck and orders placed for a third. Construction of transmission lines, substations, and other facilities to make power available from this dam progressed as fast as contractors could get supplies.

I think we can look forward with real optimism to the coming fiscal year. While it is too early to know what appropriations will be made, I think we can safely be optimistic. Bureau of Budget requests are known and if they are implemented by appropriations our program can go ahead most satisfactorily with the exception of the Hardin unit. I regret that it is not set up for construction.

Construction can proceed in the coming year at an accelerated rate on all projects. In fact, the budget request for appropriations for the Missouri Basin program of the Bureau of Reclamation is $87,150,000 and for Hungry Horse in the Columbia Basin, $24,000,000. Our Montana Missouri Basin projects are in the budget for $18,526,000, and $3,400,000 is requested in addition, to permit the completion of the power plant and

other facilities, including recreation, which are under the jurisdiction of the Army engineers at Fort Peck. Included in the Bureau of Reclamation request is $5,522,000 for the cooperating agencies of the Department of the Interior listed earlier in this statement.

In short, great progress has been made in the current year in study, planning, and construction of a well thought out and carefully coordinated program for the development of Montana's great natural and human resources. We can look forward with optimism to an accelerated program for the coming fiscal year.

Let's Keep Alert

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the following article which appeared in the Boston Post, Boston, Mass.:

WORLD MUST WATCH SOVIET—CONSTANT AWARENESS OF THREATS TO FREEDOM NECESSARY IF LIBERTY IS TO SURVIVE ATTACK ON IT

(By Lester Allen)

The individual who cries incessant warning against the Soviet Union risks the danger of being dismissed as an insufferable bore with a fixation, but unless the whole American people are kept alert to the peril, there is no hope either for the free world or for the peoples of Europe and Asia who are now enslaved.

In his day, Marcus Porcius Cato, who croaked his famed phrase "Delenda est Carthage" through a whole generation, was regarded as a pompous old earache, but he aroused the Roman world to the growing might of the Carthaginians. The result is too well known. All that is left of Carthage is a few snag-toothed ruins—and Rome still stands, brandishing the bright torch of human liberty from superstition, paganism, and oppression.

As a result of World War II, 12 European states have fallen under the sway of the Soviet Union. At the moment, 110 different racial groups in Europe and Asia feel the hard hand of despotism. This unexampled growth of Soviet power is due in a large measure to the bad faith, double dealing of the Soviet Union, and gullibility of Soviet allies.

DECEPTIVE FEELING

The deceptive feeling of security which is so prevalent in the United States stems from an almost unbroken history of security from a foreign invader. But we are not secure. It is difficult for the American people to see the forest for the trees that obscure their view.

Having crushed the Nazi regime in Germany, the American people have closed their eyes to the fundamentals of what took place there. The Nazis were professional Communist-haters. They set out to exterminate communism in Germany, root and branch.

Whether the Nazi leaders were sincere in this objective it is impossible to know. They did miscalculate. However, they believed they could trick the Soviet Union into a military alliance that would give them time to prepare to crush Russia beyond recovery. The desire to smash the Soviet Union by all the arts of deceit, double dealing, and military power was not enough. The west chose the Soviet Union as the lesser of two evils and everyone knows what happened.

So, it is not merely abhorrence of the Communist system, military power, and adroit diplomacy that will defeat the Soviet objective of world-wide domination. There must be something more—and it appears that it is a world thoroughly aroused to a duty under God to free the enslaved masses of Russia and the 110 races held in subjugation. It's a large order. No matter what your religious faith, a good place to start the fight is in church.

Not until the larger picture of Soviet operations in the so-called satellite countries became apparent with their persecutions of church leaders, their organized campaigns against all religion, their elimination of all individuals who might organize resistance against the Soviet Union, did it become apparent to all the people of the free world that the Soviet Union is here and now trying to put the plan for world domination into effect.

SECRET ORDER

Here is the substance of a secret order issued by the Politburo last July which was scheduled to be placed in operation in November or December in the Finnish and Baltic Soviet Republics, both captive areas.

All political prisoners were to be evacuated to the Soviet Union. A complete register of former professional soldiers, noncommissioned officers and officers, former civil servants, teachers and professors, priests and members of religious organizations, members of legal, medical, and engineering professions was to be prepared by the MVD.

Particular attention was to be given to their family status—which means that their families would serve as hostages. Special units were ordered to transport duty, and additional light armament was issued to MGB units, with incendiary equipment so that installations could be destroyed by fire.

Evacuation orders were prepared to clear certain areas for military operations. Persons charged with espionage or subversive activity were to be executed. Civilian population was to be evacuated either by genocide or evacuation in the event that hostile forces, mutiny, sabotage, or Soviet Army security became imperiled. Mountain, diving, and paratroop units were to be retrained in topography and map reading, and personnel able to speak Finnish or Baltic languages were to be sent to the Soviet Union for 8 weeks' political training.

That was the substance of the secret order that fell into the hands of the Lithuanian underground and was sent to Sweden.

What does it mean? The best interpretation of it was that the Soviet Union expected an armed attack from the west sometime late in November or early December, or the Politburo wanted to give the appearance of expecting an attack, or the Politburo was framing up a border incident as justification for an attack upon the west.

CALLED OFF

But coupled with the known military intelligence that large forces of MGB and MVD

personnel were concentrated in eastern Poland and Silesia at the time that this order was issued, it looks as if a sneak attack was called off at the last minute.

It is known that MGB and MVD units are used for the purpose of taking over recalcitrant satellites of the Soviet Union, countries like Yugoslavia and Czechoslovakia. The MGB moves in to take over control of all transport, and the MVD moves in to seize everyone who might take part in or lead resistance. After that comes the trials by the people's courts and the rest of the formula.

When the MVD and MGB are in position and the Communists are in control, the steps are always the same in every country they tackle. They secularize the schools, they seize larger landholdings, they trump up charges against leaders, and the MVD conducts mass arrests of opposing politicians.

Although the first Communist target is control of the government and the transport and police forces, the Catholic Church is the next target, not because of any culpability on the part of leaders of that faith, even under the Communist system where culpability can consist of mere expression of doubt of the infallibility of Stalin. The Catholic Church is the chief target because Catholics are the largest religious groups of the population of 13 European countries. They are predominant in Austria, Belgium, Czechoslovakia, France, western Germany, Hungary, Italy, the Netherlands, Poland, Portugal, Spain, and Yugoslavia.

Having broken the power of the Greek Orthodox Church in 1917 in the revolution, which was the greatest factor in the Bolshevik victory, Stalin and the Politburo hold to their theory that once the dominant church group is broken, all the rest is easy.

The lines are drawn all over the world. The terms of the fight have been set forth by Pope Pius XII and Marshal Stalin. Pope Pius has said: "Communists conceal their real purpose from the masses. Once they have won power they let fall the veil, and pass, by successive stages, from oppression of the dignity and liberty of man to abolition of all authentic and independent religious life."

WON'T YIELD

Stalin has said: "The Communist Party cannot be neutral toward religion and it does conduct antireligious propaganda against all and every religious prejudice as the best way of undermining the influence of reactionary clergy who support the exploiting classes."

It is quite plain now that the Soviet Union has not the slightest intention of negotiating with or yielding to the west. It has no intention of halting its fight for world domination. It is forlorn hope that the dictatorship will collapse of the weight of its own evil. It will fall only when struck hammer blows of unexampled force—not only military force, but moral force.

The mere fact that some of the western democracies have flirted around with watered-down socialism is encouragement to the Russians. The mere fact that bigotry and intolerance exist in the western democracies is grist for their mill.

The religious faiths in the west are in a common fight. It is a fight for survival. Regardless of what faith a clergyman may be who is convicted in a people's court by a travesty of justice—it is an affront to all religious faiths. It is their fight.

Religious faiths must fight together or be conquered separately. And not only religious faiths. The little countries which have vanished from the maps, Lithuania, Estonia, Latvia, Poland, Czechoslovakia, Bulgaria, Rumania—all of them are peopled by those who wait and hope that they once again will know freedom.

If the source of their hope in the west forgets for a single instant that those little lands once were free—then we must share the burden of blame for our own eventual subjugation. There is no longer a choice between the lesser of two evils. There is no choice. The filth and grime and appalling stench of the self-styled classless society, the overpowering odor of the so-called decay and withering away of the state according to Marxist philosophy, are too keen in the world's nostrils to be ignored.

There is no sacrifice too great to be made for what we have here and now in this Nation and in this time. It is far, far better to groan under taxation, to give of our leisure, our substance and surrender our petty prejudices than to stand by as sluggards and watch the manufacture of our own doom from afar.

There are those who feel triumph over the hard times that have befallen the British Empire. They would dismiss this travail as the expiation for the crimes of empire. But the people of the west should remember the century of peace under the British empire and recall that in that century the democracies developed and reached the peak of their power.

There is much to be forgiven the nations of Europe, but the errors of our anti-Soviet allies are forgivable. There are national crimes, however, which are too base, too appalling ever to be forgiven. One such national crime is the Soviet Union's betrayal of the noblest aspirations of men of many faiths and many races.

Men wanting security only have been betrayed into slavery. They have been persuaded to trade off their heritage for a false promise of a better life. Let's not deceive ourselves. Do not close your ears to the reiterated cry against the Soviet Union.

Custer Battlefield Museum

EXTENSION OF REMARKS

OF

HON. WESLEY A. D'EWART

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. D'EWART. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

House Joint Memorial 6

Joint Memorial to the President and Congress of the United States, requesting the introduction and enactment of appropriate legislation for appropriation of funds by the first session of the Eighty-first Congress for the building of the Custer Battlefield Museum, at Custer Battlefield National Monument, Mont.

Whereas the Director of the Bureau of the Budget has recommended the sum of $96,000 be appropriated in the 1950 fiscal year funds for a Memorial Museum to be erected on the site of Custer Battlefield National Monument; and

Whereas Custer Battlefield is one of the most prominent patriotic shrines in American history, the site where General Custer and 262 men of his gallant regiment were slain at the Battle of the Little Bighorn River, June 25–26, 1876, also known as Custer's Last Battle; and

Whereas the purpose of the Custer Battlefield National Monument is to preserve for all time the memorable ground of this great conflict and to present for public benefit the chapter it has to tell in the story of the westward advance of our settlements in the Northwest. It is necessary that a museum be erected on this battlefield site to properly care for, display, and maintain the many valuable historical artifacts, relics, and mementos pertaining to the battle that are now in storage awaiting the opportunity of proper care and display that only a museum can offer: Now, therefore, be it

Resolved by the House of Representatives of the Thirty-first Legislative Assembly of the State of Montana (the senate concurring), That we respectfully urge the Congress of the United States, that the act of August 10, 1939, "To provide for the erection of a Public Historical Museum in the Custer Battlefield National Cemetery, Mont." (Public No. 362, ch. 634, 76th Cong., 1st sess.) signed by the President of the United States, to pass legislation for funds as mentioned in the 1950 fiscal year estimates, for the erection of this museum; be it further

Resolved, That copies of this resolution be forwarded by the chief clerk of the house of representatives, t the President of the United States, to the President pro tempore of the Senate of the United States, to the Speaker of the House of Representatives of the United States, and to the Honorable JAMES E. MURRAY and the Honorable ZALES N. ECTON, Senators from Montana, and the Honorable MIKE MANSFIELD and the Honorable WESLEY A. D'EWART, Representatives in Congress from Montana.

H. R. 87

EXTENSION OF REMARKS

OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. DAVIS of Georgia. Mr. Speaker, I have today received a letter from a veteran of World War II, who is a clerk in the post office in Atlanta, written in behalf of H. R. 87. This letter so ably and well states the case of postal employees who are veterans, that I am inserting it in the RECORD with the hope that Members will read it and give it earnest consideration. The letter follows:

ATLANTA, GA., *February 25, 1949.*

Hon. JAMES C. DAVIS,
House Office Building,
Washington, D. C.

DEAR SIR: This is not a plea for a handout for veterans. It is only a matter of asking that we be not discriminated against.

As a veteran of World War II, and as a clerk in the Post Office Department, I would like to ask your consideration and influence in regard to a very important bill for the veterans in the Postal Service.

We do not believe that the existing pay rates which penalize us for serving our country during the war were passed with that intention. We are proud of our country, glad to defend her from all enemies, would do it all over again if necessary, and we do not believe that Congress owes us an easy living for the rest of our lives. We like our jobs and expect to remain in the Postal Service. But we cannot understand why we should be worth $400 per year less to the Post Office Department because we were in the armed forces until after July 1, 1945, than were the younger men who were employed by the Post Office Department before that date.

In 1945, while World War II was still in progress, Congress passed a bill giving the then war temporary indefinite postal employees credit on their pay status which has resulted in the returning veterans being penalized as to their future pay in relation to that of the war temporary indefinite postal employees.

For example, a veteran entering the Post Office Department after July 1, 1945, is now drawing base pay which is $400 less per year than that of the war temporary indefinite employee who entered the Post Office Department before July 1, 1945. This situation is very unfair to the veterans who, because of military duty, could not enter the Post Office Department until after July 1, 1945, since it will require 10 years for these veterans to earn the equivalent pay grade. Also, there will be a loss of approximately $4,000 to each veteran on income during the intervening years.

Few, if any of us, knew that this unfair situation existed until after we had worked at the post office several months, months of hard work coupled with studying after working hours. In most cases, we men who are earning $400 less per year because we were in the service and could not start working at the post office until after July 1, 1945, are older than the young fellows who came to the post office before that date as war temporary indefinite employees. Most of us had families or have acquired them since. Yet these younger men, with fewer expenses and responsibilities received $400 more per year when they were made regular employees than did we.

We see these younger men, most of them having come to the post office while we were out of the country, simply because they were then too young for the draft, enjoying new cars and other luxuries which their extra salaries afford, while we find it difficult to pay for the necessary groceries for our families, and find a doctor bill a major calamity.

Mr. DAVIS, we believe that if Congress had realized that this unfair situation existed, something would have been done to correct it long ago. As you know, there is now a bill in committee known as H. R. 87 which would correct this inequity. I urge your influence and support in getting this measure passed.

Mr. DAVIS, we are not asking for new cars. We are not asking for any consideration because we are veterans. Our only desire is to earn equal pay for equal work. We believe we are worth as much as those who were too young or too old or for some other reason, were not serving in the armed forces of their country during World War II. It does cost us as much to feed and clothe our families.

Very respectfully yours,

ROBERT M. BROOKSHIRE.

Truman: Is He the State?

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, the Washington Post on last Saturday contained a pertinent editorial relative to President Truman's Jackson-Jefferson Day address. I commend it to the attention of every Member of the House:

In his Jackson-Jefferson Day address President Truman followed the pattern of his preelection attacks against the Eightieth Congress that helped to win votes and return him to office. This time, however, he directed his fire against those special interests that, he charges, twist and misrepresent the measures the people voted for at the last election. Apparently the President regards his victory at the polls as a mandate to force his legislative program through Congress, although that program was very sketchily outlined in his preelection speeches. Moreover, he assumes that it is the duty of a Democratically controlled Congress to follow passively wherever he leads. At any rate, all critics of the administration's labor, anti-inflation, social security, and other measures are denounced as selfish special-interest groups, whose activities are inimical to the national welfare. There was a hint, too, that the President himself might resort to pressure tactics, if Congress failed to obey his commands, by taking another swing around the country to tell the people how their Government is getting on.

This brand of political oratory is highly disturbing, because it shows that the President has some very false and dangerous ideas concerning the powers and duties of the Chief Executive. He seems to forget that lawmaking is a legislative process in which Congress plays the chief role. The President may—and should—use his influence to advise and try to persuade Congress to pass measures that he believes to be in the national interest. And he has great influence in molding legislation because of his veto power. But under our system of divided powers it is the duty of Congress to make its own legislative decisions after study and discussion. The special interests whom the President denounces because they object to certain policies and proposals that he approves are sometimes selfish and sometimes obstructive. But often their suggestions and criticisms are germane and constructive. In any case the method of hammering out legislation through public discussion by all interested groups is an integral part of the lawmaking process under a democratic system of government. If only the rubber-stamp advocates of administration-sponsored legislation were allowed to express their opinions, Congress might as well fold up and let the President run the Government as he sees fit.

This newspaper shares to some extent the President's irritation as those special interest groups that spend their time sniping at his programs without offering constructive suggestions for their modification. But even negative criticism is preferable to passive acquiescence. American democracy has survived and grown in strength because our laws are based on free and open discussion of controversial issues—the product of compromises. The President's intolerance of dissent and his assumption that what he considers best for the people is precisely what the people need and what is the type of thinking that put in power men like Hitler and Mussolini and enabled other dictators to defend suppression of free speech and free elections as a protection against enemies of the public welfare.

Soviet Union

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following letter sent by Thomas Dorgan, clerk, Commonwealth of Massachusetts, Superior Court for Civil Business, county of Suffolk, Mass., to the Honorable Dean G. Acheson:

FEBRUARY 21, 1949.

Hon. DEAN G. ACHESON,
Secretary of State,
Washington, D. C.

DEAR MR. SECRETARY: On March 14, 1948, while speaking before the North Cambridge Council of the Knights of Columbus, I made the following remarks which, in the light of an article I read on the first page of this morning's New York Times, I consider very timely.

At that time, I said, "It is indeed very difficult to understand the way some of our leading educators are thinking. For instance, not so very long ago, one of our leading astronomers, Dr. Harlow Shapley of Harvard University, was chairman of a dinner given to Foreign Commissar Vishinsky by the American Soviet Friendship Organization. Commissar Vishinsky viciously attacked the policy of America in Germany, and distorted the facts completely. Our great American intellectuals listened attentively and it is an amazing fact that not one of them stood up to repudiate his statements."

The article which appeared in this morning's Times and which impressed me to the point of writing to you in protest, was to the effect that a Soviet delegation is coming to New York shortly through the invitation of the same Dr. Harlow Shapley. I believe that this delegation should be carefully screened and it should be remembered that Dr. Shapley is a prominent member of the American Soviet Friendship Organization which was classed as subversive by Attorney General Tom Clark not so long ago. Haven't we had just about enough Commie-Con from the Kremlin boys and when are we going to wake up to the peril of atheistic communism? Why, our Senators and Representatives couldn't get into the Soviet Union on a Cook's tour basis. And, furthermore, I do not believe that the Constitution of the United States ever gave the right to citizens of the Soviet Union to trespass on our soil when we know definitely that communism is an international conspiracy to overthrow our Government by force and violence. It is pretty obvious what is happening throughout the entire world and the fate of Cardinal Mindszenty and the 12 prominent Protestant clergymen should be a warning to us all.

In my opinion, this delegation should not be allowed into our country until the Soviet Union extends a similar courtesy and allows delegations from this country to travel freely throughout Russia.

Very truly yours,

THOMAS DORGAN.

UMW's Welfare Fund

EXTENSION OF REMARKS

OF

HON. CARL D. PERKINS

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. PERKINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of February 23, 1949:

UMW'S WELFARE FUND

Although differences of opinion exist regarding the proper method of establishing and administering industrial welfare and retirement funds, there is no disputing the fact that coal miners are in greater need of disability and retirement benefits than

the great majority of workers. A pamphlet just issued by the United Mine Workers describes in some detail the nature of the benefits now being paid to disabled miners and their dependents and outlines plans for the hospitalization and specialized care of the victims of mine accidents. Already quite a number of men paralyzed as a result of such accidents have been greatly aided by this special care. Last week seven paraplegics injured by rock and slate falls in mines were brought to Washington to be treated at a local hospital.

Even more impressive evidence of the good work being done by the welfare fund is the fact that 63,583 disabled UMW members and 109,081 wives and children of these men have received benefits, while more than 2,000 workers or members of their families have been given medical and hospital care. This is a gratifying record of accomplishment; it is at the same time a reminder that the coal-mining industry has an appallingly high accident rate. Only occasionally is the public aroused to a realization of the hazards of the mining industry when a particularly shocking disaster, such as the Centralia mine explosion, occurs. Now that the cost of caring for the injured and aiding the dependents of those disabled or killed in mine accidents has become an obligation of the industry, it seems likely that self-interest will spur the operators to greater efforts to improve working conditions.

For every million man-hours worked 65 disabling accidents occurred in the mining industry, compared with 30.8 such accidents in the construction industries and 18.6 in manufacturing industries. The percentage of fatal accidents in the mines is also far ahead of that in other industries. Disabling diseases such as tuberculosis and rheumatism, occupational in origin, also help to account for a much higher death rate for miners—15.1 per 1,000, as compared with a rate of 10.3 per 1,000 for the Nation as a whole.

By adding these victims of disease to the list of killed and injured, which totaled nearly 235,000 for the past 5 years alone, it becomes possible to envisage the terrific cost in human lives and hardship of the millions of tons of coal used by the people of this country. Pensions do not compensate for such sufferings, although they alleviate the misery of disabled miners and lighten the economic distress of the victims' families. The next step should be an intensified effort on the part of mine operators, unions, and public authorities to make mining a safer occupation.

The Hunt for Whipping Boys

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 28, 1949

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting an editorial which appeared in the Wall Street Journal under date of Monday, February 28, 1949:

REVIEW AND OUTLOOK

THE HUNT FOR WHIPPING BOYS

All during the Eightieth Congress and right through the political campaign, President Truman kept telling us that the reason he couldn't get his legislative program enacted into law was on account of the Republicans running Congress.

Last fall he called the legislators into special session. He handed them a long list of major legislation which he said they could dispose of in 15 days. When they didn't, he went about the country blaming inflation, deflation, and everything he could think of on the obstinacy of the Republicans.

Now, the Democrats are running Congress. They have ample majorities in both Houses and on all the committees. The committee chairmen are Democrats. In the House, the rules have been changed so any committee chairman can bring bills to the floor when ready; in the Senate that rests with the Democratic leaders.

The new Congress has been in session since January 3, nearly four times 15 days. No part of the Truman program, except his own pay raise and a few minor bills, has been enacted.

Mr. Truman is irritated. The other day the Democratic congressional leaders emerged from the White House and explained that the delays were still due to the Republicans. This sounded strange—and unconvincing—since the Democrats are a majority and hold every key post.

So now the President hunts a new scapegoat. He says he will go about the country exorcising the malevolent spirits—lobbyists and pressure groups—who are now to blame for blocking his will.

Mr. Truman obviously speaks not of the farm lobby nor the labor lobby—both of which claim to be such powerful pressure groups that they can dethrone Congressmen and elect Presidents—because they, at least nominally, support his program.

But even if there are spirits more enticing than these two large groups, who is it that has succumbed to their seductions? Why, the Democrats. The Republicans that are left in Congress may still protest Mr. Truman's program, but only the Democrats can block it.

If Congress is not responding promptly to the White House whip, it is the Democrats who are laggard. Either they are men easily seduced by these unidentified spirits, or else in the bright light of after-election day they have come to feel doubts about the wisdom and urgency of the Truman program.

Democrats, and very prominent ones, have begun to raise questions about the wisdom of increasing taxes on the people, of abolishing the Taft-Hartley labor law out of hand, of giving the President carte blanche controls over the Nation's economy.

Mr. Truman convinced us in the last campaign that he is a handy man with the bull whip. But maybe he ought to have care how he flays the Eighty-first Congress lest he find that he has, inadvertently, flayed the hide of the wrong party.

North Atlantic Defense Pact

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 28, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks an editorial that appeared in the Evening World-Telegram, Omaha, Monday, February 21, 1949. The editorial deals with the commitments we are about to make in the so-called North Atlantic defense pact.

A SMALL BOY'S GAME

It is becoming increasingly clear that the attempt to draft a North Atlantic defense pact was an ill-advised adventure.

It was an American idea. What precisely, the State Department had in mind has not been stated, but it is fair to surmise that this was to be a major maneuver in the cold war. We of the West, so it must have been reasoned, would unite for our mutual security, and thereby we would notify Soviet Russia that to touch any of us—even the least of us—would bring down the wrath of all of us.

A slick idea, on the face of it. Unquestionably it appealed to the diplomatic mind.

But there were practical difficulties in the way, some of which had not been anticipated. They have risen to plague the sponsors of the pact, grievously.

One trouble was that some of the beneficiaries didn't want to be benefited. Chief among these was—and is—Sweden.

Sweden is the key country of the Scandinavian peninsula. The peninsula is of vast strategic importance. It stands at the flank of the east-west line. Whichever side dominates it will hold a considerable advantage when and if World War III breaks out. The political sympathies of the people lie with the west. The State Department thought it would be a simple matter to bring the three countries—Sweden, Norway, and Denmark—into the alliance.

Norway was agreeable. Denmark was willing to listen. But the Swedes said "No." They have remained neutral through a century of European wars and they propose to continue that policy. They don't want the first bombs of the atomic war to drop on their cities.

Perhaps Scandinavian adherence is not essential to the pact, but it would have been exceedingly advantageous. As matters now stand, Scandinavia won't adhere.

Walter Lippmann has pointed out in recent columns that the attempt to bring the northern countries formally into the orbit of the west was a grave mistake, both from their point of view and ours. Most Americans who have followed the news agree with that.

But an even more costly blunder was made in the negotiations with nations which are actively eager to join the alliance.

No doubt the State Department assumed that western Europe was familiar with the American Constitution.

But certainly the people of the western countries, including the press, did not understand. They assumed that when Uncle Sam talked about a "defense pact" he meant just that—the kind of military alliance with which Europe is familiar.

Presently they were told, however, that that kind of pact is impossible. In this country neither the State Department nor the President has the power to declare war. That right is reserved to the Congress, and cannot be delegated. The issue must be decided when and if the question of war arises. No promise can be made to other countries that the United States, under certain conditions, will go to war.

That is no mere technicality of the Constitution. It is a basic part of the American system of government.

If the system were otherwise, if it permitted firm military alliances, this country's foreign policy would be at the mercy of every ally. By imprudent actions, little Norway, for example, or Belgium or Holland or Luxemburg, would be able to force the United States into an atomic war.

The American people don't want that. They wouldn't stand for it, even if their Constitution permitted it.

When belatedly that truth was made clear, the air of western Europe rang with angry protests. The press charged that the State Department proposed a good idea and then tried to welsh on it.

The State Department knew in advance any defense pact it could draw and reasonably recommend would have to be couched in weasel words. It would be meaningless and

worthless, except perhaps as an irritant to Soviet Russia.

As matters have turned out, our intended allies are more irritated than Russia. They, our friends, are in doubt about our purposes and our sincerity. They are saying, "If the Americans won't stay put in time of peace, how can we count on them in time of war?"

It was all totally unnecessary.

As events had developed since 1945, all the world knew that the United States was committed—psychologically if not constitutionally—to resist Russian aggression. All the world knew that if Soviet Russia tried to push its way beyond the frontiers granted to it by President Roosevelt at Yalta, an angry America would join the battle instantly.

But that implicit commitment wasn't good enough for the State Department. It sought to draft an explicit treaty which, although it could not be binding on the United States, at least would be aggravating to Soviet Russia.

It was a small boy sort of game. A writing of nasty words on the international sidewalks. And now the leaders of the Senate Foreign Relations Committee, to save face, are faced with the task of rephrasing the proposed pact in such a way that, while meaning little, it will still soothe the aggrieved feelings of America's friends.

Dairymen Face Problems

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday February 28, 1949

Mr. DAVIS of Wisconsin. Mr. Speaker, one of the weekly newspaper editors in my district who well understands the problems of our State's dairy industry is Gordon W. Crump, who for several years has been closely connected with the State's agriculture department and particularly with our nationally famed State fair. I therefore would like to include in the RECORD a recent editorial from his newspaper, the Cambridge News:

With our Wisconsin dairymen for the first time in recent years being plagued with surpluses again.

With millions of cases of condensed milk looking for users.

With the price of milk and milk products to the farmers dropping in price during this time of year.

With a Democratic Congress and a Democratic President convinced that oleo laws should all be repealed, the meeting of the American Dairy Association should be an important one.

It is time this organization and the Wisconsin dairy farmer quit kidding themselves about this dairy market and its future and get down to some serious thinking and common planning on the program to pursue.

Among the subjects which would make interesting study is the present price of dairy products and the price the farmer is getting. Lower prices in several fields are entirely possible and consumption will increase with lower prices.

Another matter is to acquaint labor and industry all over the country that the farmer is going to rebel against further increases in his costs. It is time this combination of business and labor knew that the public which has been goods hungry for so long has finally decided that prices are too high in many fields and they will wait for prices to drop before they buy.

However, these problems are simple to the great thinkers in Washington. There is nothing here that the repeal of the Taft-Hartley bill and another billion spent in 22 more commissions won't fix.

Overtime Pay for Substitute Postal Employees

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 28, 1949

Mr. KEATING. Mr. Speaker, regular postal employees are paid time and one-half for overtime. This is now a well-recognized practice in industry generally. In many fields of activity, it is required by Federal or State laws or both.

A substitute postal employee, however, when he works more than 8 hours a day receives only pay for straight time. There seems to be no logical reason why such an employee, if he is working alongside a regular employee and performing the same service, should not be entitled to the same compensation.

Abuses should, of course, be avoided. It is an administrative responsibility to insure that surplus employees beyond the needs of the service are not retained. But those on the pay roll who perform faithfully equivalent services should be equally compensated.

Today I have introduced a bill which provides that when a substitute employee is working in a category of the service in which a regular employee is paid time and one-half for overtime, he shall likewise receive the same compensation. It seems to me this legislation should appeal to the sense of fairness and equity of the Members.

American Military Government in Germany

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 28, 1949

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the third installment of an article from the magazine Politics, dealing with our military government in Germany.

It must be obvious to any fair reader that the personnel was not carefully screened and that people who have no sympathy with our form of government, but who are either left-wingers or radicals, were employed at the expense of the American taxpayer to misrepresent the United States in our effort to bring about a stabilized government in Germany.

This third installment confirms the charges I have heretofore made on this same subject.

INSTALLMENT III

THE SOFTENING OF THE LIBERAL BRAIN

In 1945 and later, American liberals by and large held three convictions about Germans, some of which were even embodied in military government directives, and all of which shaped their general attitude toward the inhabitants of our zone:

(1) All Germans were burning to start a war between the United States and the U. S. S. R. This included the subconvictions that

(a) German stories about Russian atrocities were all lies (corollary: pro-Russian Germans were the only real anti-Nazis);

(b) All Germans who thought Potsdam's program was insane wanted to prepare for war; and

(c) All Germans who talked about mass expulsions from east of the Oder-Neisse line were Fascists.

(2) All Germans could be classified according to a sliding scale of democratic convictions. Reading from left to right, the most reliable Germans were the Communists (see Edwin Hartrich's dispatch below), then the Popular Front Socialists, then Social Democrats, Centrists, Liberals, Conservatives, and professional Christians. Everyone to the "right" of the Popular Front was increasingly suspect.

(3) There had been no anti-Nazi movement inside Germany, and all those who did not emigrate were therefore guilty of Nazi collaboration. Erika Mann and others aided this conviction in several speeches and articles during and after the war. This conviction, like the other two, was, of course, false.

As a result of these three basic convictions, American liberals in military government came to believe that only Communists and associated Stalinoids filled the anti-Nazi bill completely: They never uttered a word against the U. S. S. R.; they never questioned the Potsdam Declaration (although in eastern Germany they whispered that it was all a western plot to destroy German competition in world markets); and, finally, they got first place and show on the liberal sliding scale.

It is essential for an understanding of Communist tactics in postwar Germany to analyze the political situation which confronted the United States Military Government upon the defeat of Hitler. This situation was, of course, like a vacuum; and military government, like nature, seemed to abhor it. To do away with it, military government promoted certain German political parties.

There were two possible alternatives to follow in dealing with the German vacuum. The first—and the alternative which the majority of German resistance members advocated—was to postpone the creation of a party-political structure for as long as possible, until it grew up as an organic part of German popular thought. Until that time, most observers on the spot preferred to see a regime by carefully selected, military government-appointed Germans, functioning not only as administrators but also as educators. The idea was that German community life had so completely disintegrated that only a thorough reeducation from top to bottom could even begin to create the basic conditions under which democratic self-government can function. The Allies had decided at Potsdam that the Germans needed reeducating before they could be trusted with self-government. Well, if they needed reeducating—which was true—you couldn't very well expect them to act like old, accustomed democrats overnight, could you?

Military government thought you could. Accepting the second possible alternative, military government insisted upon the creation of political parties, and demanded absolutely that its German appointees to provincial governments join one of the four parties that were suddenly grafted upon the lethargic, unwilling body of nonpolitical Germans, who were thoroughly sick of it all. The result was, sure enough, a German political scene—a scene, however, in a puppet theater. The newly (by themselves) selected party leaders (with the important exception of the well-trained, highly disciplined Communists), were a sad collection of elderly, fourth-rate standins—kindly German Santa Clauses, who had been much too unimportant to have been troubled by the Gestapo. The principal leaders of the German resistance—or, rather, those that survived—refused to join this political flea circus, and were left out in the cold. That left the Santa Clauses—who had no popular mandate whatsoever—to develop quickly under military government's excited nursing, into back-room politicians, who settled candidacies, lists of delegates, party policies, and in general behaved as if they were young again. No one, except military government, was fooled.

The organization of German self-government in the United States zone fell into three separate phases: The first phase covered the selection and appointment of Germans by the political affairs division of the military government to serve in three provincial German governments—those of Hesse, Wuerttemberg-Baden, and Bavaria. The second phase was the election of German party deputies on a local level. And the third phase concerned the election of German parties on a provincial level, and thus the election of German provincial governments. These governments are currently functioning—poorly.

Phase 1. We appoint German governments: In the Province of Hesse, with which I am rather more familiar than I am with the other two, the military government appointed a government early in the game. There were only a few Germans from whom the military government could have chosen, but with its unfailing touch, the military government chose the wrong ones. I have explained above how the survivors of the German resistance groups were bypassed by the military government, because they had declined to become parts of the military government's political puppet theater. Now the military government turned to the only remaining German politician material; the Santa Clauses, and the well-organized German Communist Party, whose alert leaders were just returning home from 12 years of intensive training in the Soviets' political schools—fit as fiddles.

The military government selected provincial government of Hesse was typical. Selected to be Minister of the Interior (the one post the Communists always fight tooth and nail to get, since it means control of the police) was a Nenni-type Socialist by the name of Venedey. To him and his Stalinist bosses the military government presented, on a silver platter, the Hessian police. The second Stalinist appointed by the Hesse military government was again given a post fervently coveted by the Communists; the Ministry of Labor. His name, Oskar Mueller, important functionary of KPD.

Phase 2. We hold local elections: Early in 1946 MG decided, against practically everybody's advice, to hold local elections and thus to force the creation, overnight, of complete party machines. The net result of the elections, though showing a clear Communist defeat, represented an indirect victory for the anti-democratic Communist-Nazi front: the elections consolidated the leadership of the Santa Clauses in the democratic parties—i. e., leadership by the weakest possible elements. Even Schumacher's Social-Democrats (who concentrated their principal effort in the British zone to the North and in Berlin), were represented in the United States zone by the feeblest of prehistoric trade-unionists.

Despite the Communist defeat at the polls, Communist influence in the Hesse government characteristically did not diminish. Although Venedey was fired upon the insistence of the Schumacher forces, his appointees were not. Many months after Venedey was out, I received the following report from a German friend:

(a) Every department in the Hesse Ministry of the Interior has either a Stalinist head, or a Stalinist executive.

(b) The police organization of Hesse is under Communist control.

(c) The police department in charge of weapons is thoroughly Communist-infiltrated.

(d) Two confidential police couriers, whose job it is to transmit important communications that cannot be entrusted to the wire or the radio, have been members of the Communist Party for years.

(e) The German border police patrolling the American-Russian zone border is strongly Communist infiltrated.

My informant added: "I heard that MG in Berlin, when told of this, simply answered that the German Communist Party was a legally constituted party, and that there was no reason why a policeman should not belong to it."

The following dispatch by Edwin Hartrich to the New York Herald Tribune, dated Frankfurt, April 16, 1948, supports my informant's point:

"The American military government has requested German state officials in the American occupation zone to purge their police departments of 'all Communist elements,' * * * In the early days of the occupation, many Communists were selected by AMG for positions in the various police forces * * * the problem of finding trustworthy anti-Nazi personnel became acute for the AMG. Proven anti-Nazi Germans were hard to recruit except for the organized Communists * * * hence they obtained positions of power in the various police forces.

Phase 3. Germans elect provincial governments: By the time the zone-wide elections took place late in 1946, three important developments had determined Communist strategy in the United States part of Germany. They were: (1) The U. S. S. R. had come out for a united and centralized Germany (with a Soviet-controlled Government in Berlin), and the Communists had therefore received orders not to cooperate in western Germany's bizonia;[1] (2) the Communists had discovered that their numerical strength in western Germany was so small that they could best damage Bizonia by concentrating upon penetration of trade unions and upon sabotage strikes in the Ruhr,[2] and (3) other German parties in the west (with the exception of Schumacher's Socialists who had, unaided, won the Berlin elections) had become exactly what the Communists—and, perhaps, their friends in MG—had hoped for: a catch-all for fourth-rate nonentities, so weak that it required little effort to make them topple over. These nonentities now proceeded to form three provincial governments headed by three santa clauses. One of them had once timidly compromised with the Nazis, and was now spending his time trying to explain it all; another was an elderly, harmless Bavarian yokel; and a third was cleverly picked from the staunch ranks of the Christian Cigar-Makers Trade Union of Darmstadt.

This left the Communists in the enviable position of being able to criticize everything, attack and sabotage anything, bear the responsibility for nothing, and claim that everything in the eastern zone was better. In spreading this last belief, MG decided to lend them a hand.

IDEOLOGICAL LEND-LEASE TO RUSSIA

Meanwhile the larger battle, the battle for central Europe, was being fought not by the Americans, but by Kurt Schumacher's and Julius Kaiser's underfed bands of Socialists and Christian Socialists. Banned from the Soviet Zone, they fought in Berlin; and in a magnificent effort on October 20, 1946, they won Berlin from the combined MVD-Gestapo administration established there by the Soviets. Forty-nine percent of the vote went to the Socialists, 22 percent to Kaiser's party. Now, surely the Western Powers would act—now that there was no diplomatic risk involved.

Not at all. What the German democrats had won at such high cost was promptly lost to the Soviets on the Allied Control Council. After typical wrangling, vetoes, subterfuge—the whole sordid bag of tricks—the Russians got just what they wanted: an enfeebled, unrepresentative Berlin City administration, totally out of keeping with the overwhelming democratic victory. Berlin was a precedent, in miniature, of what was to happen a year later in Budapest.

Next came the Berlin Trade Union elections. Let me quote the N. Y. Post's labor correspondent, Victor Riesel, who wrote on March 18, 1948:

"Pardon me if I seem to be talking about beauty culture magazines and interior decorating bulletins at a critical moment like this * * * [that] pulp stuff is being printed in Germany today—especially in Berlin—while democratic union chiefs starve for newsprint for their anti-Communist papers. Stupidity is the word for it * * * much less charitable words would be invoked to describe what I say is valuable aid to the Communist propagandists abroad * * * the State Department's refusal to provide the democratic, non-Communist German labor leaders with paper for propaganda during the recent union elections in Berlin—while the Communists had tons to spare for their publications, and they weren't devoted to beauty culture."

Reisel goes on to describe the difficulties encountered by the A. F. of L. in trying to get United States Army permission to distribute in Germany an A. F. of L.-financed labor pamphlet. Such permission presumably had to come from ICD.

We lost the Trade Union elections in Berlin. We might attribute all of this to the well-established nitwittedness in the higher circles of MG. But it is hard to remain so charitable when we see that Political Affairs of MG, while undermining the anti-Communist effort in Germany, was giving direct and immensely valuable aid to the agents of the U. S. S. R. To prove this allegation, I shall merely cite the example of the extensive speaking tours through the United States Zone of the leaders of the Russian-operated SED—a party that was not licensed in western Germany, so that there was not the slightest justification for MG to permit its leaders to campaign in those areas.

Three leaders of the SED repeatedly received MG permission to campaign in the United States zone. They were: Red Army Political Commissar Walter Ulbricht (whose rank, I believe, is that of brigadier general); Wilhelm Pieck, Moscow-trained Communist party wheelhorse; and Otto Grotewohl, opportunistic renegade "Socialist" who merged

[1] Communist Deputy Max Reimann, leading Stalinist in the British zone, announced in March 1948: "I consider as traitors those who cooperate in the splitting of Germany." With the Red Army only 100 miles away, those were strong words.

[2] Oskar Mueller's early appointment by the Americans to the Hessian Ministry of Labor paved the way to much of this work.

with the Communists in the eastern zone to form the SED. These men formed a veritable propaganda circus that traveled wherever it wished to go in the United States zone. I have attended some of its performances, which resembled Nazi meetings in every detail. But while every allegedly "nationalistic" utterance by Kurt Schumacher brings upon his head the extreme displeasure of MG's Stalinoids, the direct and repeated calls to arms [2] issued at these SED meetings were not considered sufficient reason for MG to cancel its permission to hold such meetings. I need hardly mention that neither Kaiser nor Schumacher were permitted to speak in—or even enter—the Soviet zone; and that their lieutenants in Berlin were kidnapped again and again by the terror squads of the MVD—often in broad daylight, often directly under MG's nose.

And this is not all. At an SED meeting in Frankfurt in the critical winter of 1946–47 I discovered 20 or 30 large, gasoline-burning trucks and busses parked just off the "Roemer" where the meeting was being held. These trucks, I was informed, had come from towns many miles away, carrying the Communist Germans who made up Comrade Pieck's claque. Who had issued permission to use critically short, rationed (and probably American-supplied) gasoline for this purpose? Why, the American MG, of course. That same MG that was having so hard a time, that winter, getting enough transportation facilities to distribute the meager 1,500 calory ration, which Pieck & Co. were criticizing so violently just around the corner * * * That same MG that was finding it so hard to supply anti-Communists with newsprint and with gasoline for critical election campaigns * * *. That same MG, however, that seemed always somehow able to lend the Russians a hand.

It is becoming increasingly obvious each day that the American military government is finally being introduced to the facts of life. As this is written MG is learning the hard way—in Berlin and elsewhere. Some of the situations I have described have been remedied; others are about to be.

But regardless of all the good intentions in 1948, regardless of our sudden realization of what is at stake—not frontiers, territories, bases, but the most elementary human rights themselves, all over the world—regardless of our belated understanding of these real issues, I regretfully believe that our positions in Germany, at least, have been damaged almost beyond repair. The time has probably passed when we could rally the anti-Communist forces of the German trade unions; and thanks to our incompetence, Schumacher's Socialists are today much weaker than they were when they captured Berlin in 1946. All over western Germany there are democratic Germans who have been lost to us as a result of MG's prototalitarian fumbling. It may prove almost impossible to call upon these men and women now.

But if there does remain a chance, I hope that those with the authority to act will grab it with both hands—today, now, and before all is gone.

What's Your Pressure?

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. REED of New York. Mr. Speaker, under leave to extend, I am inserting an article by Mr. Wheeler McMillen, which appeared in the February 23, 1949, issue of the Pathfinder entitled "What's Your Pressure?":

WHAT'S YOUR PRESSURE?

One thing this country sorely needs. That is an uprising of citizens, and of organizations, against spending public funds for their own benefit.

At the risk of being tiresome on this subject of public spending, I want here to emphasize the influence citizens can exert.

First of all, the Eighty-first Congress will appropriate few dollars except as pressures demand.

Some of this will be the pressure of responsibility. Congress bears the responsibility to maintain the necessary activities of government and to provide for the Nation's defense. It would authorize funds for these purposes whether or not anyone asked for such appropriations. It would be delinquent not to do so.

Much pressure upon Congress comes from within the Government. Bureaus and agencies present able pleas which tell how urgent and desirable it is for them to spend more money. Few representatives of the taxpayers ever appear to oppose them. The conscientious Congressman usually is forced to conclude that he should vote for the appropriation.

Another kind of pressure comes from groups of citizens organized for good purposes. Their spokesmen appear with skilled arguments. No one asks whether the money involved would do more good if left in the pockets of the taxpayers. The Congressman who wants to serve his country finds little support for voting against the good purposes.

Then come the pressures for multitudes of regional and local expenditures—spent for a dam here, a post-office building there, and something somewhere else. When the demand comes from his own district, the Member of Congress has to think of his political future. He knows he will lose votes if he opposes what people in his own area ask; he has no reason to expect to make votes if he supports economy.

It was not without knowledge that a cynical legislator once explained his political long life by saying that he "had supported every appropriation and opposed every tax increase."

The Government bureaus and agencies have friends and beneficiaries in every State. They can easily arouse a back-home pressure campaign to protect their appropriations. Every organized group knows how to persuade members and sympathizers to write or wire their Congressmen.

Thousands of taxpayers who squawk with justified horror at their own tax bills have been among those to write or wire in behalf of some expenditure they themselves wanted.

Is it any wonder that spending grows bigger and ever more lavish?

Should your Congressman receive a resolution from your chamber of commerce opposing a proposal to spend Federal money in your town, he would probably drop dead from amazement.

He would be greatly surprised to read a letter from you opposing an expenditure from which you might expect benefits. If he were

[2] I am referring literally to a clause in the SED constitution which was pointedly read at these meetings.

to receive several such communications, he might conclude that his people were seriously opposed to bigger spending.

Every Congressman respects his mail. An individual, personal letter impresses him. If he should now begin to receive many letters favoring economy in Government, they would have some effect on his attitude toward expenditures. Probably he personally favors public economy because he sees so much waste. He would gain support from quantities of written evidence that a spirit of self-denial has begun to arise.

Bigger spending can only make dollars cheaper and prices higher, since Government borrowing is what pumps up inflation. Every dollar the Government spends is a dollar some citizen has been forbidden to spend or invest for himself. At some point Government spending will put an end to American individual opportunity.

St. Lawrence Seaway and Power Development

EXTENSION OF REMARKS
OF

HON. CLARENCE E. KILBURN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. KILBURN. Mr. Speaker, under leave granted to extend my remarks, I desire to include a recent statement as published February 18 by the Power Authority of the State of New York, upholding New York's right under the Federal-State accord in the St. Lawrence hydroelectric power development. Editorials from the New York Times and the Watertown Daily Times are also included:

NEW YORK POWER AUTHORITY STATEMENT

More than 20 bills have been introduced in Congress to approve the draft United States-Canadian agreement and to authorize the St. Lawrence seaway and power project since the agreement was signed March 19, 1941.

Each of these measures heretofore offered has definitely provided for turning over to New York State the power facilities to be built within the State, upon assumption by the power authority of the allocated costs of the power project, pursuant to the Federal-State accord of February 7, 1933.

On February 15, 1949 House Joint Resolution 161 was introduced by Representative BLATNIK, of Minnesota, to approve the 1941 United States-Canadian agreement and to authorize the dual purpose St. Lawrence development. This is the first bill offered in the entire history of the project which attempts to repudiate the Federal-State accord. It completely eliminates the Federal-State accord provision, which appeared as section 5 of Senate Joint Resolution 104, Seventy-ninth Congress, introduced by Senator BARKLEY and 9 cosponsors, and as section 5 of Senate Joint Resolution 111, Eightieth Congress, introduced by Senator VANDENBERG and 15 cosponsors.

Every President and every governor of the State of New York has endorsed and upheld the Federal-State accord since it was entered into in 1933. Legislation containing the Federal-State accord provision has repeatedly been recommended to Congress by the United States Army Corps of Engineers, the Federal Power Commission, the State Department, and every other Federal agency concerned with the St. Lawrence development.

Bills containing this provision were favorably reported after public hearings by the House Committee on Rivers and Harbors, Seventy-seventh Congress, in 1941; by the Senate Committee on Foreign Relations, Seventy-ninth Congress, in 1946; and by the Senate Committee on Foreign Relations, Eightieth Congress, in 1948.

In reliance upon the Federal-State accord, the State of New York has made substantial expenditures in completing engineering and marketing plans, all predicated upon ownership and operation of the power project by the public agency of the State, as provided in the accord.

In his message to Congress October 3, 1945, recommending the St. Lawrence seaway and power project, President Truman referred to the State power program embodied in the Power Authority Act as follows:

"I have always been, and still am, in favor of that program. Under it the power facilities are to be constructed by the Federal Government and turned over by it to the State of New York. The terms of allocation of costs to the State of New York have been agreed upon in a memorandum of agreement dated February 7, 1933, recommended for execution by the United States Army Corps of Engineers and the power authority of the State of New York. This basis of allocation is fair and acceptable.

"It has always been understood by the responsible proponents of this development that the water-power project should become the property of the State of New York, and that the electric power should be developed and handled by the State. That should continue to be the policy, and I recommend that it be so declared by the Congress."

Since its creation in 1931 the power authority has appeared at every public hearing held by a congressional committee on behalf of the St. Lawrence project and has joined with all other public agencies, Federal and State, in support of the Federal-State accord provision. It is wholly inconceivable to the power authority that the Federal Government or its agencies will at this late date sponsor any legislation to scrap the Federal-State Accord. The trustees of the power authority are unanimously and unalterably opposed to the Blatnik bill or any other bill that fails to include the Federal-State accord provision.

In its annual report of January 31, 1949, the power authority reaffirmed its stand against any proposal to Federalize the power development in New York State; to increase the proportion of costs to be assumed by the power project under the method of allocation provided by the Federal-State accord; to restrict or hamper the use of St. Lawrence power for the benefit of the people; or to deny to the State the right to proceed with the power project duly authorized by act of the legislature.

The power authority will continue to uphold these substantial rights and interests of the people of the State of New York, consistent with the terms of the Federal-State accord, in connection with any future public hearings held on the St. Lawrence project.

(The above statement is signed by the five trustees of the power authority, Gen. Francis B. Wilby, Geneva, chairman; Fred J. Freestone, Syracuse and Interlaken, vice chairman; George Stephens Reed, Lowville; Gerald V. Cruise, New York City; and Jacob Grumet, New York City; and Ralph G. Sucher, executive secretary.)

[From the New York Times of February 23, 1949]

ST. LAWRENCE POWER

Since the United States and Canada in 1941 agreed formally to carry out the St. Lawrence Seaway and Power Project more than 20 bills in approval have been introduced in Congress. All stipulated that the hydroelectric power plant to be constructed was to be turned over to the State of New York, provided the State paid its share of the cost. Now comes Representative BLATNIK, of Minnesota, with a resolution that flies in the face of State ownership and calls for federalization. His is the first bill that repudiates a Federal-State accord which has been endorsed by every President and by every government of the State since 1933, as well as by the Corps of Engineers, the Federal Power Commission, the State Department, and every other Federal agency concerned with the development of the St. Lawrence.

If a St. Lawrence hydroelectric plant generated an excess of power that could be utilized in New England, a case for federalization might be made out. But there has long been a shortage of electric power in upper New York. Even in the New York City area the demand for electric power exceeded the assured supply in 1947. Such is the demand for power that the public utility companies of the State are prepared to install new generating capacity of 280,000 kilowatts in the New York City area alone and 354,000 kilowatts elsewhere. If we now had both St. Lawrence hydroelectric and the planned public utility steam power the State could utilize it all.

Since the American portion of the St. Lawrence plant will lie within the boundaries of the State and since the State needs all the power that it can obtain there is no need of federalization. Representative BLATNIK'S bill can serve no other purpose than that of granting the Federal Government rights for which it has never asked and for which there is no justification.

[From the Watertown (N. Y.) Daily Times of February 18, 1949]

THE POWER AUTHORITY'S STATEMENT

The New York State Power Authority today announced its opposition to any St. Lawrence seaway bill which did not clearly recognize the property right of the State of New York in the developed power. The statement was directed particularly against the Blatnik bill, described by the authority as the only St. Lawrence seaway bill ever introduced which did not contain the Federal-State accord.

The authority cites the fact that President Truman in 1945 conceded the right of New York State to the developed St. Lawrence power and says that every other President, since the St. Lawrence seaway was first discussed, has recognized this right. It was primarily for the purpose of administering the developed power that the New York Power Authority was first created and the State has spent a great deal of money in anticipation of having the developed power turned over to it.

The power authority makes a strong case but whether it will impress Washington is another matter. Fortunately, it now develops that the Blatnik bill is probably not an administration measure. Nevertheless, it is known there is a sentiment in certain Washington quarters to make the St. Lawrence development another TVA.

The strongest thing in the power authority's favor is that President Truman is definitely on record for the Federal-State accord. No man could have made a more positive commitment than he did in 1945. And there is nothing so far to indicate that he has changed his stand in any particular.

If the power authority were authorized to make it clear to the White House that if the developed power is turned over to the State, it will be distributed so that the people will receive the maximum benefit from it, it might be the one thing needed to make sure that we will get the power. At any rate, it would make our case much stronger than it is now and would be an effective answer to those people in Washington who are charging that the State wants the power only to turn it over to the utilities.

Saving Bond Theme Song Competition

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 28, 1949

Mr. ARENDS. Mr. Speaker, on February 8, I informed the House that the lack of a peacetime savings-bond theme song was being remedied by the talented harmonizers of the Society for the Preservation and Encouragement of Barber Shop Quartet Singing in America, Inc. The 6-week competition closed on February 15, and a total of 43 original compositions, both words and music, have been submitted for the approval of the United States Savings Bonds Division. Fred Waring, whose name is a byword in national harmony circles as a band and chorus leader, will act as chairman of the board of judges who will select the prize song among the 43 submitted, and render a decision by March 1.

I am proud today to acclaim my own State of Illinois for entering nine songs, as compared with five each for the District of Columbia, Indiana, and Ohio; Michigan, four; New Jersey, New York, Massachusetts, and Wisconsin, two each; Georgia, Maryland, Rhode Island, Delaware, Wyoming, and Nebraska, one each. Thus, Illinois led the Nation's barbershoppers in responding to the Treasury Department's urgent call for a bond song to succeed Irving Berlin's wartime inspirational tune, Any Bonds Today? My own chapter of SPEBSQSA—Bloomington, Ill.—is represented by two songs, Buy a Savings Bond Today, by William Bourges, and Buy Some Bonds Today, by John Hansen in collaboration with William Bourges.

Frank H. Thorne, of Chicago, former international president of SPEBSQSA, entered Keep America Saving, adapted from his famous song, Keep America Singing, which was recently sung at the inaugural gala. Billy Hannon and George P. Hill, also of Chicago, entered Buy a Bond Today and Let's All Buy Savings Bonds, respectively. Oak Park chapter was represented by The Bond Song, by R. George Adams and R. F. Svanoe, and Nothing Could Be Finer Than To Be a '49er, by George H. Zdarsky. Harold Price, of Belleville chapter, wrote a Bond Anthem, and Johnny Goering, Sr., of LaSalle chapter, wrote Buy a Bond Today.

Edward R. Place, of Washington, until recently a congressional secretary in the office of the gentleman from Pennsylvania [Mr. McCONNELL] and now the assistant conservation director of the National Wildlife Federation, conducted this competition for SPEBSQSA in cooperation with the United States Savings Bonds Division. The Nation's Capital led all chapters in the country in number of entries with five, including Ed Place's Bonds for Happiness, Mark Bowsher's Be a Minute Man of Forty-nine, in collaboration with Place; E. Taylor Papson's Buy a Bond; Edward A. Carey's Buy a Bond Today, and Charles J. Hay's Put Your Savings in a Savings Bond. Mr. Hay is a Government employee with the War Assets Administration.

Ed Cronin and Pat Sands, employees of the collector of internal revenue in Boston, Mass., entered their song, Freedom Rings. Former International President Hal Staab, of Northampton, Mass., author of the popular song, Violets Sweet, submitted a composition in the bond song competition, I Am Proud of the U. S. A.

I would like the RECORD to show the remaining entries in order to be fair to all the composers who have contributed their talents, time, and effort to the savings-bond song-writing project.

Indiana: International board member Ted E. Haberkorn, Sr., Fort Wayne chapter, two songs, O Save and You'll See and Savings Bonds Keep That Wolf Away; Arnold McPhee, Evansville chapter, Get on the Bond Wagon; Larry Smith, Muncie chapter, Buy Bonds; M. H. (Skeet) Bolds, Lafayette chapter, Buy Another Bond or Two.

Ohio: Tim Murphy, Columbus chapter, It's Bonds We Have for Sale; George B. Murphy, Columbus chapter, Opportunity Is Knocking; A. E. Stull and Howard K. Hansen, Lakewood chapter, Buy, Buy Bonds; R. F. Verderber, Cleveland chapter, Buy Buy Bonds, and Nathaniel Berthoff, Elyria chapter, Buy a Bond of Liberty.

Michigan: Willis A. Diekema, Holland chapter, chairman of SPEBSQSA's Song Arrangement Committee, Brother, Sign Up for Bonds; Dal Metcalf, Grosse Pointe chapter, Bonds on Parade; Keene W. Wolfe, Battle Creek chapter, The Victory Call, and Hal Reinhardt, Grosse Pointe chapter, Buy a Bond From Uncle Sammy; Joseph E. Martin and Howard Liffick, both of the Benton Harbor-St. Joe, Michigan chapter, Buy a US Bond Today.

Wisconsin: Cleve B. Akey, Wisconsin Rapids chapter, Buy a Bond, and Edward Berg, Milwaukee chapter, Buy Bonds Today.

New York: Walter K. Beyer, Hamburg chapter, Buy Bonds Today, and Fred J. House, Hornell chapter, assisted by his wife, Bonds of the U. S. A.

New Jersey: Edward Miltner and Gus Patzig, Jersey City chapter Give Yourself a Helping Hand, and Louis M. Casale and Pat Owen, Leonia chapter, The Bond Song.

Nebraska: Warren Adler, Lexington chapter, We'll Keep America Singing.

Delaware: Maurice Donovan, Wilmington chapter, Save for a Rainy Day.

Rhode Island: Alfred F. Girard, Providence chapter, Buy, Buy, Buy a Bond Today.

Maryland: Paul J. Griffin, Baltimore chapter, Buy Bonds for Security.

Wyoming: Francis Stroup, Laramie chapter, If You Want Four Dollars.

Georgia: R. H. ("Dick") Sturges, Atlanta chapter, Buy, Buy Another United States Savings Bond.

SPEBSQSA has given its answer to the Treasury with a flood of harmony and thanks National Director Vernon L. Clark, Des Moines, Iowa, of United States Savings Bonds Division, for the opportunity which he extended to the society to demonstrate its spirit of patriotism and public service. National Director Clark has been ably assisted by his colleagues in the United States Savings Bonds Division in cooperating with the various chapters of SPEBSQSA throughout the Nation, notably by Harold B. Master, director of community activities, and Nate Colwell, director of radio, who is one of the advisory judges to the panel to be selected by Fred Waring, who incidentally is a member of the Sheboygan, Wis., chapter of SPEBSQSA.

My hearty congratulations also to President O. H. King Cole, Manitowoc, Wis., and Secretary Carroll C. Adams, Detroit, for their promotional efforts on behalf of the bond-song competition, which has had such happy results.

Outagamie County Board Denounces Hungarian and Bulgarian Trials of Religious Leaders

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 28, 1949

Mr. BYRNES of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include the following resolution passed by the Outagamie County Board of Supervisors, Appleton, Wis., on February 15, 1949:

Whereas our forefathers came to this country from foreign lands so that they could worship as they desired; and

Whereas over the years that have elapsed many lives have been lost in defending their country to keep it a free democracy; and

Whereas in 1917 many more lives were lost when Kaiser Wilhelm tried to place himself above God, the Maker of the universe; and

Whereas in 1941 we were again embroiled in another war on account of nazism, which was finally overcome; and

Whereas we have not had a good breath to breathe from that turmoil and now we are confronted with communism; and

Whereas just recently in Hungary that Cardinal Joseph Mindszenty was found guilty under duress and was given a life sentence; and

Whereas also more recently a goodly number of Evangelical Church members were placed in jail in Bulgaria awaiting trial by Communists: Now, therefore be it

Resolved, That we send to the President of the United States and the Congress stating our opposition to such unjust convictions as have taken place recently.

A Revitalized, Patriotic Republican Party That Can and Will Serve All Groups of American People

EXTENSION OF REMARKS
OF
HON. JAMES S. GOLDEN
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 28, 1949

Mr. GOLDEN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I include an address delivered by Hon. Cal Johnson

former Member of the House of Representatives, in my congressional district at Somerset, Ky., on the night of February 11, 1949, and which, in my opinion, sets forth basic principles of the Republic Party and shows that our party can and will be of great service not only to the free enterprise system of America and the business people of America but to the laboring men and women and to the American farmers.

The address is as follows:

Fellow Kentuckians, fellow Americans, I am indeed happy to be here and to have this opportunity to join with you in this splendid gathering.

As a wandering son of old Kentucky, I suppose that I should first thank you good folks for permitting me to come back. My case is not like that of the revenue agent over in our section of Kentucky who was seeking a moonshine still. The Government knew that there was a still in our community and they had several agents out looking for it. Finally they sent one of their best men with instructions to stay there until he found it. He searched for weeks without any luck, until one evening when he was coming in along the ridge he noticed a little spiral of smoke arising from down in the valley. He decided to investigate and found a log cabin in which there was a little girl about 12 years old doing the dishes.

He asked her: "Is your pappy home?"

"No," she answered, "Pappy's not home. He's down at the still."

"Oh," said the revenue agent, "Has your pappy got a still?"

The little girl answered: "Yes."

Then he asked her where it was and she answered: "Why, I won't tell you where it is, for you might be one of them revenooers.'

"Oh," he said, "now don't let that worry you. I'll tell you what I'll do. If you will take me down to your pappy's still, I'll give you a dollar."

"All right," she said, "I'll take you down there for a dollar."

But she kept on washing dishes, and after a while he said: "Come on honey, let's go."

"Oh no," she said, "You haven't given me my dollar yet."

"That's all right," he told her, "I'll give you the dollar when we come back."

To which she replied: "Oh no, you won't, mister, you'll give it to me now, for if you go down there you ain't comin' back."

I am happy to report, folks, that in all the years I have been away, there has been only one time that I was criticized for being from old Kentucky. It was back in 1942 in a congressional primary campaign. I had for my opponent an eminent judge who had sought the nomination 2 years previously and who resented very much that I should oppose him. We were speaking on the same platform in Alton, Ill., and he preceded me. Imagine my surprise when he said, in addressing the audience:

"I was born in Illinois in this congressional district and have lived here all my life, and my opponent was not. He was born in Kentucky, and now he comes to my district and seeks to take from me, a native of this congressional district, the nomination to which I am entitled."

When he finished, I followed him to the platform and said: "Yes, folks, just as the good judge told you, I was born in old Kentucky. My mother was there on the night of my birth and, although I had nothing to say about it then, I am proud of it now, because I recognize in this audience the faces of quite a few people whom I met at Edwardsville a short time ago when we observed the birthday of another Kentucky Republican, a man by the name of Abe Lincoln. You know folks, he came to Illinois at the same age that I did. He went to the Illinois general assembly, just like I did, and then he became Congressman just like I am trying to, and then he became President. Shucks, folks, two more jumps and I'm following right in his footsteps. You may be looking at another Abe Lincoln."

I am so happy to be here tonight and to have this opportunity to join with you in paying humble tribute to the sacred memory of that great American and fellow Kentuckian, Abraham Lincoln. When I walk in silent reverence by the site of the little cabin where he was born at Hodgensville, or visit the grave of his sainted mother in Indiana, or stand in solemn adoration before the marble shrine erected to his memory in Washington by a grateful Nation, I cannot help but lift my eyes toward heaven and thank my God that I am an American privileged to partake of liberty and freedom in a united Nation, the unity of which this noble, yet humble, American died to preserve.

This was Lincoln's America and this was his State. He loved his country fervently because he realized that the very soil of America was sacred; hallowed by the memory of those who once upon it dwelt; and sacred because within its gentle embrace remains all that is mortal of those great Americans who gave their all that you and I might be a free and independent people and enjoy the blessings of liberty as we assemble here tonight.

Abraham Lincoln is long since dust. The curtain of time has forever closed the portal of his tomb, but so long as time shall be—so long as America stands, the record of his words and deeds shall be woven as golden threads in the fabric of American history, and when the Great Scorer calls the roll of the States, and asks that they list their illustrious men, proudly will Kentucky present the name of her immortal son, the rail splitter, whose righteous ax hewed to the line of principle, struck the shackles from enslaved men and blazed a trail through the wilderness of ignorance and bigotry, that all men might follow in his footsteps to a better understanding of one another's problems and to a greater and more fruitful life for all.

It was men like Lincoln who were the builders of our country and their spirits hover over this Nation. By reviewing their lives we find a pattern for our own. They were men of action, men of honor, and men whose every act was motivated by the love of liberty and of country. They were men who taught their children by the family hearthstone that America was a land of opportunity and that there was no height too great for any boy or girl in America to reach if they would work and strive to forge ahead. They were men who taught that individual initiative and a willingness to work would overcome all things and that sweat was the only cure for economic ills.

The mantle of authority has been transferred from their shoulders to yours and mine. Our duty is to carry on and preserve the type of government that made America great, the type of government that permitted the progress which, during 170 years, has placed America upon the pinnacle of world domination; the type of government built by incentive, ingenuity, and initiative; the type of government built by men who hewed an empire from a wilderness and who realized that nothing of any value was ever produced that was not the result of the sweat and toil of men's hands.

Such were the ideals of Lincoln—such was the Government of our fathers who were taught that public office was a public trust; that the Supreme Court was akin to holy and that no matter how high or how low a man's station in life, when he appeared before that tribunal he would be accorded justice and I defy you to show me a man who has that confidence today.

They were men who were taught that the Constitution of these United States was sacred and was to be held inviolate by every true American. In their wisdom they gave us a government of many freedoms, for they realized as Jefferson that "the best government is the least government," and that "When the Government shall tell the farmer when to sow and when to reap, the people shall soon go hungry."

They realized the dangers of an all-powerful centralized government, so they delegated certain fundamental rights to the States in an attempt to prevent a bloated Federal cyclops from blindly using its power to control the destinies of our people. They had fought a war to break the shackles of a monarchy and they did not intend to have another one arise to take its place.

They planned well and wisely and as a tribute to their planning in 170 years, this Nation has grown from a few struggling colonies to become the most powerful nation on earth. It grew because under its system of free enterprise business was encouraged instead of regulated, and where business is encouraged there is incentive and initiative and where there is initiative there is prosperity and progress.

But there is a new philosophy in Government now in Washington and that philosophy is that we should change from a government of laws to a government of men. It is the false philosophy that teaches that the world owes us a living and instead of stressing individual rights as our forefathers did, this new philosophy stresses the right of the individual to help himself to that which has been accumulated by others, not seeming to realize that unless we are willing to contribute of our own efforts, we should not be permitted to partake of the fruits of the labor of others.

This false philosophy has been nurtured by the demagogues of this new order who would teach that the Lord helps those who help themselves and the New Deal helps those who don't.

In a Nation where once the patriot, Patrick Henry, voiced the soul-stirring phrase, "Give me liberty or give me death," today the political Mountebanks say: "Give me the votes and I'll change the law of the land to read the way you want it."

It is indeed a sorry state of the Nation when men entrusted with public office place personal and political interests before public interest, and are willing to sacrifice principle for political expediency. When this happens, they cease to be public servants—they constitute a public menace, and they have no business in public office.

Two great political parties were created in this Nation. One was the party of Jefferson—the other the party of Lincoln. I do not charge the follies of the New Deal to true Democrats, as the record of the party of Jefferson is long and glorious, and one of strict adherence to the principles of our Constitution, but the record of the New Deal is brief and shadowy and its attitude toward our Constitution is one of abrogation and disregard.

The party of Jefferson has all but disappeared. Its last remnants were routed at Philadelphia during the New Deal convention, and although those remnants had the courage to refuse to m ch under their party's stolen standard, they stand today alone in the Congress, a small but determined group of Americans who are spurned by the New Dealers, but welcomed by the Republicans.

What are some of the follies of the New Deal, and what are its ideologies? It has placed political demagoguery on such a high plane that Diogenes decided to swipe another barrel of oil by which to continue his search for an honest man. Their candidate for high office, in his Labor Day speech in Detroit, set forth a perfect example of pure political demagoguery of the most puerile type. It was a continuation of the New Deal policy of

spreading class hatred. It was most deplorable, because it was made by a man who sought the highest office in our Nation and also because it was directed toward the same employers of American labor who, but a short time ago, were asked by their Government to produce the guns, ships, tanks, and planes with which to equip your sons and mine.

Labor and industry cooperated in the last war as a team to complete the greatest production job the world has ever known, and it does not increase the stature of any man when he attempted to set one against the other. Let us hope that when the American people hear rantings about yellow-dog contracts and labor hater, they will pity the speakers and regard them with the kindly thought of "Father, forgive them, they know not what they do."

The New Deal has so burdened our Nation with debt and overlapping governmental bureaus during its 16 years in office that one-third of our national income is used for the maintaining of Federal and State government. It has increased the cost of maintaining Federal Government from $2,800,000,000 in 1932 to $42,000,000,000 in 1948. It has increased our national debt from $22,000,000,000 in 1932 to approximately 270,000,000,000 in 1948. It is now collecting $42,000,000,000 in taxes each year for the maintenance of the Federal Government, and in addition it is estimated that $15,000,000,000 are required to maintain local and State governments. This total equals $57,000,000,000, or one-third of our national income, and yet they demand that $4,000,000,000 more in taxes be extracted from the American public. This Nation can be grateful that the taxation committees of the Congress are headed by Congressman DOUGHTON of South Carolina and Senator GEORGE of Georgia, two men who adhere to the principles of Jefferson.

Not satisfied with its present program, which has expanded the principle of WPA to Europe through the Marshall plan, it now proposes through the so-called Fair Deal to make this program global in its scope and extend its benefits to all the nations of the world. Since learning of the latest phase of this program, it is my intention to call upon my friends in Congress and plead that a resolution be introduced cutting out all appropriations to scientists for the development of rockets. I am fearful that some one will perfect one that will reach the moon and discover that the people on that planet are in need of assistance and the present administration would immediately expand the program to cover the universe instead of the globe.

The New Deal has coddled Reds and fellow-travelers and protected them from the righteous wrath of true Americans. The un-American Activities Committee disclosed that various Federal agencies were honeycombed with pinks and fellow-travelers. Their proof was dismissed with a wave of the hand and called a red herring, and the scourge that has spread like a plague throughout Europe is permitted to grow unabated here in America.

The Administration has proven by such actions that it is willing to deal with questionable groups in order to obtain political support. History has proven to Czechoslovakia, Poland, Lithuania, Hungary, Austria, and other countries of Europe that you cannot do business with Communists. The teachings of Carl Marx propose to its adherents that they promise anything including the signing of treaties or the entering into any type of agreement, in order to gain an advantage, with the understanding on the part of the Communists that such pledge will never be kept.

Communism could be likened unto cancer. It is a creeping, consuming fungus that destroys the fabric of free government as completely as cancer destroys the tissues of man. It is a malignant growth in the minds of its adherents that obstructs their ability to think for themselves as completely as cancer obstructs the ability of the other vital organs to function. It warps man's perspective in life as disease warps his body. Its breeding place is in the shrouds of fear, hate, envy, and sedition, and its goal for free government—like cancer's for man—is darkness and dissolution.

As we trace the development of communism in this country, what do we find? The New Deal recognized Russia after two Republican Administrations had refused to do so. Browder, the leader of the Communists in this country, was sentenced to the penitentiary by an American jury and he was pardoned by the late President Roosevelt. Mrs. Browder, with the assistance of the White House, migrated to the United States from Canada to become a citizen of this country. All this was engineered by the White House, in order to gain the support of the American Labor Party in New York. That is the pattern of politics they have set.

The record of the New Deal in handling Foreign Affairs in the Nation is pathetic. The fighting men of America won the war—the diplomatic arm of the Nation lost the peace. Berlin, Vienna, and Prague, are shining examples of our stupidity, when American troops find themselves without access to the areas they occupy, except at the whim of the Russians.

China's present position can be attributed directly to her betrayal by this Nation. At Cairo, Roosevelt and Chiang Kai-shek entered into a solemn agreement in which it was understood that when the Japanese were driven from Manchuria, that the industrial installations and arms would be turned over to our Chinese allies in order that they might put down the civil war in their country. That promise was broken at Yalta, where the same promise was made to Russia, who in turn, gave the arms to Communists in China, who have used them to overwhelm the Nationalist Government.

Poland, the first nation to feel the heel of the aggressor, was also betrayed at Yalta. Ambassador Bullitt's articles in Life magazine published last August and September are indeed revealing as to the vacillating foreign policy of this Nation.

The President, in his recent address to the Congress on the State of the Nation, inferred that the Lord will help on his program. The Nation joins with him in that prayer, as the Scriptures inform us that Christ was a carpenter and it would be a great consolation to the American people to know that at long last there was one builder in the New Deal, which for so many years has held only wreckers.

So much for the New Deal. What of our own party? Today the Republican Party is like a great, tempest-tossed ship. The winds of time have swept the Lincolns, the McKinleys and the Teddy Roosevelts from her bridge. She wallows helplessly in a sea of socialism, swept by Communistic tides toward the rocks of destruction, because for 16 years there has been no organized crew on her decks and no able helmsman at the wheel. It is high time that we reestablish unity in our party and return to the principles of Lincoln in order that we may regain the confidence of the people. To regain that confidence, we must prove ourselves to be leaders and we cannot prove that ability by adopting a me-too attitude or by sniping at the other fellow's ideas. We must prepare and submit a progressive legislative program to the Congress at once in order that the citizens of this country may have two legislative programs from which to choose.

Let us propose a farm program that will guarantee to the farmer a fair return for his labor based on a graduated parity, and let us establish the same graduated protection through tariffs for our industries.

Let us submit a health and welfare program that will permit a worker to draw against his own unemployment compensation account to meet a health and welfare problem and pay his physician, and let us fight with every fiber the proposed Murray-Wagner-Dingell bill which would destroy the medical profession in this country and place the family doctor under the control of the ward heeler.

Let us, as Republicans, join with true southern Democrats in Congress in a coalition of Americans to defeat every fool measure that leads toward socialism or government ownership.

In our dealings with foreign nations, let us help those who are willing to help themselves and adopt a policy toward all nations of fairness and firmness.

Let us realize that there can be no peace in the world until a strong and united America standing four square in the family of nations announces a definite set of principles upon which we are willing to stand or fall.

Our national history will cause the peace-loving nations of the world to gravitate toward us, and our strength will command the respect of aggressors. The road to peace is hewn in the bedrock of firmness, and the road to war is cluttered with broken promises, vacillations and the debris of indecision.

Let us build a strong and united America, secure in our unity and strength, and let us pray that war will never again come to America, for when we think of war we remember 1917 and it seems but yesterday that we stood in awed silence as Old Glory passed, held aloft by those stalwart sons of America. We heard the roll of drums and the echoing tramp of millions of marching feet as the legions of America marched off to war.

But folks they did not all return, and tonight as you and I assemble here there are more than one-half million dads and mothers whose hearts are heavy, for down through the years there comes to them the memory of a curly-headed little boy who once crawled across their kitchen floor. They can remember him when he was just big enough to stand on tip-toe and reach on the table to clutch at his daddy's pipe. They can remember how they toddled him on their knee and taught him to love his country and revere his flag for the things for which it stood. They can remember how he would come home in the evening from the little school around the corner and excitedly tell about the lessons in history he had learned and of the heroes who had gone beyond. They remember how proud they were when he marched away in uniform, and they remember the telegram from their Government telling them he would never again return, for he sleeps tonight beneath a whited cross upon some foreign battlefield.

Friends, I know the meaning of one of those telegrams, for the icy hand of death reached into my home during the recent war. On July 29, 1943, my son, Lt. John Bernerd Johnson, made the supreme sacrifice and joined that legion of heroes that march silently through eternity. Above his grave there is a simple cross marked: "Here lives a soldier."

I pledge to him and to his comrades in death and to those who have returned that I shall bend my feeble and untiring efforts towards the preservation of the government of their fathers. A government perpetuated by the consent of the governed, and I ask that history record of me that I had but one prayer, that this Government of ours, this great citadel of freedom, may stand forever as living, throbbing proof that government of the people, for the people, and by the people has not perished from the earth.

And to those who would launch their false ideologies at the American ship of state and attempt to drag our Nation down to the level of their own, may I paraphrase the immortal Farragut and say, "Damn their torpedoes and their ideas—full speed ahead America on the course that was charted by our fathers."

Persecutions in Hungary

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 28, 1949

Mr. ADDONIZIO. Mr. Speaker, Mr. John F. Beirne, secretary of Branch 624, National Association of Letter Carriers, Orange, N. J., has kindly forwarded to me a copy of a letter of protest to the Secretary of State, denouncing the trials of Bishop Lajos Ordass of the German Lutheran Church and of Josef Cardinal Mindszenty. The practically universal indignation of American citizens over the persecution of the leadership of Christianity by the Hungarian Government is well illustrated in the letter which follows:

BRANCH NO. 624,
NATIONAL ASSOCIATION OF
LETTER CARRIERS,
United States Post Office, Orange, N. J.

Hon. DEAN ACHESON,
Secretary of State, Washington, D. C.

HON. DEAR SIR: At a meeting of Branch 624 National Association of Letter Carriers, this city, the officers were instructed to communicate with you protesting the mock trial in Budapest.

We denounce the trials of Bishop Lajos Ordass of the German Lutheran Church and Josef Cardinal Mindszenty as reversions to barbarism and call upon our representatives to take whatever action is possible to secure their release.

Since the Government of Hungary is a puppet of Russia, and since Russia is signatory to a peace treaty in which she agreed to respect the religious rights of the people, now she has flagrantly violated that treaty and her conduct is a menace to world peace. Therefore, she should be brought before the United Nations to answer for her deeds.

Religion is the only hope for survival of western civilization behind the iron curtain and none has a greater stake in the survival of that civilization than the people of the United States. But we now witness the liquidation of that spiritual leadership in an effort to paganize Hungary. The sentencing of Bishop Ordass to 15 years and Cardinal Mindszenty to life imprisonment should be stigmatized before the tribunal of Christian civilization as infamous.

If our Government fails to rectify this crime against humanity we shall not have kept faith with our brave sons who died in two world wars.

Yours very truly,
FRED R. BAYLISS,
President.
JOHN F. BEEONE,
Secretary.

Lithuania's Long Ordeal

EXTENSION OF REMARKS
OF
HON. IVOR D. FENTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 28, 1949

Mr. FENTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Evening Herald, Shenandoah, Pa., of February 16, 1949:

LITHUANIA'S LONG ORDEAL

A few months short of 9 years ago, the Republic of Lithuania ceased to exist. Erased along with two other Baltic countries by a power founded on terrorism, it was absorbed by the Soviet octopus.

Maps these days designate that erstwhile land of free men and women as the Lithuanian Soviet Socialistic State, a part of the U. S. S. R. Through a tragic set of circumstances, Lithuanians are trapped in an unyielding system wherein their cherished independence has been sacrificed on the altar of state for the greedy purposes of communism.

But let no one suppose the spark of liberty has gone out in the hearts of these gallant people. The torch burns low and in secret but the flame steadfastly resists all efforts to extinguish it.

Lithuanians have endured almost 9 years of bitter suffering which witnessed the initial red wave of terror, succeeded by brutalities of the Nazis and a return of the Reds. Their homeland since June 1940, has, in a diplomatic sense, become a forgotten country.

There has been a determined campaign to sweep away all of Lithuania's cultural values. More than 50 percent of the Catholic clergy have been killed or deported. Only 40 percent of the Protestant churches remain in existence. The vicious Soviet war against organized religion, spotlighted by recent events in Hungary, is an old and tragic story to Lithuanians.

Lithuanian patriots have been slain or deported to Siberia by the thousands. Today, it is believed that almost half the population is made up of Russian and Mongol "settlers."

Schools have been thoroughly Sovietized with great care taken to see that teachers are loyal to the "Party." Those brave souls who seek to acquaint little children with the story of Lithuania's relatively brief period of independence are soon detected. They are shown no mercy; they die like heroes.

Tens of thousands have been torn from their homes and taken into the far reaches of Russia to be used as slave labor. It is useless to remonstrate. There can be no appeal. The rights of a mere individual brook no recognition from the all-powerful state.

Undaunted by all this, forays of militant Lithuanian patriots from forest hide-outs are a nightly occurrence. They strike swiftly at the oppressor and disappear. The patriots suffer heavy casualties but thinned ranks are soon filled again with valiant replacements. The underground has never relaxed. It won't until liberty is restored.

History conveys a message of encouragement to these Lithuanians. They know of mankind's difficulties since the world's dim past in climbing civilization's ladder. They know of the halts and temporary descents, such as the Dark Ages. It is well understood that tyrants and war lords have come and gone down history's trail. And they know, too, that mankind, after each upheaval, has resumed the ascent toward the shining goal.

The deep sympathy of those of us in and about Shenandoah, many of whom are of Lithuanian descent or nativity, is deep for those people in the Baltic who are helpless in the midst of a hostile regime. With sadness but hope for a better future, we commemorate today the thirty-first anniversary of the Republic of Lithuania.

We pray with earnestness that the cruel, stealthy, and vindictive tyranny of the Kremlin will one day recede into history, remembered only as a dark blot.

There is a tendency to forget that communism has been a force for only 32 years. Measured in time, this is a fleeting split minute when the globe's history of trial and tribulation is considered.

Our own Government has never recognized the incorporation of the Baltic states into the Soviet Union. Such an eventuality is unthinkable. And some day the Republic of Lithuania will again arise. Pray God that we live to see this bright day.

Speech of Hon. Tom C. Clark, Attorney General of the United States

EXTENSION OF REMARKS
OF
HON. EDWARD J. HART
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 28, 1949

Mr. HART. Mr. Speaker, on February 24, the New Jersey State Democratic organization conducted its Jefferson-Jackson victory dinner at the Essex House, Newark, N. J. More than 2,200 members of the party gathered in three large dining rooms to commemorate the deeds of Thomas Jefferson, the founder, and Andrew Jackson, the sword of the party, to celebrate the well-merited victory of President Truman in the 1948 election and the return of a Democratic Congress, and to signify their readiness for the gubernatorial campaign of 1949.

The feature address of the evening was that of Attorney General Tom C. Clark. First on the speaking program was Col. William H. Kelly, of Newark, N. J., Democratic State chairman of Essex County and honorary chairman of the dinner committee, who expressed his pleasure over the great outpouring at the dinner and then introduced the toastmaster, Hon. Thomas J. Holleran, magistrate of the court, Irvington, N. J., who presided with grace and skill. Besides the Attorney General, Judge Holleran presented as other speakers Hon. Vincent J. Murphy, mayor of Newark; Hon. Elmer L. Wene, formerly a Member of this House and now State senator from Cumberland County, who has the indorsement of the party leader, Hon. Frank Hague, as candidate for Governor; Hon. Frank H. Eggers, mayor of Jersey City; and myself. Hon. MARY T. NORTON, also scheduled to speak, was, unfortunately, unable to be present.

After the diners had listened with marked attention and obvious approval to the radioed addresses of the President and Vice President, the Attorney General was presented to the large audience. His speech delighted his hearers, even as his personality captivated them. Speaking with an air of deep personal conviction, he left with them a most favorable impression which will long endure.

His speech was as follows:

I am happy to be in the great industrial city of Newark tonight to greet old New Jersey friends and to meet new ones. It is a delight to join this enthusiastic and inspiring gathering of Democrats honoring the memories of Thomas Jefferson, a founder of the Democratic Party, and Andrew Jackson, a sturdy champion of the plain people.

But Democrats don't have to hark back to the triumphs of 170 years ago of those two

famous men to find a reason for a celebration. All we have to do is recall the November 2 triumph of Harry Truman and ALBEN BARKLEY.

However, our Republican friends don't seem to realize as yet what actually did happen in November—they still seem to be in a political daze—still furiously and futilely fighting the Presidential battle of '48, wielding verbal punches in all directions.

The period of 1948 and 1949 will probably be recorded by history writers as the Republican alibi era. We have heard more alibis for the defeat of their Presidential candidate than we ever thought the human mind could conceive. The one reason they have failed to recognize was the fact that the people of the United States saw and heard Harry Truman and believed him. They knew that here was a man who would never let them down—that he was sincere, genuine, and capable. They also saw and heard ALBEN BARKLEY and knew he, too, possessed these great qualities.

What was planned recently by the Republican leadership at Omaha, Nebr., as a resurrection of the rejected national party wound up in a battle royal. The Old Guard and the young liberals proceeded to stage a battle of words that amused the Nation. When the oratory subsided the bosses emerged from the scene of strife and turmoil with a blazing sensational announcement of the issuance of a new edict.

Behold, the edict blared forth: "The ancient GOP—Grand Old Party—shall henceforth be hailed as Great on Progress."

No, the Republicans didn't have to go out to Nebraska to give birth to this brilliant and enthralling idea—millions of voters could have furnished them a more descriptive and more appropriate epitaph, at a lesser cost. Yes, even I can suggest a few for the GOP. What's wrong with—Great on promises—Great on privilege—Great on profits—Great on panic—Great on power—Great on poverty—yes, Great obstruction party.

Our political foes have well earned the right to these slogans through their record down the years.

Let us now for a moment leave our opponents floundering in their political sea of uncertainty—it is the only party which I know that claims to be able to go forward going backwards.

However, we are not here only to rejoice over our recent victory or to elate over the difficulties in which our opposition finds itself.

We assemble to pay tribute to the creators of our Nation's traditions, and also to take stock to ascertain whether we are meeting our responsibilities as citizens to uphold these sacred traditions and to rededicate ourselves to the cause of democracy.

The traditions of a country are the symbols of its character. They are the milestones which mark the growth and development and the shaping of our destiny.

In that sense a nation's traditions are similar to those which go into the shaping of our characters as individuals.

As individuals we are what we are today because of the numerous influences which affect the course of our earlier lives. We are the product of our inheritance, of our paternal training, of our various religions, of our learning, of our associations, and of the strong currents of our time.

In like fashion, our country is what it is today as a result of similar influences—of its inheritance, of the wisdom of its founders, and of the lasting contribution of a continuing line of great statesmen who, by their deeds and words, have shared in the molding of its character.

To a large extent the character of our country today is merely a reflection of the characters of such immortals as Washington, Jefferson, Franklin, Marshall, Jackson, Lincoln, Wilson, Franklin Roosevelt, and others.

The best traits of their collective characters, the toughest iron of their will, the vision and wisdom of their assembled statesmanship—all of these have gone into the mold of our Nation's character.

These are our traditions. These are the things which make us understandable to ourselves, if not always understandable to others. These are the things that bind us together as a people and as a country.

Jefferson believed in a democracy with liberty and opportunity for all. He held the faith that the democratic process would release the energies of every human being to live more abundantly.

Author of the Declaration of Independence, the Virginia statute of religious freedom, father of the University of Virginia, and fighter for freedom of education, he, in a vast measure, was also responsible for the fact that our country's spiritual, educational, and material growth has been unhampered by limited area. His vision in the historic Louisiana Purchase more than doubled the domain of our young Republic, and helped to make the greatness of America as a world power.

Jackson carried on the principles of Jefferson, and battled the vested interests in behalf of the people.

Jefferson was a man of peace. He expanded our boundaries, not by force of arms but by legal acquisition. Jackson, although a soldier, made his greatest contribution to the cause of a peaceful democracy by driving special privilege from our temples of finance.

Yes, while other nations may revere great conquerors, we have as our national heroes men of peace. We remember and revere them, not for the ravage they wrought to the world about them, but for their contributions to their fellow men.

All of our history, all of our tradition, and all of our national character show us to be a peaceful nation—a peaceful people. We impose no intentional injustice on others, nor will we submit to injustice being imposed on us. We honor above all else the dignity of man and the rights of the individual.

Foreign statesmen, however, who fail to interpret us in the manner in which we understand ourselves do a dangerous disservice to their own people and to the contentment of the world. The iron in the characters of Jefferson and Jackson, to whom we pay special tribute tonight, has long since been transplanted into the heart and sinews of our Nation. It is at once a part of our tradition and a part of our present national character.

These inheritances, well understood by us, should not be misunderstood abroad. They were passed down to us by men whose lives were dedicated to the principle that our people should govern rather than be governed. They are among our national heritage.

These things to us are easily understood. We understand that such a heritage entails vast and violent disagreement among ourselves. We understand that those disagreements, honed on the flint of public opinion, are the conditions which keep our democracy virile and vigorous.

We understand that the right of disagreement, the right of freedom of thought and speech, the right of individual dignity—those rights, jealously protected at all times, are the basic conditions to a strong and fervent democratic government.

We also understand something else. In spite of these political differences, when we are in the face of an internal or external threat we spring together as the one powerful nation which we are, and all of the tradition of our heritage keeps us firm and calm and determined until the hour of final victory.

Foreigners who misunderstand those characteristics, and mistake our individual freedom for national disunity, are committing a tragedy of immeasurable proportion.

And those proponents of totalitarianism, or of other vicious ideologies, must be made to realize in no uncertain terms that the paths of freedom in America will never be closed.

We want nothing of any people except their good will. But we shrink from no duty in the protection of our liberties.

So tonight we ask ourselves, has the Democratic Party of this generation helped to keep secure the heritage handed down to us? "Let us look at the record"—at least part of it, for time will not permit to enumerate all the virtues.

First, a quick answer is that the people think we, as Democrats, have done a good job because five consecutive times they have elected Franklin Roosevelt and Harry Truman to the Presidency. It is rather noteworthy and gratifying that, as the years marched on, whenever the Nation faced a crisis the people chose Democrats, or believers in and advocates of democracy, to steer the ship of state out of the turbulent waters to tranquil shores.

Today our people revere the names of Washington, Jefferson, Jackson, Lincoln, Cleveland, Wilson, Franklin Roosevelt, and Truman.

I know I don't have to tell a New Jersey audience about Wilson's greatness. But it is most appropriate to emphasize some of his deeds because it is so timely.

When Woodrow Wilson, with his "new freedom" program, came onto the political scene in Washington, the Nation was in the grip of privileged groups. Even the Government itself was a facile instrument in the hands of private interests.

Wilson had an entirely different concept. He believed that government exists for the benefit of the people.

Under his leadership came a flood of progressive legislation more sweeping in its objectives than the Republic had witnessed since the days of Andrew Jackson.

The legislation included the Underwood Tariff, the Federal Reserve Act, the Federal Trade Commission Act, the Clayton Anti-trust Act, and the Federal Farm Loan Act—all designed to preserve the economic, as well as the political freedom of the individual.

Woodrow Wilson also strove to make the world safe for democracy—to bring peace and safety to all nations and to make the world itself at last free.

What this great man started we are trying to complete and make enduring.

If I were asked to outline the difference between the two major parties, my reply would be that Democrats eagerly boast about their record, and want the people to remember it, while the Republicans work furiously trying to erase their record and to have the people forget it.

It is our duty not to let the people forget the Republican faults and errors. Every man and woman in our land should know that at this very hour some in the opposition party in and out of Congress are busy trying to frighten the Nation with reckless talk that a depression has hit us—merely because the price of meat and the price of eggs have dropped so that more housewives can provide better and more nourishment for their families. Too long have the prices been too high.

Now, however, when some prices begin to come down there are prophets of gloom who immediately begin predicting that we are heading into a depression. These dismal predictions frighten the timid employers and they begin laying off workmen, which further contributes to the seasonal unemployment situation. This in turn further feeds the grist of the prophets of gloom.

Those apostles who would have you believe that the profits of the large corporations have dwindled so extensively that they

are compelled to resort to mass lay-offs of employees should be exhibited in their true greedy colors.

Those preachers of pessimism who would create fear among the workers of the Nation by predicting mass unemployment are doing harm to the country. I think there is nothing from which Communists at home and abroad derive more joy, more solace, more hope, than from the fearmongers in our midst.

Panic-provoking statements about our national economy are more malicious because they are utterly without basis in fact. The proof of the dishonesty of this economic scare campaign is the statistics available to anyone. A simple inquiry at official sources would have revealed the fact that there were over 300,000 more persons employed in January of this year 1949 than in the same month of 1948. A further question would have disclosed that there were over 100,000 more persons employed in January 1949 than in any other January in the Nation's history.

Some corporations have been shedding Hollywood tears, in the name of private enterprise, claiming that they suffer because of interference by your Federal Government. Statistics upon which business and Government reports rely show that of 14 major corporations, representative of a cross section of our economy, earnings for the year 1948 were 30 percent greater than the previous year, aggregating approximately $1,348,000,000. They surely should dry those tears.

In 1948 the corporate profits in this country, after taxes, were more than $20,000,000,000—the highest of all time.

In 1948 the total personal income passed $213,000,000,000—the highest of all time.

In 1948 the total farm income passed $2,500,000,000—the highest of all time.

In 1948 the total national income reached $224,000,000,000—the highest of all time.

In 1948 there were around 60,000,000 civilians employed in industry and agriculture—the highest of all time.

Now it is obvious from those facts that we have obtained a degree of prosperity heretofore unknown in the world. It is only natural that some adjustments must take place. But it is very difficult to picture the conditions of a depression out of such statistical material as this.

There are other reasons, such as Federal deposit insurance and unemployment compensation, which make a depression most unlikely. But the strongest asset we have is a sound and prosperous country itself. Yes, we will run into times when profits will get too high, and when inventories will get too large, and from those conditions some readjustments must inevitably follow. But by and large the basic wealth of our Nation remains as a source of enduring confidence.

The singers of economic blues and the forecasters of dire things are surely short-sighted if they think the people have already forgotten the pollsters' crash of 1948.

Now that was a depression—the biggest depression in the history of forecasting.

Since Truman knocked the L out of "polls" you know how it spells backwards?—"Slop"!

What do we get from this talk of mass unemployment—mass unemployment that does not exist?

What do we get from talk of a business recession that does not exist?

What is the talk of tumbling prices?

I will tell you.

It's the old bugaboo of the psychology of fear.

They cry unemployment to depress the pay of the wage-earners.

High-bracket taxpayers cry for big reductions at the expense of the small taxpayers.

No, our Nation was not built on the doctrine of fear and more fear.

We must not and will not be deterred by cries of discouragement and by shouts of despair. The Philadelphia platform has not been filed away in the cabinet of forgotten political pledges. The platform lives today—now—in the White House and the Capitol of the United States.

There, some of the most distinguished leaders ever to grace our legislative halls are shaping into a living monument the progressive program that was adopted in the City of Brotherly Love.

Our country today is blessed with the boundless energies, the skill and talent, the wisdom of such men as Vice President ALBEN W. BARKLEY, of Kentucky; Senator SCOTT LUCAS, of Illinois; Senator FRANCIS MYERS, of Pennsylvania; and Representatives SAM RAYBURN, of Texas; and JOHN MCCORMACK, of Massachusetts.

This team, together with Democratic and other progressive legislators, is forging a new and just labor bill, legislation for veterans' care, for educational aid, adequate housing measures, improved medical welfare, and other legislation for the betterment of our people.

We must never forget that our freedom was not a gift. It was earned—and must be earned by each generation again and again.

Harry Truman is showing the way, with his usual vision, courage, determination, and good will toward all men.

In a world where freedom is in peril let us thank God for America and its leadership.

The League of Nations and the One World

EXTENSION OF REMARKS

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. JENKINS. Mr. Speaker, one of my constituents who is a student of political history contrasts the political conditions of 1920, when the League of Nations legislation was defeated, with the conditions in our day when so many of our people want to force us into a "one world."

Mr. Howell is a patriotic American who does not want us to lose our heritage of liberty and freedom under which we have grown to be the mightiest Nation in the world. His newspaper article is inserted as a part of my remarks, and follows:

In his broadcast Friday, February 18, Mr. Kaltenborn stated that a conference had been held between Secretary of State Acheson and leaders of the Senate at which they had agreed on the wording of that part of proposed mutual aid treaty with foreign nations referring to our obligations to go to war to protect any contracting nation when unjustly attacked. That the State Department would immediately submit the draft to the other nations for their approval.

State newspapers, the next day, carried an AP dispatch which said that the huddle between Secretary Acheson and the Senators failed to produce agreement on the wording of the proposed North Atantic defense pact.

It is unfortunate that such broadly accepted and highly authenticated sources of information should make such contradictory statements on a subject of such vital interest to all the citizens of the United States. Such errors detract from the confidence we all feel for such trustworthy sources of information.

I think Mr. Kaltenborn slipped when he compared the action of these Senators in accepting Secretary Acheson's version of the treaty (which they did not do) to the refusal of the Senate to agree with President Wilson on the provisions of the charter of the League of Nations (1919–20). Article X of that charter obligated the United States to go to war on order of the League without a declaration of war by the Congress.

The Senate demanded modification of article X and certain reservations. President Wilson stubbornly refused to consider reservations. The Senate did not ratify the treaty and we stayed out of the League of Nations.

The issue went to the people in the Presidential election in 1920. The Republicans, opposing article X, nominated Warren G. Harding. The Democrats, favoring the charter, nominated James M. Cox, perhaps an abler man than Harding. Harding was elected.

Now, this vital issue has been dragged out again by this Democratic administration. If we are to live under the Constitution of the United States; if our Government is to function and our foreign relations conducted under that Constitution, there can be no argument as to who has the authority to go to war with a foreign nation.

Article I, section 8, of the Constitution says, "The Congress shall have power to declare war." Further on in the same section it says "to make all laws which shall be necessary and proper for carrying into execution the foregoing powers." This last clause prohibits the President or any agency of Government from carrying into execution any powers to wage war except in obedience to the laws of Congress.

The State Department is in a terrible fix, trying to say one thing and mean another. President Truman is a past master at this trick, but this one stumps him. Even if the Senate consented to delegate its war-making powers to the State Department, how about the House of Representatives, elected by the people? A declaration of war must be passed by both Houses of the Congress.

They may be able to fool the other nations of the proposed pact, but they cannot fool the American people. Article X did not get by in 1920. It shall not in 1949.

A. V. HOWELL.

Thirty-first Anniversary of Lithuanian Independence

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following address which I delivered on February 20, 1949, at Lawrence, Mass., on the occasion of the thirty-first anniversary of Lithuanian independence:

Friends of Lithuania, even though my ancestors did not come from the same homeland as yours, I am happy to join with you on this thirty-first anniversary of Lithuanian independence.

My people came from Ireland, which is also a small nation. They endured long persecution before they won their independence. That is why we have so much in common.

When we look around at our neighbors in Lawrence, we realize that they are descendants of people who left every country in the world to find freedom and opportunity in America. We are united by our twin faith—in democracy and in God.

This being so, our sympathies are on the side of those who are fighting for liberty, wherever they may be.

February 16 marks the thirty-first birthday of Lithuanian independence. We meet on this Sunday to pay tribute to that occasion.

In your homeland, by the Baltic, your kinsfolk cannot celebrate it openly. They would bring down the wrath of their oppressors if they did. For the Communists both fear and hate God and freedom.

But all the power of their armies and their dreaded secret police cannot crush the souls and the minds of men. Today, in Lithuania, there are no parades and festivals to honor the great event which took place at Vilnius on February 16, 1918. All seems quiet. The Communists think that they have conquered Lithuania completely.

In that they are mistaken. Every Lithuanian is thinking of his birthright and of the future day when it will be redeemed. The Communists, believing in force alone, are ignorant of the greater strength which glows in the hearts of men. They forget that the Lithuanians are a proud, brave people. The more they are persecuted the more they will resist, strengthening their spirit for the day when they will break the oppressor's chains.

The Communists close their eyes to the lessons of history, and this will be the cause of their inevitable collapse.

They would destroy a people's belief in God, without which men would be like animals in the jungle. They destroy prayer books, close churches, imprison or murder those who have dedicated their lives to religious instruction. But they cannot kill the soul of man. For it is eternal.

And the laws of God by which it lives during this journey of life strengthen men in their determination to build a free society on this earth. It can suffer. It can wait. Its triumph is inevitable.

For this is not the first time that Lithuania has been crushed only to rise again.

The czars were the first to conquer her in 1795. For over 200 years the Lithuanians suffered under the iron heel of foreign tyrants, but they did not forget. From generation to generation, parents whispered to their children of the days when Lithuania was free, and they nurtured in their children that hunger for liberty which would some day find fulfillment.

On February 16, 1918, that day came. The czars were overthrown and Lithuania was a nation again. Soviet Russia gave full recognition to the reborn state and renounced for all time all rights to the territory of Lithuania. The United States and other nations recognized the sovereign independence of Lithuania.

We meant it. The Communists did not. And that is the lesson for us to learn this day. In their short history, the Communists have broken so many treaties and have betrayed so many solemn promises that we are forced to the conclusion that they can never be trusted.

A Communist is a creature who looks like a man and who thinks that he is very clever because he cheats you. By trickery, lies, and brute force he takes your property, your freedoms, and sometimes the lives of those who are dear to you. He thinks that you are no match for him, and that you will permit him to do as he pleases with you.

He does not realize that he is fast losing your confidence and that of the whole civilized world.

He does not seem to understand that we are slowly but surely uniting against him and those who traffic with him.

He has drawn down an iron curtain against us, which may turn out to be imprisonment for him. And when he has exhausted his bag of tricks and has failed to conquer the world he may wish to call off the one-sided game he has been playing and act like a human being again.

Then will come the time when he will know how much he has lost. Like the man from Missouri we will say: "Show me."

The road back for the Communists will be hard. They will have to make amends for every atrocity they have committed, but I am afraid that it will be impossible.

The peoples of this world are slow to righteous anger. Once aroused, they will strike this evil from the face of the earth.

Look at Communist Russia today. With its satellites and its victims, it covers a large part of the earth's surface like a huge red stain. To some this may be frightening, but I say that the more it seems to spread the weaker it becomes. Its armies get farther from Moscow and its close controls. Its soldiers see for the first time how much better other people live. These Red soldiers cannot fail to compare their own wretched standard of living with the material comfort enjoyed by freemen. They visit homes where there is no fear of secret police. They learn of countries where there is no slave labor and no concentration camps.

No wonder, then, that tens of thousands of Russian soldiers have deserted. They have seen the truth against which the barrage of Communist propaganda fights in vain and bounces off like an echo in the wind.

Once upon a time Napoleon invaded Russia and found that it was too big for him to conquer. He was lucky to get out alive. Now the shoe is on the other foot. Russia tries to invade the world and finds that she has bitten off more than she can chew. But I venture to predict that the Communists will suffer a worse fate than Napoleon. Eventually, they will try to retreat only to find revolt behind their own lines.

And the Lithuanians will be one of the first to rise against them.

Let us look at the record.

From the very beginning, the United States refused to recognize Russia's conquest of Lithuania.

For 2 years after the war we negotiated patiently in the hope that we could draw up treaties which would bring peace to the world. Russia balked us at every turn. She did not want peace. Her policy was to spread hate and fear, to prevent recovery, and to so disorganize the world that chaos would breed communism.

The Communists blockaded Berlin, thinking that would force us out of Europe and leave it at her mercy. We refused to be shouldered out by this maneuver. At great cost and with superhuman effort we started to supply the men, women, and children of Berlin with food and necessary supplies.

The Communists laughed. They thought we could never do it. Through fair weather and foul, however, our men and our planes built up the Berlin airlift. Through summer, fall, and winter we stuck to the task until today we are delivering 6,000 tons daily, proving that we are in Berlin to stay until the Russians get out.

Communist propaganda is there suffering one of its worst defeats. We are proving that democracy can deliver the goods. And by this fact, we are building up the morale of those who were fearful and disheartened.

The United States is giving hope and help.

A year and a half ago, in one of the most generous and realistic foreign policies ever conceived by any nation, we started the so-called Marshall plan.

We began to pump the life blood of economic aid into a Europe which had been exhausted by the ravages of a long and most destructive war.

That plan is bearing fruit, and the Communists know it. Day by day Europe is getting stronger and, as it does, its spirits rise. The despair upon which communism thrives is lifting. The help which encourages self-help is bringing Europe up from the floor. Men are beginning to talk as men again and not as silent hostages waiting to be taken to the slave market.

In spite of bold talk, Moscow is not so sure of itself.

And in spite of the iron curtain, you may be sure that the people of Lithuania are getting the good news that the world at last is standing up to the Communist evil and is building that material and spiritual unity against which the devil's advocates cannot prevail.

The underground is smuggling in the news of the western nations who no longer are afraid to do or say anything that might offend Russia. They will tell of Norway, for example, a northern neighbor of Russia. The Reds tried to scare these brave people and to prevent them from making any plans for their own defense. Last week the Foreign Minister of Norway came to the United States and he made no secret of his trip. He came to consult with our highest officials over the broad terms of the North Atlantic security pact. Such an agreement would take the form of a collective defense arrangement within the framework of the United Nations Charter. It would include the United States, Canada, Great Britain, France, Belgium, the Netherlands, Luxemburg, Norway, and any other freedom-loving nation which might wish to join in a working arrangement to protect any member from attack. Attack by whom? Only Russia.

And Russia, for a change, is beginning to wonder if she has gone too far. For the world is beginning to organize against her.

The torture of Cardinal Mindszenty and other clergymen has angered the world and is bringing all decent people together in opposition to the Red terror.

Once the pressure was all from Russia. By her excesses, she is inviting retaliation.

From every home in Lithuania the prayers, which even the Russian secret police cannot stop, rise up in a great spiritual chorus asking God to cleanse the hearts of all Communists before it is too late for their own salvation.

We in the United States know that the Lithuanians are a peaceful, hard-working, and happy people who are a credit to this Nation and to the world.

The trials of the Lithuanian Republic touch a responsive chord in our hearts. It reminds us of the struggles of the American Colonists to win their freedom 174 years ago. And as the independence day of your homeland takes place between the birthdays of the two greatest Americans—Lincoln and Washington—it brings close to us the high responsibility we share to work for freedom everywhere.

In the forests near Vilnius, the guerrillas fight on. They know that they are not alone. Word comes to them that the free nations are getting stronger, and that the subject nations under communism are becoming restless.

The Reds will not last as long as the czars. They think that the number "16" means that Lithuania is the sixteenth Soviet state. But the number "16" means something entirely different in the minds and hearts of your people. It stands for that 16th of February 1918 when Lithuania proclaimed her independence. It is the rallying cry of the resistance. It is the day which will be celebrated openly, in the not-too-distant future, when the Reds are gone.

And so we salute the Republic of Lithuania and her brave people.

Each day brings us closer to the rebirth of her freedom in which all Americans will rejoice.

Communists Push Idea of National Churches

EXTENSION OF REMARKS

OF

HON. CHESTER A. CHESNEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. CHESNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by

John MacCormac, which appeared in the New York Times on Sunday, February 27, entitled "Communists Push Idea of National Churches":

COMMUNISTS PUSH IDEA OF NATIONAL CHURCHES—THEY ARE SEEKING TO CONTROL RELIGION AND WIN CATHOLICS FROM VATICAN

(By John MacCormac)

VIENNA, February 26.—Although the direction of the Communist attack on the Christian religion in iron-curtain countries shifted last week to Protestantism in Bulgaria, there has been no relaxation of the steady pressure on Roman Catholicism that began long before Joseph Cardinal Mindszenty was arrested and tried in Hungary.

The three Soviet satellite countries where Roman Catholicism predominates are Poland, Czechoslovakia, and Hungary. Of 37,000,000 Catholics in the three countries, Poland has almost 22,000,000 and is in this and other respects the most important.

But Hungary, rather than Poland, was chosen by the Communists as the initial object of persecution. Churchmen here believe this was because in Hungary the leader of Catholicism was strong but the Hungarians are passive and Hungary is weak.

SITUATION IN POLAND

Had August Cardinal Hlond, of Poland, lived, the sequence of events might have been different, since he was as determined an enemy of communism as Cardinal Mindszenty in Hungary. But Cardinal Hlond died in Lourdes last October, and the present leader of the Polish Church, Archbishop Sapieha, of Cracow, has exhibited the same tolerance of communism that Archbishop Czapik, of Eger, is said to represent in Hungary.

Agitation for the nationalization of the Polish schools and alienation of the church lands has begun, and it is believed to be only a matter of time until Catholicism in Poland will suffer the same sort of attack as the church did in Hungary.

Catholic churchmen who are accustomed to taking a long view are themselves convinced that the differences in the Cominform's treatment of the church in the various satellite states are only questions of timing and that the strategy is the same for all. The strategy is to destroy the universality of Catholicism by breaking it up into national churches and eventually to absorb these into the Russian Orthodox Church.

CZECH CONFERENCES

There are indications that the Czechoslovak Catholics will be the next objects of the attack.

Two months ago the Czech Catholic hierarchy warned the faithful in a pastoral letter against the danger threatening them. The letter declared that even John Huss never intended to form a national church in Bohemia, recalled that an attempt had been made to form a Czech national church after World War I, and warned: "Your loyalty to the church may be subjected to a new test. Your way of life and your eternal will depend on whether you withstand it."

Czechoslovak newspapers were not allowed to publish the pastoral letter, but were instructed to polemicize against it without quoting it. There was a rapid succession of resolutions by the executive committee of the Brno freedom fighters, the central council of Moravian trade unions, a representative of the League of Catholic Women and Girls, the Czechoslovak Women's Council, and a representative of the Catholic high-school students condemning the Catholic hierarchy.

NEGOTIATIONS WITH BISHOPS

Since then Communist Cabinet Ministers at Prague have declared publicly they were ready to negotiate with the Czechoslovak bishops regarding the relations of state and church, but not with the Vatican. The ministers have coincidentally promised to help progressive Catholics and their clergy to free themselves from the pressure of clerical reaction.

In Slovakia, where Catholicism is strongest and most influential, a number of its publications have been restricted this year. Three Communists named by the Ministry of the Interior have been put on the staff of one Catholic journal and the ministry has ordered the closing of the Catholic Central Office in Bratislava.

The last measure is believed to be a first step toward realization of the resolution by last year's conference of leaders of the Russian Orthodox Church in Moscow requesting dissolution of all Roman Catholic Church central offices in the peoples' democracies.

The latest development in communism's war on organized Christianity in Hungary has been an attempt to use Cardinal Mindszenty in jail to bring about that agreement between church and state that he had refused to endorse as a freeman.

LETTER PUBLISHED

What was purported to be a letter from him to Archbishop Czapik, of Eger, was published by the Hungarian official news service. The letter asked that, in the interest of such an agreement, the cardinal be permitted to receive a visit from the present acting head of the Episcopate, Archbishop Grosz, of Kalocsa. A remarkable thing about the cardinal's letter was that it was addressed to the Cardinal of Eger whereas Cardinal Mindszenty must normally realize there is still only one cardinal in Hungary—himself.

Cardinal Mindszenty had late last month, before his trial, received a visit in prison from Archbishop Czapik. According to reliable reports, Monsignor Czapik then concluded that the cardinal was under the influence of drugs.

As a result the episcopate in Hungary has declined to act on Cardinal Mindszenty's alleged proposal that an understanding be reached with the Government. It has declared this to be a matter beyond its competence. There seems little doubt that it has received instructions from the Vatican to hold fast.

Address of the President of the United States

EXTENSION OF REMARKS

OF

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1949

Mr. BOLLING. Mr. Speaker, under leave to extend my remarks in the RECORD I include the fighting speech delivered on the occasion of the Jefferson-Jackson Day dinner on Thursday, February 24, 1949, by my fellow Missourian, the great leader of the Democratic Party and of the people of the United States, President Harry S. Truman:

Mr. Chairman, ladies and gentlemen, this is a happy occasion for the Democratic Party. I know that all the gatherings of our party, throughout the country, are as cheerful as this one, and I give all of them greetings.

I am happy to be up here talking to you once more from the same old stand.

Incidentally, this is right where I expected to be.

What I feel tonight is not personal pride or elation; it is a deep satisfaction that our party has served its country so well that the people have endorsed it for the fifth consecutive time.

I am aware that this was something of a surprise in certain quarters. I am told that some persons were even making elaborate plans, with considerable relish, to bury the Democratic Party and all that it stands for.

These persons were like certain friends of Andrew Jackson, whose memory we are honoring tonight.

Once upon a time there were a number of citizens who thought that Andrew Jackson ought to have a suitable coffin. At great expense, they went to Syria and purchased a marble sarcophagus. A sarcophagus, as you know, is a tomb, a big marble coffin with a marble lid. These citizens then shipped this marble box to Washington, which was quite a job as it weighed 4 or 5 tons.

At last, they thought, a suitable resting place had been provided for Andrew Jackson.

The only trouble with the project was that Andrew Jackson was not dead. Moreover, he wasn't ready to die. He did not intend to be hurried to the grave.

Courteously but firmly he wrote to these well-meaning citizens, and said, "I must decline the intended honor."

And they never did get Old Hickory into that thing. You can still see it, if you're interested, out in front of the Smithsonian Institution.

I think that this little story has a moral in it. It is this: Before you offer to bury a good Democrat, you better be sure he is dead.

There is another lesson we can derive from the more recent past: You cannot bury the Democratic Party as long as it is working for the welfare and the advancement of the people of this Nation.

The central issue of the campaign last fall was the welfare of all the people against special privilege for the few.

When we made it clear where the Democratic Party stood on that issue, the people made it clear that they stood with us.

The Democratic Party has had a long and glorious history. Through its founders and leaders, whom we honor tonight, its roots go back to the American Revolution. But however ancient and glorious it may be, our party is not and never has been an end in itself. The only justification for the Democratic Party is its usefulness to the American people in achieving the government they desire.

I am proud to say that never before has the Democratic Party been more firmly dedicated to a program in the interest of all the people. The platform adopted at the Democratic Convention of 1948 is clear and forthright.

Our job now is to enact into law the programs that the people need and deserve.

That is exactly what we are doing.

We are meeting determined opposition.

The special interests are fighting us just as if they had never heard of November 2. For them, campaigns and elections are just preliminary exhibition matches—the fight in Congress is the main bout.

The special interests are on the job year in and year out—7 days a week and 24 hours a day. They work through their lobbies and pressure groups, through the editorial pages and the columnists and commentators they control. They twist and misrepresent the measures the people voted for. They are again trying to frighten the people with the old, worn-out bugaboo that socialism is taking over in Washington.

This one-sided barrage of propaganda seems overwhelming at first. There are no full-page ads on our side. In fact, all we have on our side is the people.

But that is enough, because the people are aroused.

I did a lot of traveling around the country last fall, and I found that the people were vitally interested in what their Government

was doing. Make no mistake about it, there has never been a time when the people were so well informed about Congress, and the President, and the records of their Representatives and Senators as they are now.

This concern on the part of the people is a fine thing for the growth of democracy and responsible government. I propose to do all I can to help it along. In fact, I may even get on the train again and make another tour around the country to tell the people how their Government is getting on.

If we keep the people fully informed, I am confident that they will support the Congress and the President in our fight against the special interests.

It is important that the American people should be aware of the tactics that the special interests are using to obstruct our programs.

Right now the special interests are using every trick they can think of to defeat our labor policy.

After the election, hardly anybody had a good word to say about the Taft-Hartley Act.

But now, when I ask the Congress to repeal the Taft-Hartley Act, exactly as I said I would in the campaign, there are great outcries from the special interests. "He can't mean it," they say, "Repeal the Taft-Hartley Act? Repeal that beneficent, charitable, kindly old statute—the charter of labor and the workingman's friend! Why, it's unthinkable!"

And they keep this up night and day in an effort to convince the people that the Taft-Hartley Act is a good law. But it's no use.

All the oratory in the world won't change a bad law into a good law.

When the Taft-Hartley Act was before the Congress, a Republican Senator called it, "a device for making unions so weak they cannot carry on effective collective bargaining."

That was true then, and it is true now.

The Taft-Hartley Act is an insult to the working men and women of this country and they will not rest until it is destroyed.

After the election, I thought we would have the cooperation of our Republican friends in this effort. I felt sure that the Republican Party would be anxious to throw the Taft-Hartley Act overboard faster than the sailors got rid of Jonah. I am beginning to think that maybe I was wrong about that.

No matter what the Republicans do, the course our party should follow is clear.

The Democratic Party, in its platform, is solemnly committed to work for repeal of the Taft-Hartley Act.

We are working for its repeal; and with the support of fair-minded Americans, regardless of party, we will continue to work for its repeal until it is replaced upon our statute books with a labor law that is fair and decent.

The same die-hard reactionaries who want to cripple labor unions have also started a campaign of confusion against all our other measures for the welfare of the people.

They say they are for extending and improving social security—but they call our proposals a bureaucratic system that will destroy the character of every American.

They claim to be in favor of housing—but they say our low-rent housing program is a mistake because it does too much for low-income families.

They make speeches about the American home—but they encourage landlords to lock out their tenants until rent control is repealed.

They say they are in favor of good wages—but they argue that the minimum wage should be held down to a starvation level.

They claim to be in favor of developing our great river basins—but they raise the old cry of superstate against every practical step we propose.

We will not be deceived by their propaganda. Despite their efforts to confuse, we will enact the programs to which we are committed.

We can and we will provide a better life for our people.

At the heart of our program lies our determination to preserve the health of our economy. We know that the welfare of the whole Nation depends upon keeping our economy well balanced—seeing to it that each group gets its fair share of the goods we produce.

The special interests have attacked every governmental measure we have devised to keep our economy on an even keel.

As an example, last year some selfish groups tried to destroy our farm-price-support program.

It is a good thing for the country that they failed.

These farm-price supports are actually supports for our entire economy. In the twenties, the collapse of farm prices brought on a depression in agriculture which ultimately spread to the whole economy and dragged the country down to breadlines and bank failures.

But this time the farmer and the economy are protected from such a collapse by the farm-price-support program. I ask you to remember these facts when the special interests begin to raise their usual hue and cry about the cost of price supports.

In further support of Nation-wide prosperity, I have submitted to the Congress proposals for maintaining full production and full employment.

The proposals I made are designed to aid business in increasing production and eliminating bottlenecks; they are designed to keep price movements balanced, and to prevent shortages from driving certain industrial prices higher while farm prices are leveling off.

These proposals are being attacked by those special interests who are making excessive profits out of present shortages. And the usual outcries about regimentation are now filling the air.

It is easy to be misled by a small group of special interests engaged in a campaign of misrepresentation. We must not let the selfish demands of special groups blind us to the common good.

The success of every business enterprise depends upon the prosperity of the whole country. Your Government is pledged to use all its resources to maintain the economic health of the country and to prevent depression. To do this means that Government must act—wisely and judiciously—but it must act.

A government able and willing to act in the interest of the whole economy is a better friend of free, competitive enterprise than a do-nothing government ready to let the economy slide into a depression.

The great problem of the free western democracies is the problem of boom and bust. The future of the world depends upon our ability to master that problem. During the last 16 years this country has made great progress toward finding the solution. This progress has been made over the protests of selfish and short-sighted people. We have not let them stop us in the past.

We will not let them stop us now.

In his first inaugural address, 148 years ago, Thomas Jefferson said that this country was in "the full tide of a successful experiment." He called our Government "the world's best hope." Today we are again in the full tide of a successful experiment—the experiment of achieving economic abundance and basic human rights in a society of free institutions and freemen. Today this experiment is again the world's best hope. Today it is the hope of a world confronted by greater dangers and greater possibilities for good than were dreamed of a century and a half ago.

Great as our responsibilities are, we have nothing to fear if we rely upon the energy, the resourcefulness, and the common sense of the American people. So long as the people understand the issues of the day, the special interests cannot prevail against the general welfare.

With the understanding and energy of this mighty people, our Nation can move confidently toward the goals of prosperity and peace.

The Tale of Two Trials

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 1 (legislative day of Monday, February 21), 1949

Mr. MUNDT. Mr. President, a few well-meaning but ill-informed Americans who still have an utterly unrealistic conception of what communism actually is and what it portends for all of us should have their illusions pretty well shattered these days as they read newspaper accounts of the trial of Cardinal Mindszenty, the trials of the Protestant clergymen now being dragooned in Bulgaria, and the amazing spectacle of the trial which is running the judge up in New York City. Communists are involved in all three trials, and, while at the moment it appears the Communists are also running all three of them, there is good reason to believe that before long Judge Medina will assert himself and prevent the legal proceedings in New York City from going down in history as a farce.

In all events, the following editorial from the Daily Plainsman, published in Huron, S. Dak., and edited by Robert D. Lusk and Bruce Campbell, provides us all with food for thought. Even a hasty reading of this brief editorial dramatizes the difference between living in the slave lands of communism and in the free air of the United States.

In the darkness of the lonesome night it would seem that many an American Communist must at times awaken to realize the awful fact that if communism succeeds in its drive for power in this country it will mean an end to all judicial processes which protect the innocent and preserve the rights of disagreement and discussion.

I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE TALE OF TWO TRIALS

In Budapest and in New York, by coincidence, are occurring two trials involving the Communist Party.

In Budapest the Communist Party through its judicial arm—the so-called people's court of Hungary—has gone through the mockery of a trial of a cardinal of the Catholic Church, Josef Mindszenty, outspoken opponent of both nazism and communism, and spiritual leader of 7,000,000 Hungarian Catholics.

As this is being written, Mindszenty's sentence has not been pronounced, but by the time this is read it will have been. Such is the unvarying technique of Communist trial, however, that it is perfectly safe to assume that the verdict is guilty and that the pun-

ishment is death, or a life sentence worse than death.

The technical charge is of little consequence. It was that of treason, but the charges were all trumped up. The so-called confession by Mindszenty presented in the people's court obviously was wrung out of him by torture, a thing which he himself had foreseen before the start of the trial and of which he himself had given warning. Had the charge of the trial not been treason, the Communist Party would have found another, however, so it is of little matter. What is important is that Cardinal Mindszenty was keeping alive the spark of individual freedom, freedom of the soul, in Hungary against the ruthless doctrine of a totalitarian state. The Communist Party could not allow such a breach in their political state and so it proceeded to silence him.

Meanwhile in New York, the 11 key leaders of the Communist Party in America are on trial.

For the first time, the court is given the basic question to decide: Whether being a Communist in itself constitutes treason to another form of government. Does Marxism teach the overthrow of the government by force, and is such teaching and belief a danger to the United States?

The trial is proceeding according to the laws of the land. And the Communist Party and its defense attorneys are now utilizing every legal weapon in the jurisprudence of American democracy to drag out the trial. They have picketed the court and tried to charge that the American jury system is not fair. Their methods have been so patently crude and mocking that the judge has warned defense counsel of the danger of contempt of court.

Because the trial has not yet progressed far enough for evidence to be submitted and summarized, no one can safely predict what the sentence will be.

Certainly, however, one can point out that the writings and speeches and actions of Communist doctrinaires have proved again and again that they do advocate world revolution.

And the method of trial of Mindszenty in Hungary probably could be offered as evidence in the New York trial of the threat to individual freedom which communism in any country contains.

Health Insurance Costs

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 1 (legislative day of Monday, February 21), 1949

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Health Insurance Costs," from the Christian Science Monitor for February 26, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HEALTH INSURANCE COSTS

It has become a habit for Federal officials promoting compulsory health insurance in the United States to minimize or ignore its costs. The original Wagner-Murray-Dingell bill played down the costs. The last of the series under this name left them out altogether. Effort has been persistently made for the past 10 years to sell the American public something calling for a huge expense without giving an accurate forecast of the ultimate cost. That may be ingenious, but it is poor public policy.

However, analysis is now and then furnished by independent sources. W. Rulon Williamson, former actuary of the Social Security Board, says there could be a high of 18 percent of pay roll, a plausible medium of 12½ percent, and a low, hardly to be expected, of 7 percent when years hence the program is fully under way. These benefits include both medical care and cash benefits for disability—the standard features of Government health insurance.

Mr. Williamson points out that a great deal depends on the liberality both of the formula and of administrators, and hence estimates must vary widely. But in his view the total cost of social security, with health insurance added to the liberalized old-age and survivors' insurance and unemployment compensation, could come between 18 percent and 36 percent of pay roll.

The greatly mounting costs of the British and New Zealand health-insurance programs indicate that the United States would be faced with the same problem. If introduced here and really made effective, health insurance for many years would probably require much more tax money than old-age or unemployment insurance. Its financing should be adequately explored.

Supreme Court and Tidelands

EXTENSION OF REMARKS

OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. HÉBERT. Mr. Speaker, I had hoped to bring this matter to the attention of the House when the misrepresentation was first given the public in the columns of the Washington Post but a series of incidents over which I had no control took place.

On February 15, 1949, 2 days after the article appeared I directed a letter to the editor of the Washington Post setting forth the real facts in the case. After waiting a week without seeing the correction in print I personally called the Washington Post and was informed that no communication had been received from me. I then sent a second copy. In today's issue, the letter, or rather the letter minus a most important paragraph, was printed on the editorial page.

I have no knowledge or information whether the paragraph was deliberately deleted or not but it read as follows:

The Washington Post has supported editorially the position of the Department of Justice in this controversy. When an error as flagrant and serious as this one appears in a leading article in such an influential newspaper, we in Louisiana naturally wonder just how such a thing could happen. We wonder how a paper the caliber of the Washington Post could make a serious and inexcusable error like this one, and whether the so-called free press in the Nation's Capital is becoming a political mouthpiece of the Federal Government.

The rest of the letter follows:

SUPREME COURT AND TIDELANDS

On February 15 there was an article on page 3 of the Washington Post, the first part of which reads as follows:

High Court to hear tideland argument

"The Justice Department yesterday won a preliminary round in its effort to have the Supreme Court determine Federal rights to the submerged oil lands off the coasts of Louisiana and Texas.

"Oral arguments to help decide if it has jurisdiction to entertain the Justice Department suits were ordered by the Supreme Court over objections of both States."

Farther down in the article, it is stated:

"Should the Government win, it could claim royalties from sales of oil obtained by oil companies from offshore wells."

The statements in the Washington Post constitute flagrant and outrageous misrepresentation of the status of the attempt by the Federal Government to sue Louisiana and Texas over the tideland areas. The oral arguments were not granted by the Court over the objections of both States, but at the specific request of Louisiana and Texas.

Ordinarily, oral argument is not had on motions in the Supreme Court, and the granting of oral argument in these cases at the request of Louisiana and Texas can only be construed as a pronounced set-back for the Department of Justice. It is a clear indication that the Supreme Court considers that the question as to whether or not it has jurisdiction over Louisiana and Texas in the tidelands controversy is a very serious, if not doubtful question.

In this great tidelands controversy, which has now shaken the States to their very foundations, the Federal Government is openly seeking the nationalization, without compensation, of all resources within the marginal sea areas. In this serious controversy, the States are entitled, at the very least, to fairness and accuracy in the reports of the press. Certainly, if the press is ever reduced to the low and servile state of being a political instrumentality of the Federal Government, then the rights of the States, and indeed our very dual form of government, will be close to extinction.

Most assuredly you have every right to take any side of any issue you deem proper in your editorial columns and I respect that right. With the privilege of a free press, however, goes the responsibility of news columns free from propaganda and inaccurate or sloppy reporting.

F. EDWARD HÉBERT,
Representative from Louisiana.

WASHINGTON.

National School-Lunch Program

EXTENSION OF REMARKS

OF

HON. JAY LeFEVRE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1949

Mr. LEFEVRE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include a table showing facts about the national school-lunch program. One of my constituents, Mrs. Theodor Oxholm, is chairman for Spokesmen for Children, Inc. This organization is very much in-

terested in the school-lunch program. It believes that due to the increased enrollment of children in our schools the Federal grant should be increased to $100,000,000. The table showing the facts follows:

Facts about the national school-lunch program, 1947–48

[All figures from the U. S. Department of Agriculture]

State	Percent children participating	Percent schools participating	State appropriation	Matching funds from sources within State [1]	Federal indemnity	Number of schools aided by sec. 32 [2]	Number of schools aided by sec. 6 [2]
Alabama	29.2	29.5	$130,000	$6,199,759	$2,185,523	1,723	1,233
Arizona	27.0	28.7	17,525	1,485,406	323,497	203	165
Arkansas	29.7	20.6	24,550	3,395,512	1,431,269	869	554

Wyoming	23.1	23.0	11,500	353,167	100,292	98	100

[1] "Matching funds from sources within State" indicates penny milk, lunchroom sales, contributions by organizations, and State appropriations. While figures for 1946–47 are latest available, provisional reports indicate States did equally well in 1947–48.

[2] Secs. 6 and 32 of the Agricultural Act allow for distribution of fresh and dried fruits, fruit juices, canned fruits and vegetables, fish flakes, cheese, peanut butter, jam, dried eggs, nut meats.

[3] Local, $475,000.

[4] Biennial appropriation.

[5] Not in program this year.

[6] Amount unspecified.

Speak Up and Work for America

EXTENSION OF REMARKS

OF

HON. DWIGHT L. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1949

Mr. ROGERS of Florida. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I desire to include a speech delivered by Mr. E. D. Anthony, Sr., of West Palm Beach, Fla., before the Rotary Club on February 15, 1949, entitled "Speak Up and Work for America." Mr. Anthony is one of the outstanding business, civic, and religious leaders in south Florida and his remarks are very opportune at this particular time in our Nation's history. I commend it to your careful reading and consideration.

SPEAK UP AND WORK FOR AMERICA

Ten miles south of West Palm Beach, on U. S. No. 1, west of F. E. C., is located J. R. Hine's hydroponic tomato industry, an investment considerably in excess of $100,000.

I asked him one day, "Why are you doing all this? You have a good business." He replied, "We have many men who have been with us 25 or more years. If we put them on pension, their expectancy is 3 to 5 years. Change their work, put them out in the Florida sun, and let them share in the profits, and you change their expectancy to 12 to 15 years."

That statement came home to me with tremendous force. Like John Alden of Longfellow's The Courtship of Miles Standish, "Why not speak for yourself, John?" After 52 years I find myself retired. Will my expectancy be 5 or 20 years? This is the most important question I face today. I have the time to travel, play golf, fish, shrivel up to die. Instead, I stand before you today, looking at this new freedom as a time for growth and study. For some months I have been turning my attention to the blessings of being an American and a Rotarian. In that spirit I speak today.

In a study of a few months I have discovered some startling facts about this blessed country we call America. My first statement is—

I believe we have no more important job facing us today than to see to it that the United States continues to do business in our own American way. The American way of life offers the opportunity for a free flowering of the spirit no other land can match.

There are millions in many parts of this free land who do not know the full meaning of America. They are reaching out for communism and socialism because they do not know any better. I find it healthy mental exercise to review our glorious industrial past.

(a) America offers greatest opportunity to acquire more of life's material riches in return for a smaller expenditure of effort than anywhere else in the world.

(b) In no country at no time in the history of the world has a standard of living been so high as we enjoy here. In no other country can an hour's labor be exchanged for so many hours of comfort and luxury as in America.

(c) We Americans total only one-sixteenth of the world's population, produce seven-sixteenths of the world's goods, own 48 percent of the world's electric power, 50 percent of the world's radios, 55 percent of its telephones, 60 percent of its steel capacity, 64 percent of its life-insurance policies, 87 percent of its automobiles, and 94 percent of its bathtubs. These are not wonders to us, who have been accustomed to them from the time we were born.

(d) In 150 years America has made more industrial progress than all the other nations have made in 6,000 years. Some others more richly endowed with natural resources, some more land and more people. We have only 6 percent of the world's area. What a job we are doing with our small area. It is our free enterprise which gives us the edge on the rest of the world.

(e) Here is an especially startling fact. Our system is the most progressive and democratic form of capitalism ever devised. It is the only system which provides all three of its component parts—the investor, the producer, and the consumer—with equal freedom of choice and opportunity. It is a 3-in-1 system.

(f) There are 9,000,000 free enterprises in America today. Each and everyone lives and has its being according to the buying whim of the customers who support them.

(g) Every time you spend a dollar you cast that purchase vote for the future of that business. That purchase helps determine which business shall be large or small. The survival of every business depends upon winning the free purchasing vote of the free American citizens.

(h) There are 57,000,000 workers who work at the pleasure of these customers. Note how our 3-in-1 system works. As workers they insist on high wages. As customers they demand low prices. As capitalists they demand a return on their money. American business is forced to operate with greater efficiency so we can produce better goods at lower cost.

A quick look at the fundamental differences between our system and communism. America was founded on faith and the right to worship God according to the dictates of conscience. Faith in God. Faith in our fellow Americans. We believe that every man should have the right to extend his ability and enjoy the emoluments of his labor. Communism was born in want, reared in poverty, is without faith in God or man. Their philosophy is that there is not enough

of the good things of life and that every man should have too little. Socialism denies the dignity of the individual, and holds to the belief that the state can do what man cannot. That security by the state is a proper exchange for individual liberty. The government makes the decisions. All its capital is taxation or capital levies. The state decides wages and prices.

In England today everyone is disciplined from cradle to the grave. An unthinkable condition for free America. Freedom of choice. Freedom of belief. Freedom of movement—of occupation—all exchanged for the coin of security. The state operates the Bank of England, the mines, the railroads, the utilities. The inheritance tax consumes the life estates of all the wealthy who pass on.

Salaries have been limited by taxation to $8,000 top. A joke for our labor leaders, much less our industrial leaders and movie stars. Our system produces six times as many goods as the average workers abroad, because of our machine superiority. The record has never been equaled in the history of the world.

We produced 45 percent of the world's goods before World War II. Today, 50 percent. This makes greater buying power. The dignity of the individual is the great mainspring which makes our free enterprise work. Our machines take the burden off labor to an extent unknown anywhere else in the world. One hundred years ago the workman averaged 70 hours per week and earned a bare existence. Did most of the work with his hands. $500 of invested capital averaged the capital to provide facilities of production he used. Today 12½ times as much capital is needed for machines. He works 40 hours per week and earns 16 times as much in wages. His purchasing power has increased and passing strange his production has increased in ratio to capital investment increase. His muscular strength is no longer the standard of his production.

In 1908 the automobile industry was young. It took one man 8 hours to shape the top half of a gas tank. Today one man, plus machines, can do the same job in 1 minute. Today our autos produced by that day's hand method would cost $50,000. By our machine method, the cost is cut to 5 percent, or $2,500.

QUICK LOOK AT FARMING INDUSTRY

(a) Three million tractors, thirty-five million farm equipment. Doubled since 1940.

(b) Our farms feed 40,000,000 more than in 1920.

(c) Use the same 360,000,000 acres.

(d) One and one-half million less workers.

(e) Eighteen hundred, 3 out of every 4 worked on farms.

(f) Same ratio holds true today for the rest of the world.

(g) America today, due to machinery, employs 1 in 7, and produces more than we need, and enough to help feed the rest of the world.

(h) One farm of 11,000 acres, using $250,000 of equipment, employs only 500 men.

Annually: Gross $8,000,000; net $800,000.

Cotton, beet sugar, and vegetables. More machine power on farms of America than there is in all of our factories.

Today $6,500 in capital is required for machine investment for every worker.

This is where the capitalist comes in. Who is he? The answer is you and me. Whoever and wherever you are under our American free economy. The true capitalists are the Americans who have life-insurance policies, savings accounts, a few bonds, or shares of stocks. In America, a capitalist is the average prudent and thrifty individual who saves part of his income daily.

The Government records show that 90 percent earn $5,000 or less. More than one-half of all corporate dividends go to this 90 percent. Fifty million people in America have savings accounts. Their savings, plus their life-insurance policies, total $135,000,000,000. The checking accounts of corporations and individuals total $65,000,000,000. Grand total, two hundred billion. Only two and one-fourth million earn $5,000 annually; 138,000 each $25,000 and upward; 80 people earn $1,000,000 or more. It is easy to see our capital investments come for the big companies, like Western Union, for our average Americans.

FAIR WAGE FOR CAPITAL

These people of modest income, through frugal living, have made our system possible to a large extent. They have a just claim for return on use of their capital as labor has for his wage. What is the true story? The stockholders wage comes out of the profits of industry. This is a much misunderstood situation.

The Government figures for 1946 show a year of 6.2 profit. Machines accomplished 85 percent of the work. Only 5 percent by human energy. You pay 10 times as much for the labor part as for the machine portion of production. Almost 60 percent went into pockets of labor. Only one-half of the 6-percent profits went to dividends. Other half to replacements. Department of Commerce reports industry needed eleven billion for replacement. Only seven and one-half billion available from the 3-percent dividends—other had to be financed. The remaining portion of this speech is devoted to changing conditions and what we should strive to do about it.

1. (a) Grover Cleveland was the only Democratic interlude from Mr. Lincoln to Woodrow Wilson. The financial interest had become strongly entrenched. Cleveland's second term followed a Republican 4-year term, sandwiched in between Cleveland's two terms.

(b) The financial interests of Wall Street did everything in their power to wreck his second term. They just about did it. The panic of 1893–96 was when we had 3-cent cotton and 5-cents-per-dozen eggs.

(c) President Cleveland did not have money to meet the Federal pay rolls. He went in person to New York and negotiated a Government loan with J. P. Morgan. The Democrats charged he had sold out to Wall Street. His reply was epic, "I faced a condition that had to be met and not a theory."

(d) This was the Wall Street financiers big moment. Their attitude—"To hell with the public." William Jennings Bryan and his theory of 16 to 1 flourished as the savior of the down-trodden average man. Time marched on. The Spanish-American War and spending changed conditions.

2. Teddy Roosevelt and his "Big Stick." His Ananias Club made very little dent in the financial grip Wall Street had on the control of our way of life.

3. Woodrow Wilson, the historian and great thinker, became President in 1912. Both Houses of Congress solidly behind him.

a. Almost overnight he passed the Federal Reserve Act which technically transferred the financial center from Wall Street to Washington.

b. He followed England's example and passed the income-tax law so he would never be caught as Mr. Cleveland was with no money to meet Government pay rolls.

c. He put his benedictions on the cooperative system in 1916, which has now grown to be a cancer eating at the very vitals of our free institutions. I cannot spend much time on this menace.

(a) It can borrow our tax money at 2½ percent. Pays no taxes. Is tax exempt by Wilson's approval. Doing 15 percent of the Nation's business in open competition with honest businesses, taxed almost to extinction.

(b) At a recent merchants State meeting, a brilliant young attorney from Atlanta delivered a wonderful address exposing this evil. I have personally had this speech printed and have 300 copies here to distribute with my compliments.

(c) I want to call your attention to one outstanding fact. They are now doing all kinds of business, far afield from what they were supposed to do.

4. We can skip the period of Mr. Harding and his return to normalcy, and Mr. Coolidge and Mr. Hoover.

5. Things began to really happen in 1933 when Mr. Roosevelt took office—"Nothing to fear but fear itself."

a. Bank failures was the last great act of the financial regime.

b. Bank guarantee law added stability to our national economy and really put Government in the saddle.

c. The New Deal and Government spending with accompanying new taxes became the order of the day.

d. The next great cancer, which is eating at the moral heart, is unemployment insurance. Born with the finest purpose, but has grown by unrestricted use into a chisler's bonanza. Let me quote: "The men who originated unemployment insurance never thought that chiselers and crooks would loot the funds which belong to honest workers, and get away with it."

(a) Pennsylvania was chiseled out of over $500,000 in 1947.

(b) One shoe factory in New York paid $40,000; 200,000 job tickets to run down rascals.

(c) New York State, with its thousands of summer hotels whose employees come to Miami Beach and collect unemployment insurance.

(d) Perfect racket for girls who want to get married.

(e) Over 3,000 in Miami now trying to collect $40 to $50 per week while they vacation.

THE REMEDY

1. Have reached several definite conclusions:

(a) It is time for the business and professional men to organize and begin a concentrated fight to preserve this great Government of ours.

(b) Have reached a definite opinion that there is a great difference between politics and policy in government. That the businessmen should plan and think out the policy and let the politicians handle the details.

(c) In my long career, I attended to my business and left politics to the politicians. This study has taught me how wrong I was, because today this Government is the biggest business in the world.

(d) The State of Florida is a $200,000,000 business.

(e) Palm Beach County is a $3,500,000 business.

(f) West Palm Beach is a $1,500,000 business.

2. The United States Chamber of Commerce will send field men here to help businessmen organize. They will actually run a school.

(a) They will teach us how, through concerted and intelligent cooperation, the consent of the governed can be made into a mighty force.

(b) I plead for the awakening of the businessmen as a balance of power between labor and capital.

(c) I plead for business and professional men to study the local conditions and reach definite business conclusions as to what our county commissions and city fathers should put first on the business agenda.

(d) I plead for a clearer understanding of the relation of our politicians to the taxpayer. In America, the taxpayer is likened to the stockholder in this big business of ours. Some have defined the taxpayer as the real owners of America. Others have defined the officeholders as the hired men of the taxpayers. It is certainly true that

they hold their jobs at the pleasure of the voter. The taxpayer certainly has a perfect right to study common problems and help decide which projects should come first. As illustrated with possible change in attitude of new governor on the water-control bill.

Here are 10 socialistic planks in the 1936 campaign which have been written into our laws since 1938:

1. Minimum Wage Act, 1938.
2. Old-age pension; we have them now.
3. They asked for system of free public employment service. We have it.
4. Unemployment compensation. It is a cancer eating at the heart of America.
5. Sharp increase in inheritance and personal income taxes for those in higher brackets—70 and 80 percent.
6. They wanted aid to farmers. You know the story.
7. Five billion for housing. Pikers.
8. Wanted recognition for Soviet Russia.
9. Wanted all war debts canceled.
10. Wanted the cooperatives given a break.

In spite of the foregoing, I say there should be a cordial relation such as exists in big corporations where stockholders and directors direct the management.

The great question: Are we headed for socialism? My answer is a great big "No," for the following reasons:

1. These 9,000,000 free enterprises and 50,000,000 savings-account depositors will not stand for it.
2. Labor does not want socialism. They are homeowners, small capitalists, owners of life-insurance policies, have savings accounts, and love our way of life. In the majority they are true Americans. I do not believe labor has reached the frenzied stage that capital reached, under Mr. McKinley, when the campaign slogan was a "full dinner pail" for 70 hours' of labor per week.
3. We have too many auto owners (40,000,000), radio listeners, and too many common, everyday people who are informed and who are studying these problems as never before.
4. There are millions of people in the country anxiously awaiting the much-heralded Hoover report, which will show we have 2,030,000 people on the Government pay roll. That the Government pay roll can be cut $3,000,000,000 per annum permanently by adopting the report as submitted. Here is your opportunity to instruct your Congressman on how you want him to vote.
5. Public opinion when aroused is still the uncrowned king in America.
6. We are not a warlike people, yet we pack a mighty wallop when we make a business of war. When we are aroused in our might, politicians, bankers, and labor all look alike. This free people will not perish from this earth.

Arab Refugees in Palestine

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1949

Mr. JAVITS. Mr. Speaker, the rehabilitation of the Arab refugees will be tangibly contributed to by the proposed appropriation by the United States of a $16,000,000 fund for that purpose to be utilized by the United Nations together with other funds similarly made available. The displacement of these unfortunate Arabs was attributable to shortsighted fanaticism by Arabs so harmful to their brother Arabs. Let us hope that now that peace is in sight an effective rehabilitation will take place under the auspices of the United Nations.

The following letter from the New York Times of February 27, 1949, by Rabbi David DeSola Pool of the Portuguese Synagogue, one of the oldest congregations in New York, carefully analyzes the situation and shows the constructive and cooperative role of the new State of Israel in it:

TO AID DISPLACED ARABS—RELIGIOUS LEADER CALLS FOR UNITED EFFORT TO REHABILITATE REFUGEES

To the EDITOR OF THE NEW YORK TIMES:

In your issue of February 11 Kermit Roosevelt gives his own theory to explain away the flight of the Palestinian Arabs from their villages. No one can accept this theory who has seen Arab villages near Jewish settlements going on their wonted ways, or the city of Nazareth, where an Arab population double that prior to the war is living and working peacefully.

One must set Mr. Roosevelt's theory also against the ruins and the destruction of Jewish villages in the wake of the war. The Palestine Arabs fled before the invading armies of neighboring Arab states. The blame for the mass flight of the Arabs cannot be laid at the door of the Israeli Army or the Israeli Government. Mrs. McCormick makes that clear, and Mr. Roosevelt does her less than justice in taking out of their context some lines from her searching and moving articles.

It is perhaps too soon accurately to measure the degree of responsibility that we may charge against each of the many partners in the creation of a new aggregate of DP's. This is rather the time to bring all minds together to meet the problem of these unhappy people. Jews can be depended on to respond and cooperate in a constructive program of rehabilitation. Their own experience in suffering and succor alike is the best guaranty of this.

History has more time than has relief; it will apportion just blame where it belongs, on the irresponsible terrorism at Deir Yassin, on the mandatory administration which withdrew in chaotic indifference and on neighbor Arab states that gave no thought to the victims of their policies of invasion. Indeed, a number of observers have stated that Arabs sought the creation of an Arab refugee problem as a weapon of calculated strategy against Israel.

Another point in Mr. Roosevelt's letter should be noted. In passing he writes of individual Americans as being pro- or anti-Israel. This is a surprising phrase. Until recently American citizens were with complete propriety Zionist or non-Zionist, and a few were anti-Zionist. But with the establishment of the Jewish state zionism is no longer on the debating boards. Israel is a friendly nation with which our Government now has full diplomatic relations. An American citizen labeling himself anti-Israel seems to imply support of the aggressive Arab states which as their answer to the United Nations resolution brought war to the Holy Land, with the creation of the problem of Arab refugees.

Has not the time come to stop partisan debates and get to work unitedly to rehabilitate the Arab refugees in accordance with a constructive plan and to help Israel establish itself as a free nation in a peaceful world? Only thus can we give to the entire region of the Near and Middle East a lift out of the lethargy of the ages and bring it into an aware and alive partnership in extending the frontiers of democracy. Those like Kermit Roosevelt who are closely associated with Arab groups can do very much in achieving this high aim.

D. DE SOLA POOL.

NEW YORK, *February 15, 1949.*

The New American Revolution—IV

EXTENSION OF REMARKS

OF

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1949

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial appearing in the Christian Science Monitor on February 24, 1949:

THE NEW AMERICAN REVOLUTION—IV

Henry Luce has called this the American century. Henry Wallace has called it the century of the common man.

Unquestionably, this is the century in which the full force of American technology has hit the world with revolutionary impact. And it is also the century in which the worldwide revolt of the masses has challenged Americans to revolutionize their concept of their international role.

Yet the dominant political fact before humanity today is neither that America is "top dog" in an economically stricken world nor that the underdogs of society are on the march. If we lived in a wholly materialistic, dog-eat-dog world, these two facts might determine history between them. But man is more than an economic animal; he is a moral and spiritual being. Specifically, he has arrived through the centuries at the concept of freedom under law.

With the peculiarly favorable circumstances which a new, virgin continent offered to men and women seeking greater freedom for themselves there grew up in America an independent spirit, tending at its worst to lawlessness but at its best to an advanced degree of freedom under law, diversity within unity.

So the Declaration of Independence opened the way for the Constitution, and a revolution fought for freedom led in time to a civil war fought to preserve the binding principle of federal union. Liberty, Americans had discovered, required law for its preservation.

Today, as the world struggles through the throes of technological, social, and political revolution, an increasing number of people look to the federal principle as the solution for world chaos. As the most successful example of large-scale federalism on the globe today, the United States has the opportunity to furnish leadership in this direction. Paradoxically, the establishment of world law on a federal basis still seems revolutionary to most people, immured within traditional concepts of national sovereignty; yet that way lies the future.

Here, in fact, is the dominant political fact of our day, though it will not be realized tomorrow or the next day. There is a long, hard job of education to be done. Countries still in the colonial stage must pass through the phase of nationalism. The anarchic power struggle which marks the present exaggerated nationalism of the world must be mitigated by the growth of a conscious community of mutual interest. Regional federalism and perhaps a federation of like-minded democracies are likely to be required steps toward the ultimate goal of world government.

Yet the idea is at work in human consciousness. Already today Americans find their country a member of a United Nations organization which, however much it is bypassed, flouted, deadlocked, and denounced, remains an inescapable necessity for nations

which hope to live in atomic peace. American emergence from isolationism to the degree represented by United Nations membership is itself a fact of revolutionary importance.

Surely if this century is anything it is a century of exploration. America is discovering the world; the common man is discovering his opportunities; and increasing numbers are discovering that, in this world of swift change, freedom for the individual will persist only under law for the whole.

Private Utilities Oppose Public Power Program

EXTENSION OF REMARKS
OF
HON. HUGH B. MITCHELL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 1, 1949

Mr. MITCHELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article entitled "Other Side of the Kilowatt Crisis" which appeared in the Seattle Post-Intelligencer of January 16, 1949. This article is signed by Tillman K. Garrison, assistant to the president of the Washington State Federation of Labor; Roger Williams, president of the Public Power League of Seattle; and J. C. Unger, publicity chairman of the Public Power Committee. It constitutes a reply to an address recently made by Frank McLaughlin, president of the Puget Sound Power & Light Co., which has been printed by the Post-Intelligencer in digested form in a series of three articles, entitled "The Kilowatt Crisis."

OTHER SIDE OF KILOWATT CRISIS

The main theme of the articles on "The Kilowatt Crisis" was the present acute power shortage and who is responsible for this deplorable situation.

Mr. McLaughlin stated: "Prior to the advent of the Federal Government into the power field in this area, the construction of power-generating facilities was the responsibility of the private utilities and the municipal power systems."

He admits the private utilities had responsibilities in the early days. We would like to ask him why they did not continue fulfilling these obligations by doing their utmost to build generating and other power facilities to meet an ever expanding demand for more power to serve our rapidly growing region? The records show his company had not built any major generating facilities for more than 10 years, while other private power companies in this State have built only a few minor plants during this long recent period.

By what line of reasoning could Mr. McLaughlin or any other private power executive rely upon the Federal Government alone for its entire future supply of wholesale power? Nearly all Federal laws pertaining to the disposal of power from Government-built dams or other power projects provide that priority must be given publicly owned power distributing agencies as against private power companies.

In the Bonneville Power Act this priority is even more definite than in some others. Never since the first kilowatt was generated from either the Bonneville or the Grand Coulee Dam has any private company been able to contract for a long term for any power from either dam which might soon be needed by any publicly owned power distributing agency in the entire Pacific Northwest.

The law pertaining to this priority is so definite that no Bonneville administrator would ever dare ignore it. This has been the law of the land for nearly half a century for such Federal power projects. All the powerful opposition has not been able to get this priority taken out of the Bonneville Act.

Space will not permit us to cite all the many instances in which nearly all the private power utilities of the Pacific Northwest have opposed needed appropriations for the Bonneville Power Administration.

For the past 2 years, during which even the Pacific Northwest private power executives have realized we are rapidly approaching a power shortage, they have merely condoned, and with their contributions assisted, this opposition, which the eastern private utility executives and their high-priced lobbyists have continuously carried on.

This State's leading prominent crusader for the Columbia Basin project as recently as January 4 gave a vivid account of this private power opposition to Pacific Northwest Federal power projects. This man is Mr. Rufus Woods, publisher of the Wenatchee Daily World and possibly the best informed man in the State on who is really responsible for our present power shortage. In this recent article he devoted nearly two columns of his paper to answering this question. We will quote him only briefly:

"The Columbia Basin Commission, with its job relating to the Columbia River and the Columbia Basin and with the advice of some of the best engineers in the world, has consistently urged the necessity of building hydroelectric power somewhat in advance of demand.

"With that in view, its members have asked for the authorization of Foster Creek Dam (Chief Joseph Dam). That authorization has been given by Congress. But there has been a steady opposition to its construction on the specious plea that we wouldn't need this power—there was 'a surplus of 1,000,000 to 1,800,000 kilowatts which would last for 10 years.'

"Oh, these foolish, foolish men! * * * What have they done? Today the groups these men represented are crying for power and attempting to lay the blame on the Bonneville Power Administration for not giving power to them. But it was only 3 years ago in a meeting in Seattle on January 4, 1946, that the three different companies had men testify that we would have a surplus supply of power so great that it would run a million kilowatts or more for a period of 10 years.

"Why the power shortage? It is due to the men and the interests who opposed construction of Foster Creek Dam.

"Who held up the development of Foster Creek Dam? Men representing the private power companies of the Northwest met in Seattle and Portland with other groups to discuss the power situation. The general feeling of those present was that there should be a surplus of 10 percent to provide against threatened shortage. The private power men—three of them—said this was too high. * * * The private power men were M. L. Blair, of the Washington Water Power; H. H. Schoefield, Pacific Power & Light; J. D. Ellis, Northwestern Electric. They said:

"'In 1955 there will be a surplus of 780,000 kilowatts and a peak surplus of 1,450,000, and in 1960 there will be a 580,000 kilowatt surplus and a peak surplus of 1,100,000 kilowatts'."

We ask: Who is responsible for the power shortage?

In his second article Mr. McLaughlin said:

"Now as to what is basic in the Government's failure to provide an adequate power supply, you have, of course, numerous agencies and bureaus and the Congress and the President, all with their finger in the pie, and you have lots of hocus-pocus and politics."

Most of the hocus-pocus referred to has really been engaged in by the private power companies' lobby in the Nation's Capital, headed by Mr. Purcell Smith, who is reputed to get $60,000-a-year salary besides a liberal expense account. Of all the dark and shady chapters in the history of private power operations in our Nation, these national lobbyists have produced the worst. Our own experience in our own State with private power lobbying would fill many books.

In his third article Mr. McLaughlin said:

"As I see it, the biggest task confronting the Pacific Northwest today is that of assuring this region of an adequate power supply without regimenting our economy. * * * This is a tremendously grave and complex problem, * * * and the highest order of statesmanship and the greatest degree of unity, both at the national and at local levels, is necessary if the right and proper solution is to be obtained."

We say amen to every bit of that, also.

It seems rather amusing to have any private power company executive plead for real cooperation from the Federal Government or from other public power executives insofar as power questions are concerned.

Public power leaders have witnessed the private power interests' continuous and most vigorous hostility until within the past 2 or 3 years a few of them have "slowly been preaching the same power faith" which the "torch bearers of public power" have been preaching for at least 40 years. Why the sudden change? Let us answer this question from the record.

None of these private power executives ever showed any degree of friendship or cooperation or unity with any segment of the public power movement in the Northwest until they simply could not do anything else if they contemplated staying in business at all. These private power companies, especially the company of which Mr. McLaughlin is president, had "their backs to the wall" through their own folly, and they have suddenly "found religion."

So we suggest a real burying of the hatchet by our former opponents, including Mr. McLaughlin and his entire staff and board. Let them confess their past sins, with a contrite heart, and then really march forward with us in real unity.

A Call for More Inflation

REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 1, 1949

Mr. RICH. Mr. Speaker, I call the attention of the Members of the House to an editorial appearing in this morning's Washington Times-Herald headed "A call for more inflation."

Mr. Keyserling has appeared before our Joint Committee on the Economic Report. He is one of the chief advisers of the President of the United States, along with Mr. Clark. If you will read this editorial, you will see that now, when the price index of the Department of Labor shows that prices are coming down, Mr. Keyserling is advocating to the labor unions of this country that they strike for higher wages. Mr. Clark said the same thing as a witness before our committee. I tell you that these men are poor people to have as advisers to the Chief Executive, especially at this time

when conditions as they are, with that advice we will never stabilize our economy and bring prices and wages to a level that the economy will be stable and sound.

Mr. Speaker, the editorial is as follows:

A CALL FOR MORE INFLATION

Leon H. Keyserling is vice chairman of the President's Council of Economic Advisers. The other members of this important and influential agency are John D. Clark and Edwin G. Nourse.

In New York Sunday evening, Mr. Keyserling made a significant speech to a gathering of representatives of the 100,000 members of the Amalgamated Meat Cutters and Butcher Workmen of North America (AFL).

"Labor," said the Presidential adviser, "should be militant in this period of slightly declining prices"—meaning labor leaders should get out and fight for higher and higher wages regardless of what prices are doing.

"Nothing at this time," said Keyserling, "would do more to accentuate the beginnings of a softening up that we have seen in a small way as to follow price adjustments by wage reductions which would cancel out the consumers' increased buying power."

The whole speech was keyed to this note—that we can and should push up wages indefinitely, and that wage hikes should not be reflected in higher and higher prices for consumer goods.

Nothing was said by Mr. Keyserling, so far as reported, about increasing production per worker, by step-ups in the worker's own efficiency and the use of better and better machines. That cuts costs of production per unit of the things produced, and justifies higher wages. But this fact of economic life apparently is outside the limits of Keyserling's philosophy.

What he evidently is calling for is more of the inflation which has plagued us since wartime—and he cheerfully ignores President Truman's insistence that inflation is still the worst economic danger now menacing the country.

We don't know of anybody who quarrels with the general proposition that labor in a profit system must have generous wages, so that it can buy what it produces.

But what if labor leaders, taking the Keyserling advice, work this general proposition to death? They will only end, it seems to us, in pushing prices so high that the bulk of the unorganized consuming public cannot buy enough goods to keep the factories running and all the workers working.

When and if that happens, we'll have the depression so many people fear, plus. That's mathematical.

However, this Mr. Keyserling is a trusted adviser of Mr. Truman's, and is said to have the inside track just now to the Presidential ear. So maybe we're in for a bust, brought on by doctrinaires and economic quacks whose heads are as soft as their hearts are warm. And maybe that helps explain the continuing apathy of the stock market, and the widespread hesitancy of businessmen to expand operations.

The Rankin Pension Bill

EXTENSION OF REMARKS

OF

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1949

Mr. BOLLING. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the editorials which deal with the pension introduced in the House by the chairman of the House Committee on Veterans' Affairs:

[From the Providence Journal and Evening Star]

VETERANS' HAND-OUTS

The political axiom that nobody wants to shoot Santa Claus was bound to make our unqualified opposition to any general veterans' pension or bonus legislation unpopular among most ex-servicemen. For that reason we are particularly gratified by such support as we have received from that quarter. One veterans' organization, the American Veterans Committee, whose Providence chapter specifically endorsed our stand, has now actually carried its own opposition to hand-out legislation into congressional hearings being held on the latest and most extravagant pension proposal.

The attitude of this organization and of many intelligent individual veterans may not carry much weight with such politicians as Chairman Rankin of the House Committee on Veterans' Affairs, who openly denounced the adverse testimony of the AVC's national vice president on the proposed Rankin pension bill. The best chance of licking this particular piece of pork-barrel legislation seems to rest rather with the administration, which has also made known its opposition on budgetary grounds.

But the ability of at least a few veterans to put the national interest above their personal gain is important in a broader sense. It gives special point, on this anniversary of Lincoln's birth, to one of the Great Emancipator's wisest warnings of an ever-present danger to our democracy. "The struggle and scramble * * * for a way to live without work will finally test the strength of our institutions."

[From the Kansas City Times of February 21, 1949]

LIMITS ON VETERANS' AID

Well-reasoned advice to the country's veterans has been offered by President Truman. In an indirect comment on the big-money pension bill being pushed by Representative RANKIN, of Mississippi, the President has spoken of "certain limits" which "cannot be stretched" in providing for the collective welfare of former servicemen. He indicated that to exceed these limits would create hazards for the future stability of the Nation's economy.

This warning commands the attention of every one of the approximately 18,800,000 living veterans. Together they comprise about one-third of the jobholders in the United States. With their families they will soon make up about one-half of the total population.

It is no longer possible to regard veterans as members of a relatively small group who have performed special patriotic services and are therefore entitled to almost unlimited benefits. There are simply too many now to permit them and their dependents greatly preferred treatment over the other half of our people.

This does not mean, however, that nothing is due those who were exposed to physical danger, hardships, and personal sacrifices in wartime. The Nation has taken on a full set of obligations to ex-servicemen. There is no sentiment whatsoever for dropping them. As cited by Mr. Truman last week, these include the welfare and rehabilitation of disabled and ill veterans and the care of their dependents or survivors. Also called for is the fullest of efforts to establish former service men and women in the economic place they would have held had they not gone into uniform. The GI bill of rights has been an effective aid to that end for a majority of the 15,000,000 with service in World War II.

To say that more boons should be granted the older veterans of the two world wars implies a need for fulfilling promises to these men which were never made. They were called upon to fight not for mercenary reasons but to defend their Nation against forces prepared to conquer it if possible. To put a deferred price on their contributions would be to deny that this was the case.

The country preserved by their service is theirs to maintain. It does not belong to a citizenry standing apart from them and obliged to reward them free-handedly for what they did. Additional benefits paid to them on a large scale would take the form of a tremendous burden on the national economy. There are definite limits to what it can carry without collapsing. These apply not only to veterans' pensions but to various other proposals for scattering public funds around in a manner dictated more by emotion and good intentions than to reason.

As the President has just reminded all veterans, a solvent government able to function on a sound basis for all the people must come ahead of other considerations, however alluring they may seem.

[From the Des Moines Register of February 15, 1949]

ONE VETERANS' GROUP WITH COURAGE

When the American Legion and the Veterans of Foregn Wars announced some time ago that they would support Government pensions of $60 a month for all veterans after age 60, few people paid much attention. It sounded so extreme even the most cynical observers thought it would have no chance in Congress.

But now that Chairman JOHN RANKIN, Democrat, Mississippi, of the House Committee on Veteran Affairs has introduced a bill for such pensions, it seems to have a better chance than anyone expected. The Rankin bill even goes the Legion and the VFW one better. It provides for increasing the $60 pensions to $90 when the veteran reaches age 65 and also has liberal disability benefits for veterans.

Of all the major veterans organizations, only one, the American Veterans Committee (AVC), that high-minded group with the slogan, "Citizens first, veterans second," opposes this bill. In testimony before the Rankin committee, AVC said:

"The country owes the veteran a right to readjustment into his community life, and a chance to get started as a civilian, but the country does not owe the veteran a hand-out which has the effect of a boomerang endangering the stability of our economy as a whole."

The Veterans' Administration figures that the cost of the Rankin bill would be nearly $2,000,000,000 the first year and that by 1985 it would be between five and six billion. Even in the first year this bill—for veterans alone—would cost more than the Federal social security, welfare, and health programs for the entire population.

Veterans now are receiving about $6,000,000,000 a year in special educational, readjustment, and other allowances. These benefits are, for the most part, paid on the basis of special needs of citizens who took time out from their civilian activities to serve their country.

But the grandiose social-security program Congressman RANKIN proposes has no such basis. It is sponsored merely as a gratuity for those citizens who happened to be in the age bracket able to fulfill the duty of every citizen in time of war.

Strangely, the veterans organizations who do the most talking about the free-enterprise system and their devout faith in capitalism are the ones supporting this "Townsend plan" for veterans.

The country can be thankful one veterans organization, at least, is clear-sighted

enough to see that social security is not a veterans' problem alone—and courageous enough to oppose a Treasury grab for their own special benefit.

Negro History Week

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 1, 1949

Mr. JAVITS. Mr. Speaker, the following editorial from the New York Times of Friday, February 25, 1949, explains so eloquently and factually the meaning of this week, that I believe it will be of interest to all Members:

NEGRO HISTORY WEEK

The Negro American has come of age, and a celebration of the achievements given to civilization by present-day Negro scholars, singers, writers, and scientists is in keeping with the American tradition of paying homage to leaders of every age and race. Some fear that Negro History Week has become a beating of drums and sounding of trumpets to make American history a little more Marxian than it is, and its peoples the subjects of forces that would carry all of us on to a totalitarian finale. The history of our 13,000,000 Negro Americans belongs to all of us, and it should not be altered to make a poor propaganda.

The accomplishments of George Washington Carver and his studies of the peanut and other lowly plants are well known, but few of us have heard of Benjamin Banneker, a freeman of color who lived in Baltimore in the days of Thomas Jefferson and George Washington, and by his knowledge of geometry, the climates, and other useful things was able to help in laying out the city of Washington. This was refutation enough to all the people who saw black people only as historic hewers of wood and drawers of water.

The last war and subsequent social upheavals in Europe, Asia, and Africa have taught this generation that wars can free people, or wars can enslave them. It should clarify our thinking to have learned that race and religion have long been reasons for enslaving or exterminating entire races, nations, and classes. It will only be when we have learned more of the history of Africa that we will be able to say truthfully who was weak and who was strong in moral courage and fortitude. Negro History Week can be used among students as a stimulus to more scholarship. Among average people it can widen the range of cultural contacts and narrow the abyss of racial intolerance.

Rural People in Washington Favor Group Medical Care

EXTENSION OF REMARKS
OF
HON. HUGH B. MITCHELL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 1, 1949

Mr. MITCHELL. Mr. Speaker, a recent study by R. W. Roskelley, formerly associate rural sociologist, agricultural experiment stations, the State College of Washington, throws light on the attitude of rural Washington families regarding present medical practice. This study, entitled "The Rural Citizen and Medical Care," is printed as Bulletin No. 495, December 1947, of the State College of Washington, Institute of Agricultural Sciences, Agricultural Experiment Stations. On the basis of interviews with homemakers and heads of 595 representative rural families in the State of Washington, it was found that two-thirds—67.2 percent—of the people wanted medical care administered on a group basis. Few more than 1 person out of 5—22.4 percent—wished to continue with the system of private medical practice which has prevailed in the past. Approximately 1 out of 10 was not sure whether he wanted to continue with private practice or wanted his medical program administered by some other system. The general conclusion of the study follows:

The prevailing system of medical practice—private practice—in the State of Washington today is at variance with the wishes of a large majority of rural people. These wishes, which differ so greatly from the prevailing methods of administering medicine, appear as handwriting on the wall for changes in the operation of medical programs, if we continue to live in a country where the people's desires are given consideration in the determination of programs that affect them.

Although the entire study is too long to be reprinted here in full, I believe the Members will be interested in the information as summarized by the author:

This study reveals rather clearly that the practice of private medicine in rural Washington is not the first choice among a large percentage of the rural population as the method by which they would like to have their medical service program administered. The desire for change is marked. Two out of every three persons desire a change.

Of the five alternative methods, a larger majority preferred the social-security program as outlined by President Truman to any other system. Private practice was the second most popular choice; Medical Bureau plan was third; the cooperative approach, fourth; and tax-supported State medicine was last.

It is significant that the social-security program should be desired by so large a portion when one considers how limited the information has been explaining the details and the nature of the program. In addition, much publicity about it has been negative.

It seems particularly significant that in Pierce and King counties, where the Medical Bureau program was developed 25 years ago and has functioned since, the most desirable medical plan in the minds of the people would be one developed under an expanded social-security program.

Nearly every person who expressed a desire for a change in the method of administering medical-service programs expressed a positive desire for comprehensive coverage of all medical, hospital, and dental services. A large majority also indicated a preference for a prepayment plan for medical bills, based upon an insurance principle, and they expressed a willingness to pay 5 percent of the first $3,000 earned a year in order to defray costs.

Although there were many people who expressed a desire for private practice, it does not have the support of many related attitudes in the minds of the people which may be necessary for its continuance as an effective competitor to other systems of administering medical services.

The people who want change and those who desire to retain private practice as the method of administering medical programs represent a cross-section of the rural population. This suggests that a desire for change is not a phenomenon of the poor man, the rich man, the educated, or the uneducated, but is an expression characteristic of the attitudes and values of a great majority of rural persons in the State of Washington.

Rent Controls

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 1, 1949

Mr. MULTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the delegates to the convention of the New York City Federation of Women's Clubs, held at the Hotel Astor, New York City, on February 4, 1949:

Whereas existing Federal, New York State, and New York City rent controls on residential housing accommodations will come to an end on February 28, 1949, unless further extended; and

Whereas the housing emergency is still serious in the city of New York, as well as in other parts of the United States: Therefore be it

Resolved, That the New York City Federation of Women's Clubs, Inc., in convention assembled this 4th day of February 1949, does hereby go on record in favor of the extension and strengthening of Federal, New York State, and New York City rent-control laws relating to residential housing accommodations; and be it further

Resolved, That appropriate protection be given to tenants of decontrolled housing accommodations who have given voluntary increases to landlords under the law; and

Resolved, That copies of this resolution be forwarded to the President of the United States, the Governor of the State of New York, the majority and minority leaders of the United States Senate and House of Representatives, the majority and minority leaders of the New York State Legislature, the vice chairman of the city council, and the Clerks of both Houses of Congress, and of the State senate and assembly, as well as other appropriate public officers.

Cooperative Health Plans in Tampa

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Monday, February 28 (legislative day of Monday, February 21), 1949

Mr. PEPPER. Mr. President, at a time when we are considering health care for the people of the country I think it appropriate to have printed in the Appendix of the RECORD, and I ask unanimous consent to do so, an article entitled "Cooperative Health Plans in Tampa" by the Honorable Angus Laird, which is reprinted from the July 1942 issue of Medical Care.

Mr. President, I am informed by the Government Printing Office that the printing of the article in the RECORD will require 2¾ pages at a cost of $195.25.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COOPERATIVE HEALTH PLANS IN TAMPA

(By Angus Laird)

(After personal visits to Tampa, Mr. Laird prepared his article and also obtained comments from local physicians and others. These are appended. Mr. Laird is merit system supervisor, Florida State Department of Health.—The Editors.)

For 50 years a group of people in the city of Tampa, Fla., with a Latin-American background has been quietly developing a comprehensive program of medical and hospitalization services and health insurance. Organized into democratically controlled societies for educational and social as well as medical purposes, these people provide for themselves a health service that begins before birth and ends only when the body has found its final resting place. Membership in the societies is open to all persons of the white race of good character and in good health. The oldest and largest "club" is the Centro Espanol de Tampa, with a membership of more than 6,000 persons. One-third of these are men. The women and children members are entitled to the same medical and hospital benefits as the men. The Centro Asturiano, with about 5,500 members, has representatives of some 40 different nationalities in its membership. There are nearly 4,500 members in the "Italian club," which was limited to people of Italian blood until 1913, but is now open to all. The Circulo-Cubano, the last of the present important clubs, has about 2,700 members. While the age limit is generally from 40 to 60 years, some of the groups allow older people to join.

THREEFOLD OBJECTIVES OF THE CLUBS

In a broad sense, the societies are organized not merely to provide medical services and health care but for general social and welfare purposes. Thus, the objectives of Centro Asturiano, according to its officials, are threefold: "Primarily, it is a beneficent organization, tendering help, medical and surgical aid, treatment, and hospitalization to its members. Secondly, it is an educational institution, conducting classes in English, in art, and in other subjects as the requirements arise. Thirdly, it is a social center for the members, their families and friends, fostering dances, theatrical performances, literary meetings, parties, picnics, and other social functions, and encouraging clean social contact and relations amongst the members." The other societies have similar objectives.

SOCIAL BACKGROUND OF THE SOCIETIES

One major reason for the success of these societies is the democratic type of organization and the wide participation in club administration by the members. All of the clubs have large boards of directors. Centro Asturiano elects half of its 60 directors each year and frequently has spirited elections. On the day of election, members stream into the palatial clubhouse to cast their secret ballots. All members may vote, including men, women, and children. The election procedure of other clubs differs only in details. A club election is as important to a member as a political election is to any other American citizen who feels that voting is an obligation of citizenship.

Several occupations or professions are usually represented on a board of directors. At a typical board meeting, a lawyer, a banker, a cigar manufacturer, a cigar maker, and day laborers may sit round the same table. As one prominent club member told the writer, "We would rather have a good banker than a poor cigar maker, or a good cigar maker than a poor banker."

These clubs seem to have a remarkable record for stability in administration, and the paid managers, or secretaries, are generally considered permanent employees. An administrative turn-over rarely takes place.

One of the secrets of the success of these organizations is that they have been able to enlist the active participation of their members in their governing bodies and activities. While to most of us medical and hospital services are still the responsibility of the individual, to the Latin—in Tampa, at least—they are the responsibility of the community or the club.

DUES AND SERVICES

The amount of dues varies in the clubs, depending upon the type of membership. Thus, in the Italian club, the 65-cent weekly rate entitles a member to the following benefits:

1. Two dollars a day in case of sickness where a member is unable to work after having been a member of the club for 8 weeks.
2. General medical care, available at once after the first payment of dues.
3. Eye, ear, nose, and throat specialist; medicines; electrotherapy; laboratory examinations after five payments have been made.
4. Tooth extractions; X-rays; surgical operations, except tonsils; and hospitalization after 6 months' membership. Tonsils may be removed at the end of a year's membership.

Subscribers may also pay lower rates; service benefits are the same but cash benefits are reduced or omitted.

The Italian club's sickness-benefit plan provides for regular monthly payments in case of permanent disability from accidents. Thus, a member disabled by loss of a limb or of eyesight, will be paid $30 a month as long as the member lives and does not become a public charge.

Upon payment of rates varying from 20 to 30 cents per person weekly, depending upon age, a member's family may become members of the club and receive all benefits except the cash payments. Other clubs have different rates, varying from 35 cents per week to $2 per month. The benefits vary in detail, but are essentially the same. Additional benefits may be allowed by the payment of small additional sums.

Two of the clubs, Centro Espanol and Centro Asturiano, operate their own hospitals. Several members proudly informed me that these were the only hospitals in Tampa with X-ray therapy machines. The Italian club and the Circulo Cubano do not own hospitals, but their patients are free to choose any hospitals of the city with which their clubs have agreements.

A large part of the club revenues comes from social activities. The exact amount is available only to club members so that definite percentages cannot be given. However, in some organizations quite a large proportion of the revenues for health and hospitalization services arise from this source. While technically a member is financially liable for his weekly club dues only, actually he is expected to make some contribution through participation in social activities. This provision has probably been a deterrent in securing Anglo-Saxon members who often do not care to participate in these social affairs. The membership from this group is growing, however. Twenty percent of the members of the Centro Asturiano are said to be of Anglo-Saxon stock.

HOW MEDICAL CARE IS PROVIDED

Each club has a panel of salaried doctors who have regular consulting hours during which a member can come for examination and treatment. Some of the clubs have specialists on their staffs who receive a regular stipend. Generally, however, persons requiring a specialist's attention are referred to an outside specialist who is paid on a fee basis. Members may choose their family physician from the club panel. They may choose specialists from among the many, though by no means all, of the city specialists who have entered into agreements with the club. Dentists are paid on a fee basis and there is similar free choice within the panel.

PREVENTIVE HEALTH SERVICES

Most of the members of the clubs come from the low-income groups. If they did not have the clubs to look after their medical needs, they would be constantly worried about the expense of medical care in times of illness and might even become public charges. As club members, they go to see the doctor whenever there is the slightest doubt about a health matter. While this may mean more work for the doctor, as a rule it means better health for the members. Their physicians are able to carry on a considerable amount of preventive work. Many stories are told by both physicians and members of cases in which precautionary examinations and treatments prevented serious illness.

COLLECTION OF DUES

Collectors call upon members in their homes to receive payment of dues. Usually this payment comes before many things that the average American would consider much more important—in fact, before everything else. When a member is delinquent, a committee from the club calls upon him to find out the reason for nonpayment. If dissatisfaction is the cause, the committee endeavors to convince the backslider of the value of retaining his club membership. Where unemployment is the reason, the committee may order his dues paid out of a special fund raised for that purpose by the club. This assistance may be continued, if the member is considered worthy, for the duration of his unemployment and is considered one of a member's basic rights. This fund is also used to pay the dues of aged members and occasionally of employed persons in great need.

WHO ARE THE CLUB DOCTORS?

In the early days of the club, most of the doctors were of Anglo-Saxon or native American stock—in fact, the first doctor at the Centro Espanol was a graduate of the University of Tennessee Medical School, and helped to found the organization in 1891. Today, however, a number of the young doctors in the societies are of Latin stock, who are serving their own people through the medical societies. Still many continue to be of non-Latin ancestry, as for example, the hero of the Latin community in Tampa just now, M. R. Winton, M. D., head surgeon of the Centro Espanol Hospital. Because of his connection with the Latin clubs, he was not considered eligible for membership in the County Medical Society. As a result, in 1939 the Municipal Hospital, of which he had long been a staff member, was compelled to dismiss him in order to obtain reinstatement as a hospital approved by the A. M. A. for the training of interns. In that year, the A. M. A. had dropped the Municipal Hospital from its approved list, because, among other reasons, certain members of its staff were not eligible for membership in the local medical society. Dr. Winton appealed to the courts and won a verdict which denied the right of the hospital board to deprive any physician qualified under the laws of the State from serving on the staff of a hospital because of nonmembership in the Medical Society. Members of all clubs considered that Dr. Winton was fighting for the principles upon which their organizations were founded. They look upon him as their leader against what they believe was organized medicine's efforts to destroy their societies.

HOW THE DOCTORS ARE PAID

In most cases, doctors are employed on a part-time basis, and are paid from $150 to

$200 a month plus special fees for maternity cases. Some doctors are employed by more than one club, and nevertheless have time for private practice. One of those who complained most strongly against the clubs was employed by three organizations and claimed an income from all sources of more than $600 per month. When it is remembered that this amount is net and that office expenses, drugs, and other items are not paid out of it, his income does not seem too low for a professional man in such a community as Tampa. Many doctors in 1939 would have been willing to trade places with him—as he admitted. His net income was probably considerably above the average for doctors in private practice with similar clientele.

While club doctors are not as free to use their own time as private practitioners, their status in this respect probably does not differ from that of the average institutional doctor. They are allowed a month's vacation with pay every year, provided they can arrange to have other club doctors handle their patients.

GENERAL COMMENTS

Of course there have been criticisms of the clubs at times by both physicians and club members. Most of the group doctors interviewed felt that they were overworked. Some of them, thoroughly in favor of club medicine and hospitalization, accepted this situation philosophically. Some thought that an improvement would come in time. Others complained bitterly. Among club doctors the writer found no division of opinion as to the value of the services to members, but there were some differences in views as to the status of the club doctors.

One club informs me that over a period of time their doctors have on the average 7 house calls and 18 office calls a day. Another states that the approximate number of house calls for the average doctor per day is 4, while the approximate number of office and hospital cases handled by the average doctor is 10. Two of the doctors informed me that they are sometimes required to see as many as 25 to 30 patients daily. There was particular objection among the doctors to the number of home calls. They felt that many were unnecessary, although they had to make them for fear of criticism by the members. The writer has been assured that steps are being taken to improve this situation.

The lot of the doctors probably could be improved to the advantage not only of the medical personnel but of the club members themselves. No matter how well pleased the member may be with his club, he can hardly expect to receive good care consistently over a long period, unless the club doctors are loyal to the club type of hospital and medical services.

Members of the medical profession have also objected to the type of medical and hospitalization services provided, sometimes for good reasons, at other times on grounds that are hardly valid. Nonclub members frequently state that members do not get as good medical attention and care from club doctors as they could get on the outside. While this is probably true of members who could afford to pay for better service on the outside, one prominent physician who engaged in both club and private practice insists that club members get better medical care than do any other citizens of Tampa. The truth is that the average member would not be able to pay anything like the amount necessary to obtain similar medical care for himself and his family if he had to purchase it at the usual rates. The secretary of the Italian club believes that without the club, 75 percent of his members would become public charges in case of illness. The city health officer remarked that while he did not believe the clubs rendered the best medical service that could be given, he did not know what in the world Tampa would do without them.

A large part of the success of the Latin clubs is due to the intense loyalty of the members. Next to their family, the club is the center of their lives. It takes generations to develop such an organization, with the ties of devotion that have helped to make the Latin clubs in Tampa a success. For this reason, it is unlikely that this type of organization will ever develop on a large scale in America. Yet the clubs appear to be on a permanent and stable basis in Tampa, as any observer who has met and talked with members will agree. Perhaps the key to their success is explained in the statement of the late venerable Fermin Souto, of Centro Espanol: "The officers and members who work for this club are not working for money; we are working for humanity."

COMMENTS

From the committee on public relations of the Hillsborough County Medical Society: H. Mason Smith, M. D.; Robert G. Nelson, M. D.; H. G. Cole, M. D.:

"Your [Mr. Laird's] letter addressed to Dr. Robert G. Nelson, president of the Hillsborough County Medical Society, requesting a statement from an officer of the Hillsborough County Medical Society concerning the Latin clubs and the status of the medical personnel connected with them, was received by Dr. Nelson, who was president of the society in 1941, and referred by him to Dr. Blackburn W. Lowry, the president of the society for 1942. Dr. Lowry in turn referred this communication to the undersigned committee on public relations.

"The committee feels that it is not qualified to give you a statement concerning the status of the medical personnel connected with the Latin Benefit Societies of Tampa. The rules and bylaws of the Hillsborough County Medical Society prevent the physicians serving these clubs becoming members, unless they give up their contract with the Latin clubs. That is, no one is acceptable for membership who is on a contract to provide medical service to any organization or group that makes a profit on such services.

"Other than this, we do not know anything about the conditions of employment of the doctors in the Latin Benefit Societies doing group practice in Tampa. Therefore, we are not in a position to provide the statement as requested by you."

From Aeto P. Leto, an officer of the Italian Club (principal, Tampa Bay Boulevard Elementary School):

"The medical and human value of the Latin mutual-aid organizations in Tampa can never be overestimated. From a very humble beginning these societies have grown to where they now occupy a very prominent place in the civic and medical circles of our city. I have personally had a fine opportunity to observe the work they are doing, having belonged to the board of directors of one of them for 6 years and on the executive committee for 2 years.

"During good times and bad, taking time out on several occasions to fight back at the attacks by organized medicine, they have continued to grow and expand, always increasing the benefits to their members. Not even during the most critical periods of the depression were benefits to the members curtailed.

"These organizations have definite human and medical values. What human value could be considered greater than the feeling of security the head of a family feels when he knows that in spite of his very limited income his family is guaranteed medical attention and hospitalization if it should be needed? He also feels secure in the fact that if he himself were to become ill he would not only have proper medical care but that his loss of income would be replaced by the cash benefits paid by his organization.

"One of the greatest values of these organizations in my estimation is their value in the field of preventive medicine. When a member of one of these organizations feels the first symptoms of illness he can immediately visit a doctor and be attended without having to worry about his ability to pay for it. My experience as a public-school teacher further emphasizes this point. I find that when children in our schools are examined by public health doctors and medical treatment is recommended by them, those who are members receive this treatment immediately while others have to wait until their parents can afford it or else receive this treatment as charity.

"The Latin Mutual-Aid organizations do not stop at simply giving medical care to their members. As you will observe in the article by Mr. Laird, they carry on extensive cultural, educational, and recreational programs. Besides this classes in American citizenship are conducted. All the members of the societies are reached by these activities and the value to their morale is immense.

"The members take great pride in the achievements of their organization and are always glad to contribute of their time and effort. They derive a great deal of pleasure and a sense of belonging, which in turn animates their spirits.

"These organizations are indeed an excellent example of what can be accomplished by cooperative effort in a democratic nation."

From Charles Wm. Bartlett, M. D., a former club physician:

"Physicians that work for the health clubs in Tampa, do so at a flat rate monthly, with the exception of nose and throat specialists, and occasionally surgeons who may be paid on a per case basis. The average monthly fee, up to a short time ago, was $150.00 a month. For this fee, the physician had to make unlimited house to house calls and hold two separate consultations per day. One of the consultation hours had to be after 5 p. m. when shops were closed, permitting a large number of members to seek medical advice for the least complaint. Besides the prior mentioned services, about every third week, the doctor has to take night calls referred to him regardless of the nature, or the extent of his day's activity. If he is possessed of any surgical ability, he is expected to perform operations without further remuneration. In rendering these services, the doctor must furnish his own transportation and the essential instruments needed in his bag.

"As can be seen from this brief outline, the amount of work is considerable and the remuneration is small. Young physicians, in order to improve their financial conditions, usually work for two or more health clubs. This requires them to be on the go continuously with a big overhead for car expense. The number of calls vary with the season of the year, averaging from 12 to 40 house calls a day. The office consultations vary from 10 to 35. Due to the large number of house calls, these doctors try to see this large number of office patients in a period of about 2 hours, which precludes any scientific investigation in most cases. The surgical and critically ill medical cases in these clubs, are furnished with hospitalization which, in my opinion, is the chief benefit that the members derive from them, for this allows first-class treatment which, otherwise, would be out of their reach except as a service case (charity) in the local municipal hospital.

"The majority of these health clubs are governed by a board of directors, composed of cigar makers who have not had more than a ninth-grade education, and who, like most people who have not had any opportunity, like to show their authority when they have an opportunity to do so. If the doctor should happen to displease one or more of these powers that be, he may be dismissed from service without even the customary courtesy extended a janitor of a week's notice. These clubs are composed mostly

of cigar makers whose average earnings are from $18 to $20 a week, so that if a doctor spends 10 or 12 years working in these organizations and then decides to shift for himself in private practice, he cannot even look forward to drawing from this practice which he has established, for even if he has made a favorable impression upon them, they will continue to use his successor, feeling that they cannot afford his private services.

"In conclusion, I will say that from a physician's point of view, the health clubs are favorable only if he needs an immediate income and will not stay in this type of work more than 2 years. Prolonged practice in this field will tend in most cases, to cause a deterioration in his work, which may prove hard to overcome."

From M. R. Winton, M. D., a participating surgeon:

"I am surgeon to the Centro Espanol Hospital and have been for more than 7 years. In that capacity, I think I can judge the contract in contrast with pay. I am frank to say that I am better paid by contract or club work than I would be if I did the same work as private practice.

"Another important feature, I do not have to hunt up surgical cases to increase my volume of work, thereby increasing my income.

"You know it is estimated that 75 percent of the volume of surgery in this country is not necessary—of no value to the patient, but brings suffering and incurs heavy expense. The same applies to prescriptions. The usual doctor feels that he cannot charge a fee if no prescription is written—result—$10 worth of medicine, 10 cents worth of good to the patient; the truth is, 10 cents worth of advice is worth $10 in medicine—but you cannot collect.

"In club work, you can tell the patient "Yes" or "No"; in surgery, you are paid just the same—you avoid night calls, house calls, wrangling over every fee, etc., all of which require more than three times as much of your time as club work.

"Another thing, if you could place all doctors at good salaries, there would be an all-out endorsement. You must consider all doctors are not good surgeons or other specialists; that there is a majority that will always cry against it.

"If I had my way, I would compel all people with an income of $2,500 or less, to join a good club and if they could not pay their dues, the State should pay. They would have the best service and less butchering.

"It is well known that charity patients have been getting the best service of any class of people. They have a staff as their doctor and they have the best the staff can give. The rich have to be on guard against a sinister opportunity to make a fee—whether surgery, hypodermics, or electric treatments.

"Here, at present, the club patient is getting better treatment than the poor or the rich, and they are satisfied, as a rule. No one makes them join a club or compels them to use one doctor."

Luxury Excise Taxes

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1949

Mr. MULTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the delegates to the convention of the New York City Federation of Women's Clubs, held at the Hotel Astor, New York City, on February 4, 1949:

Whereas the 20 percent Federal excise tax on so-called luxury commodities was enacted during the war emergency for the purpose of raising revenue and discouraging the manufacturer of nonessential items in favor of the manufacture of necessary war goods; and

Whereas the conditions that brought about the imposition of this form of taxation have changed; and

Whereas many of the taxable luxury items, such as pocketbooks and other leather goods, drugs, cosmetics, toilet articles, furs, jewelry and similar items are regarded as actual necessities rather than luxuries by both producer and consumer; and

Whereas business leaders have protested that the existing luxury taxes have created a dangerous buyer resistance, placing several large industries in jeopardy; and

Whereas manufacturer, retailer, labor and consumer groups are in agreement that the repeal of this form of nuisance tax would be in the best interests of labor, capital and the consumer; and

Whereas, according to figures published in the press, this form of tax, in 1948, brought only slightly more than 1 percent of the total revenue collected by the Federal Government in taxes; Now, therefore, be it

Resolved, That the New York City Federation of Women's Club, Inc., in convention assembled this 4th day of February, 1949, does hereby call upon the Congress of the United States to repeal the excise tax on luxuries; and be it further

Resolved, That the New York City Federation of Women's Club, urges the members of Congress from the city of New York to work for the repeal of the excise tax on so-called luxuries; and be it further

Resolved, That copies of this resolution be forwarded to the President of the United States, the majority and minority leaders of the Senate and House of Representatives, the Speakers of both Houses, the Chairmen of the appropriate Congressional Committees, the Representatives in Congress from the city of New York, the secretary of the Senate and the clerk of the House of Representatives, and any other appropriate officials.

Bishop Lajos Ordass

EXTENSION OF REMARKS

OF

HON. JAMES J. HEFFERNAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1949

Mr. HEFFERNAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include the following article written for the Brooklyn Eagle by John A. Heffernan:

HEFFERNAN SAYS LUTHERAN JOINS THE CHRISTIAN MARTYRS

Now that the case of the Hungarian Lutheran Bishop, Lajos Ordass, has popped out of the diplomatic top drawer, we may consider what is really going on under the most stupid of the Red regimes that have sprouted from Marxism. Hungary's population is as predominantly Catholic as the United States is Protestant.

However, there are half a million Lutherans in Hungary and, despite the effects of the war, a by no means negligible number of Jews. All of these people have received monetary gifts, and those most in need, clothing and food from their coreligionists in this country. For instance, Bishop Ordass received $500,000 from American Lutherans. It was not a personal gift but a fund for carrying on the church work by the daring religious leader, who, like his Catholic and Jewish fellow countrymen, was undergoing a second persecution, more savage than the first.

Failure to register such gifts is a crime under the Red regime, which confiscates them when they are registered. That is what, in the Communist-dominated countries, is called black marketing, or an offense against the currency laws.

It has been noted by such historians as Macaulay that countries which became Protestant at the time of the Reformation have remained predominantly Protestant, while countries that remained Catholic in the main, continued so. The Red regime at Budapest and other Communist capitals desires to garb itself in respectability by having at its several courts little national church hierarchies. It is an old trick of dictators. Machiavelli taught it in his political philosophy.

In his war memoirs Churchill tells of a conference at which the question of the Pope came up. "The Pope?" said Stalin. "How many divisions has he?" Churchill's comment was "More than you think, although they are not always visible." Stalin may now be surprised to find the soldiery of Christendom, some in the cardinal cap and robe, some in the black cassock, some in the simple civilian garb, marshaling in the divisions that denominationalism brought about, to wage battle against his armor.

He may hear their battle cry, sounding strangely like the "Battle Hymn of the Republic," and the noise of the captains in the words of Theodore Roosevelt, "We stand at Armageddon and we battle for the Lord."

Veterans of Foreign Wars Explain Veterans' Pension Issue

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1949

Mr. VAN ZANDT. Mr. Speaker, Members of Congress are greatly confused over the veterans' pension issue that will no doubt reach the floor in the near future.

The Veterans of Foreign Wars through their national legislative director, Omar B. Ketchum, has attempted to clarify the issue by sending to Members of Congress the following letter which contains certain statistical information including the comparative costs of various pension plans.

The letter is as follows:

VETERANS OF FOREIGN WARS
OF THE UNITED STATES,
Washington, D. C., February 25, 1949.

DEAR CONGRESSMAN: There appears to be so much confusion over the pension issue that I am taking the liberty of presenting the views of the Veterans of Foreign Wars with respect to this subject. A bill identified as H. R. 2681, by Mr. RANKIN, has been reported favorably by the House Committee on Veterans' Affairs and will no doubt come before the House of Representatives for a show-down decision in the near future. Press and radio reports on this bill, stating

the position of this and that veteran organization, together with astronomical estimates of costs, has created such confusion and raised such a smoke screen that the real facts have been obscured.

For 10 years the Veterans of Foreign Wars has gone on record in each national convention advocating and urging the adoption of a pension program for the ailing and aging World War I veterans similar to the pension benefits which are available to Spanish-American War veterans. Up until the Eighty-first Congress we made some progress but had been unable to bring the pension issue up for serious consideration in either the House or the Senate. This year, however, the pension issue has been developed in the House Committee on Veterans' Affairs with a fanfare of exaggerated and distorted publicity which threatens to nullify or delay further our efforts over the years.

The bill, H. R. 2681, which was reported out of the Veterans' Committee, is not the pension program which was advocated by the Veterans of Foreign Wars. While we are not opposing Mr. RANKIN's bill we think you should know that it falls far short of the target and will not take care of the group of World War I veterans who are so desperately in need of pension assistance from the Federal Government. The Press reports and cost estimates on the Rankin bill are completely distorted and exaggerated because the bill in its present form actually would cost very little above the present pension costs for non-service-connected pensions, for World War I and World War II veterans. Briefly summed up, the Rankin bill pending before the Rules Committee would grant pensions to World War I and II veterans when they reach the age of 65 irrespective of physical condition or income. The only advantage of the Rankin bill over the present law which grants non-service-connected pensions to World War I and II veterans is that the Rankin bill would pension a group of veterans who reach the age of 65 and who cannot now qualify for pensions because of good physical condition or substantial income. The Veterans of Foreign Wars has proposed a bill identified as H. R. 2512, by Mr. RANKIN, and H. R. 2379, by Mr. VAN ZANDT, which was a compromise between the most expensive bill which had been introduced, H. R. 1693, on which hearings were held, and the Rankin bill, H. R. 2681, which has been reported favorably.

This compromise bill (H. R. 2512) proposed by the Veterans of Foreign Wars is completely realistic and approaches the problem of a pension program for World War I and II veterans on the sound basis of helping those who are desperately in need of help. A cost estimate prepared by the VFW, which we believe to be as accurate as any cost estimate could be, indicates that our bill would cost approximately $375,000,000 more in 1950 than what is already being expended yearly on existing part III non-service-connected pensions for World War I and World War II veterans. The VFW compromise bill would provide pensions on both an age and disability basis with an income limitation to make certain that the pensions would be paid only to those veterans who are actually in need of pensions. When the Veterans' Administration submitted a cost estimate on H. R. 2512 they did not take into consideration the income limitation in the bill, which cuts the cost almost in half.

It is our viewpoint and our hope that if and when the Rankin bill, H. R. 2681, comes before the House that it will be amended by substituting the provisions of either H. R. 2379, by Mr. VAN ZANDT, or H. R. 2512, by Mr. RANKIN. Both of the latter bills are identical in wording and purpose.

I am attaching two exhibits identified as A and B. Exhibit A is a chart showing (1) the present part III non-service-connected pensions available to World War I and II veterans; (2) the Rankin bill, H. R. 2681, as reported out of the Veterans' Committee; and (3) the VFW compromise bill, H. R. 2512, which we recommend as a substitute for the Rankin bill. Exhibit B is an estimate of detailed cost which we have prepared on H. R. 2512 and which gives a break-down of both World War I and World War II veterans who would benefit from the legislation if the bill is enacted into law and goes into operation for the year 1950. I think a careful study of the attached exhibits will reveal that our compromise bill is completely realistic and will reach the target in caring for that group of World War I and II veterans who are unable to find and hold gainful employment and yet are unable to qualify for a pension under the existing part III benefits law as shown in exhibit A.

If the Congress desires to enact a realistic pension program that will take care of those World War I and II veterans who are desperately in need of assistance from their Government, may I again recommend that the provisions of H. R. 2512, or H. R. 2379, be substituted for the provisions of H. R. 2681, which is presently pending before the Rules Committee.

Respectfully yours,

OMAR B. KETCHUM, *Director.*

EXHIBIT A

Comparative analysis of World Wars I and II pension systems—existing (pt. III), Rankin and VFW plans

	Existing law	Rankin bill (H. R 2681)	VFW compromise plan (H. R. 2379, H. R. 2512)
Eligibility	90 days or more service or discharge for disability incurred in line of duty. Active service before cessation of hostilities.	Same	Same.
Rates	Permanent and total, $60; rated permanent and total for continuous period of 10 years or reach age 65 years, $72; nothing additional where aid or attendant required.	Age 65 years, $90; where aid or attendant is required, $120.	Age 65 years, $90; permanent and total, $90; 75 percent disability, $7 ; 50 percent disability, $50; where aid or attendant is required, $120.
Income limitations	$1,000 if single, $2,500 if married or have dependent minor children.	No income limitation	$2,000 if single, $3,000 if married or have dependent minor children.
Discharge requirement	Other than dishonorable	Other than dishonorable.	Other than dishonorable.
Disability due to misconduct.	Will bar pension	Will not bar pension	Will not bar pension.
Cost estimate (first year).	$119,823,781 [1]	$62,411,000 (cost of pension features only).[2]	$514,000,000.[3]

[1] Actual cost 1948.
[2] Actual cost in addition to cost of pt. III.
[3] Absorbs and includes cost of pt. III pension.

EXHIBIT B

Estimated cost for 1950 on H. R. 2512 as prepared by Veterans of Foreign Wars of United States

1950—WORLD WAR I, AGE 65, TOTAL AND PERMANENT

World War I, 65 or over	104,039
Will never apply (percent)	5
Will never apply	5,201.95
Remaining over 65	98,837
Income limitation bar (percent)	40
Barred by income limitation	39,534.80
All-round eligibility	59,302
Per month	$90
Per month cost	$5,337,180
Months	12
Yearly cost	$64,046,160

1950—WORLD WAR I, TOTAL AND PERMANENT, UNDER 65

Under 65 years	3,483,423
Will never apply (percent)	5
Will never apply	174,171
Remaining under 65	3,309,252
Eligible total and permanent (percent)	8
Eligible total and permanent	264,740
Income limitation bar (percent)	50
All-round eligibility	132,370
Per month per person	$90
Per month	$11,913,300
Months	12
Per year	$142,959,600

1950—WORLD WAR I, 75 PERCENT DISABILITY, UNDER 65

Under 65 years	3,044,512
Eligible 75 percent disability (percent)	7
Eligible 75 per cent disability	213,116
Income limitation bar (percent)	50
All-round eligibility	106,558
Per month per person	$75
Per month	$7,991,850
Months	12
Per year—1950	$95,902,200

1950—WORLD WAR I, 50 PERCENT DISABILITY UNDER 65

Potential for 50 percent	2,831,396
Eligible for 50 percent (percent)	20
Eligible for 50 percent	566,279
Eligible under income limitation (percent)	40
Total eligible for 50 percent	226,512
Per person per month	$50
Per month	$11,325,600

Unemployment

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 1, 1949

Mr. PATTERSON. Mr. Speaker, while figures are normally dull and uninteresting as quoted, I have available here some which should prove of interest to all Members of this body, and to the citizens of this great Nation.

We all realize that production of consumer products and essential consumer services are the economic backbone of our country. Without this area of enterprise, our system would collapse and government as we know it could not function.

Nonproducing employment, on the other hand, must be subsidized from the labor of the producer in the fields mentioned. Government employment, therefore, falls into the category of subsidized labor, in that no product or service of monetary return is performed.

The Washington Times-Herald of last night, February 28, quotes the Civil Service Commission as stating that Federal employment in the Washington area increased by 1,200 during January, and that the national increase during this period was 1,700.

Of considerable interest would be the employment figures in private employment in one of our greatest industrial States, Connecticut, and in a highly industrialized area within Connecticut, that of Waterbury and surrounding communities.

In the Waterbury area alone, unemployment during January reached the discouraging total of 4,900, an increase of 1,000 over December, and 3,100 above September, 1948. Of the January total, 800 were veterans who relinquished their jobs involuntarily because of decreases in business. The total number between February 14 and February 19 had risen to 6,048, and the number of jobless veterans to 835.

The over-all picture in the State is comparable in that 55,863 were unemployed during this period in February, 10,090 of whom were veterans. These figures apply only to those who have filed unemployment compensation claims. It may be safely assumed that the total is greater.

This is a severe indictment of the present administration. Is this the fair deal which the working men and women of America were to receive? With private employment shrinking, the administration increases its governmental pay roll so that there are now 1,900,900 Federal employees who must be supported by a diminishing number of employed citizens. How far can we expect the administration to go in its quest for political power? Are the people to be saddled with ever-increasing public pay rolls? This increase cannot be attributed to increased social benefits granted by the Eighty-first Congress, because to date there have been none.

We might far better seek measures of decreasing the tremendous Federal bureaucracy which has been built up by a succession of deals, either new or fair, and thus lighten the burden of our taxpayers.

Potato Prices

EXTENSION OF REMARKS
OF
HON. CHARLES H. ELSTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 1, 1949

Mr. ELSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cincinnati Enquirer of February 25, 1949:

POTATO BUSINESS RIDICULOUS

The Government will spend $200,000,000 this year to maintain potatoes at their parity price—that is, to keep the price of potatoes up. This is about $1.35 for every man, woman, and child in the United States. For an average family of four it amounts to $5.60, in the form of taxes paid to the Government.

The Government had two parity prices for potatoes. The higher price was for the best grade and the lower price for the poorer grades. When the best grade prices dropped below parity, potato growers unloaded their best potatoes on the Government. The price of poorer grades did not drop to parity, so growers sold these on the open market for the market basket. Thus the best grades of potatoes went to feed cattle and the poorer grades showed up on the store shelves for the dinner table.

To make this possible—to insure you getting the lower grades for your dinner table—the average family of four paid $5.60 to the Government.

Ridiculous, isn't it The Government admitted recently it had made a mistake and will do it differently next year. But this year you're eating the poorer grade potatoes, and paying $5.60 for the privilege, if you consider it a privilege.

Let's hope this situation—silly as it is—does not extend to the whole parity program of propping up prices this year. The Government has just announced that it will spend $2,250,000,000 on its farm support program this year. This represents $15.50 for every man, woman, and child. For the average family it means taxes of $62.

We aren't going to like paying $62 in taxes to prop up all these prices if it's going to give us the poor end of the deal, as it did with potatoes.

Steel Scrap Scandal

EXTENSION OF REMARKS
OF
HON. W. KINGSLAND MACY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 1, 1949

Mr. MACY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an excerpt from the Editor's Point of View section of House Furnishing Review, the national business magazine of housewares and appliances, whose distinguished editor is Mr. Julien Elfenbein, which reads as follows:

STEEL SCRAP SCANDAL

Recently the Advertising Council, Inc., assumed responsibility at the request of Secretary of Commerce Sawyer for conducting a Nation-wide advertising campaign to salvage steel scrap from industrial sources in our country.

The council picked the business papers of the country for this campaign and brought together a large group of business-paper editors last December in New York at the Hotel Pierre, and later appeared in Washington at the January session of the National Conference of Business Paper Editors, to help them get started. I pointed out at the Hotel Pierre that Congressman KINGSLAND MACY (N. Y.), chairman of the Subcommittee To Investigate Questionable Trade Practices, and other Government experts claim it is not possible to improve our scrap position from domestic sources alone. In other words, we need more scrap to increase steel production

than our industrial sources can salvage. Perhaps you wonder why producers of housewares and appliances pay high prices for steel and often have to get it in the black market. The experts point out that worse than this, our scrap shortage is a serious threat to our national security. Somebody is stock-piling scrap and it isn't the United States. Let's see who it is.

Congressman MACY wrote me on December 1, 1948:

"Our local scrap is already in a sense stockpiled in that it is in the country and can always be secured, better under an emergency than under stimulated advertisement at this time. Besides, in stock-piling our own scrap, we may be lulled into a false sense of security and thereby fail to take advantage of bringing back the quantities of this important ingredient from abroad when our ships are coming back empty.

"You will recall that when we were together I pointed out that during all the fine swimming weather this summer, there was an embargo on the German Ruhr scrap, due to conflict of ideas between various United States Government Departments and their representatives on the other side. While it is United States money that is being used all over abroad, in this case we found it used to bid against our own merchants in the purchase of this German scrap, with the result that this may have been responsible for the embargo. It would seem that some interdepartmental conference at top levels could be developed in this country that would adequately solve so important a question to our peace and war economies as a comfortable stock pile of scrap steel suitable for maintaining the high level steel production now prevailing. Yes, to answer your question General Clay has lifted the embargo and ships are on the high seas returning with steel scrap, which is why our mills here are now running at record capacity. The flow is not nearly as great as it should be, nor was the allocation agreement with Great Britain anything like fair since that country has already taken free over 800,000 tons of booty scrap."

Our Government admits that out of 10,000,000 tons of rubble scrap surplus in the western zone of Germany, Britain got 800,000 tons free for nothing. Under pressure General Clay finally allotted 440,000 tons for United States buyers in June 1948. In July, United States got 9,500 tons, in August 24,000 tons, in October 51,000 tons. Then a stalemate ended the flow of scrap to United States from Germany. After General Clay lifted the embargo in November 1948, United States steel producers paid a fancy market price for German scrap.

United States buyers have to bid against Germans, English, and Italians who use United States money (Marshall plan) to outbid United States buyers for German scrap. Much of this German scrap finds its way into Russia. We have paid as high as $50 a ton for scrap worth $20 a ton. The price is now about $28.50.

Alex Miller, vice president of Columbia Iron Metal Co. (scrap dealers), is a special consultant to the Department of Commerce. Mr. Miller told business-paper editors at the Hotel Pierre that the United States steel industry last year lost 3,000,000 ingot tons of steel due to the lack of scrap.

American scrap dealers have driven a hard bargain with the steel industry. Many have traded scrap, not for money but for sheet steel which they sold in the gray market at unbelievable profits. The Macy committee described the profits of the gray marketeers exploiting the steel shortage and the demand for scrap as fantastic profits running into millions of dollars. The committee reported that from 10 to 12 percent of strip and sheet steel was diverted from the Nation's total steel production into the gray market. So now you know.

Some irate folks in the housewares and appliance industry tell us that Paul Hoffman should trade Germany food for scrap and should cut off all countries that use our ECA money to exploit us. Our answer is, tell it to Mr. Truman, who threatened in his state of the Union speech to put the United States into the steel business if production did not increase.

Cardinal Mindszenty

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 1, 1949

Mr. MULTER. Mr. Speaker, permit me to direct the attention of my colleagues to the action taken by the board of directors of the Brooklyn Jewish Community Council on February 14, 1949, with reference to Cardinal Mindszenty. At that meeting the council adopted the following resolution:

The Brooklyn Jewish Community Council expresses its concern over the threat to religious freedom involved in the trial and sentence of Cardinal Mindszenty, primate of the Roman Catholic Church in Hungary, and Bishop Jajos Ordos of the Lutheran Church in Hungary.

The Brooklyn Jewish Community Council, which is dedicated to the American democratic concept of full religious freedom for all men, takes this occasion to register its protest against any form of religious persecution, no matter against whom directed. We express our abhorrence of so-called totalitarian justice which disguises religious persecution as prosecution on political grounds.

Regulation W Should Be Relaxed

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 1, 1949

Mr. McDONOUGH. Mr. Speaker, regulation W as applied to sales of new and used automobiles is creating a widespread hardship on prospective buyers, and has already caused a rapid decline in the sales of cars because of the stringent credit restrictions it imposes.

I am receiving many letters from my constituents who find the monthly payments are too high under regulation W and they cannot buy the car they need. The present restrictions imposed on the purchase of automobiles discriminates against many persons of good character with good credit who need cars for transportation, but cannot purchase them with the high monthly payments required under regulation W.

When the Eightieth Congress reinstated authority to the Federal Reserve Board to issue regulations for credit control, the act provided elasticity of authority so that the Board could alter consumer-credit controls in keeping with the changing times, and it was my understanding that the Federal Reserve Board would relax these controls when supply caught up with demand.

In the automotive industry this status is now being reached, but in spite of this fact, the Federal Reserve Board has not indicated any intention of considering a change in regulation W as it applies to the sale of automobiles.

Since the Federal Reserve Board has failed to act to alleviate a credit squeeze in the automobile industry caused by regulation W which will have a depressing effect on business in general and may cause further declines in the automotive market which would lead to widespread lay-offs and business failures in that field, I have introduced H. R. 1552, a bill which would eliminate the drastic credit restrictions imposed on the sale of automobiles under regulation W and would permit prospective buyers to purchase cars with a monthly payment within the limitation of their monthly budgets.

I believe there is an urgent need for immediate relief from the restrictions imposed on automobile sales by regulation W for the car purchaser and the dealer, and I ask that the Members of the House give early consideration to legislation for this relief.

The following is a copy of my bill, H. R. 1552, and a copy of my letter to Chairman Thomas B. McCabe of the Federal Reserve Board requesting that his Board act to amend or remove regulation W as it applies to automobile sales:

[H. R. 1552, 81st Cong., 1st sess.]

A bill relating to the authority of the Board of Governors of the Federal Reserve System to impose consumer-credit controls with respect to automobiles.

Be it enacted, etc., That in the exercise of consumer-credit controls with respect to automobiles the Board of Governors of the Federal Reserve System shall not require a minimum down payment of more than 25 percent and shall not limit the maximum maturity (irrespective of the principal amount of the credit) to a period of less than 24 months.

HOUSE OF REPRESENTATIVES,
Washington, D. C., February 26, 1949.

THOMAS B. McCABE,
Chairman, Board of Governors,
Federal Reserve System,
Washington, D. C.

DEAR MR. McCABE: I am receiving many letters from my constituents who are appealing for relief from the stringent restrictions of regulation W as it applies to the purchase of new and used automobiles. Consequently I have introduced H. R. 1552, a copy of which is enclosed, which has been referred to the Banking and Currency Committee and may be referred to your Board for an opinion.

Prospective purchasers state that the monthly payments under regulation W are too high, and they, therefore, cannot buy cars now. The dealers in both the new- and used-car fields are in turn finding their market drastically curtailed.

The reinstatement of authority to the Federal Reserve Board to issue regulations for credit control by the Eightieth Congress provided elasticity of authority so that your Board could alter consumer credit controls in keeping with the changing times, and it was my understanding that the Federal Reserve Board would relax these controls when supply caught up with demand.

In the automotive industry this status is being reached, but regardless of this fact your Board has not indicated any intention of considering a change in regulation W as it applies to the sale of automobiles.

Because of the obvious present hardship in the automobile industry under regulation W which is creating a credit squeeze which, if not alleviated, will have a depressing effect on business in general, I believe your Board should give this matter immediate attention. I sincerely urge you to take whatever steps are necessary to amend or remove regulation W as it applies to automobile sales to prevent further declines in the automotive market which would lead to widespread lay-offs and business failures in that field.

Very truly yours,

GORDON L. MCDONOUGH,
Member of Congress,
Fifteenth District of California.

[From the Los Angeles Times of February 18, 1949]

THE QUESTION OF REGULATION W

The Federal Reserve Board restrictions on installment buying—known as regulation W—are coming increasingly under fire, particularly from those who believe a slackening off of business is under way. These people argue that if this restriction were done away with, the market for automobiles and for other items customarily bought on time payments would widen, and a depression might thus be avoided.

There is force in the argument. But additionally there is the grave question of whether such restrictions ought to be imposed at all in time of peace, since they are obviously incompatible with a free-enterprise system.

Regulation W was reimposed last September 20 as an anti-inflation measure. Restrictions on credit had been imposed during the war for quite a different reason: to divert production away from civilian goods and toward war goods, and whether or not they were justified or necessary, they were accepted by the public as part of the war set-up. They faded away at war's end and were put back on the theory that too easy credit led to too much demand in certain categories of goods and hence boosted prices.

Now, it is contended, any justification for their continuance has evaporated. There are lots of radios, phonographs, television sets, washing machines, refrigerators, and the like in the market and even the automobile makers are catching up with demand, and the restrictions should be lifted to enable them to be sold more readily.

While most economists think the possible effect of easier consumer credit toward warding off a depression has been exaggerated, there does not seem to be any good reason for continuing regulation W.

One of the main reasons for its abandonment is that it rests on a false assumption. This assumption is that the Federal Reserve Board knows more about what is good for the public than the public does. The merchant, who is on the ground and has the most immediate information, or the local banker or credit manager, knows more about what a particular customer can or cannot afford than any board in Washington or elsewhere can possibly learn. Furthermore, a rule which may accurately fit the average situation of the average individual cannot justly apply to everybody, since very few persons will be average.

The regulation does not take into account what may be the individual's particular requirements. He may need a car desperately to enable him to earn a living, yet can't rustle up the down payment. If credit were a matter of private arrangement such a man could no doubt find someone who would sell him a vehicle on relaxed terms; under regulation W he is cut off at the pockets.

Regulation W insists that the down payment on a car be at least one-third and that the remainder be paid in 18 months. On furniture the payment may be one-fifth, the contract to be paid off in 15 months, unless it is more than $1,000, in which case 18 months are allowed. Usual contract terms before the war allowed 24 months on practically all purchases, with smaller down payments.

That some foolish individuals will buy what they cannot afford, and some foolish merchants will extend credit to the wrong people, if there are no restrictions, is true enough. But who in Washington is wise enough to set the restrictions at the correct level?

In the case of housing, where people are much more apt to go in beyond their depth, credit terms are much more liberal. Some houses can be bought for as little as 5 percent down with the balance running for 30 years. Regulation W is being circumvented in some cases of household appliances, where a washing machine or refrigerator or range is furnished as part of the house and included in the housing loan.

It is very doubtful if regulation W is accomplishing any desirable purpose, at least under present conditions. If it is not abolished outright, at least there should be some relaxing of the restrictions.

George Washington Is Our True Guide

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. REED of New York. Mr. Speaker, I have not only made it a practice each year for the last 30 years to listen to the reading of Washington's Farewell Address in the House of Representatives but I have read it and pondered over it many times each year. The principles which he enunciates and the advice which he gives to the people who wish to enjoy and retain liberty under law are requisite to the perpetuity of our form of free government.

We are the trustees of a great heritage which it is our privilege to enjoy and our duty and responsibility to protect and ultimately transmit to the next generation stronger, better, more virile than it was transmitted to us.

Under leave to extend, heretofore granted, I am inserting in the RECORD a recent editorial by William Griffin, editor and publisher of the New York Enquirer:

WILLIAM GRIFFIN SAYS GEORGE WASHINGTON IS OUR TRUE GUIDE

The parting words of Washington concerning our domestic affairs and our relations with the rest of the globe resound in the National Capital each year when Members of both Senate and House listen to the recital of his Farewell Address in celebration of the birthday of the greatest of all Americans.

In view of the fact that our lawmakers stubbornly refuse, year in and year out, to conform to the standards of statecraft and patriotism enunciated in that immortal pronouncement of the Nation's first President, its annual recital in House and Senate only serves to emphasize the gravity of their infidelity to its teachings.

The Father of his Country was a nationalist.

He gloried in the American name.

It was his heart's desire to see America stand on her own feet at all times, confident and self-reliant, working out her destiny in her own way, and demonstrating to the Old World and the New the manifold blessings to be derived from life as lived in this land of liberty and opportunity for all.

Congress has long ceased to be the nationalist institution which Washington so ardently hoped it would always be. It is now the most powerful internationalist body in the world.

The man to whom the Republic renders homage every year on February 22, was the military commander who led the nationalists of 1776 in their triumphant revolt against unjust taxation at the hands of a European power.

He and they confidently thought that they had forever freed our country from the servitude of unwarranted imposts.

Were they here today they would find that we are the tax slaves, not of one European country, but of the whole world.

Who is responsible for this appalling state of affairs? None other than the Congress of the United States of America, whose duty it was and is and ever will be to protect and perpetuate the multiple boons won for this Republic by George Washington and his fellow nationalists of the War of Independence.

In dissipating the resources of our country for the advantages of other nations, Congress cannot justly plead that it is promoting the cause of liberty abroad.

Take the case of Britain, the land from whose exploitation George Washington's leadership was supposed to have liberated us for all time.

A Socialist regime was established there by popular vote in 1945, after socialism had been crushed in Germany at an unprecedented cost, in blood and wealth, to the American people.

Since then Congress has voted huge sums of taxpayers' cash for the purpose of sustaining Britain's Socialist Government. That Government, according to no less a Briton than former Prime Minister Churchill, detests our American way of life while cheerfully accepting the billions of American dollars handed over to it by acts of Congress.

This is a proud boast for our Legislature, which listens once a year to the reading of Washington's Farewell Address and spends the rest of its time violating its precepts.

But Britain is not the only land wherein Congress is buttressing socialism by levying heavy imposts upon the earnings of Americans.

Socialism is the dominating force in that part of Europe enjoying the benefits of the Marshall plan, while millions of our people are suffering from privations that are a disgrace to the American name.

A recent statement of the president of the University of Illinois, Dr. George D. Stoddard, discloses that the Marshall plan is providing some regions of Europe with houses and school buildings superior to those of many communities here at home.

This is a thought-provoking example of the manner in which our tax-levying body discriminates against Americans in carrying out its program of bankrupting the Republic so that socialism, one of the leading foes of mankind's well-being, can have its authoritarian way abroad, while it insidiously exerts itself within our own land.

Our "rulers" in the city named in honor of America's greatest nationalist tell us that it is necessary to resort to extraordinary measures and expenditures in order to give encouragement to foreign nations. They are trying to do, what George Washington warned against their attempting, namely, to purchase the friendship and cooperation of other governments and peoples.

Three and a half decades of costly internationalism have gained for our country nothing but contempt and hatred. Today the American name is detested abroad as never before and the rights of man, for which Washington and his fellow nationalists sacrificed so much, are imperiled as never before.

Nothing could be more groundless or un-American than the internationalist plea that circumstances have fundamentally changed since Washington's day, and that consequently the standards which he prescribed for us are no longer applicable.

Those standards, like truth itself, are immutable and eternal.

Equally fallacious are the internationalist arguments that we are living on a shrunken globe and must accommodate ourselves to it by embracing one-worldism if we are to survive. The world is as large today as it ever was, and American citizenship is as proud and precious and indispensable for Americans as it ever was.

It is precisely because the standards prescribed for America and Americans by George Washington have been abandoned that the Republic is imperiled and disheartened as it is in 1949.

The American people deserve encouragement from their "rulers." All they are getting is heavy taxation and promises of still heavier taxation, in order that the socializers of the land of Washington can transform them into robots of their Government, instead of their being its governors as the Father of his Country intended they should always be.

Our greatest worry is, not what is going to happen to foreign lands, but what will be the fate of the land which gave America and the whole world the man known as George Washington.

The American Disgrace

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Detroit Free Press for February 23, 1949:

THE AMERICAN DISGRACE—OUR GREATEST DANGER: FINANCIAL ROCKS AHEAD

This country is faced with the gravest danger in its history.

It is a disaster worse than war.

For we have always been able before to rebuild after war and to grow mightier.

That time has gone.

The imminent danger with which we are confronted transcends all political differences.

It is not a question of Republicans against Democrats or New Dealers against Old Dealers. It is not a conflict between unions and management. It has nothing to do with the progress of social security, national health or any other controversial question.

The cold stark ugly fact is that the United States is rapidly drifting into national bankruptcy.

Unless something is done to stem the tide we will be, within a very few years, no better off than the nations of Europe.

It is this condition for which the Moscow Communists are patiently and hopefully waiting.

They know what is coming unless we wake up. They can well afford to wait.

Who will be reponsible for this national collapse?

Let's be honest about it. We have all been guilty.

No party, no class, no group has brought these conditions about.

We have drifted into it from generation to generation.

The insidious enemy which is serving Moscow as the deadliest of fifth columnists is mismanagement.

It is bitterly ironic—but a great laugh for Stalin—that America upon whose altars we have placed the god of efficiency is dying of dry rot because of gross and stupid inefficiency.

The most powerful business corporation in the United States would go into bankruptcy within a year if it were so wretchedly managed as is the business of our Federal Government today.

There is this difference, however: The private corporation, mismanaged and criminally extravagant, would pay for its own sins and go broke; but the Government does not go out of business. It simply borrows more money which has to be paid through taxation until all business ceases, the factories remain idle, and the people starve.

That is the history of all mismanaged nations since civilization began.

We are now rapidly coming to that period.

Only courage and vision can save us.

Again, this newspaper states as emphatically as possible: This is not a party issue.

We are the victims of our own follies and the follies of past generations.

The guilt rests with both parties and all classes. We thought our wealth would never end.

Today the President of the United States, a Democrat, is working shoulder to shoulder with the only living ex-President, a Republican, to save America.

Never in all our history has there been a more completely nonpolitical approach to the prevention of so great a tragedy. Here, in brief, is the picture:

Eighteen years ago it cost $4,600,000,000 to run the Federal Government.

Today it costs $41,858,000,000.

Under President Hoover there were 300 agencies.

Today there are 1,800.

The reason for this?

Lack of organization and the fight of the bureaucrats of both parties to block reform.

In 1931 Hoover begged Congress to give him authority to get the Government on a working basis. Both Republicans and Democrats rejected the proposal for just one reason:

It might affect the soft jobs of political parasites of both parties.

Ten times Hoover pleaded and 10 times was he refused.

Red tape was killing the Nation.

When Roosevelt came in he was granted powers to meet the depression emergency, but when he asked for power to reorganize he was met with the same stone wall of personal selfish opposition.

With the second war over in 1945 it was obvious to everybody regardless of party affiliations that something had to be done.

President Truman and the Congress agreed.

To eliminate politics it was also agreed that there should be six Democrats and six Republicans on a commission to draw up a plan of reform.

It was unanimously agreed that Herbert Hoover was the one man in all the United States best qualified to head the group.

Mr. Hoover is 73 years of age. He has no political ambitions of any kind. Regardless of party lines he has served the Nation under President Truman faithfully and brilliantly both in war and peace.

The Commission has drawn the best brains from all walks of life in the United States.

Never before, not even in time of war, has there been such a galaxy of experts on management.

For 2 years these experts have studied our Government. Now they have ready 15 separate reports. All of these mesh into one magnificent presentation of what is needed to save us from national bankruptcy and to meet Moscow.

No American of intelligence can read these reports without gasping in horror at our dangers.

Yet there is a grave possibility that the greatest task of its kind ever accomplished in the history of America will go for naught.

The mean and petty politicians of both parties are seeking to destroy it for their own selfish ends.

As Hoover stated to the Senate committee, the danger is as it was in all other such efforts, "They died of grasshopper bites."

Here, then, is the call to the American people of every honest shade of political belief.

Here is the challenge to save us from the fate for which Moscow is waiting.

Shall we continue to drift?

Or shall we be aroused in time by a mighty outburst of public sentiment?

The people of America have crusaded for war bonds, for Red Cross, for Community Chests, for every worthy effort devised by the mind of man.

Twice in one generation they have gone to war to fight for human liberty. They have poured forth the lifeblood of their youth and their treasure. They have willingly and without protest taken upon their backs the most staggering burden of debt history has ever recorded.

Has all this been in vain?

The Bible has said that where there is no vision the people perish.

Will the leaders of the Republican and Democratic Parties, the National Association of Manufacturers, and the AFL and the CIO, the church leaders of all denominations, every civic-minded group, every noonday club, every individual citizen, unite as we have always done in war, to campaign against the evil which is destroying us?

Will there come a clarion call for battle?

Only public opinion can save the United States from the bureaucrats who stifle us.

The politicians of neither party will move unless they hear the mighty roar of an aroused populace. That is what they dread, the only thing they fear.

"Public sentiment is everything," said Lincoln. "With public sentiment nothing can fail. Without it nothing can succeed."

Our one hope is the people themselves.

Facing the Communist horde, surrounded as we are by darkness and chaos across the world, this must be a holy crusade, a fight for God, for country, and for humanity.

One Escape Still Open From Civil-Rights Deadlock

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1949

Mr. HAYS of Arkansas. Mr. Speaker, the Louisville Courier-Journal is one of America's outstanding newspapers. Its editorial columns have repeatedly contained strong endorsements of the civil-rights program. Now the editor, Mr. Barry Bingham, urges acceptance of my proposed compromise. His statement of February 24 is a significant one, and under leave to extend my remarks, I include his editorial of that date:

ONE ESCAPE STILL OPEN FROM CIVIL-RIGHTS DEADLOCK

Congress is building up to another filibuster fight. The thunder of the approaching storm is already heard rolling across the congressional halls, and the Nation stands poised, and helpless, waiting for the unhealing, destructive rain of oratory. Is there any way to avoid this deluge of bitterness?

The only escape would lie in finding a quick and respectable compromise on the civil-rights issue. If is this issue, of course, that inspires the filibuster. If the administration's program on civil rights continues to confront Congress in its present form, a filibuster is inevitable. Nobody will gain from it, everybody will suffer discredit. The South will be blamed for stalling important legislation and for maintaining the hard tyranny of a minority through a parliamentary device. Such isolation can only be deeply damaging to the South. The rest of the Nation will present a picture of helpless anger and frustration. The Democratic Party will be revealed as hopelessly divided. Even the Republican Party stands to gain no credit, for its record on civil rights has been long on promises, short on performance.

Is a compromise still possible, before passion completely takes over the congressional scene? The only possible proposal would have to come from the South, and from the ranks of the more liberal southern Democrats, who know the full force of tradition in race relations, but who still hate to see the South reduced to angry resistance against the rest of the Nation. Such a liberal southerner is Representative BROOKS HAYS of Arkansas. He has made a specific proposal for a compromise on civil rights.

Reduced to its barest outlines, his proposition takes this shape: First, Federal action on segregation, limited only to interstate movements; second, repeal of the poll tax by constitutional amendment, not by statute; third, antilynching legislation, placing full responsibility on the governor and attorney general of any State in which a lynching occurs, and providing for Federal intervention only if these officials fail in their duty; and fourth, provision of a counseling service in the Department of Labor on fair employment practices, in place of a permanent FEPC.

Nobody will agree with every detail of these proposals. Southern traditionalists will insist that the least surrender will open the way to full social equality for Negroes. Agitators will scream against any compromise that might work to reduce tensions between the races, since they want continued agitation, not a settlement. Many sincere liberals, both white and Negro, will argue that the full civil-rights program is a moral principle and that justice cannot be divided.

This newspaper is not happy over every aspect of the Hays program. We stated our conviction some weeks ago, however, that half a loaf of civil-rights legislation in the Eighty-first Congress would be better than no loaf at all. We asserted our belief that Congress would not pass a full antisegregation law or a permanent FEPC in the present divided state of American opinion, and that such statutes could not now be enforced in the South if passed.

We believe, on the other hand, that Federal legislation against the poll tax and lynching is essential to our position as the leading democratic nation of the world. We would be willing to accept the constitutional amendment method to end the poll tax. It would be somewhat slower than direct legislation, but it would be sure, and it would save southern "face" on an issue which many southerners would like to be rid of.

It is possibly not too late to win support for such a compromise as Representative HAYS suggests. Before the hopeless and purely negative battle is joined on the Truman civil-rights program, there might still be time to win concessions from the less violent southern Democrats. What is needed is a positive approach. If liberals throughout the country would now rally to general support of the Hays compromise, they might lift the issue right up out of the mire into which it is sinking.

Nobody likes to surrender, but it is easier when both sides in a fight surrender something. The alternative is a battle poisoned with sectional bitterness, no legislation on civil rights of any kind, and exposure to the world of a United States grievously disunited.

Railroad Freight Charges

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 1, 1949

Mr. EDWIN ARTHUR HALL. Mr. Speaker, I submit herewith copy of a resolution introduced in the New York State Assembly by Assemblyman Richard H. Knauf, of Binghamton, N. Y.:

Whereas the number of employees recently laid off by railroad companies throughout the country is reaching alarming proportions; and

Whereas the reason advanced by the carriers is the reduced revenues, particularly from the hauling of freight which is alleged to have drastically decreased since the beginning of the year; and

Whereas the unemployment of a vast number of railroad men, causing undue hardship to their families is of great concern to the Nation as well as to the people of the State of New York; and

Whereas the entire problem of railroad freight charges has been a troublesome question, and if conditions are permitted to continue additional unemployment will result and the transportation system of the country will be seriously impaired: Now, therefore, be it

Resolved (if the assembly concur), That the Congress of the United States be, and it hereby is, respectfully memorialized to appoint a congressional committee to thoroughly investigate and make a study of the conditions in the railroad industry in general and the question of railroad freight charges in particular, to the end that appropriate legislation may be enacted by Congress to remedy the present unsatisfactory situation; and be it further

Resolved (if the assembly concur), That a copy of this resolution be transmitted to the Secretary of the Senate, the House of Representatives of the United States, and to each Member of Congress duly elected from the State of New York.

Let the Record Be Kept Straight on Graeme K. Howard

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 1, 1949

Mr. DONDERO. Mr. Speaker, there was recently inserted in the CONGRESSIONAL RECORD an article by the Society for the Prevention of World War III, which contained slurring references concerning one of America's foremost industrialists, a man of proven patriotism.

I refer to Mr. Graeme K. Howard, vice president and general manager, international division, Ford Motor Co., and recently named president of the new Ford International Co.

Mr. Howard has sent me a statement concerning that article. I include it in the RECORD in order that the full facts may be known by all:

The CONGRESSIONAL RECORD of February 2 contains an article inserted by Representative GEORGE SADOWSKI, of Michigan, in which the following paragraph appears:

"The history of General Motors' activities in Germany is indeed a book in itself * * * as far back as 1945, when the Foreign Economic Administration was working on the problem of Germany, the man who fought most vigorously on behalf of the German industrialists was Graeme Howard, General Motors representative in Germany during the Hitler regime. Most Americans are not aware of Howard's pro-German activities, but the FEA was, and it was only through constant pressure on the White House and the Army that Mr. Howard was finally relieved of his position."

There is no foundation whatsoever for this statement.

The facts are as follows:

I went to Washington at the request of General Frink, Chief of the Motor Transport Division, on or about January 1, 1942, as a consultant. At that time I was vice president of General Motors in charge of their international operations. I agreed to come to Washington for 60 days, taking a leave of absence without pay.

At the end of 60 days, however, I found myself so involved that I felt I could not in good faith leave the job on which I had started to return to General Motors. In view of the General Motors rule that a leave of absence without pay could not extend beyond 90 days, I resigned from General Motors Corp. March 31, 1942. This was after some 25 years with that corporation. I was appointed Deputy Chief, Motor Transport Division, with the rank of colonel in the Army of the United States.

Between that time and October 1944, I served in the following posts: Chief of the Control Division of the Tank Automotive Center, Detroit; Director of Spare Parts, Ordnance Division; Deputy Chief, Tank Automotive Center; American head (Civil Affairs), SHAEF mission (Norway).

In October 1944 I became Chief, Economic Division, United States Control Council (Germany). In this capacity I was responsible for military government planning in the economic sphere.

About January 1, 1945, I came to Washington from my European headquarters on official business. The day following my arrival at the Pentagon Building, I requested General Hilldring, G–5 on General Marshall's staff, to accept my resignation at his earliest convenience. That same day in conference with Assistant Secretary of War, John Jay McCloy, I likewise requested that my resignation be accepted.

I submitted my resignation for the following reasons:

1. My wife's health was a source of real concern.

2. As a consequence of my long military service, my personal situation compelled me to look ahead and plan for the education of my three children and the maintenance of my wife.

3. By the time my resignation could be processed, I would have served almost 4 years with the armed forces.

4. Finally, I found myself in disagreement with JCS Directive 1067 (embracing many

elements of the Morgenthau plan). It seemed to me desirable that someone sympathetic to this policy be named to my position.

Both General Hilldring and Secretary McCloy then and for several weeks thereafter declined to accept my resignation.

Secretary McCloy and General Hilldring agreed finally to accept my resignation provided I would assist in arranging for a suitable successor.

Col. W. H. Draper (subsequently major general and recently Under Secretary of War) was eventually persuaded—by me, among others—to accept the appointment as Chief of the Economic Division, United States Control Council (Germany).

This information was relayed to the European theater with the suggestion that I remain in Washington to brief Colonel Draper and to assist him in the procurement of personnel.

A cabled reply was received the same day over the signature of Gen. W. Bedell Smith, Chief of Staff, declining to agree to the proposal and ordering my immediate return to the theater. I flew back the next day.

On return to the European theater I again pressed for acceptance of my resignation but was not able to secure acceptance until some 2 months later. I returned to Washington by air sometime on or about April 1, 1945.

Coincident with my return to the United States, Gen. Lucius D. Clay was appointed Commanding General, United States Control Council (Germany). General Clay urged me to agree to continue in the service, and successively proposed the following assignments:

His representative on the Reparations Commission at Moscow. (Estimated time, 3 months.)

Assistant to then Colonel Draper and himself for a period of 6 months (Berlin).

Service in General Clay's rear echelon in Washington where there was a problem of coordination of Army, Navy, Air Force, and Department of State, FEA, and Treasury all of which had a hand in the German occupation situation.

For the reasons already given to Secretary McCloy and General Hilldring, and despite my strong personal admiration for General Clay, I regretfully declined.

However, I did agree to continue in the service to assist General Clay and Colonel Draper in securing suitable personnel to staff the Control Council for Germany which, up to this point, had been a planning rather than an operating group. In this capacity I assisted in the recruitment of some 200 civilians and officers. My official resignation finally became effective August 25, 1945.

Summarizing, it is quite patent that Representative SADOWSKI has been grossly misinformed.

From the foregoing record it is obvious that it was I who initiated action to be relieved of my position as Chief of the Economic Division, Control Council for Germany, and that this was granted only after persistent and repeated requests.

With reference to the assertion that I advocated the restoration of German industry, it is quite true that I believed such restoration was necessary for peaceful purposes not only on behalf of the German people but, more importantly, for the benefit of Europe and for the relief of the American taxpayer. It is gratifying to note that current United States policy supports this view.

However, in my opinion, the restoration of German production must be accomplished in such manner as to insure against disturbing the peace of the world for a third time. The problem of the revitalization of German industry and the political problem of insuring peace are not mutually exclusive; on the contrary, it is my belief that the harmonization of both of these ends not only must be, but can be, effected.

GRAEME K. HOWARD,
Vice President and General Manager, International Division, Ford Motor Co.

The Nasty Head of Scurrility Shows Through AMA Propaganda

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1949

Mr. KLEIN. Mr. Speaker, under consent I am inserting in the RECORD another brilliant editorial from the New York Post which exposes the bad faith and low ethical standards of some of the most rabid opponents of an intelligent and comprehensive approach to national health and welfare, and by implication exposes equally the presence of active and virulent discrimination in organized medicine. Many of us have long been aware of the fact that the AMA has imposed un-American quota systems on admissions to schools under the monopolistic control of the AMA.

Today their bias is showing.

As this editorial states, continued relentless sabotage of the President's proposal for national health insurance by the American Medical Association may eventually lead to real socialized medicine—a scare term the AMA now erroneously uses to characterize all-inclusive, prepaid medical care. Under actual socialized medicine, all United States physicians would become salaried, Government employees, subject to complete Government control. Under the proposed system of national health insurance, no doctor is compelled to join the program if he does not desire to do so.

I believe that in order to maintain the high quality of our medical profession and still extend its benefits to all our people, a system of national health insurance is essential.

IS THE AMA ASKING FOR IT?

In some quarters, the fight against President Truman's proposed national health-insurance program is leaning heavily on veiled appeals to religious bias, rather than reason.

According to Albert Deutsch and Oliver Pilat in yesterday's Post Home News, the once-discredited National Physicians Committee (largely financed by drug firms, not M. D.'s) has crawled out from under a rock to engage in a vicious mail campaign against any Federal health-insurance plan.

The NPC is sending Protestant ministers, dentists, and physicians a particularly noxious sheet, known as Dan Gilbert's Washington Letter.

Mr. Gilbert begins his letter with "Dear Christian American" (we never knew the word American could be religiously qualified) and falsely implies that the insurance program would force Americans to practice birth control and yet would somehow compel American women to produce bumper crops of children, at the same time.

A difficult feat, indeed. Particularly if Margaret Sanger's methods were made to prevail, which would not be the case.

The National Physicians Committee is directed mainly by ex-presidents of the American Medical Association and once received the AMA's endorsement.

The committee's recourse to biased and completely nonsensical attacks may indicate that after the AMA has smeared Federal health insurance by mislabeling it socialized medicine, it has nothing more to say.

And, unable to think of valid objections to the Truman plan, the AMA apparently sits by, unprotestingly, while an outfit which has received its approval, tries to floor the program with foul blows.

Needless to say, many doctors are thoroughly disgusted with the AMA's attitude and its recent decision to raise $3,500,000 to fight national health-insurance legislation.

On the surface, it may be difficult to understand why the ruling clique within the AMA has declared war on Truman's health plan. Particularly since Federal Security Administrator Oscar Ewing has stated that at least 325,000 deaths a year could be prevented by better medical care.

No doctor would be compelled to join the program.

And, financed by a negligible pay-roll tax on both employer and employee, the proposed program would make only two changes in the customary doctor-patient relationship.

First, after finding out which doctors, hospitals, and druggists in his community had agreed to practice in the system (at fixed fees contracted between themselves and the Government), a patient could freely choose to use any or all of the services offered.

Second, participating doctors would receive their checks from the Government, rather than the patient.

Under socialized medicine all United States physicians would become salaried Government employees, subject to complete Government control.

The Truman-Ewing program obviously is not socialized medicine.

It is simply a humane method by which American wage earners could repay for complete medical care.

Moreover, the program, by making adequate medical attention available to most Americans, would help to cure the conditions which—if allowed to fester—might eventually force the United States to socialize medicine.

The AMA officials probably don't really oppose national health insurance because they think it would bolshevize medicine. They must know better than that.

They may be fighting the plan because it could offer young doctors a chance to build their practices without being overly ruled by the arbitrary demands of some older doctors—who would turn their profession into an exclusive club where they wield strangling power.

But if the AMA succeeds in pigeonholing health-insurance legislation; if it continues to sanction with its silence the NPC's antidemocratic diatribes; it will be foolishly asking, even pleading, for nationalized medicine.

Mr. Speaker, the American Medical Association has consistently opposed virtually every progressive step in the organization and distribution of medical services in the past generation. Concurrently, they are trying to raise three and one-half million dollars from their membership to use in preventing passage of the proposed health-insurance plan.

Mr. Albert Deutsch has written an excellent column on this subject which ap-

peared February 1 in the New York Post and Home News, which I am also inserting under the same consent:

WAY OF THE AMA

(By Albert Deutsch)

Dr. Morris Fishbein, factotum of the American Medical Association, has not only decried national health insurance as a Red conspiracy, he has denounced old-age and unemployment insurance as "a definite step toward either communism or totalitarianism." When United States Senator ROBERT F. WAGNER in 1939 introduced a bill authorizing Federal aid for hospital construction—a principle adopted 5 years later when Congress passed the Hill-Burton Act with AMA approval—Dr. Fishbein applied a thick coat of "red" paint to it.

In an address delivered to a conference of State medical society officials on behalf of the AMA board of trustees, Dr. Fishbein warned:

"The introduction into this Nation of a Federal security plan whereby the Nation itself, as a Federal agency, will step intimately into the sickness and life of every person in the country will be the first step in the break-down of American democracy. Indeed, all forms of compulsory security, even against old age and unemployment, represent a beginning invasion by the state into the personal life of the individual, a weakening of national caliber, a definite step toward either communism or totalalitarianism.

Both Dr. Fishbein and the AMA would now be enjoying a far more respectful lay audience if they hadn't cried wolf at virtually every progressive step in the organization and distribution of medical services during the past generation.

Organized medicine opposed workmen's compensation laws as inroads on medical freedom when they were first introduced in State legislatures. Now the medical societies not only accept workmen's compensation, they control the medical end in most States.

In 1932, when the Committee on the Costs of Medical Care—headed by Dr. Ray Lyman Wilbur, a former present of the AMA and Secretary of the Interior in Herbert Hoover's administration—released a report favoring voluntary (private, nonprofit) health insurance for the American people, Dr. Fishbein printed an editorial in the AMA journal denouncing the report as representing socialism and communism—inciting to revolution. When the same distinguished committee advocated group medical practice—where general physicians and specialists pool their skills and equipment under one roof, as at the Mayo Clinic—the AMA charged it with trying to set up medical soviets.

Now, of course, the AMA hierarchy not only enthusiastically advocates voluntary health insurance but it talks as if it fathered the idea. Group practice, too, has become quite acceptable to the hierarchs.

And so it goes. Rarely has a progressive step in medical economics been proposed without the AMA attacking it as certain to deteriorate the quality of medical care, enslave the American physician and dupe the American public. Time after time, following the adoption of a plan thus opposed, the AMA has embraced it as its own and proudly proclaimed that American medical care is the finest in the world.

The test of a truly scientific attitude is its powers of predictability. When the AMA and its State and local satellites have been proven so wrong so often in the past, they lose claim to scientific objectivity in the field of medical economics. Their present attacks on President Truman's health insurance program can be understood properly only in the light of their past mistakes. The medical bourbons never learn and they never forget.

New York Medicine, official organ of the AMA's biggest local affiliate, the New York County Medical Society, broke out in a rash of unaccustomed editorial candor in its January 5 issue when it confessed:

"Ten years ago there was in the medical profession an indiscriminate condemnation of any participation in nonprofit, voluntary prepayment medical care insurance plans.

"Twenty years ago, the same standard attitude was taken when Governor Smith advocated the medical provisions of the workmen's compensation law. In both instances, the medical profession, as is to be expected, incurred public suspicion of self-interest. Allowing for a reasonable number of exceptions, this generalization is a safe one."

Substitute for "medical profession" the more accurate term "organized medicine"—and there you have it.

Resolution by Alabama State Board of Public Welfare

EXTENSION OF REMARKS

OF

HON. LAURIE C. BATTLE

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1949

Mr. BATTLE. Mr. Speaker, the Alabama State Board of Public Welfare has passed three significant resolutions. In order that these decisions may be given the proper attention I include them as a part of my remarks in the CONGRESSIONAL RECORD:

Whereas the Federal grants-in-aid program provided by the Social Security Act does not take into account the relative fiscal ability of each State to finance the public assistance program; and

Whereas the Federal Government now participates in the cost of payments to only certain specified groups—the aged, the blind, and the dependent children; and

Whereas there is need for a public assistance plan whereby all persons in need may receive equitable treatment regardless of where they live; and

Whereas Federal legislation is now pending which, if enacted, would reduce many of these inequities: Therefore be it

Resolved by the State board of public welfare, That the commissioner is directed to call to the attention of the Alabama congressional delegation the desirable principles contained in H. R. 2645 (introduced by Hon. AIME J. FORAND, of Rhode Island) and to work with appropriate groups, to the end that necessary changes are made in the Social Security Act; be it further

Resolved, That a copy of this resolution be sent to each member of the Alabama congressional delegation, to other appropriate groups, and be spread upon the minutes of this meeting.

Whereas the social-insurance phases of the Social Security Act provide limited coverage of employees, both as to numbers and as to amounts of benefits; and

Whereas the farmer, self-employed, and other uncovered employees should be insured by old-age and survivors insurance and unemployment insurance; and

Whereas the exclusion of certain types of workers from building up benefits under this program results in a heavy burden of providing assistance to large numbers of people as a result of this limited coverage; and

Whereas the proportionately heavier burden falls on States which are predominantly rural and usually have lower per capita income and consequently fewer resources for providing public assistance; and

Whereas only about 102 per 1,000 of Alabama's population 65 years of age and over are receiving old-age and survivors insurance as compared with 227 per 1,000 in Rhode Island, a highly industrial State: Therefore be it

Resolved, That the State board of public welfare reiterates its belief that the social-insurance phases of the Social Security Act be extended both as to persons covered and as to amount of benefits and directs the Commissioner to work with the Alabama congressional delegation and other appropriate groups, to the end that needed changes are made in the Social Security Act; be it further

Resolved, That a copy of this resolution be sent to each member of the Alabama congressional delegation and to other appropriate groups and be spread on the minutes of this meeting.

Whereas the board has reviewed the needs of people who are the responsibility of the department in relation to present conditions and funds available for public-welfare purposes as well as the way in which these funds are made available under current legislation; and

Whereas the lack of adequate medical care facilities in the State is reflected by the fact that illness or disability of the applicant or some member of the family was the primary reason why more than one-half of the cases approved for aid last year were approved; and

Whereas only about 102 per 1,000 of Alabama's population 65 years of age and over are receiving old-age and survivors' insurance as compared with 227 in Rhode Island, a highly industrial State; and

Whereas the aged population is increasing more rapidly than the total population—an estimated rise of about 10 percent in the aged population as compared with only about 1 percent in the total population in Alabama between 1940 and 1948; and

Whereas despite recent increase in per capita income payments in the State—to $837 as compared with $1,323 for the Nation in 1947—Alabama still ranked fourth from the bottom; and

Whereas the method of financing the public-welfare program both by the Federal Government and within the State results in inequity of treatment of needy individuals as between States and as between localities within the State; and

Whereas the board has adopted resolutions in support of needed amendments designed to broaden and strengthen both the public-assistance and social-insurance phases of the Federal Social Security Act: Therefore be it

Resolved, That the State Board of Public Welfare endorses the department's proposed budget for the next biennium and urges that the method of financing within the State be simplified and changed in order to provide a more stable and equitable public-welfare service; be it further

Resolved, That a copy of this resolution be sent to each member of the Alabama Legislature and to other appropriate groups, and be spread upon the minutes of this meeting.

GOV. JAMES E. FOLSOM,
Chairman.
Senator BROUGHTON LAMBERTH,
Vice Chairman.
Mrs. GEORGE ADAMS.
Mrs. BESS BAINS.
Mrs. JAMES A. SIMPSON.
Judge WILL O. WALTON.
Senator OLIVER E. YOUNG.

Adopted February 17, 1949.

Selling Oleomargarine as Butter

EXTENSION OF REMARKS

OF

HON. MERLIN HULL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1949

Mr. HULL. Mr. Speaker, the propaganda being spread for the benefit of the oleomargarine monopolies may be fooling millions of people who are not properly informed as to the relative merits of butter and oleo, but those who are being misled will learn the facts later on.

One of the valuable publications which is defending the cause of the farmers and at the same time enlightening the consumers as to what they may expect if the oleo propaganda shall gain the ends of the monopolies, is Hoard's Dairyman, published at Fort Atkinson, Wis. For 64 years that publication has been one of the leading proponents of the great dairy industry of our Nation.

It is with pleasure that I am inserting in the RECORD the comments of W. D. Knox, of the editorial department of Hoard's Dairyman, upon the repeal of the taxes on oleomargarine. His letter is as follows:

FEBRUARY 22, 1949.

Hon. MERLIN HULL,
House of Representatives,
Washington, D. C.

DEAR MR. HULL: In the near future you will be passing judgment on one or more of several bills affecting the dairy and oleomargarine industries. As the only national dairy farm magazine, we feel a deep responsibility to our readers as you feel your responsibility to your constituents. For 63 years we have attempted only to seek out the truth, promote it and defend it, regardless of its popularity.

We have but one request of oleomargarine manufacturers. We ask them to sell their product in its own clothes and on its own merits. They have never agreed to adopt such a policy. In H. R. 1703, we believe you have a most realistic and fair solution to the controversy. All license fees, taxes, and other restrictions are removed. The manufacture and sale of yellow oleo is prohibited.

If the manufacture and sale of yellow oleo is not prohibited, we have concrete evidence of the injustice that will be perpetrated upon American consumers and 2,500,000 dairy farmers. In an El Paso, Tex., grocery, butter and yellow oleo are selling at the same price. White oleo is selling 30 cents cheaper. The tax on yellow oleo is only 10 cents. Where did the other 20 cents go? And where in the future will the housewife find a cheap spread for bread? It appears to us that the 28 oleomargarine manufacturers have every reason to justify their $6,000,000 advertising and public relations expenditure for 1948. Their investment may be returned many times.

In a recent spot check by the Pennsylvania Department of Agriculture, 78 establishments out of 300 were selling yellow oleo as butter. In another impartial survey, 53 restaurants out of 159 in 8 States served yellow oleo as butter when a customer requested butter. Here is clear evidence that the present law is inadequate and that more realistic legislation is needed.

We shall sincerely appreciate your consideration and evaluation of our editorial position. If we can be of any further assistance in providing additional information, please advise us. With kindest regards,

Respectfully yours,

HOARD'S DAIRYMAN,
W. D. KNOX,
Editorial Department.

Economic Planning

EXTENSION OF REMARKS

OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1949

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Connersville (Ind.) News-Examiner, issue of February 19, 1949:

IF WE ARE TO HAVE PLANNING IT MUST BE DONE CORRECTLY

A short while back President Truman made a speech in defense of economic planning. He granted that planning was a word that scared certain people. But his contention was that these frightened people were confusing planned economy with controlled economy. The President himself, unless we misread him, seems to see a sharp division between the two.

Yet planning implies a preparation for action. And in a planned course of action there are components that must be directed in such a way that the action comes out according to plan. Otherwise there wouldn't seem to be much sense in planning in the first place.

It may be that Mr. Truman meant that a planned economy is one in which the Government draws up a blueprint and private business voluntarily undertakes the action, with its accompanying controls. A controlled economy, by Mr. Truman's definition, might be one in which the Government would guide the course of action only if business refused to cooperate or failed to achieve the Government's economic goal.

This might explain the stand-by controls that Mr. Truman requested in his state of the Union message. These are part of his economic planning, but apparently are only for use in emergency.

At any rate, we imagine that a planned and controlled economy might be acceptable to the great majority of Americans under certain conditions. If Government planners could somehow guarantee that they could control the business cycle and prevent depressions, and if they could also guarantee that there would be no unfair discrimination against private business, we doubt that the most rugged champion of laissez-faire economics would raise serious objections.

Nobody wants a depression, of course, because nobody gains anything by it in the long run. But can the Government guarantee a preventive? At present, the answer would certainly be no. Government means not only the executive branch but also Congress, which writes the laws and doles out the money. And the last time we looked, there were several divergent economic viewpoints in both these departments.

Some Government economists are worrying about a depressing drop in prices and employment. They produce figures to justify their fears. Others say the danger is still inflation. They also cite figures to prove their point.

To some people planning, like nationalization, is a sort of magic, cure-all word. But planning is simply the opinion of an individual or group of individuals.

There are all sorts of economic planning going on in Government today. But who are the planners? How have their other economic prophecies panned out? What is their objective now? What is the evidence that it is the right one? Mr. Truman and Congress will have to agree on the answers to those questions. It obviously isn't enough just to have a planned economy. It must be correctly planned.

Committee on Un-American Activities

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1949

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Lowell (Mass.) Sun of February 24, 1949:

UN-AMERICAN ACTION

The House Un-American Activities Committee, butt of much abuse at the hands of President Truman during his campaign last fall, will be continued. There lies before this group a great amount of investigating, and it could even develop, in order to protect the future security of this land over a long period of years, that such a committee would have to be maintained—so that it will become a fixture in the lower House of the Legislature.

Recently, Congresswoman EDITH NOURSE ROGERS called for appropriations to continue the Un-American Activities Committee. Her inquiries came after she had received a threatening letter, which is only one in a series of incidents over the years that have threatened her.

It is natural that agencies that are working to destroy the American system would choose Congresswoman ROGERS as one of its marked victims, since she represents the finest and best traditions of the country's democratic way of living. She is constantly championing all measures that will guarantee the security of the United States.

She has been threatened by anonymous letters and telephone calls on many occasions; two attempts have been made to poison her, and, it may be recalled by all residents of her fifth district, the communistic elements in this area, although not powerful, were nevertheless lined up solidly in an effort to defeat her reelection.

Other Congressmen of her caliber must receive the same threats and warnings of violence.

If that is the case, the House Un-American Activities Committee should not only be continued, but it should be fortified in many ways so that the Government may be protected, and, as well, those within the Government who are doing their level best to protect this country from subversive forces, controlled in foreign capitals.

Security in Old Age

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following address which I delivered before the Massachusetts Society of Old-Age Pensions, Salem Branch, Friday, February 18, 1949, at the VFW Hall, 41 Church Street, Salem, Mass.:

Mr. Chairman, ladies and gentlemen, your organization has done much to bring home to Americans the need for providing old-age pensions.

By patient and persistent effort, you have sowed the seeds which are beginning to bear fruit.

It is no exaggeration to say that this is the foremost domestic problem facing our Nation today. Both major political parties are pledged to the goal of complete coverage through social insurance and a higher level of benefits.

Such antagonists as the United States Chamber of Commerce and the big labor unions are not so far apart on this issue, as one might suppose.

Last year Clarence R. Miles, manager of the department of governmental affairs of the United States Chamber of Commerce, in a letter addressed to the Senate committee considering such legislation, said, and I quote: "In particular, the chamber favors an extension of coverage under the old-age and survivors insurance program, insofar as feasible, to all employees and self-employed persons not now covered thereunder. With substantially complete coverage, the program will approach its objective of providing a basic floor of protection for all against the hazards of old-age dependency and of the premature death of the family breadwinner."

The chamber believes in contributory plans. Other groups favor old-age assistance programs also. Various others want special legislation, such as the veterans, for instance. Even within industry we find some plants which provide pensions for their employees and others which do not. But the point is that there is a steady and increasing demand from all quarters to provide old-age pensions in one form or another.

The original Social Security Act was passed in 1935. This marked the first recognition by our Federal Government that the problem of financial security in old age was one of national concern.

When President Roosevelt signed the act he said, and I quote: "This law, too, represents a cornerstone in a structure which is being built, but is by no means complete. It is a structure intended to lessen the force of possible future depressions. It will act as a protection to future administrations against the necessity of going deeply into debt to furnish relief to the needy. The law will flatten out the peaks and valleys of inflation and deflation. It is, in short, a law that will take care of human needs and at the same time provide for the United States an economic structure of vastly greater soundness."

Through old-age insurance it was planned that all Americans would contribute toward their own retirement protection. Employer and employee, through pay-roll taxes, would build up the account. Benefits would be paid as a right which the worker had earned. There would be no need for the aged to swallow their pride and beg help from their relatives or from the local government. Every aged person would be protected against want and humiliation.

In that first year, 1935, there were more than a million aged people who would never again be employed. They could not contribute through pay-roll taxes and thus qualify for insurance.

To take care of this passing situation, old-age-assistance provisions were included in the bill, as distinguished from old-age insurance, to help those already over 65 years of age who were proven to be in need.

Some of the States had old-age-assistance laws, but even these were woefully inadequate. Besides, the States, in the 1930's, did not have the revenues to support such a program. The cities, in turn, were worse off. Old people in desperate circumstances could only apply for that miserable pittance called relief. It was a shameful state of affairs which bothered young and old alike. The dignity of the individual was pauperized. The United States was not prepared to meet the problem. It had to start from scratch.

Through the Social Security Act, Federal funds were provided to increase the resources of the States, the cities, and the towns. This was a revolutionary break with the past, which believed that relief for the aged and others was a local responsibility. But the depression taught us at a heavy price that we are all interdependent. The crisis was individual, magnified a million times, until it became a national tragedy. The Federal Government had to move in to save the day.

Washington matched State payments to needy, aged persons on a dollar-for-dollar basis up to a maximum of $15 of Federal money per recipient per month.

Old-age insurance and old-age assistance were intended, under the act, to ward off the flat, noncontributory pensions of $200 a month proposed by Dr. Townsend and others with similar plans. It succeeded for the time being. In the years since 1935, however, the act itself has been transformed. The formula for old-age-assistance grants has been increased three times, but every proposal to liberalize old-age and survivors insurance has been rejected. Even the States themselves, through legislation and a change in administrative practices, have moved slowly toward the Townsend-like pensions determined by mass-production techniques. This trend is apparent in some of our Western States.

The average assistance payment to a needy person was $38 per month even before the last liberalization of the Federal law. This is two-thirds greater than the $22 average monthly benefit for an aged person under contributory old-age insurance. The spread between the two has steadily widened in favor of the assistance program.

I am certain that the present Congress will increase both coverage and payments under the Social Security Act but the emphasis on old-age assistance cannot be overlooked. Social workers wonder whether this will eventually overwhelm the insurance program and finally result in a flat, general pension for the aged without means tests of contributions.

In 1947, over 200 Congressmen, of which I was one, signed the discharge petition for the latest pension bill. Two hundred eighteen signatures would have forced the bill out of the Rules Committee and to a vote which would decide whether such a bill would become law or not.

Since that time, the power of the Rules Committee to hold up a bill, has been curtailed. Now, the chairman of the committee which favorably reports a bill to the Rules Committee can, after the expiration of a certain time, request that the bill be released and voted upon by the House of Representatives. Under such circumstances, a bill cannot be pigeonholed.

The first major test of this new procedure may come on the bill to provide pensions for veterans of World Wars I and II. Heretofore, a bill of this nature would never see the light of day. It was easy for some legislators to give lip-service to such a proposition, knowing that it would never come to a vote. Now they may experience embarrassment because they cannot evade the issue. They will be called upon to prove where they stand, and back up their promises by performance. You will be able to see the voting records on some measures which many legislators do not care to face. A controversial issue, like old-age pensions for all, appears to be headed for a show-down.

Believe it or not, but there are some people in Washington who are less concerned with raising the floor of pensions than they are with putting a ceiling on them. Their argument runs something like this. With new social-security legislation coming up, and with labor pushing demands for private pension plans, there is a need for interrelating the two systems. If the present trend continues, the time will come when many workers will receive more in retirement income under combined social security, veteran benefits, and private pension plans than they did when they actually worked. A tax-free Federal pension of $120 a month, with an additional $120 from a union-won pension plan, would yield the worker an income of $240 a month. There are planners who want to establish a ceiling of $200 a month for joint private-public aid. Thus, if a worker received $150 from a private fund, Federal payment would be limited to $50. On the other hand, if his private pension exceeded $200, there would be no Federal payments at all.

It strikes me that this is going far afield. They are ignoring the immediate problem facing you under today's high cost of living.

We know that by 1960, the number of persons 65 years old and over will probably number 18,000,000, or almost 8,000,000 more than today. We appreciate the fact that some planning ahead is necessary. But our problem is of today and tomorrow. Not too many of us will be present to enjoy the solutions of 1960.

The need for old-age assistance is growing, in spite of the insurance benefits. A survey conducted in Boston last year revealed that 17 percent of the men and 26 percent of the women receiving old-age insurance could not make both ends meet. They had to apply for assistance, as well.

Eventually, pay-roll taxes will be raised, and other adjustments made to lift insurance benefits to a decent level. In the meantime, what is to happen to those who must depend upon assistance exclusively?

Perhaps we shall arrive at a system whereby we have an adequate pension floor for everyone, with increased benefits for those who build up additional insurance credits.

That is for the future. Today, we are up against the fact that we are supplying too little, and too late.

It is time for the old-age-assistance program to mature and give our senior citizens a pension that is worthy of the name. Worthy of our human fellowship and worthy of that widespread purchasing power which is necessary to maintain and increase the flow of goods and services which make our economy dynamic.

In keeping with my personal interest in this matter, I have introduced several bills this year which have been referred to the Committee on Ways and Means for consideration.

One, identified as H. R. 460, would amend the Social Security Act so as to reduce from 65 to 60 the qualifying age for old-age and survivors insurance benefits.

Another, known as H. R. 462, would amend the act by liberalizing benefits, by increasing amounts beneficiaries may earn without loss of benefits, and by lowering the age of eligibility of women beneficiaries.

The third, called H. R. 486, is intended to establish a self-sustaining national pension system that will benefit retired citizens 60 years of age and over; to stabilize the economic structure of the Nation; and to induce a more equitable distribution of wealth through monetary circulation. Revenues to finance such a program will be raised by a 2-percent tax upon the gross dollar value of all business transactions consummated for profit within the United States. In no case shall the pension be less than $75 per month or more than $100 per month. In case the tax revenues for any month are not sufficient to pay the minimum pension, the difference will be adjusted from the United States Treasury. Should the tax returns under this plan be more than sufficient to pay the maximum pension plus administration costs, the surplus shall be turned back to the Treasury. Pensioners will be barred from any employment that brings them within the provisions of the present Social Security Act. The purpose of this restriction is to afford job opportunities for the younger people who will be paying the tax.

I believe that this is largely a Federal responsibility, which would operate on a pay-as-you-go basis, without financial risk to the country at large.

I believe that it is necessary to remove want and fear from the age of retirement until the end of life's journey and confer upon old age the serenity and the dignity to which it is entitled.

I believe that it is national insurance, paid out of the work and wealth of a nation in which all have participated in varying degrees as partners—insurance against poverty and despair.

In foreign affairs our major purpose is to outlaw war so that the world may have security.

At home we can do no less. The uncertainties and the hazards of economic life, over which the individual has little control, is no excuse for penalizing the aged. In countless ways they have contributed to the growth and well-being of our Nation.

We must first put our own house in order. Respect for old age is rank hypocrisy if it exists only as a pious thought. It will have meaning only when we provide the basic security which proves our good intentions.

The message I have tried to bring to you is that the United States is pension-conscious as never before. And this desire is not limited to a particular group.

Senior citizens, middle-aged veterans, younger members of labor unions, all are seeking pensions to provide for present or future needs, as the case may be.

Some are seeking Government pensions; others want industrial pensions.

From our experience with the Social Security Act, we note the growing demand for assistance in old age, rather than insurance for old age.

Without going into the complex factors involved, it is nevertheless clear that we cannot solve the problem in a piecemeal fashion. Whatever voluntary pension systems may be set up on the side are all to the good. Our primary concern must be for over-all coverage, to guarantee individual security in the national interest.

To my mind, a flat pension, available to all at the age of 60, financed by a modest general tax on business transactions, and administered without red tape, is the most practical solution.

And when it comes, the credit for it will be due in no small measure to the patient efforts of organizations such as yours, which never gave up the fight.

For that we can all be grateful.

Thank you for your kind attention.

Federal Aid for Education

EXTENSION OF REMARKS

OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1949

Mr. HARVEY. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include an editorial from the Shelbyville (Ind.) News dated February 22, 1949, entitled "Aid Means Control":

AID MEANS CONTROL

Now under consideration by the Congress of the United States is a measure which would provide Federal aid to the various States for expansion and maintenance of schools. Such a bill, reviewed "once over lightly," might appear to be a fine thing to many citizens. It contains, however, the same pitfalls which are likely to fool any citizen who is sufficiently naive to believe that Federal aid is "something for nothing."

The News is strongly opposed to any Federal measure which, in operation, calls for putting $100 into the "kitty" and receiving $50 in return. That, in brief, is what most so-called Federal-aid measures actually mean.

Federal aid for schools naturally is favored by those States which find it impossible to keep up with others in providing public education. Those poorer States are in the minority. Perhaps they do need help if they are to maintain their educational systems on the same level as those with more wealth. But under a Federal-aid arrangement, if a certain State needs a million dollars, it may well cost two million by the time the funds collected from other States are channeled through Washington bureaucracy.

There is no such thing as Federal aid without Federal control, and all Federal control tends toward a further removal of government from the hands of the people to the hands of a very few persons.

Many well-meaning people say "Yes, we are for Federal aid, but we are against Federal control and there are no Federal controls in the present proposal in Congress." No controls? Don't be foolish. Federal aid and Federal control go hand in hand. One does not exist without the other.

What do some of our responsible educational leaders think of Federal aid? Well, they think plenty, and what they have to say is most interesting. For instance, Gen. Dwight D. Eisenhower, president of Columbia University, declares that: "The concentration of too much power in centralized government need not be the result of violent revolution or great upheaval. A paternalistic government can gradually destroy, by suffocation in the immediate advantage of subsidy, the will of a people to maintain a high degree of individual responsibility. And the abdiction of individual responsibility is inevitably followed by further concentration of power in the State."

A Shelby County man, Franklin Bobbit, of Waldron, professor emeritus of the University of Chicago, said that: "When the Federal Government takes charge of education with its invisible methods of getting the people's money and its showy ways of exhibiting its generosity in using a part of that money, there probably can never be any turn back to the people control of the people's schools."

Dr. Frank H. Sparks, president of Wabash College, has this to say about Federal aid for education: "Anyone who believes that a State or city can draw Federal funds for the support of its schools and still keep its schools shielded from meddling by Federal bureaucracy runs contrary to the record of experience. Federal aid to schools is a step toward central control of matters that our forefathers saw should be left in the hands of local communities and in the hands of the individual sovereign States. To expect the Federal Government, which has a debt of over $250,000,000,000, to contribute Federal aid to the States which have balanced budgets and most of them surpluses, is an absurdity."

Another big measure to provide more Federal "aid" to the States is another move toward additional centralization of government. Great centralization of government is a mark of the slave States of the past and the present. There are millions of people in the world today who are wearing the chains of dictatorship. Many of them once said, "It can't happen here."

Peace in Palestine

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the New York Times of February 25:

PEACE IN PALESTINE

The Governments of Israel and Egypt signed formally at Rhodes yesterday a permanent armistice agreement amounting to a nonaggression pact. This puts an end to the war between them and clears the path to permanent peace in the Holy Land and the whole Middle East. The state of Israel has established itself as a new power whose further existence is now beyond challenge, and Egypt, which was most determined on destroying this new state, has taken the lead among the Arab states in recognizing it by virtue of this compact. The other Arab states can now be expected to follow Egypt's example. All of them have already expressed their willingness to conclude, or to accept, armistice agreements along similar lines.

The Rhodes agreement is primarily a victory for the United Nations, which in the face of all difficulties and disappointments continued to work for peace until the main outlines of its proposals were accepted by both sides. It is also a tribute to the courage of the Israeli army, the moderation of the Israeli Government, and the realism of the Arab states. But in a very special sense it is a tribute to Dr. Bunche, who took over the work of the murdered Count Bernadotte at a critical moment and by his patience, skill, and resourcefulness advanced it to a point which promises a triumphant conclusion.

Much remains to be done to solve the many territorial, political, and economic problems between Israel and her Arab neighbors before peace can be signed and sealed. But, barring outbreaks by extremists on either side, there is every hope that these problems can now be solved by peaceful negotiation instead of the arbitrament of arms. That is all the more necessary because neither Israel nor the Arab states can hope to develop and flourish unless they find ways and means of alleviating the dangerous fragmentation of the Middle East by a firm peace and the closest kind of political and economic cooperation.

Richly Deserved Tribute to Dr. Ralph Bunche

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 1, 1949

Mr. KLEIN. Mr. Speaker, the Washington Post of Friday, February 25, carried an editorial tribute to Dr. Ralph Bunche, the mediator appointed by the United Nations to bring peace to the Middle East.

Dr. Bunche was formerly a resident of Washington, and many now in this House knew and liked and admired him in his various official positions.

It makes me especially happy to insert this editorial in the RECORD because the Post, with a civilized and democratic attitude which all of us could emulate, made no special mention of the fact that Dr. Bunche is a member of an American minority frequently assailed, oppressed, and exploited in our country. I am making mention of Dr. Bunche's racial antecedents, not to stress the fact, but to accent the graciousness of the Post tribute and to show that Dr. Bunche's eminence and recognition are doubly deserved.

The editorial follows:

BUNCHE'S ACHIEVEMENT

The armistice signed at Rhodes is, as President Truman said yesterday, a tribute to the restraint and statesmanship of the governments of Israel and Egypt. It is also a proof of rare qualities in Dr. Ralph Bunche, whom the U. N. had the good sense to name as acting mediator when Count Bernadotte was murdered. Without Dr. Bunche's tact and persistence, and his sense of timing, the negotiations at Rhodes would have collapsed, with disastrous results for the whole of the Middle East.

It is too early to say that the armistice will bring lasting peace to Israel and the Arab world. The other Arab states will have to join in the armistice, and the U. N. conciliation commission will have to produce a long-term agreement before one can be sure that a new chapter in the Middle East has begun. The Rhodes agreement has made it possible, however, to start thinking and talking of a new chapter.

The President rightly called attention to the possibilities of economic development in the Middle East, perhaps with American help, after peace has come. The sooner peace is made, the sooner Arabs and Jews can get busy with the cooperative projects on which the future of the whole area will depend. It is time to sweep away the hatreds of the past and concentrate on the future. It is high time, as President Truman suggested, for "freeing the talents of these Near Eastern peoples for constructive work in the development of their respective countries."

The Rankin Bill

EXTENSION OF REMARKS
OF
HON. EUGENE J. McCARTHY
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 1, 1949

Mr. McCARTHY. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include therein an editorial from the New York Post Home News, on Wednesday, February 16, 1949.

This editorial states the position of the AVC on the Rankin bill and points out expertly the methods, and apparent intent, with which the author has been promoting the measure.

THE RANKLING RANKIN

Poor Representative JOHN RANKIN (Democrat, Mississippi).

Mr. RANKIN is apparently rankling because the Administration wisely denied him his chief delight—membership in the Un-American Activities Committee, where once he strutted in furious headline opposition to those who did not square with his deep-south definition of Americanism.

But Mr. RANKIN has ways of getting even. As chairman of the House Veterans Committee, he is sponsoring a pension bill which seems calculated to embarrass the administration.

The Rankin bill would hand all veterans a monthly $60 check when they reach the age of 60 and $90 when they are 65, plus compensation for disability not incurred in service.

Experts estimate that in its first year alone, the Rankin bill would cost the United States nearly $2,000,000,000. They respond with shudders when asked its total price tag.

Mr. RANKIN, however, is probably not one to be dissuaded by a multi-billion dollar sign. Particularly if he realizes that his bill could accomplish the double deviltry of a vote-getting political handout plus the unstringing of Mr. Truman's budget.

Imagine, then, his dismay when the American Veterans Committee was permitted, over his protests, to testify on the bill.

The ungrateful AVC, speaking for 100,000 men and women, said in effect, "Thanks a lot, Mr. RANKIN, but no, thanks. Veterans don't want special consideration at the expense of the total social security needs of the American people. Veterans themselves would suffer if the nation, as a whole, were deprived."

Since we're all inclined to go a little soft with gratitude when veterans are discussed, we'll let the veterans themselves state the compelling case against the Rankin pension bill.

The AVC helpfully points out that there are problems which beset the veteran exclusively. It agrees that adequate national aid must be extended to the war wounded and disabled, to the widows and orphans of soldiers, to ex-servicemen who need help in readjusting to civilian ways.

But, the AVC remarks with philosophical accuracy, old age is not a problem which plagues the veteran, alone.

And old-age benefits should not be ladled out to a favored group just because it happened to be of fighting age and performed its duty when the United States was at war.

Reminding Mr. RANKIN that our ex-servicemen should consider themselves United States citizens first and veterans only when their war-engendered needs are concerned, the AVC turns down his handout to make a citizenly request.

It asks for a broadened Federal social-security program under which adequate financial support is provided the aged of our country—and the veteran takes his democratic place in line along with the rest of the Nation's old.

Finally, if Representative RANKIN succeeds in propelling his bill through Congress, the AVC warns that veterans could be hurt, rather than helped.

Multibillion-dollar expenditures on pensions for veterans alone could short-change the Federal spending necessary to promote economic stability at home and overseas. If the world crashed around his ears, the veteran would find small security or consolation in a $60 pension check.

Eloquently summing up its case against the veterans' pension bill, the AVC says, "The average ex-serviceman is not a professional veteran * * * He is a citizen, interested in assuring that his Government gives consideration to the problems of all citizens who need the protection of Government in illness, in old age, in the absence of employment. His reward is a prosperous free America and a stable world."

Cardinal Mindszenty

EXTENSION OF REMARKS
OF
HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 1, 1949

Mr. KELLEY. Mr. Speaker, under permission to extend my remarks, I am including a resolution concerning the imprisonment of Cardinal Mindszenty which has been adopted by the Knights of Columbus of Monessen, Pa., a prominent city within my congressional district.

I feel this resolution deserves introduction into the CONGRESSIONAL RECORD, because there are so many people of Hungarian descent living in my district, and especially in Monessen, who are grief-stricken that this thing has happened in their native land, although fully realizing that that land is now dominated by a brutal master. It is a matter for concern not only to people of Hungarian descent but to all liberty-loving people in the world, and their pain is mor· acute at the realization that the liberty of large groups can be lost to such a satanic master as the Politburo.

The following resolution on the imprisonment of Josef Cardinal Mindszenty was adopted by the Knights of Columbus, Monessen (Pa.) Council No. 954, on February 16, at a regular meeting held on that date:

"Whereas the conscience of our membership and of liberty-loving people all over the world is shocked and outraged by the imprisonment of His Eminence Josef Cardinal

Mindszenty, Primate of Hungary, whose only offense is his courageous espousal of truth and justice and his fearless resistance to the dictates of Red Russia: Therefore be it

"*Resolved*, That the Monessen (Pa.) Council, with a membership of 200 Catholic men, earnestly entreat you, our elected representative in the Federal Government of the United States, do all within your power to secure the release of this shepherd of millions of Hungarian people and to protest against the repetition of such iniquitous action so revolting to our civilization.

"It is the firm conviction of the membership of our council that failure by our Government zealously to explore all channels through which remedial action may be taken in behalf of the innocent victim of this travesty on justice will damage beyond measure the cause of human liberty everywhere and will make a mockery of the affirmation of faith in fundamental human rights which is written into the preamble of the United Nations Charter."

Respectfully submitted.

EDWARD J. DEAN,
Lecturer, Monessen Council No. 954, Knights of Columbus.

Improved Forestry Practices

EXTENSION OF REMARKS
OF
HON. OTTO E. PASSMAN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 1, 1949

Mr. PASSMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me to the Granger subcommittee of the House Committee on Agriculture, February 24, 1949, in support of Federal legislation to provide for improved forestry practices:

Mr. Chairman and gentlemen of the committee, I wish to make a brief statement in behalf of greater Federal participation in the field of forestry. I have studied the several bills introduced in the Eighty-first Congress concerned with the subject and am happy to lend my endorsement to measures designed to assist in returning our fast depleting forest reserves to a sound basis.

I recently had the opportunity to study a report prepared by Mr. Lyle F. Watts, Chief, United States Forest Service, which proved to be very enlightening. Some of the facts and figures presented in Mr. Watts' report are well worth the attention of any group studying the aspects of improved forest practices.

A charting of United States timber reserves revealed that in 1910 we had a reserve of 2,900,000,000,000 board feet; through the twenties and thirties our reserves dropped to the danger line of 1,700,000,000,000 board feet; and today that reserve is down to 900,000,000,000 board feet.

The importance of lumber is readily perceived when we glance about us. Twenty-three million of the Nation's 28,000,000 homes are made of wood, and wood figures importantly in some way in practically everything we use. One-third of the surface area of the United States, or 624,000,000 acres, is in forest lands, and 461,000,000 acres of the six hundred twenty-four million are classed as commercial timber lands.

Worthy of serious attention is the fact that saw timber is disappearing one and one-half times faster than it is growing and we cut or lose enough timber annually to build nearly 4,000,000 homes. Statistics reveal that our wood reserves have been reduced 43 percent in the past 36 years and that another 20 years at this rate will practically deplete our timber reserve.

Today we are growing annually only about one-half of the sixty-five and seventy-two billions of board feet we need to produce a safe margin of timber.

The crux of the problem lies with private land owners, tracts comprised of less than 5,000 acres, as their lands make up 75 percent of commercial forests and 71 percent of the cutting there is classed as poor or destructive.

In my own State of Louisiana a traveler can drive for miles through certain sections of barren land denuded of timber except for sparse, scrub-oak bushes. In many sections one can see with satisfaction that progress has been made toward the reforestation of many acres, yet the over-all picture leaves much to be desired. I am sure the same condition exists in most, if not all, of our other States.

Fire losses today total $35,000,000 or more annually, while insect and disease losses equal or surpass fire damage. Reports reveal that 136,000,000 acres of United States forest lands are without organized protection from fire.

I am wholeheartedly in favor of measures that are designed to provide for the completion and continuation of a comprehensive forest survey and for a more adequate program for forest-fire control, reforestation, wood-use research and for the dissemination of useful forestry information through the land-grant colleges. I favor the establishment and maintenance of services and facilities for furnishing technical guidance and assistance to private timberland owners and for the proper management of federally owned lands administered by the States.

Let us bear in mind that our Nation's greatness is based on its abundant natural resources. Wherever possible, it behooves us to see that those natural resources are not depleted, and that every effort be exerted to restore losses made on our reserves by the advance of our civilization.

Thank you, Mr. Chairman, and gentlemen of the committee, for your kind attention to my remarks.

Real Social Security

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 1, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include a brief but excellent editorial that appeared in the February 28, 1949, issue of the Christian Science Monitor:

President Truman's proposal to raise the payments of old-age insurance to retired workers under the social-security system should give the needed impetus to an overdue reform. The monthly benefits of the Government's old-age and survivors' insurance have been allowed to slip far too low in buying power. No change has been made by Congress since 1939.

The average retirement benefit to a recipient of the old-age payments is only $25.28 a month, according to the latest figures. To get this, both the worker and his employer had to pay taxes for a number of years. These contributions were very low; still, they were taxes. Yet the average of old-age assistance—not available to those under the retirement plan but given on a claim of need—ran $16 more. In Colorado it reached $78.29, in California $61.25, in Washington $60.33, and in Massachusetts $58.74.

The way the social-security program has carelessly been allowed to work out, it often pays not to save—you can get so much more for having inadequate resources. The recipients of relief now exceed by nearly 1,500,000 the insured workers who are drawing benefits. The number granted cash on the basis of need totaled 2,469,372 in October, against 1,016,303 retired workers receiving old-age insurance. This is just contrary to what was planned when the social-security program was adopted in 1935.

The taxes may have to be raised to justify an increase in the benefits. In any case, the payments must be increased to make the social-security system live up to its name.

Federal Spending

EXTENSION OF REMARKS
OF
HON. CLIFF CLEVENGER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 1, 1949

Mr. CLEVENGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Ohio State Journal for February 4, 1949:

HOW MUCH FURTHER

Twelve years ago the total Federal income taxes collected from the people of the United States amounted to $7,900,000,000. This amount was equivalent to the total income of all the people living in two great States, Pennsylvania and Missouri.

In 1947, just 10 years later, the total income tax collected to run the Federal Government had skyrocketed to $42,505,000,000. That amount was equal to the total income of all the people living in 25 States. Imagine it—the total income of all the people living in Washington, Oregon, Minnesota, Louisiana, Maine, New Hampshire, Connecticut, Idaho, Nevada, Arizona, Utah, New Mexico, Colorado, Wyoming, Montana, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Iowa, Arkansas, Mississippi, Alabama, and Indiana. The total income of States having an aggregate population of 42,000,000 people.

Again this year, the President submitted a $42,000,000,000 budget to Congress—and it did not contain everything he has asked for, let alone everything he has outlined in subsequent and earlier speeches and messages. His proposal for expansion of the social security program alone calls for $2,000,000,000 in addition to the $42,000,000,000 asked for earlier. No one knows how many billions of dollars will be added in the program to provide western Europe with military supplies and equipment under the proposed North Atlantic security pact and to meet other like commitments.

How much further can this go before the Government takes over everything and everybody? That's the question recently propounded by DeWitt Emery, president of the National Small Business Men's Association. Commenting further, Mr. Emery said:

"Creeping paralysis? It certainly is, and if the cost of our Federal Government continues to increase year after year as it has in the past, in another few years—I don't believe it will take more than 3 or 4—there won't be any freedom of enterprise left in the country. And if we lose freedom of enterprise, we shall soon thereafter lose all our other freedoms: Freedom of speech,

freedom of the press, freedom of assembly, freedom of opportunity, and all the others. * * *

"It's absolutely impossible to overestimate the importance of this great and grave danger. It's absolutely essential for the people of this country to know what is happening and that if this trend continues, the only thing you can look forward to is complete and absolute regimentation, that is, being told by the Government what you'll eat and wear, where you'll live, where you'll work, and how much you'll be paid. It means also getting permission from a bureaucrat before doing any traveling in your own car, or otherwise, and full and complete governmental control of newspapers, magazines, radio programs, and motion pictures. * * *

"It can't happen here? It is happening here—I almost said it has happened here—but there is still time to stop it if you and I and millions of others like us, want it stopped. We can force our representatives in Congress to make the drastic reduction in the cost of our Federal Government, which is the only thing that can save the situation.

"I've said before and I say again with all the emphasis at my command, it's up to you, and I do mean you."

Can there be any doubt as to the logic and truth of Mr. Emery's observations? All history points up his argument. Huge taxes go hand in hand with increasing autocratic or bureaucratic power and ultimate ruin for a nation.

Yet, how long has it been since a President of the United States took any notice of these well-known facts? In his campaign in 1932 Mr. Roosevelt promised a reduction in the budget—and that's the last anyone has heard of cutting down the cost of Federal Government, except the comparatively feeble reductions which Congress has been willing and able to force through against tremendous pressures from the Federal spenders, from the White House down through all the departments and bureaus.

No, the trend for 16 years has been and continues to be—tax and spend and elect; promise more, tax some more, spend a great deal more and reelect.

This year Federal spending will require an amount of money equal to considerably more than the total income from all sources of all of the people of 25 States. It may take an amount equal to the income of 30 States, perhaps 35 States. That's getting pretty near the cracking point between the upper millstone of heavier taxes and the nether stone of increasing Federal controls. It should be a matter of first concern not merely of big business and small business but of every wage earner and every citizen of the United States.

AMA and the Christian Conscience

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 1, 1949

Mr. KENNEDY. Mr. Speaker, under leave to extend my remarks, I include in the RECORD an editorial which appeared in the Catholic weekly America on December 18, 1948, entitled "AMA and the Christian Conscience."

There is great need for intelligent discussion of this important problem.

The editorial follows:

AMA AND THE CHRISTIAN CONSCIENCE

Christian social philosophy teaches that the security and temporal prosperity of society and its members is the responsibility of the State. When a problem such as the Nation's health exceeds the powers of individual or group action, intervention by the Government becomes not merely justified but morally imperative.

It is the incorrigible opinion of the American Medical Association, on the contrary, that the Nation's health concerns merely the sick man and his doctor—provided he can afford one. On the findings of the association itself, half the families of America cannot meet the expenses of a serious illness on the fee-for-service system now prevailing. Yet they stubbornly oppose the adoption of compulsory health insurance to put medical services within the reach of half the families of America.

The program of public-health insurance which Congress will be asked to consider will undoubtedly be a controversial measure. The bill will demand careful scrutiny to make sure that policy-making and administration are preserved in professional hands, that decentralization—along the lines of the Federal Housing Agency—is maintained, that voluntary, cooperative health-insurance plans are protected and encouraged while universal coverage is achieved. There will be need of open, informed discussion of the legislation—starting from the verdict of the Christian conscience that the Nation's health falls within the scope of the Government's proper sphere.

Such a debate is democracy acting responsibly.

How, then, are we to characterize the activities and conclusions of the convention of the American Medical Association, which met in St. Louis the first days of December? A private national health-insurance plan covering hospital and medical care, proposed as a means of combating health insurance, was rejected. The resolution was not made available to reporters, who were barred from the closed sessions of the house of delegates. "We're lucky we didn't get a kick in the teeth," was the wry observation of Dr. Paul R. Hawley, executive officer of the commission, originally sponsored and financed by AMA itself, which made the proposal. The commission was censured for intruding in the policy-making function of the association.

To carry out its own policy the association voted an assessment of $25 on each of its 140,000 members. The $3,500,000 fund will be used to fight "socialized medicine," a stereotyped phrase in the loose idiom of AMA for any plan of compulsory health insurance. In a statement of policy the convention declared that the Nation's health is robust, as a result of the free-enterprise system in medicine. It proclaimed that wherever the Government has interfered, the care of the sick and needy has suffered. It announced ambiguously that any scheme of "political medicine would be a catastrophe for the American people." It warned that compulsory health insurance would lead to complete state socialism and unctuously promised to continue to make medical care available to all our people.

These are sentiments that read like the fervid condemnation of the workingmen's compensation acts at the turn of the century. They recall the protestation of beneficent employers against jeopardizing personal freedom. There is ample evidence that AMA is no more representative of medical opinion than the NAM is of the current thinking of businessmen. Few doctors would repeat the statement Dr. Morris Fishbein, editor of the Journal of the American Medical Association, made on November 16 at the health forum at Harvard, that those who favor compulsory sickness insurance "are leading the American people toward communism." Some might inquire about the 32 countries that have such legislation. Ireland, for instance. Is Ireland Socialist?

Is Group-Libel Law Practicable?

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 1, 1949

Mr. KLEIN. Mr. Speaker, under leave, I am inserting in the RECORD the text of a guest column written by me which appeared in the New York Day, one of the oldest and largest Yiddish dailies in the world, in the issue dated February 24, 1949, on the subject of the group-libel bill, H. R. 2270, which I introduced on February 3. Four other Members of this House introduced identical bills at the same time.

The article follows:

I am proud to be one of the authors of the proposed legislation to outlaw the dissemination of literature-libeling groups.

Our first problem was to decide whether it is possible to legislate wisely and effectively in the field of words and thoughts; whether it is possible to write into the statute law of the land a new act establishing a clear and enforceable principle of group libel.

When we had decided that question in the affirmative, we were faced with the very concrete question: How?

This is a problem that cannot be solved by hysteria, resentment, or name-calling; and it cannot be approached with levity or with casualness. There are vitally important principles of democratic liberty at stake.

Lawyers who specialize in constitutional law are themselves divided in opinion. Many hold that no effective group libel statute can be framed which does not invade some precious right of individual freedom guaranteed by the American Constitution.

Others hold that a whole category of individuals can be given the protection of the law against calumny and scurrility by a properly drawn law without depriving any one else of any right of free expression of honest opinion or of genuine facts.

The group libel bill, H. R. 2270, which I introduced in a distinguished company of other Members of the House cutting across all political lines, represents the distilled thinking of a great many people who have long been interested in this field.

My colleagues who introduced this bill simultaneously with me (and let me explain that under the rules of the House we cannot introduce bills jointly as in the Senate) were: Representative JACOB JAVITS, a Jew and a Republican; Representative KENNETH B. KEATING, of up-State New York, a Protestant and a Republican; Representative EUGENE E. KEOGH, a Catholic and a Democrat; and Representative WILLIAM L. DAWSON, of Illinois, a Protestant, a Democrat, and a Negro.

Tentative efforts have been made toward framing legislation which can be called a group-libel law over a long period of time. Many of these have been prepared as bills and introduced in Congress; some were very good as exploratory measures to stimulate debate and thought, and some were pretty hopeless. Very substantial progress has been made in the more limited field of political campaign literature, both in National and State legislation, directed toward full disclosure of responsibility; and, as a matter of fact, several States have adopted laws which operate in the broad field of group libel.

Indiana and Massachusetts have laws prohibiting distribution of material libeling any racial or religious group; but they have not yet been tested in the courts. Other States

have more limited statutes which still pave the way for Federal action.

It is worth while to mention that not only is there no Federal law to prevent or punish the distribution of the grossest libels against religious or racial groups, no matter how strongly such material may endeavor to stir up trouble and even physical strife; but, in effect, the publishers of such matter are, if otherwise qualified, entitled to the Federal subsidy of a second-class mailing privilege.

Naturally, I get a great deal of abusive and anti-Semitic mail; for instance, when Walter Gieseking decided to return to France rather than face a full investigation of his past and present by the Department of Justice, my office was flooded for several days with violent letters and post cards denouncing the Jews generally and me in particular for running this Naziphile out of the country. I did not even have the basis of a complaint to the Post Office Department; unless one of these bigots scrawls some obscene message on a post card or an envelope, he is free to make the most violent statements.

However, in the previous efforts to prepare a Federal group-libel bill, none of the previous proposals have been able to overcome the tests of constitutionality; that is, they have clearly invaded rights of free speech or thought.

The constitutionality of our group-libel bill would rest chiefly on the thesis that such defamatory utterances are of such slight social value as a step to truth that any benefit that may be derived from them is clearly outweighed by the social interest in order and morality as the Supreme Court phrased it in one decision.

Another valid but subsidiary argument would be that the first amendment to the United States Constitution (which guarantees the rights of free assembly, free press, and free conscience) does not prevent punishment of individual libels, and should not protect group libels. In at least three instances the Supreme Court has held that only truthful statements are protected by the constitutional guaranties.

For years good lawyers and laymen of good will have been trying to devise national legislation which would protect our country, our citizenry, and our democratic processes against the assaults of bigotry and racism within the framework of our constitutional freedoms. The search has been to find a way of punishing deliberate and intended lies about whole groups of people without limiting the free expression of facts and opinions, no matter how distasteful those facts and opinions may be.

Because the Jewish community, collectively and individually, is a frequent object of scurrilous attacks from the believers of the Hitlerian lies, it is natural that Jewish groups should have been among the most active in the efforts to devise such a law, meeting the tests of constitutionality, common sense, and enforceability, not easily perverted to prevent free speech, and clearly acting toward the end desired.

I am glad to give credit to the Commission on Law and Social Action of the American Jewish Congress for the draft upon which our bill was based.

That the language will be criticized by extremists of both sides goes without saying.

The racists will call it an invasion of their right to tell lies.

The extremists on the other side will call it innocuous.

In my belief, the bill goes just as far as is safe; and its adoption by the United States Congress will of itself have a salutary effect on the mouthpieces of the myths of hatred.

The offense defined by this proposed act is clear and specific.

The bill would make it unlawful maliciously to mail or otherwise send into interstate commerce, or to import into the United States, any printed or otherwise duplicated material containing any false statements concerning a person or a group of persons identified by race or religion which tends to expose him or them to hatred, contempt, or obloquy.

A person charged with the dissemination of group defamatory matter could not be convicted if the statements were true, or if, on reasonable grounds, he honestly believed them to be true, nor could he be convicted if, although the statements were untrue, there was no malice or intent to libel a particular group. This would protect a newspaper or magazine or even an honest pamphleteer.

Violation of the act is made a misdemeanor rather than a felony. Maximum punishment would be a $1,000 fine or imprisonment for 1 year. That is to encourage juries to convict, where a higher penalty might make them reluctant. However, to guard against any abuse of the statute, no prosecution could be commenced without prior approval of the Attorney General in Washington.

We can see no reason why the laws of libel cannot be made to apply to the willful and malicious defamation of a group, as long as truth is made a defense. The omission of such provisions from the common law is explained by the historical accident that when the law of libel was developing the law generally did not recognize multiple entities such as associations and ethnic groups.

There is no particular logic to the omission beyond that explanation; yet under cover of the absence of a group-libel law bigots can peddle their poison with immunity.

Any effort to legislate in the field of opinion or ideas is fraught with peril. I have never been opposed to the full-disclosure laws ably advocated by many of my friends and colleagues; yet I must recognize that publicity alone may inhibit freedom of thought, action, and words.

What the arguments of the advocates of our group-libel bill, H. R. 2270, boil down to is this: The bill would, if it becomes law, protect members of minority groups against open and wholesale defamation; but it would not in the least limit the right of free expression of honest opinion and facts.

I am inserting also the following interesting discussion of the bill, prepared prior to introduction, by the American Jewish Congress:

PROPOSED FEDERAL GROUP-LIBEL STATUTE

1. WHY A GROUP-LIBEL LAW

Although the evil effects of racist defamation are almost universally acknowledged, the law of libel, civil or criminal, does not apply to such defamation of groups. This omission is explained by the historical accident that at the time the law of libel developed, the law generally did not recognize multiple entities such as associations and ethnic groups. This anomaly has made it possible for anti-Semites and other race-hatred mongers to peddle their poison with complete immunity.

2. WHAT THE PROPOSED BILL WOULD DO

The CLSA drafted bill does not attempt to meet the whole problem but attacks it on a limited front. There are several reasons for this, the most important being that the courts and public opinion in the United States are not yet ready for a more comprehensive approach.

The CLSA bill deals only with group libels disseminated through the mails or in interstate or foreign commerce. In this field the powers of Congress are not open to reasonable question. The bill sets forth the finding that such dissemination of false and defamatory statements concerning racial and religious groups constitute a danger to the Nation's welfare by creating intergroup conflict and tensions. The bill then announces a policy to prevent the spread of such defamatory material.

Section 3 of the bill makes it unlawful maliciously to mail or otherwise send into interstate commerce or to import into the United States any printed or mimeographed material containing any false statements concerning a person or group of persons identified by race or religion which tends to expose him or them to hatred, contempt, or obloquy. A person charged with dissemination of group defamatory matter cannot be convicted if the statements were true or if, on reasonable grounds he honestly believed them to be true.

Persons violating the law are subject to punishment up to $1,000 fine and imprisonment for a year, but to prevent any possibility of abuse, no prosecution can be commenced without the prior approval of the United States Attorney General.

3. IS THE PROPOSED BILL CONSTITUTIONAL?

There is no case in which a carefully drafted group-libel statute has been declared unconstitutional. Laws making it criminal to libel an individual person have uniformly been held constitutional. We believe that there is no reason a similar law aimed to protect racial and religious groups should not also be held constitutional, so long as it makes truth a defense.

4. WILL IT INTERFERE WITH FREE SPEECH OR PRESS?

The purpose of the guaranty of speech or press is to facilitate the free traffic of knowledge and ideas. We do not believe that to prohibit the dissemination of false, defamatory statements, such as ritual murder libels, interferes with such free traffic, any more than prohibiting traffic in impure or poisonous foods and drugs interferes with the free movement of goods in commerce.

5. WILL A GROUP-LIBEL LAW ELIMINATE RACISM?

We do not suggest that our proposed law, or any group libel law will solve the problem of prejudice or discrimination. We do believe, however, that it may be a valuable weapon in the arsenal of democracy to be used, along with many other weapons such as antidiscrimination laws, in the struggle for ethnic equality and dignity.

My discussion of this bill would not be complete without the insertion of an amusing, interesting, and instructive letter I received today from Mr. Will Maslow, which is followed by the text of the bill:

AMERICAN JEWISH CONGRESS,
COMMISSION ON LAW AND SOCIAL ACTION,
New York, N. Y., February 28, 1949.

Hon. ARTHUR KLEIN,
United States House of Representatives,
House Office Building,
Washington, D. C.

DEAR MR. KLEIN: I know you will be amused to learn that the Freiheit, the Jewish organ of the Communist Party, has come out against your group-libel bill.

They object on three grounds:

(a) The bill does not specifically outlaw anti-Semitism.

(b) Truth is made a defense.

(c) The bill, they state (erroneously), can prevent attacks on nonethnic groups, such as capitalists.

Sincerely yours,

WILL MASLOW.

H. R. 2270

A bill to amend title 18 of the United States Code (Crimes and Criminal Procedure) to make unlawful the transportation or importation of false and defamatory statements designed to arouse intergroup conflict

Be it enacted, etc., That title 18 of the United States Code (Crimes and Criminal

Procedure) is amended by adding a new chapter 28 thereto as follows:

"CHAPTER 28—TRANSPORTATION OF DEFAMATORY MATTER

"SEC. 562. The Congress finds:

"(a) The channels of interstate and foreign commerce and the United States mails are being used to disseminate false and defamatory statements designed to arouse conflict among the racial, religious, and ethnic groups, which together have contributed to the growth and prosperity of this Nation. Such dissemination constitutes a danger to the welfare of the Nation.

"(b) The malicious dissemination of false and defamatory statements tending to arouse intergroup conflict interferes with the national policy of fostering the enjoyment of human rights and fundamental freedoms by all, without distinction as to race, language, or religion, interferes with free communication of ideas and serves no public interest.

"(c) The malicious dissemination through the channels of interstate or foreign commerce or the United States mails of false and defamatory statements tending to arouse intergroup conflict must be prohibited to preserve the unity of this Nation, to prevent discord among our people, to prevent disruption of the normal channels of trade and commerce and dislocation of the economic life of the country, to promote universal respect for and observance of human rights and fundamental freedoms for all without distinction as to race, language, or religion, to promote the healthy interchange of ideas and opinions and to preserve the republican form of government.

"SEC. 563. In the exercise by Congress of its powers to regulate commerce among the several States and with foreign nations, to establish post offices and to fulfill the international treaty obligations imposed by the Charter of the United Nations upon the United States, it is hereby declared to be the policy of the United States to prevent the spread through the channels of interstate and foreign commerce or use of the mails of false and defamatory statements designed to arouse intergroup conflict.

"SEC. 564. It shall be unlawful for any person, with intent to create ill will against a racial or religious group within the United States or any of its Territories, knowingly to bring or cause to be brought into the United States or any place subject to its jurisdiction, or to send by common carrier or other agency, or to deposit or cause to be deposited in the United States mails for mailing and delivery, from one State or Territory of the United States or the District of Columbia or from any point within any Territory of the United States or the District of Columbia to another such point, any publication or material which is printed, mimeographed, or otherwise reproduced in multiple form by mechanical process, containing any statement concerning any person, persons or group of persons, designating, identifying, or characterizing him or them directly or indirectly by reference to his or their race or religion, which exposes or tends to expose him or them to hatred, contempt, or obloquy or causes or tends to cause him or them to be shunned or avoided or to be injured in his or their business or occupation: *Provided, however,* That no person shall be convicted under this section if such statement is true or was honestly believed by him, upon reasonable grounds, to be true. The burden of coming forward with evidence upon the issues of truth, honest belief, reasonableness of belief and lack of intent to create ill will shall be upon the defendant, but the burden of proof beyond a reasonable doubt upon the entire case shall be upon the prosecution.

"SEC. 565. Any person violating any of the provisions of section 3 of this act or who conspires or acts in concert with any other person or persons to violate any of the provisions of section 3 of this act shall for each such offense upon conviction thereof be punished by a fine of not more than $1,000 or by imprisonment for not more than 1 year or by both.

"SEC. 566. No proceeding for violation of section 3 or 4 of this act shall be instituted by any district attorney without the prior approval of the Attorney General. The prosecution of any such proceeding by a district attorney shall be conducted under the supervision of the Attorney General.

"SEC. 567. If any clause, sentence, paragraph, or part of this act, or the application thereof to any person or circumstances shall for any reason be adjudged to be invalid, such judgment shall not affect, impair, or invalidate the remainder of this act or its application to other persons or circumstances."

St. David's Day

EXTENSION OF REMARKS
OF
HON. BENJAMIN F. JAMES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1949

Mr. JAMES. Mr. Speaker, by the calendar this is the day of March 1 but in the hearts of all who descend from the sturdy men of Wales—this is St. David's Day—and St. David is the patron saint of the Welsh. As to the saint himself, his works and the manner of his becoming a Welshman, little enough will be said at the many festivities to be held in his honor this day. The saint is a good topic for other occasions, so able orators will devote their talents to proving that King Solomon, Christopher Columbus, Napoleon, Franklin, Washington, Lincoln, and all good and great men down to and including Adam were Welshmen, and they will be right.

A preview of the celebration in Philadelphia of St. David's Day has been written by Mr. John M. Cummings and published in the Philadelphia Inquirer. It is both entertaining and informative and is offered here for your pleasure and enlightenment:

ST. DAVID'S OR ANY DAY WELSHMEN WILL SING OUT

(By John M. Cummings)

If you were around and about on February 25, 1729, you no doubt will recall reading the following item in the Pennsylvania Gazette:

"We are informed that several Gentlemen and other Persons of Reputation, of the honorable Stock of Ancient Bretons, design to erect themselves into a Society to meet annually on the first day of March, or St. David's Day, so-called. In order thereto, on the first of the next month, there will be a Sermon preached in the ancient British language by Dr. Wayman in this city, and a Psalm set to the organ; from thence the Society are to go and partake of a handsome Collation at the House of Robert Davis, at the Queen's Head in King Street."

It will be 220 years, come St. David's Day on March 1, since the Welsh Society of Philadelphia was founded. It was not incorporated under its present name until 1802, but chartered or unchartered it has never failed in its yearly observance of the day named in honor of the patron saint of the little chunk of Britain.

Philadelphia and its environs form a section of the State rich in the lore of the Welsh. Here we know as household words such names as Cadwallader and Meredith, Wister and Clymer, Meigs and Owen, not to mention ancient stand-bys such as Jones and Roberts, Griffith, Wayne and the like.

The Welsh Society, originally organized to extend financial aid to emigrants from Wales, is, you read in a brief history compiled by Howard Benton Lewis, the oldest social and benevolent institution in the city. It antedates the St. Andrew's Society, founded in 1749 and the Friendly Sons of St. Patrick which dates from 1771, and the Sons of St. George, which had its beginning 1 year later.

From this it would appear we in the Philadelphia area are provided with a variety of patron saints.

We once had in these parts a Welsh barony. It comprised some 30,000 acres adjacent to the old city of Philadelphia and it embraced such Welsh name places as Bala, Cynwyd, Merion, Haverford, Bryn Mawr, St. David's, Berwyn. The early Welsh who established the barony later acquired holdings which we now know as Gwynedd Valley, Penllyn, and North Wales.

This year, God willing, and with David J. Jones as our host, we shall attend the annual St. David's Day round-up. We know there will be singing, for the Welsh are born with music in their hearts. Dr. Ivor Griffith will be there, and Ronald S. Drysdale and John F. Davis, the Welsh Mayor of the Pennsylvania Dutch town of Reading.

Gladly we shall join in singing "The Men of Harlech," and "Hen Wlad Fy Nhadau," which, if you Irish insist on knowing something of the secrets of the ancient Breton tongue, means "Land of My Fathers."

It's our recollection this number was written by Brechen Powell, the managing editor of the Scranton Tribune, an old friend of our'n. His brother Ed and this reporter pulled out of Scranton (a paper collapsed) many years ago and headed for Philadelphia. Ed Powell wrote sports on the old Philadelphia Press. He was killed in action in the First World War.

Land of My Fathers we heard sung by some 5,000 Welsh, men and women, and three Irishmen at Lakeside Park in Schuylkill County last summer. At this big "sing," as distinguished from an eisteddfod, we heard for the first time Land of My Fathers. While there singing and playing around with Harold Watkins and his frau, called Nellie, we ran into Ed Powell's brother and it's our impression he corroborated a report he was the author of the number.

It would be a fine thing for this town if the Welsh, of a pleasant summer day, would assemble in Fairmount Park and let go with an afternoon of singing such as the one the Welsh of Schuylkill and nearby counties staged at Lakeside Park. The nice thing about these assemblies is that they need no great preparation.

Give a Welshman a songbook and he's as happy as if you gave him a dish of faggots. And if you give 5,000 Welshmen 5,000 songbooks and have a man with a baton stand on a chair and say, "Now, all together," you've got something to make your pulse pound and your heart beat faster.

We don't know how long the old barony lasted. Certain it is, however that it embraced a large portion of what is now Fairmount Park. It would seem like something in the nature of poetic justice, therefore, for the park commission to invite the descendants of those early days, together with those who arrived here in the meantime, to take over the park for a day so that all Philadelphia might know the spirit and the fullness of the Welsh when they raise their voices in song.

The idea of the barony, apparently, was to establish a bit of Wales in this country. Welsh customs were to prevail; Welsh justice administered and, above all, the Welsh

language preserved. It was a nice dream. But the project was foredoomed to failure.

Philadelphia grew and it spread out. Here and in Montgomery County the barony was overrun by people representative of all the nations of Europe. The Melting Pot was boiling.

So the Welsh of today, like the Irish and the English and the Scots, remember the land of their fathers by social functions, dinners and the like, generally on the day of a patron saint. We shall begin tonight to brush up on the pronunciation of the few Welsh words in our vocabulary. We know Penllyn means the head of the lake—Dr. Griffith told us so. And we know Bryn Mawr means something about a hilltop.

And if there's anything else you'd like to know about the Welsh come around and see us on St. David's Day in the morning.

Civil Rights: Truman's Move Now

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 28, 1949

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks, I would like to call attention of the Congress to the recent article in the Christian Science Monitor by Roscoe Drummond regarding the proposed compromise on civil-rights legislation offered by my colleague, Hon. BROOKS HAYS, of Arkansas.

No one can deny the need for full study and consideration of all plans which will help extend civil rights in the way that will genuinely benefit those who are now adversely affected. Congressman HAYS has performed a great service in offering a basis for discussion and consideration of alternate plans designed to accomplish much of the objective sought in this program.

The splendid article by Roscoe Drummond, chief, Washington bureau, the Christian Science Monitor, is as follows:

CIVIL RIGHTS: TRUMAN'S MOVE NOW

(By Roscoe Drummond)

WASHINGTON.—President Truman and his political advisers thus far are turning the cold stare upon any offer of the southern Members of Congress to work out a middle-ground compromise on civil-rights legislation.

Such an offer has been made by one of the most respected Members of the House of Representatives, BROOKS HAYS, Democrat, of Arkansas. Mr. HAYS has the support of numerous of his southern colleagues. And he has full credentials as a loyal party Democrat.

Mr. HAYS is offering a significant compromise in good faith. His purpose is not merely to avoid a continuing split within the Democratic Party but, more importantly, to avoid an acute and long-enduring breach within the country.

The President is leaving Mr. HAYS' offer dangling in mid-air. If Mr. Truman doesn't grasp it, it can't remain there for long. In ignoring it he is admittedly pursuing a course attended with risk.

The administration is courting the risk of getting no civil-rights legislation at all by rebuffing even an examination of compromise in good faith.

The administration may well be playing into the hands of extremists on both sides by refusing to give a responsive hearing to the counsel of the most progressive southerners.

There are some southern politicians who, for their own expedient reasons, want the Federal Government to do absolutely nothing at any time to help insure further civil rights to minority groups. They will like nothing better than to have the administration ask for so much that they will be in the best tactical position to block it all.

There are some nonsouthern politicians who, for their own expedient reasons, want the Federal Government to do everything at once on civil rights. They may well find it to their political advantage to have everything rejected at this session rather than to have a good beginning made. A hot civil-rights controversy in the 1950 elections would be to their liking.

These are the extremes which alone would benefit by a wrangling, divisive fight, ending without any civil-rights legislation of any kind.

Conceivably, Mr. Truman may feel that he first must try for everything, testing the ability of the administration forces to end the filibuster and put through at this session his full program.

But a strong argument can be made—and Mr. HAYS has made it to a most attentive audience in the House—that it will be better for the country and better for the Democratic Party to welcome progressive southern initiative and proceed on the maximum area of agreement.

The President's civil-rights program deals with four subjects of dominant concern to the South: Segregation, poll tax, antilynching, and the FEPC.

Representative HAYS believes the southern Members of Congress should and would join in accepting a constitutional amendment to repeal the poll tax, and in enacting a Federal statute which would center responsibility upon the governors of the States for dealing with lynching and would empower the Federal Government to intervene in event of the failure of the governor to act. Mr. HAYS advocates a nonpenalty Fair Employment Practice Committee with a counseling service to work for nondiscrimination in industry. He holds that the Supreme Court decision banning segregation in interstate travel gives the Federal Government adequate power in this field.

These are significant proposals to come from an influential southern Congressman. They make a valid distinction between civil rights, which should not be compromised, and social aspirations, which cannot be waved into being by a law.

Can Representative HAYS bring his southern colleagues to support his middle-ground position? He never will know unless the administration invites serious consultation. If the southerners substantially back Mr. HAYS, the basis of a constructive compromise can be laid. If the southerners substantially reject Mr. HAYS, the administration, by having tried a constructive compromise, will be in a better position than it now is to press its program over totally recalcitrant southern opposition.

Advance Planning of Non-Federal Public Works

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 1, 1949

Mr. BOGGS of Louisiana. Mr. Speaker, I have today introduced a bill to stimulate the advance planning of non-Federal public works—exclusive of housing—by authorizing the Federal Works Administrator to make advances to States and local governments for the purpose of preparing plans and specifications. Each advance would be repayable to the Federal Government, but without interest, out of money available for the construction of the project whenever the State or local government actually commences construction. The bill is very similar to title V of the War Mobilization and Reconversion Act of 1944, which expired on June 30, 1947. The advance-planning program under that act was widely approved by State and local officials, engineers, architects, contractors, economists, and the general public. Under it the Federal Works Administrator advanced $56,000,000 to State and local governments, which was sufficient to set in motion the blueprinting of projects with an estimated construction cost of $2,100,000,000. But already over $300,000,000 worth of the planned projects have been placed under construction. There remains about $1,700,000,000 of projects as a reserve which will shrink rapidly as projects pass from the blueprint to the project stage.

This is a pitifully small figure. The total value of new construction during 1948 was $17,700,000,000, $13,700,000,000 private and $4,000,000,000 public. Of the public portion, $2,700,000,000 was State and locally financed. Thus it may be seen that the reserve shelf under the FWA advance-planning program is only about two-thirds the amount of State and local public construction expenditures for the year 1948 alone. And that was a year in which private construction was very substantial.

In a recession the volume of private construction declines sharply. If that undertaken in 1948—$13,700,000,000—were to decline by 50 percent—and in the past it has fallen much more than that—we would need $10,900,000,000 of public construction to maintain the construction industry and employment on an even keel. The present reserve could not begin to tackle the problem. It is therefore vital that we start again to build up an adequate reserve shelf of sound non-Federal public works upon which construction can be started as economic conditions warrant. The existence of such a store of plans will promote confidence in our national economy because both industry and labor will know that a vast program of public works is available for construction at any sign of faltering. And these projects will not be made work, ill-conceived and hastily designed in order to cope with unemployment. They will be soundly devised so that they will return to the people lasting and worth-while capital improvements. The ultimate cost to the Government of the previous reserve shelf program will be relatively small and mainly confined to administrative costs. This type of program provides far more economic insurance for every dollar put out than any other that could be devised.

Section 1 of the bill, in order to encourage States and other non-Federal public agencies to maintain a continuing and adequate reserve of fully planned

public works—exclusive of housing—readily available for use when the economic situation may make commencement of construction of such public works desirable, authorizes the Federal Works Administrator to make advances to the States, their agencies and political subdivisions to aid in financing the cost of architectural, engineering, and economic investigations and studies, surveys, designs, plans, working drawings, specification, procedures, and other action preliminary to the construction of public works—exclusive of housing. This section also contains a provision to the effect that the making of advances thereunder shall not in any way commit the Congress to appropriate funds to undertake the construction of any public works so planned.

Section 2 of the bill specifies that the Federal Works Administrator shall allocate the funds appropriated for the making of advances in the following proportion: 75 percent in the proportion the population of each State bears to the total population of all the States, as shown by the latest Federal census; and 25 percent in accordance with the needs of the States as determined by the Federal Works Administrator.

This section also provides that if said Administrator determines that any funds so allocated to a State cannot promptly be utilized in effecting the purposes of the bill he may reallocate such funds to any other State or States requiring additional allotments.

Section 3 of the bill prohibits the making of any advance for a particular project unless the project conforms to an over-all State, local, or regional plan approved by a competent State, local, or regional authority.

Section 4 provides that the advances made shall be repaid, without interest, as and when the construction of the public works is undertaken or started. The sums so repaid are to be covered in the Treasury as miscellaneous receipts.

Section 5 authorizes the Federal Works Administrator to prescribe rules and regulations to carry out the purposes of the bill.

Section 6 authorizes the annual appropriation of such amounts, not to exceed $50,000,000, as may be necessary to effectuate the purposes of the bill. It also provides that funds appropriated are to remain available until the end of the fiscal year for which the appropriation is made.

Section 7 defines the term "State" to include the District of Columbia, Alaska, Hawaii, and Puerto Rico.

Invention Through the Ages

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1949

Mr. BRYSON. Mr. Speaker, at a recent dinner sponsored by the American Patent Law Association it was my privilege to hear Mr. Crosby Field deliver a most informative address on the subject, Invention Through the Ages. In order that others may have an opportunity to read and understand more about patents, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include Mr. Field's address:

INVENTION THROUGH THE AGES

(By Crosby Field, president, Flakice, Corp., Brooklyn, N. Y.)

We are living in an age of rapid mechanical advancement. Our daily problems evolve largely about the question of which new improvement we should buy, or whether we should wait and save to get something perhaps a little better a little later. This applies to our consideration of most everything, from automobiles to household utensils. It is hard, therefore, for us to conceive of a civilization in which the average man, such as you and I, could live an entire lifetime in exactly the same way that had lived his father, his grandfather, and his ancestors up to 30 generations. Yet that was the fate of the average man most everywhere in western Europe for a thousand years.

Not only was this the fact amongst those the Romans called barbarians, but more particularly within the higher types of social organizations of the times. Then the common man was wholly ignorant of mechancal invention, and his life was unchanged by it. Let us have a brief glance at inventions through the ages, and discuss their effect, if any, upon the life of the common man.

This would appear to be a rather large subject for a short talk were it not simplified by two facts. The first is that the physical surroundings of the common man were not noticeably improved for centuries. The second is that increasing mechancial improvements enjoyed by the common man always eventuate into the abolition of slavery. By slavery I do not mean the rhetoric bleatings of rabble rousers, but legal slavery in which one man actually becomes the property of another, or as the property of the state he is put at the disposal of another man. Where slavery exists, mechanical progress is negligible; where it increases, invention dies.

We have difficulty in conceiving the barrenness of the life of the common man until most recent times. It comes as a still greater shock, moreover, to realize that an average man of, say, the year 400 A. D. would have found himself entirely at home a thousand years later. Could he have been instantly transplanted from the year 400 to the year 1400, he would have found his physical surroundings almost identical. He would have found the same housing, the same food, the same methods of preparing and cooking it, the same personal utensils, the same field tools, the same roads, and very similar, although possibly not identical, clothing. In some parts of the western European world he would have been embarrassed by changed speech and perhaps by foreign-speaking kings and officials, but otherwise he could hardly have known that the interval had been 1,000 years—it would have seemed more like a day.

Worst of all, he would have found himself no better off in facing his real problems, how to get enough to eat and how to keep warm. Famine still would claim its huge annual toll, and the king still owned the trees from which, "by hook or crook," a pitiful fuel supply might be extracted for absolute essentials. Disease, of course, was a most proper punishment direct from the Deity.

Those of us in this room, old enough to have applied to us the euphemistic term of middle age, have in our own lifetime seen changes in our physical surroundings a thousandfold greater than could have been found by the common man in the thousand-year period mentioned. For most of the world the specter of normal peacetime starvation has been removed, health has been improved, the usual diseases causing death held under control or even eliminated, death from old age pushed a little further back, and our average American common man has become accustomed to a standard of living so high that it is the envy of the world.

What is the reason for this great change in tempo of improvement of the average man's physical lot? Many have asked this question, some have come up with plausible answers, most of which do not stand up under scrutiny.

There are those who suggest that it is all a matter of natural resources; that the American workingman lives high because of nature's bounty to our countryside. But other nations, such as Russia, China, India, have the same resources, perhaps not developed, and yet they have extremely low standards of living.

There are those who suggest that the answer is to be found in the climate, or in the agglomeration of racial cultures, or in the emancipation of women, or in the desire of our population for amusement to occupy constantly increasing idle time, etc. In fact, there are innumerable similar explanations, none of which seems to stand strict examination.

There are others who ascribe our success entirely to the fact that we have produced a new race, within ourselves, called the Ingenious Yankee, who, upon settlement of the colonies, sprang forth as a mechanically minded Merlin. If we find the genesis of this marvel to be the forces of freedom culminating in the Declaration of Independence, there is an element of truth in this theory, but much as I would like to take a bow for this phenomenon, I'm afraid the historians won't let me.

It is only relatively recently that the history of invention has received much attention but now a large number of interesting facts are being unearthed. These indicate that many inventions believed new were in reality well known long, long ago in one or the other parts of the world.

The authors of works on specific industries almost always devote at least a few words to their origins; in each case one or two dates in antiquity are mentioned, then a couple in the Far East or in Arabia during the Middle Ages, and then a constantly increasing number of inventions in the eighteenth and nineteenth centuries.

GENERAL SUMMARY OF INVENTIONS

The following general summary is believed to be acceptable: (2) Technics before the tenth century: Fire, its application in furnaces, ovens, kilns. The simple machines, such as planes, screws, cranes. Thread, cord, rope. Hand spinning and weaving. Advanced agriculture, including irrigation, terrace cultivation, and soil regeneration (lapsed in northern Europe). Cattle breeding and the use of the horse for transportation. Glass making, pottery making, basket making. Mining, metallurgy, and smithing, including the working of iron. Power machines: water mills, boats with sails. Machine tools: bow drills and lathes. Handicraft tools, tempered metal cutting edges. Paper. Water clocks. Astronomy, mathematics, physics, and the tradition of science.

Inventions of the tenth century: Painted glass windows in England.

Inventions of the eleventh century: years 1041–49, movable type (Pi Sheng); 1050, first real lenses (Alhazen); 1065, Oliver of Malmesbury attempts flight.

Inventions of the twelfth century: The magnetic compass, known to the Chinese 1160 B. C., comes into Europe via the Arabs and reached England about 1195; 1105 first

recorded windmill in Europe (France); 1118, cannon used by Moors; 1144, paper (Spain); 1147, use of wood cuts for capital letters (Benedictine monastery at Engelberg); 1180, fixed steering rudder; 1188, bridge at Avignon, 18 stone arches, 3,000 feet long; 1190, paper mill (at Herault, France).

Inventions of the thirteenth century: Mechanical clocks invented; 1232, hot-air balloons (in China); 1247, cannon used in defense of Seville; 1269, pivoted magnetic compass; 1270, compound lenses (Roger Bacon); 1272, silk-reeling machine (Bologna); 1285-99, block printing; 1289, paper mill; 1298, spinning wheel.

Inventions of the fourteenth century: Year 1300, wooden type (Turkestan); 1320, water-driven iron works, near Dobrilugk; 1322, sawmill at Augsburg; 1324, cannon; 1330, crane at Luneburg; 1338, guns; 1350, wire-pulling machines; 1390, metal types (Korea); 1390, paper mill.

Within a hundred years after the year 1400 we have authenticated manuscripts of Leonardo da Vinci (1452-1519), which contain a large number of descriptions of machines, many well illustrated. At first believed to be his invention notebook, the general opinion now is that the manuscripts contain not only his inventions but also a compendium of the state of the art at this time and also include the inventions of many other people. He was, if you please, not only artist, inventor, engineer, but also a professor of each of those subjects and these manuscripts were the textbooks he and his associates used in teaching.

Amongst his notes are: Centrifugal pumps; dredges for canal building; polygonal fortress with outworks; breach-loading cannon; rifled firearms; antifriction roller bearings; universal joints, conical screw; screw with square threads; hydraulic presses; steam cannon; rope-and-belt drive; link chains; submarine boat; bevel gears; spiral gears; compasses; silk doubling and winding apparatus; spindle and flyer; lamp chimney; ship's log; standardized mass-production house; wool spinning; printing press; pile driver; coin-making machinery; and parachutes.

Why did not the common man benefit substantially from this great fund of knowledge?

In the first place, few of da Vinci's inventions ever progressed beyond the sketch-book stage, and when they did, their application was very limited.

Next, was this fund of knowledge really great? The words describing the inventions may have the same denotation as given them today, but the connotation was far different.

For example, take the word "gear." The ancient Greeks had the theory of the cycloidal gear tooth, da Vinci shows not only spur gears but spiral gears. Yet few gears were actually used and these generally were pins driven into wooden wheels; all were made by hand, sizes were few and materials were scarce, although the metal gears of Swiss and Italian clocks were just around the corner of time's corridor. The word "gear" today represents a multitude of sizes, several generally used shapes, made of hundreds of kinds of materials on special machines, each of which is the descendant of a long line of inventions, and obtainable by telephone call to the nearest distributor. Let us not be deceived by words; it is true the ancient and the medieval civilizations had gears, but from our viewpoint, or from the viewpoint of the common man of that time, the gear they had was a most inferior thing of most infrequent occurrence, and its effect on everyday life was almost nil. In those days gear meant a single or a very small number of inventions, today the word "gear" means a flood of inventions—as does the name of almost any other mechanical device. Out of this selection any common man can provide for his needs, usually already incorporated within one or more of the still hundreds of other inventions he desires, and which are complete and on the sales counter.

The history of another invention will also illustrate the difference. The rifle was a fifteenth-century invention, and was dutifully made for the king's armed men in a certain country until the nineteenth century in pretty much the same way its inventor originally made it. In the seventeenth century certain of the gun makers fled their country and settled in the Colony of Pennsylvania. In order to sell their guns, these gunsmiths had to keep changing and improving them to meet the needs of their customers, the common men. So when the American Revolution came, the rifle, thus improved, had a great part to play in winning the war. Its superiority was proven even when the Colonial riflemen were confronted by the only European troops carrying the rifle, made in accordance with tradition and the directions of their kings.

But this wasn't all. The Revolution brought the American patent system, and the rifle stepped into the flow of invention to give us not only improved weapon after weapon but also helped to induce interchangeable manufacture, mass production, the machine-tool industry, much of the chemical industry, and thousands of products.

In this steady stream each invention in turn begets other new and useful inventions; thus a new design may require a new material to be compounded, and the new material make possible other inventions.

THE MARKET OF 1400

Had you or I lived in those days, that is, before the year 1400, and had we come upon an invention, not necessarily conceived by either of us, I am certain that before exploiting it we would have made an attempt at what we do in such circumstances today—that is, make a market survey. And what would we have found?

Our market survey at the very outset would have stumbled upon a fact hard for us to believe, but nevertheless one of the greatest obstacles to progress of any kind that ever existed. That most stupid fact was that no man had a natural right to go into business. The free enterprise system just didn't exist. All business was owned by the sovereign. He could, and sometimes did, operate it himself. From the earliest times, however, state-operated businesses have been unprofitable—even the salt mines of ancient Attica, owned by the Athenian state had finally to be operated by private contractors—so the sovereign most usually sold or gave his monopoly to a man or a group of men. To engage in a business was a state-conferred privilege.

Jail or even head-felony awaited us were we to try to sell our invention to others than the holders of the monopoly, so automatically the multitudinous common man was eliminated as a sales prospect.

The usual ancient and medieval holders of these monopolies were guilds chartered by the crown, and given wide powers over the public, limited only by the product or service named in the grant. The guild had absolute authority over the making, selling, and even use of its product, and controlled rigidly the activities and even the private lives of those engaged in the trade. For example, the Blacksmiths' Guild in 1605 fined and even expelled members because of their holiday lady companions. This latter deprived them of their means of livelihood—almost a death sentence.

So if we are to sell our invention we must go to our only customers, one, or in the most fortunate event, two or three guilds. But what sales argument could we use to them?

As the guild was a monopoly, why should it improve its product or reduce its prices? The answer is, it didn't, and all through history prohibited invention among its members. For example, a cooper in Florence in 1286 complained of being boycotted by his guild because he bent the staves for his barrels by means of water which, he claimed, was an advantage to all who bought them.

Similarly, invention could not come in from outside the guild because of its monopoly. In this fashion invention to benefit the common man was almost completely prohibited for centuries.

As an example of what were considered perfectly natural methods of control under monopoly, which are not completely forgotten today, was the limitation of the number of admissions to membership in the guild. In fact, for centuries there were only two recognized ways of getting into a trade: First, by properly selecting your father, so as to be his first-born boy and inherit his guild membership; secondly, by apprenticing yourself to a member of the participating guild of the craft you desired, which master should have the further qualification of having no sons and only one daughter, preferably homely. Amongst the few authentic records of William Shakespeare was his affidavit in such a case.

What became of the other boys? There wasn't much chance for them. Either they went into the king's army, or his navy, or his merchant marine, or crowded onto the already overcrowded farm. In any event, they didn't make much of a market for inventions of any kind. Labor was cheap, and forced labor because of conviction for the inevitable poaching or private robbery cheapened it further. And, finally, the king's victorious arms would be counted upon to bring in captives for a short-lived slave life at the harder work, such as the galleys.

Where, then, was our market? The sovereign or his immediate subordinates, charged with following out his directions.

What kinds of invention would the sovereign buy? Only two: expensive toys, including the means of black magic, which were very limited market-wise, or aids to the less-limited demand of his usual occupation, war.

Aggressive war was the only way he recognized as having a chance to improve the standard of living of a favored few of his subjects who might survive the war. They would receive direct or indirect benefit by the loot, and the hardest work of the state could be performed by enemy personnel suddenly become slaves.

As the result, inventions aiding war have ever been pushed at a somewhat higher rate because there usually was some sort of market for them. An inventor could even travel from one prince to another offering his wares, and it may not be wholly coincidence that Italy, the small nation of many independent princes and therefore many prospects for inventions, forged ahead relatively fast during the Renaissance and was the home of the da Vincis, the Cellinis and their many contemporaries. Nevertheless, the lack of a truly universal common-man market made this rate of pushing war material approximate zero when compared with our own rate of progress. This situation explains the reason for the universal practice of keeping inventions in absolute secrecy, when they were of a nature that permitted that type of exploitation. If not checked, some present day trends in American legislative and judicial attitudes will result in a return to the use of secrecy instead of public disclosure.

And so in the Middle Ages we find our average European man starving for invention, with inventions all about him! All for the reason that there was no way of making him the market for inventions! The educated and many of the elite knew about these numerous inventions, at least those on paper, but their wide natural market was forbidden by law.

The more civilized states had the machinery well oiled for promulgating promptly new laws forbidding invention. Even when the invention had been adopted for centuries

somewhere else, it would still be squelched immediately it showed itself within the well-ordered economy of a civilized State. For example, trousers, a barbaric invention, were forbidden in Rome by decree in 397 A. D. and again fur garments received the benefit of such a decree in 416 A. D. Moreover the blight of Roman law accompanied by Roman arms stamped out invention in the conquered peoples, as for example the automatic harvester of Ancient Times, so well described by Pliny and Palladius.

Many authors believe that in the tenth and eleventh centuries waves of invention came from the east. More recent investigations indicate that many of these eastern inventions were in reality western-born, were taken to the east in search of market, and then forgotten in the land of their origin.

INCENTIVE FOR INVENTIONS LACKING

This calls our attention, however, to the fabulous Saracen Empire, that flourished from the sixth to the fifteenth centuries, which collected and preserved the arts, sciences, and the machines of the west and Far East and then gave them back to Europe long after their origins had been forgotten. Comparisons of the Saracen and the American civilizations show many similarities in scientific and mercantile achievement, and what is most important, individual freedom. This last is stated to be the reason for the greatness of both nations.

Although the Saracen Empire with its freedom to use invention was a great advance over the Roman Empire with its prohibition of invention, yet it lacked the one essential preservative of a civilization: A method of ensuring a perpetual steady flow of invention. It was this lack that has caused the breakdown of the great empires of the past, for it is only by perpetual flow of inventions into daily use that a people in a widespread nation can keep in strong daily contact and bonds of economic and military defense be forged.

For example, it is often stated that steam railroads alone made the United States possible. Others have pointed out that had the Roman Empire a system of steam railroads, it could have survived the onslaught of the barbarians. Why didn't Rome have the steam railroad? Steel, concrete, wood, bronze were available; wheels, bridges, and many other inventions and needed skills were present. Hero of Alexandria had a small steam turbine in operation. Hero could by law, however, use the turbine only for purposes approved by his own guild, the priesthood. He also apparently valued his head. So the power to save Rome was restricted by superior planners solely to the task of making an idol's face grimace.

Missing was that great flow of invention needed to produce not one type of each of the essential components of a railroad, to adapt it to all the varied uses even then needed to make the railroad a success, and to induce the thousand other enterprises based on invention needed for improvement and further adaptation.

Similarly, the Saracen Empire, a great improvement over the Roman in the matter of individual freedom, nevertheless missed the great flow of invention, for there was no method of inducing it.

Applying our standard of comparison, the existence of slavery, we find it in both Roman and Saracen Empires.

ATTEMPTS TO PROVIDE AN INCENTIVE

Changes come gradually, as a result of conflict, and I must not leave you with the impression that struggles against the idea of a regimented sovereign-owned business life did not occur. In fact, there was a nearly continuous struggle with little success until the reign of James I of England whose jurists began to rule for the first time that the guild's regulations could not be applied to nonmembers of the guild. This was based upon Queen Elizabeth's proclamation of November 26, 1601, and was indeed a most revolutionary doctrine, for it took away most of the incentive to belong to the guilds and they rapidly disappeared as an economic force.

More particularly as regards innovations including invention and the attempt to provide an incentive for them, sporadic outbreaks against the prevailing apathy took place from time to time.

There was the Greek city state of Sybaris, founded 720 B. C. and flourished for 2 centuries, which, it has been said, "gave patents of 1 year's duration to cooks and confectioners who could concoct new tasty dishes or confections."

Edward III in 1331 A. D. gave letters patent to John Kempe, a Fleming, to come to England, to establish a weaving industry and to John Delft a patent to bring clockmaking to England, probably water clocks. Henry IV in 1440 gave patent protection to John of Schiedame to bring salt making to England.

Edward III was really 600 years ahead of his time. He issued a patent for the philosopher's stone, to transmute lead into gold. What he knew not was that the invention he wanted could not be obtained at a single jump—it could come only at the triumphal climax of a steady flow of inventions, great and small.

During Elizabeth's reign, the granting of time-limited monopolies to induce enterprisers to bring new trades into her realm began to be extended to inventors for inventions—the very beginnings of the small trickle that 3 centuries later was to become the perpetual steady flow so necessary to real mechanical progress.

This novel step was taken with great caution, and the age-old methods of prohibiting progress remained in nearly full power during her reign. For example, the Rev. William Lee, an Anglican curate of a little town near Nottingham, England, moved by the plight of his shivering parishoners, invented and built a knitting machine about 1589. The chartered guild of London Knitting Women prevailed upon Elizabeth to ban the machine for it might throw many of their members out of work.

(Parenthetically, in 1753 the statutes of the stocking makers were abolished as "against all reason and opposed to the liberty of English subjects.")

Elizabeth's most momentous triumph was due to her father's acceptance of an invention centuries old and yet trampled out by Rome and all forgotten save in the East and Far East, and her management of it. This invention placed in the dramatic naval action of the ages, freemen with the resurrected invention on one side, facing on the other side the Spanish Armada, at the oars of which were slaves in chains. I refer, of course, to the fore and aft rigging, which enabled ships to be tacked effectively against the wind, eliminating the galley slave. It increased the average speed of ships, and it reduced the size of the crews, thus increasing the range of ocean voyaging. It also created truly naval warfare, distinguished from the previous type which was merely land warfare on water.

Henry VIII is said to have been sold this idea for his navy by Shipwright Fletcher of Rye, but Elizabeth's volunteer navy of freebooters that shattered sea slavery were freemen who could and did use any rig they wanted. They chose the fore and aft for use primarily on the Spanish Main.

During the reign of the James I, already mentioned, a great movement against monopolies of every kind culminated in the statute against monopolies in 1624. All monopolies were abolished, except letters patent to inventors, even then apparently recognized as being one of the very few beneficial to society as a whole. (In passing it may be noted that under James I the term of a patent became 14 years, a term which lasted 250 years.)

Again may we remember that the Constitution of the United States provides: "To promote the progress of science and useful arts, by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries."

The general ideas held by the free Americans of that day were well summarized by Thomas Jefferson who wrote from Paris in 1787, "Every discovery which multiplies the subsistence of man must be a matter of joy to every friend of humanity." In a letter to Oliver Evans in 1807 from Monticello, Jefferson wrote, "Certainly an inventor ought to be allowed a right to the benefit of his invention for some certain time. * * * Nobody wishes more than I do that ingenuity should receive a liberal encouragement."

To summarize, in civilizations of little individual freedom, inventions can rarely be made, and can be introduced from other lands only by governmental permit, and then not primarily for the benefit of the common man. If made, inventions rarely develop beyond the sketchbook. In those most rare incidents that they do they are very limited in their application. In civilizations of much individual freedom, inventions can be used, but their advent is only occasional and then they are used almost exclusively for the elite. In civilizations which have not only individual freedom but also the means of inducing a perpetual steady flow of invention, the benefits of invention reach practically the entire population. The only means yet discovered for inducing this flow is the limited time protection of a patent system similar to the American. The multitude of separate inventions thus induced soon join to produce a steady stream of mechanical progress which, excepting for short termed monopolistic small tributaries, is entirely in the public domain.

Great as are the material everyday benefits the common man receives from this induced flow of invention, and the freedom of the inventor or his agent to exploit each invention, the greatest is the self-perpetuation of the society permitting and encouraging them. We have seen empires and nations come and go, none had this induced flow of invention. We ourselves have passed through great crises, individual freedom and this induced flow of invention have been of the utmost value in saving us. The American patent system is the only true inducer of the invention flow so far discovered. Its abolition or emasculation, therefore, is not merely a matter of slowing down our material benefits; it is actually a step toward national suicide.

Air-Mail Payments

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1949

Mr. KENNEDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of February 25, 1949:

BILL ASKS PLACING AIR MAIL ON OWN—KENNEDY, CITING HOOVER BOARD, WOULD SEPARATE SUBSIDIES FROM SERVICE PAYMENTS

WASHINGTON, February 24.—Representative JOHN F. KENNEDY, Democrat, of Massachusetts, introduced a bill today to separate air-mail payments from the subsidies now paid

to certificated air lines as part of this compensation.

He asked that separate accounting be kept of the different types of payments, to show which is which in Government payments now involving about $100,000,000 a year. Under current procedure, the Civil Aeronautics Board establishes the air-mail compensation for each certificated air line and directs the Post Office Department to write the checks. The CAB determines this rate on the cost of maintenance of required service in comparison with the normal revenues available from passenger and other services.

"The Hoover commission," Mr. KENNEDY said, "is endorsing the principle of separating subsidies from actual payment for services rendered in carrying the air mails, and I, having been preparing for some time legislation covering this point, am naturally pleased at this endorsement.

TOTAL IS $100,000,000 A YEAR

Since the combined expenditures total about $100,000,000 a year, it is high time a good system of accounting was set up, so we will all know how much is subsidy and how much is air mail.

Representative KENNEDY introduced six measures relating to civil aviation today. They represented broad suggestions for revamping current supervision and encouragement of airline development, as well as proposals for strengthening the air services as arms of national defense.

One of the bills proposed revocation of all taxes on transportation and communications, paid alike by the airlines and surface carriers, so as to take this impost from fields that Mr. KENNEDY considers vital to our defenses.

Two of the bills would provide both for lower air postage rates and for postal economies through special contracts for the carrying of bulk air mail.

Mr. KENNEDY proposed that the air mail letter rate be returned to 5 cents, from the present 6. As for bulk carriage, he proposed authorizing the Postmaster General to make special arrangements for the transportation in air commerce, at low rates, of large shipments of air mail and parcel post, where such arrangements would result in savings to the public or to the postal service.

BILL ON OCEAN CARRIER RATES

Another bill, which would carry out recommendations previously made by the President's air policy commission and the congressional Air Coordinating Committee would authorize the Civil Aeronautics Board to regulate the rates of air lines operating abroad from the United States, as it now regulates the rates of domestic carriers.

The final proposal in Mr. KENNEDY's series would relieve foreign air carriers of the payment of overtime rates, as at present, to customs officials who meet airplanes arriving at United States airports at night or on week ends, an item, he said, that ran to $800,000 a year.

Mr. KENNEDY said that his air-line legislative program was based on suggestions from representatives of all interested parties in aviation as well as from private citizens.

Must We Hate?

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks, I am including an article by Mr. Milton Mayer which appeared in the March 1949 issue of the Progressive. This article carries a message for all of us:

American democracy has just been saved—again—by the American Veterans Committee, the American Jewish Congress, the Jewish War Veterans, the Antidefamation League of the B'nai B'rith, and the National Council of the Arts, Sciences, and Professions. May their tribes decrease.

The enemies of American democracy consisted, this time, of two aging male musicians, one of them, Wilhelm Furtwaengler, the third, or perhaps second, greatest living conductor, the other, Walter Gieseking, the third, or perhaps second, greatest living pianist and by all odds the greatest living interpreter of Mozart and Debussy. Their weapons consisted of a wand and a piano. They have both been repulsed by the saviors of American democracy, and they will both continue to perform in France and England, where they are welcome.

The French and the English suffered less, presumably, at the hands of Furtwaengler's and Gieseking's Nazi friends than we did. Or maybe France and England are antidemocratic and pro-Nazi. Or maybe our democracy is so enfeebled that the invasion of a conductor and a pianist would destroy it. Or maybe the United States has been made a fool of by the AVC, B'nai B'rith, et al.

Furtwaengler, the conductor of the Berlin Philharmonic since 1922, was invited to conduct the Chicago Symphony Orchestra next year, and he withdrew his acceptance after some of the blood drinkers listed above threw the whole book of Nazi horrors at him. Gieseking arrived to conduct a sell-out concert tour and left with a "Vive la France" when the pack turned on him.

Neither of the men was a Nazi, both of them had been cleared of nazism by the American military government fumigators, and both of them had been certified as harmless by the State Department. The testimony that Furtwaengler actually saved the lives and the freedom of Jewish musicians under the Nazi heel was uncontradicted.

But let's say they were both Nazis, just to make it easy for the blood drinkers. The American State Department and the American military government are both so asinine in these matters that we should not be impressed by their seals of either approval or disapproval. Let's say that Furtwaengler and Gieseking, instead of being dumb, compliant, and weak-kneed musicians, were full-blown Nazis who actually thought that Hitler was Wotan and who condoned the unspeakable bestialities committed by the Nazi regime.

What then?

What did we gain by letting the blood drinkers repel them from our shores, and what did we have to lose by letting them in, the one with his wand, and the other with his piano?

In the gain account, I find not one item. Not one. Two Nazi musicians—we're saying they're Nazis, mind you—who do not make speeches could not in any way imaginable have injured American democracy, American morals, American freedom, or American culture. The war is 3 years over, the Nazi regime has been destroyed and deracinated, insofar as force can destroy and deracinate, and Furtwaengler and Gieseking are Nazi musicians who were musicians before they were Nazis and were never engaged in any other occupation than music during the Nazi regime.

In the loss account, I find, first, that American democracy has testified to the world that its fabric is weaker than that of England and France; second, that America has repudiated both its Judaic principle of equal justice before the law and its Christian principle of redemptive love; third, that those Americans who wanted to hear it have been deprived of hearing some of the best music in the world, and that all of America has been deprived of a serious contribution to its culture; fourth, that, by treating as monsters two Germans who are adored by their countrymen, America has played into the hands of the Russians.

This is the gain-and-loss account in the Furtwaengler-Gieseking matter, and none of the blood drinkers listed above can, nor will any of them try, to maximize the gain or minimize the loss. What they want is more blood, and whether or not a liquid diet is good for them they are too drunk on blood to care.

Instead, they will reply by reciting the list of unspeakable bestialities committed by the Nazi regime, under which Furtwaengler and Gieseking were compliant musicians, and, while they deny they hate the two musicians for being Germans, they will crucify them for the same crime, namely, weak-kneed compliance, that was committed by nearly all the Germans in Germany.

Furtwaengler and Gieseking were not heroes, though there may actually be a trace of heroism in their refusal to join the Nazi Party. Germans are not heroes, although there may have been traces of heroism in untold millions of them who, while they did not dare open their mouths, dared to smile a friendly smile on the open street at Jews whom they had loved. Americans are not heroes, though there may be a trace of heroism in the feeble protest of millions of them against the bestial atrocity of Hiroshima.

Men, as the Reverend Donald Harrington said on this subject in the Community Church of New York, are not heroes. Would that they were. Would, if we would that others were, that we were first.

The spokesman-in-chief of the blood drinkers, just for the record, is Walter Winchell, the darling-in-chief of the original and persistent native American Fascist, William Randolph Hearst. When American democracy is saved by Winchell, the rights of the workingman will be saved by Pegler.

Apart from Winchell—the most scurrilous figure in journalism—the blood drinkers appear to have found few confederates in their effort to keep the wheel of hate turning, with all of mankind chained to the rim. Newspaper opinion—such as I saw—was almost uniformly against the pogrom. The New York Herald Tribune was eloquent, and the Chicago Daily News rose to mournful beauty:

"Many Germans who were not vicious men acted like Furtwaengler. Sometime, the rest of the world must reestablish relations with them. It is important that those who can be brought actively to share in the common culture of civilized humanity should do so. If they will share in its common political and ethical traditions, so much the better. It will not be wise always to cry 'untouchable' to those who are willing."

The single disappointment among the newspapers I saw was what once was unquestionably the Nation's greatest newspaper, if the Christian Science Monitor is excepted. It was saddening to see the St. Louis Post-Dispatch say, in illogic no less than in illiberalism: "And to give him [Gieseking] the freedom of the Nation's concert stages is to accord him a personal eminence and honor that go beyond his status as a piano player."

About once every 10 times, the world's most frightful newspaper, the Chicago Tribune, is right. And when it is, it is superbly right. In answer to the letters presenting the particular policies of hate of the American Jewish Congress and the Anti-Defamation League, the Tribune made the repeated point that the Furtwaengler-and-Gieseking-haters should be free not to patronize them while the music lovers should be free to patronize them. If the American people agreed with the haters, they would keep away from

the concerts, and the two musicians would starve.

The blood drinkers weren't taking any chances on the American people. Carnegie Hall was sold out for Gieseking's first concert—which was canceled 2 hours beforehand—and Orchestra Hall in Chicago would have been sold out for Furtwaengler. The blood drinkers didn't care whether the American people agreed with them or not. They did not want democracy; they wanted German blood to drink.

The Anti-Defamation League, whose single function, so far as I have been able to discover, is defamation, explained to the Tribune that the league had gone to work on Gieseking out of a sense of duty. The Tribune asked: "Duty to whom?"

The question went to the heart of the matter. And of course it went unanswered, because the answer is, "Duty to hatred."

II

Now, we can understand, without justifying, the hatred that Artur Rubenstein has for his fellow Germans, and his refusal to appear in concert with Furtwaengler. Five members of Rubenstein's family were murdered by the Nazi regime. We do not expect him to behave normally toward his fellow Germans for a long time to come, if ever. What is more, he and the rest of the Jewish soloists who said they would not appear with Furtwaengler are exercising the same right as those Americans who, for any reason or for no reason, would not attend a Furtwaengler or a Gieseking performance. If a Jew does not want to associate with a German in activities that do not involve the common good, there is no reason why he should.

But nonassociation is not the same thing as segregation, and segregation is a form of p rom. The Jews have been on the receiving end of so many pogroms that you would think they would not want to have anything more to do with them, but the smell of one's very own blood seems, in this instance, to whet the appetite for another's. And so they keep the wheel of hate turning, ignoring the fact that the one way not to save the Jews—or any other small minority—is force. What Morris Cohen said long ago is still true, "Bashing in heads is for the 96 percent, not for the 4 percent."

If you ask the American Veterans Committee, the Jewish War Veterans, the American Jewish Congress, the Anti-Defamation League, and the National Council of the Arts, Sciences, and Professions whether they want to keep Nazis out of this country, they will say "Yes." If you ask them whether they want to keep Nazis off the United States Government pay roll, they will say "Yes, indeed." But if you ask them why they don't get up on their hind legs to protest the importation of Nazi scientists and engineers to work on bombs and rockets for the United States Army, they will tell you that is different. Nazi musicians produce music, but Nazi scientists and engineers produce bombs, and bombs and rockets produce blood.

The doctrine in the counterpogrom against Furtwaengler and Gieseking combines the pernicious fallacy of collective guilt, the fallacy on which the Nazis slaughtered the Jews, with the pernicious infantilism of revenge. When the unspeakable bestiality of the Nazi regime has been avenged on all the Germans where shall we be?

The wheel of hate was turned at Potsdam; then, in spite of MacArthur's great words on the *Missouri*, at Manila in the hanging of Yamashita, then at Nuremberg, and then at Tokyo. In our duty to hatred, we manufactured a fraud called international law, in the prosecution of which we have thrown out the window the very first principle of Anglo-Saxon law, namely, that no man shall be a judge in his own cause; the Constitution of the United States, which forbids the passage of an ex post facto law; the Declaration of Independence, which asserts that Government rests upon the consent of the governed; and, just in case it, too, should turn out to be an American document, the Holy Bible, which enjoins us to forgive those who trespass against us.

The tragedy of the Jews is their imitation of the gentiles, who have sacrificed Christianity and the Constitution to the duty to hate. A Jewish musician like Yehudi Menuhin, who pleads for Furtwaengler, goes unheard and himself goes into the blacklist of the pretended Jews who will not remember that Job asked God to grant him consideration for the fact that he never gloated over his fallen enemy. The Jews learned the counterpogrom from the gentiles. The gentile answer to Chancelor Hitler's Nuremberg laws was Justice Jackson's Nuremberg laws, both based on force without justice. In this perpetuation of hatred, in this increase of sorrow and suffering, in this Hitlerism turned inside out, the American gentiles who engage in destroying Furtwaenglers and Giesekings are destroying American liberty and love, and the Jews who join them are destroying themselves. When American liberty and Christian love are gone, then the Jews are finished.

III

Some years ago I read an article in the Saturday Evening Post which said all this better. I've forgotten its title and the name of the author, a Jew himself, who was trying to persuade the Jews not to sink to the level of the gentiles. But I haven't forgotten the closing lines of the article, and I pass them on to the American Jewish Congress, the Jewish War Veterans, and the Antidefamation League, who seem to have missed that issue of the Post:

"The Jew who wants to be saved cannot wait for the gentiles to turn Christian. The Jew who wants to be saved will have to save himself. And the suddenly crowded temples won't save him. The denouncing of Coughlin won't save him. The destruction of Hitler won't save him. All these fallacious faiths are based on the grand fallacy of adjustment. The Jew will be saved when he saves his own soul."

A Clevelander Considers G. Washington, Father of His Country, and Suggests He Would Not Know His Erring Child Headed Down Hand-Out Boulevard

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1949

Mrs. BOLTON of Ohio. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an article by one of Cleveland's most important and able columnists, Philip W. Porter:

[From the Cleveland (Ohio) Plain Dealer of February 22, 1949]

(By Philip W. Porter)

George Washington had another birthday this week, and instead of listening to the usual radio and luncheon guff about the father of our country, I took a half hour out to meditate sourly on what old George would think of this country today (and what certain of his countrymen would think of George). He is probably churning in his grave over these phony womb-to-tomb security panaceas, particularly the latest little gem at which Mr. Truman gave us a look on February 22.

Of course, to start with, Washington today would be discredited in Washington. He was a man who had accumulated some property, a fair amount of it, including a country place called Mount Vernon. He had made some money and also married some. That would make him a glutton of privilege and put him in the doghouse of Senator PEPPER and the CIO. He would be a proper target for insult.

Having been a successful general, he would also be fair game for ridicule, and of course could not serve in a cabinet or as an ambassador. To the column writing snipers who extol the hand-out state, he would be big brass, and undoubtedly in league with Wall Street. (As a matter of fact, I seem to remember that a banker, Robert Morris, at one time financed the American Revolution for a time, all by himself.)

But let's skip that and get back to what George might think of some of the things now being advocated as national policy by his successor as the great white father, Mr. Truman.

TAXES PROVOKE WAR

Mr. Truman is advocating higher taxes, for instance, higher pay-roll taxes, higher income taxes. Washington and his associates went to war against King George because of unjust taxes—the stamp tax, tea tax, etc. They refused to pay, and finally rebelled outright.

Mr. Truman is advocating rent control. Washington and his contemporaries believed that the owner of a house, bought with his savings, had a right to get fair market value for it, if he chose to rent it. He would have shuddered at the idea of a Government clerk fixing the price, and an unevictable tenant living in it indefinitely at the same rent, as if he actually owned it.

Mr. Truman is telling people they can get free medical and dental care if the Government socializes medicine and dentistry. Washington wouldn't have understood this at all. In his day, the Federal Government merely coined money, carried the mail, maintained a small Army and Navy. Herding doctors into line and fixing their fees was not considered a field of government.

Mr. Truman is giving people the idea that when they reach 60 or 65 the Government is under an obligation to support them. In Washington's day, citizens had the quaint idea that people were supposed to provide for their own old age, and if they hadn't saved up enough, their kids would take care of them.

PITCHFORKS FOR BRIBES

Mr. Truman thinks the Government should guarantee the prices of crops to farmers. In Washington's day, a Government agent who would offer any such bribe—or suggest that an independent farmer restrict or control his acreage—would have been driven off with a pitchfork.

Mr. Truman has advanced the idea, which many unthinking people have fallen for, that the Government is a crutch for citizens to lean on, a big cornucopia from which to extract dollars, without any particular sense of obligation to furnish those dollars. He has advanced the parallel idea that the Government has the right to tell its citizens in peacetime at what prices they can buy and sell and how much profit to make. He apparently thinks of Government as primarily the manager of citizens, rather than their servant.

This would have been a strange concept to Washington—and to Jefferson, who wrote the Declaration of Independence. (Incidentally, he, too, must have been an evil fellow, for he accumulated property, including a big home, Monticello, on a hill in Virginia.) They and their contemporaries regarded government as a simple device for

making, enforcing, and adjudicating a few laws which would permit the citizens to enjoy the liberty they had risked their necks to gain from the British King. They didn't conceive of it as a cure-all, a vast, paper-shuffling Santa Claus, giving jobs to millions and interfering with and arranging the lives of other millions, printing rubber dollars, and promising the moon to the shiftless and the unhappy.

Perhaps this comparison is fantastic; the 13 small colonies of Washington's day are a far cry from 145,000,000 industrialized Americans today, and many new problems have arisen. Nevertheless, the citizen of 1949 had better think more about the freedom and self-reliance of his forefathers, and less about trying to get something for nothing, or we're headed for a social and financial crack-up.

Under the sleeping pills of the hand-out state, the boy who once read Horatio Alger, Jr., and had visions of rising from bootblack to bank president, today aspires to a civil-service soft snap at 25, a pension at 45, and free mush at 65.

Public Housing

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1949

Mr. RODINO. Mr. Speaker, the question of public housing is one which affects not only the people of the district which I am proud to represent, but all the people of America, as well. During my campaign for election to Congress, I brought forth before the people of my district the frightful situation of housing. The people elected me believing that I would lend my voice in support of a program for public housing.

We cannot lose sight of the fact that in these great United States of America, many of our people live in horrible slum conditions, because of the inaction of our Government.

Mr. Raymond Foley, of the National Housing Authority, has stated that the city of Newark, of which I am a resident, suffers more from slum conditions and improper housing, than any other city in America, with the exception of Boston. It is indeed a frightful situation for a city with a population of over half a million people.

The honorable mayor of the city of Newark, Vincent J. Murphy, recognizing these conditions has been fighting for a program of slum clearance and public housing. On February 17, 1949, he submitted the following statement before the House Senate Banking and Currency Committee, I believe that the statement is certainly enlightening and should prove conclusively the need for slum clearance and public housing. The statement follows:

I am appearing before you today to urge the adoption of a program of low-cost housing—a program large enough to permit our lower-income families to live in decent surroundings, and to enjoy some of the benefits that are associated with what is known as the American standard of living.

During the recent war, it became clear that far too large a percentage of our American youth were physically incapable of serving their country in the armed forces. There were undoubtedly many causes of this most unfortunate condition, which only recently has been strongly emphasized by the amazing percentage of physical rejections in the present draft. But it must be plain to anyone that the major cause is the existence of our city and rural slums, and the resulting crime, vice, filth, and disease. No one truly interested in the welfare of our people can close his eyes to this shameful situation or fail to take the necessary steps to correct it.

Although it is very well to be concerned about our system of private enterprise and insist that it must continue, we must realize also that private enterprise is not a one-way system, dedicated solely to economic profit.

I believe in private enterprise. I hate communism and dictatorship of all kinds, but I believe that the system of private enterprise, with all its great advantages, carries with it certain definite obligations. Society owes obligations to the people who made the system of private enterprise possible—the working people, without whose work, free enterprise would not exist in any form. In our system, each group is dependent upon all others, and through their mutual representative, the Government, they owe a moral, as well as economic obligation to meet a proven need for which private enterprise has been unable to provide. I believe, and I hope the members of this committee will agree, that every American who works for a living is entitled to raise his family in a decent home, in decent surroundings, and with decent facilities to maintain health. But it is a fact that millions of our people are unable to do so, first, because there are not nearly enough decent dwellings, and second, because the cost of building these dwellings is too high for the average American to pay.

In this country, at this time, and especially in our industrial cities, an unbalanced economic condition has developed. Too many of our people are denied their right to enjoy the American standard of living because the increased cost of housing is beyond their ability to pay. That is true in all of our lower and middle class income brackets. Just think of the man and his family who barely are existing on the wages paid for unskilled physical labor. The day laborer, with his pick and shovel, is just as important to the success of the industry that employs him as is the president of that industrial corporation. Can you imagine the feelings of that laborer earning $30 a week, when he reads in the daily newspapers that private enterprise is willing to provide low-cost housing at a rental return of $20 per room, provided they get tax concessions from our municipalities? That is what they are calling low cost in my city—yes, and in the entire metropolitan area of New Jersey and New York. Private enterprise considers that it is doing the municipality a favor by providing this low-cost housing at $20 per month per room. How can the average worker afford to pay $80 per month for a four-room unit? His earnings in thousands of cases can justify no more than $25 a month.

I do not believe that the American people will permit this condition to continue.

But entirely aside from the moral point of view, our failure to eliminate the slums and provide decent low-cost housing is a criminal economic waste as well.

Private enterprise, in the final analysis, pays the tax bill for our Government whether that government be national, State, urban or rural. Private enterprise, therefore, is paying millions of dollars a year to continue the slum conditions and the attendant vice, crime and disease. It is paying far more than it would cost to remove these conditions and create the satisfactory living conditions that would make our American working people comfortable.

Let me give you some figures to prove this. These figures were gathered in the city of Newark, N. J., a city that Mr. Raymond Foley, head of the National Housing Authority, has testified suffers more from slum conditions and improper housing, than any other city in America, with the exception of Boston. Newark is the largest city in New Jersey, having a population of almost a half million persons—with another 1,000,000 living in its immediate suburbs.

Newark is primarily an industrial city because of its great transportation advantages, and its immediate access to the great markets of the world.

Newark is also an old city—one of America's oldest. In fact, it will be 283 years old in May of this year.

It has a cosmopolitan population, which, because of the industrial character of the city, has a relatively low average income.

It is a city of renters. As a matter of fact, the studies on which we based our official master plan, show that there were 118,550 dwelling units existing in Newark in 1945 (there has been little or no change in this figure up to the present time because what little housing construction has taken place in Newark in the last 4 years has been neutralized by housing destruction through fire and other causes). Only 17.3 percent or 20,209 of these dwelling units were owner-occupied. In other words, for every Newark family owning the dwelling unit in which they live, five Newark families are renters.

Sixty-eight and seven-tenths percent of our residential structures are over 30 years of age, 27.6 percent having been built before the year 1900.

Thirty-eight thousand four hundred and twenty-three, or 30.8 percent, of all Newark dwelling units are below the minimum standards for health and decency, because they either need major repairs, or lack private baths, private toilets, or private water supplies.

A real property inventory made by the New Jersey State Housing Authority in 1935, found that 10.9 percent, or 4,718, of Newark's residential structures were unfit for human occupancy. Those figures were compiled 14 years ago. The situation has grown worse since that time.

In 1940, the average monthly rental for the entire city of Newark was $33.36 per month. Nineteen percent of all housing units rented for less than $20 per month, while 31.6 percent rented for between $20 and $30 per month.

That our people cannot afford to pay the rents required by private enterprise for decent housing is proved by the fact that an average of only 244 dwellings have been constructed annually in Newark since 1929.

Stated in another way, 22.2 percent of our 1940 population lived in 26,000 substandard dwelling units. Those figures are even higher today. Approximately 1,200 acres of residential housing in Newark must be demolished and entirely rebuilt. This situation exists in a city that is one of America's leading industrial cities, and vitally important to our national economy. Our manufacturing importance is so great that the city of Newark can be said to be indispensable to any war effort or national emergency. We cannot continue as a great industrial center unless we can continue to supply large numbers of skilled, semiskilled, and unskilled labor to our factories, our foundries, our mills, and our service industries. Such workers simply do not, and cannot come from slum areas.

Let me add a few more facts as proof of the present economic unbalance. In 1940, the last official census year, we had 116,550 families in Newark; 6,870 of these families had an earned income of less than $1,000

annually; 17,850 families had an annual income of between $1,000 and $1,500; 40,510, the largest group, had an income between $1,500 and $2,000 annually. These figures mean that 56 percent of all Newark families had an income of $2,000 per year, or less, in 1940. This condition still holds relatively true today, because while incomes have risen, living costs have increased to an even greater degree. The wage earners have an even greater problem when it comes to the payment of the inflated rentals.

Our Government has done something for us in the way of creating decent living conditions in the city of Newark. It has created, through its public-housing projects, 3,036 living units. But this is grossly inadequate. Not all of these families were taken from slum areas, since not more than 200 of Newark's slum dwelling units were demolished to create this public housing. This was unfortunate, but the slum housing, as bad as it was, was needed for occupancy. In fact, there is still a need for at least 10,000 to 15,000 units.

However, case studies have shown a remarkable result, from both a social and economic standpoint as the result of this public housing. Comparing public housing facilities with families still living in slum areas, it was found that contagious diseases in public housing amounted to 114.2 per 1,000 children under 15, whereas in the slums, the ratio is 158.8. Tuberculosis, per 10,000 persons, from 15 to 40, is 29.2 in public housing, but 58.8 in the slums. Crime, vice and truancy all show comparable decreases among those fortunate enough to be housed in Federal low-income projects. The human suffering, and loss of life, caused by slum conditions is beyond computation. It is, and long has been, either overlooked or ignored by too many of our leaders. Somehow they do not seem to overlook as easily the economic waste caused by these slum areas.

May I present to you a pamphlet entitled "The Cost of Slums in Newark," prepared by recognized experts employed for the purpose, under direction of the housing authority of the city of Newark. This pamphlet clearly exposes the human and economic waste resulting from slum conditions in America. There is a wealth of information contained in it, but, briefly, the conclusion reached on page 21 is that the net cost of slums to the city of Newark, each year, is over $14,000,000. This startling figure is arrived at by an analysis of the cost of municipal services in slum areas, and also in the better residential districts. This study shows that municipal services in the slums cost 3.2 times as much as the city revenues derived from the slums, while in the better sections, tax revenues are 2.2 times greater than the cost of municipal services.

Now, I do not say, and I do not believe, that eliminating all of the slums in Newark would mean an immediate saving to the city of $14,000,000 per year. However, it must be clear that if trained experts arrived at such a figure after careful study, then the ultimate savings from slum clearance would be enormous. Even if only one-half of that amount, or $7,000,000 per year could be saved, in Newark alone, it could, itself, on the basis of bonds issued at 2½ percent interest return, over a twenty-five year period, provide about $100,000,000 for slum clearance. But the slums must first be eliminated before the city could save that money. With our limited tax base and capacity for the issuance of bonds, we cannot engage in this vast project without your help. If you will give us, and all American cities, a substantial start, our ultimate savings will enable us to finish the job. There is only one possible solution—action at the federal level for the good of all of the people of the United States.

Private enterprise can never build and rent adequate housing for our lower-income groups, even with partial subsidy by the city or the State. Take, for instance, the 24,720 families living in the city of Newark and earning $1,500 or less a year. These families need a four-room dwelling unit, and yet they cannot pay more than $30 per month for such a dwelling unit. Private enterprise in Newark has made its best offer—an offer of low-cost housing at $20 per room, per month, or $80 per month for a four-room apartment. It must be plain that some form of subsidy must be given if these people are going to live as citizens of the United States should live. That subsidy must come from the Federal Government, not only because the Federal Government takes the greater portion of the tax dollar, but also because the basic wealth of the country is its people. The health, morals, and welfare of these people must be protected at all costs.

On the basis of pure economics, it would be wise for our Government to undertake a complete program of slum elimination. On the basis of simple decency, this program should begin at once.

The neighborhood is the proper extension of the home. The State is the natural extension of the neighborhood. The protection of the neighborhood is vitally important to the security of the State. Slums are destroying the neighborhood, and, if not eliminated, will destroy our Government.

I urge you, do not delay too long. The actual work will take decades, but a start must be made now.

Permit me to thank you for the opportunity to appear before you and to express, not only my own views on this vital subject, but views which I know are shared by my fellow mayors throughout the country, as has so clearly been demonstrated, year after year, by the United States Conference of Mayors.

Need To Equalize Annual and Sick Leave for Postal Field Employees

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 1, 1949

Mr. BOGGS of Delaware. Mr. Speaker, I introduced into the House yesterday H. R. 3030, to which I respectfully direct the attention of all Members of the House.

H. R. 3030 provides for an amendment to existing laws, so that field employees of the Post Office Department will be granted annual leave of 26 days and sick leave of 15 days per year.

Mr. Speaker, I have not yet found any Member of this House who does not agree that our postal employees are among the most loyal, efficient, and necessary Federal public servants. By their ability and their devotion to duty they have built for themselves a reputation of which they may all be very proud.

In view of the Nation's respect and high regard for postal employees, it is difficult to understand why our present laws provide only 15 days' annual leave and 10 days' sick leave for postal field employees, while all other Federal civil service employees are granted 26 days' leave and 15 days' sick leave.

Although I have been unable, Mr. Speaker, to obtain any explanation of this difference as it applies to sick leave, I have been told that the difference in annual leave may go back some 40 or more years ago to the time when it was considered necessary to give more extended annual leave to other Federal employees because they needed the additional time for transportation to their homes, whereas postal field employees worked in their own respective home communities. There was perhaps some validity to that line of reasoning in years gone by. However, with transportation facilities being what they are today, it appears to me that no such justification continues to exist.

For the foregoing reasons, Mr. Speaker, I have introduced H. R. 3030, and it is my sincere hope that early and favorable consideration may be given to this bill, so that our field employees of the Post Office Department may enjoy the same rights and the same privileges as all other Federal employees, including departmental postal workers.

Sam Rayburn, the Untalkative Speaker

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, March 2 (legislative day of Monday, February 21), 1949

Mr. JOHNSON of Texas. Mr. President, Mr. William S. White of the Washington staff of the New York Times is a native Texan, born at DeLeon, Tex. He is an able journalist, writing for a great newspaper. On Sunday, February 27, an article by Mr. White about one of the great men of our generation, the Honorable SAM RAYBURN, Speaker of the House of Representatives, was published in the magazine section of the New York Times.

I ask consent to have this article printed in the Appendix of the RECORD for today, because Texans are proud not only of the subject of the article, Speaker RAYBURN, but we are also very proud that Texas has produced such an able and talented journalist to write such an article as Bill White has written.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SAM RAYBURN—THE UNTALKATIVE SPEAKER
(By William S. White)

WASHINGTON.—The time of glory has returned in a kind of bright autumnal sunburst for SAM RAYBURN, of Texas. His new era has made him the most powerful Speaker of the House since the days of "Czar" Joe Cannon, and the most influential elected man in the United States apart from his friend Harry—Mr. Truman.

He stands at the President's shoulder, closer even, in the personal sense, because of old affection and old similarities between the two men, than Vice President BARKLEY. More than any one, excepting only the President, SAM RAYBURN will have it in his hands to determine the general course and record of the Eighty-first Congress.

For him, then, the present is brilliant, but there have been other times, other days.

In the late afternoon of April 12, 1945, a sturdy, blocky, somewhat saturnine man—a not very gentle man upon whose tongue the sharp phrase was ever more at rest than the sweet—wept silently in the Capitol.

SAM RAYBURN, of Texas, who is now doing what no other man has ever done in entering upon the fifth Congress in which he has served as Speaker of the House, had just been visiting with Vice President Harry S. Truman, of Missouri. Mr. Truman had suddenly been called to the White House. Franklin D. Roosevelt was suddenly dead. Mr. Truman hurried out. Mr. RAYBURN, the Speaker in a Democratic Administration that had seemed to many already to be slowly dying in the weight of the years and their bitterness, sat at his desk in the semidarkness. No one thought to turn up the lights.

His heavy and very nearly immobile face was still in the shadows and the only movements upon it were the small and barely visible traces of the tears. He swept them away roughly. For a long time no one said anything at all. Then Mr. RAYBURN hunched his shoulders and, looking out unseeingly into the dusk, he spoke slowly in short, hard phrases as though talking to himself.

There, before friends, in words that are yet under the seal of that room (in which this correspondent was among those present), Mr. RAYBURN took an oath for the future. Its substance was that SAM RAYBURN—southern Democrat and all—had followed Franklin Roosevelt in life, and that SAM RAYBURN would follow Franklin Roosevelt in death.

It was, at least to some of those who stood and looked, a scene with a certain touch of elegy for more than one man. Mr. RAYBURN was in his fourth term as Speaker; already, if one looked at history, his power was running on borrowed time, for another Democratic capture of the House, in the election of the following year, looked most unlikely. The elegiac view was, so it turned out, the correct one—for the time being.

For the months ahead were hard and certainly anything but good for Mr. Truman's shaken leaders and his shattered forces in Congress. And then, in the next year, in November, Mr. RAYBURN took a train with the President to Missouri and there two of the biggest men in the Democratic Party went about clamoring loyally, but with not much heart for the ear of the voters in an hour of foredoomed disaster for the Democrats.

When the returns were in, half a generation of Democratic rule of Congress was swept aside; and swept aside with it, it seemed, was all the future for SAM RAYBURN.

Never a notably sunny man, he surveyed the future without enthusiasm and he would not have accepted the post of minority leader for the Democrats—a dismally far rung down on the ladder from the exalted speakership—but for Harry S. Truman. Accept it he did, however, and with such of those as he could rally from his broken party he stood stolidly in the House for 2 years, fighting with a melancholy skill against a Republican tide that few thought would ebb for years.

He had come, as he himself had used to say, "a far piece from Flag Springs" (the town which was his first Texan home, and the first home of his Tennessee-bred father and mother), but it rather looked now that it was to be back to Flag Springs, in every sense except the most literal one.

Then came one of those recurring miracles which demonstrate the unbelievable vitality of the two-party system and the vitality of such responsible, and able, politicians as SAM RAYBURN—the elections of November 2, 1948.

So SAM RAYBURN, whose sun had been a long time burning in four Congresses as Speaker and who could not in any other profession have been thought to have much of a future—SAM RAYBURN sits at the top again, more powerful and influential than ever. But he is still unhurried, still laconic in speech and manner, still the most unpolitical politician of one's acquaintance.

It is possible that in the rare extremities of the political situation in his home district centering about Bonham, Tex., he has kissed a baby or two. It is conceivable that, in moments of the August heat upon the rural hustings, he may even have "made the eagle scream."

But it is inconceivable that he ever, in his life, slapped a single back, except the back of a genuine friend—all of whom he does not lightly choose nor lightly discard—and it is quite certain that his own back is very rarely slapped to his pleasure.

In this sense he is a maverick in his profession. And even more so when measured against the folkways of professional Texans.

Here is no Texan as that character has been personified of late years to the East by some of the State's more booming extroverts among the oil and cattle and sulphur millionaires. Mr. RAYBURN wears no 10-gallon hat, he wears boots in the privacy of his ranch-farm home when they are sensibly indicated, and only then, and has absolutely no cowpoke drawl. He handles the king's English quite well, in fact, and with an economy that is without parallel in Congress. It is not his habit, even on the most desperate of issues, when he may be speaking for the highest hopes of a Democratic administration in the House, to beat his breast or loudly to raise his voice.

His method, perhaps, is extremely good largely because it is so rare. He does not rise to lead the entire Democratic array in furious action against every little disputed item that comes up, or every "little old ticky bill." Nor does he signal for the heavy artillery every time desultory Republican firing breaks out across the aisle.

He keeps his eye, and his interest, always on the major objectives, the big political issues, and refuses to waste his own efforts and ammunition, and those of his party, in diversionary actions the outcome of which doesn't really make much difference.

Thus, when a major battle does come, he rises quietly in the House and the simple motion has something of the spectacle about it, for it is realized by all who watch that something big is at stake. The commanding general has come forward into the line. The party whips rush out to bring in Democratic stragglers; even the Republicans summon the laggard; mutters run through the Members' lounges and shouts through the press gallery: "RAYBURN is up."

The effect, whether or not the Speaker realizes it, is one of high drama, however restrained, and the House—Republican and Democratic side alike—falls silent as for no other man except the President of the United States.

Mr. RAYBURN then takes a firm stance, either at the leadership table or down before another microphone in the well of the House. For a moment he surveys the House in silence, his face calm but his brown eyes sparkling and darting about. Then, conversationally, he begins to speak, and it is as though he edited the words before they left his mouth. There is no extravagance of phrase; there are no threats or shouts.

"Before you go on here," he may say to his opposition, when the position is difficult, "I want to tell you this—you are about to make a big mistake here, a very big mistake."

In the Eightieth Congress, when the Taft-Hartley bill was before the House, he made, in about two paragraphs, one of his characteristic speeches.

After accusing the Republicans of having given the Members too little time to study a much-revised draft, he went on to this effect:

"I do not know all that is in this bill. Few do, or can. But, from what I know of it, I know that what you are doing here is not fair. The bill is not fair. I'm not going to vote for it."

It may seem odd that so calm a statement could be so effective. But it is not so strange when, for days, one has heard the high and purple exaggeration that is so ordinary to big congressional debates. It is, as the theatrical profession is understood to use the term, a case of underplaying a scene until all the other actors somehow seem trivial or insincere.

It is this fugitive quality of reserve and restraint that makes Mr. RAYBURN so useful a leader in what most people here consider to be—the Vice Presidency notwithstanding—the second highest position in the United States.

This strange quotient of leadership is not really so very different in a constructive legislative politician than in a military commander: The essential is the capacity to suggest a certain withdrawal, if a benign one, from the crowd; an awareness of much that is not immediately before the eye and hand; an ability to cope, with due but not excessive concern for the safety of the participants, with obstacles that are only vaguely formed in the minds of the followers.

All this makes Mr. RAYBURN, in the almost universal judgment of Washington, a vastly effective congressional leader when the necessities of the situation are affirmative, call for forward motion; that is, to pass a bill, or many bills, or a whole program. He is not, one believes, quite so effective when it is necessary simply to hold on in some grim defensive action, although he is not at all bad at this.

He is a man who, in his complex personality, inspires confidence more by what he does not do—the mistakes he does not make—than in what he does do. The power of his silent example is very great. For example, last spring he never said a public word about the movement to bolt President Truman which was then sweeping strongly through the southern delegations in Congress. (What he said in private then and at the Philadelphia Democratic Convention was said in the explosive monosyllables of an old Anglo-Saxon glossary of epithet.)

So freezing, however, was the bleak aura of disapproval emanating from his office that protesting "Dixiecrat" groups, meeting almost under his nose to plan "revolts" against the regular Democratic tickets, walked in and out looking over their shoulders, sometimes audibly worrying what SAM would think.

His relations with President Truman are very close, politically and personally, and whenever the President comes to the Capitol he makes it a point to drop in on the Speaker for a chat as intimate and unreserved as any talk between two close and loyal friends. These are not conferences; they are exchanges of confidences.

It was no accident that Mr. Truman was called from Mr. RAYBURN'S office to become President of the United States. The President could often be found there in the old days when he was "the VP," and it would not be different now but for the necessities of the President's new life.

Mr. RAYBURN'S responsibilities, therefore, are much beyond those of the average Speaker of the past. He is a trusted and frequent adviser upon the very highest matters to the President of the United States. Officially his job is in many respects comparable to the job of heading any great corporation or enterprise. He is the ultimate chief of everything in the House, from the nature of its legislative program to the conduct of its dining room, and the direction of its personnel—hired and elected—is his endless concern.

He performs his job with economy of motion, with scant and infrequent but heady

praise to those about him, with a ready and easy delegation of authority, and with a somewhat amused deference to perhaps the most temperamental of all men—the politician at work.

As the Speaker of the House, he has three main functions:

(1) To perform as the responsible presiding officer (and in nearly every real sense the outright boss) of a parliamentary body.

(2) To act as the head of the Democratic Party in the House; its general manager, umpire, and, occasionally, in a rather hard-shelled way, as a paternal counselor to whom many in the fold bring their troubles and ambitions. In this, he has also, and always, to keep a critical eye upon all the vast legislative mechanisms of the House, spurring on this laggard committee, reining in that overzealous one—in short, taking personal responsibility for all the important business of the House.

(3) To advise the highest personages in Washington—from President Truman on down—on all manner of topics, at all times.

It is in this last capacity, and one that is not necessarily in the book, that he operates the rather well-known Rayburn "board of education." This board of education meets, at the will or whim of the Speaker, of a late afternoon now and then in one of his smaller offices. Its sessions are friendly, and very informative, and by no means resemble a meeting of the boys in the back room.

One could take there without fear of embarrassment a reasonably worldly maiden aunt—except that Mr. RAYBURN wouldn't like it. What goes on in the board of education, where the trustees are assembled—for example, it might be Chief Justice Fred Vinson, Associate Justice William O. Douglas, and perhaps some officer of Cabinet rank—is utterly "in the room." There is shop talk there, but of awfully important things.

Mr. RAYBURN, formerly of Flag Springs, goes through it all with a brisk, slightly absent-minded geniality, neither "cottoning" to his fellow "great"—as it used to be put in the South—nor standing too much apart from them. His advice is quick, pungent, and clear.

Here, as on the floor and everywhere, he detests the pompous, the precious, and the sentimental. When, on rare occasions, the House falls into the mood for passing out extravagant encomiums, he always, of course, gets a full share. In the throbbing rhetoric, he sits, somewhat slumped in his chair, a hand across his face. One suspects, with some cause, that sometimes the hand hides a strongly deprecating grin.

When, of late, Congress was passing a bill to raise the pay of the President and Vice President and the Speaker of the House, Mr. RAYBURN never rose to declare that he felt honored, etc., but really wasn't worthy. He could use the extra money and, in the opinion of his colleagues in both parties, he was worth it. So he simply said nothing at all.

He took a similar line when the House, in curbing the privilege of its ancient Rules Committee to smother legislation, gave to him powers not held by a Speaker in a long time—powers to let bills come up, in certain circumstances, notwithstanding the committee. This meant, so his critics said, a return to czarism, for in cutting down the Rules Committee, the Members, so it was contended, had simply left it all up to 1 man's yea or nay, rather than to 12.

Certainly, SAM RAYBURN had received an extraordinary mandate, to state it in the most conservative way. He never suggested that he would reject these new perquisites. He said he thought them adequate. Privately, however, he stopped the House from going even further in its regard for him.

An extreme individualist, he is a living refutation of the filing-case system of categorizing men. No man living did so much, so long, for what were then often called the radical programs of Franklin Roosevelt—from the holding-company "death sentence" on down through the years—but SAM RAYBURN is no New Dealer in the common use of that term.

He does not foregather with the ex-Harvard bureaucrats in Georgetown and lament over the little cups for a past era. He has profound reservations about such things as the so-called civil-rights program. He never uses the word "liberal" in reference to himself. And some of his best friends are as conservative as John Stuart Mill and as traditionalist as Lord Macaulay.

He is a perfect member of a small but intelectually tough and long-lived group of elderly men from the inland reaches of Texas, with whom it happens that this writer is intimately familiar.

They are descended from those who suffered, at arms or at home, in the War Beteen the States, and, in or shortly after the reconstruction, picked up what was left of an easy and vanished life and went West, to Texas. For the most part, they are of English and Scottish descent, with the Scottish the stronger in them, and their settlements in Texas still feel the Calvinistic influence of long ago.

They believe—Mr. RAYBURN believes—first of all in a fairly rigid Constitution, but not an unchangeable one; in order, in self-discipline, in a rather hard but fair justice; in the utmost of personal freedom wherever it is accompanied by personal responsibility—and personal responsibility is the greatest article in the credo. They take no great stock in money for itself, or property for itself, except for the proper maintenance of one's family and connections and a proper station in life, and therefore they do not really fear economic reform, not even sweeping economic reform.

Instinctively they question—Mr. RAYBURN among them—any social reform which seems to abridge innately personal rights, even the not very pretty right to be a little prejudiced, as opposed to mere money rights. They are strong in the works of mercy, but very weak in the sufferance of those they may consider to be fools.

Mr. RAYBURN, at 12 years of age, walked several miles into Bonham, Tex., to hear Joseph Weldon Bailey, a Representative and later a Senator, and his magnificent nineteenth century prose. He was a country boy, from Flag Springs, and he was timid. It was raining, but he would creep only to the edge of the covered tabernacle, as rural evangelistic arbor churches were then called, and he stood there, listening, for 2 hours with water trickling down his neck.

It makes almost too good a story, but it is a fact: he went home and vowed to be Speaker of the House some day. At 28 he was speaker of the Texas House of Representatives. Thirty-five years ago he was elected to Congress and never has been defeated since.

He is a bachelor and has a small apartment here; a driver for his limousine, and many more social invitations than he cares to accept. He is 67 years old now and profoundly believes that most things younger men worry about are damned nonsense. He is no rich man and no poor man. He has a 300-acre farm and ranch near Bonham and another little place of 80 acres, with bunks on the wall and pots of coffee in the kitchen.

He does not live with special care for his health, but it is his habit, barring State dinners or the like, to sleep exactly 9 hours a night. He has a theory that his splendid health, under really crushing burdens, may be explained by his breakfasts.

"I never eat in the morning," he told me recently, in the most earnest way, "without one thing: honey. Honey's very good for you."

Axioms of Global Policy

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Wednesday, March 2 (legislative day of Monday, February 21), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Miss Dorothy Thompson at a meeting sponsored by the United Service to China at the United States Chamber of Commerce on February 27. Many of us in Congress feel that the State Department's policy toward China should be reconsidered and restated. Miss Thompson's discussion of our foreign policy deserves consideration.

I have obtained from the Public Printer an estimate as to the cost of printing this address. The estimated cost is $248.50.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AXIOMS OF GLOBAL POLICY

(By Dorothy Thompson)

The aim of American foreign policy is to defend the United States, without war if possible, with war if there is no other way. The aim of foreign policy is not to establish the "four freedoms" all over the world; it is not to "make the world safe for democracy"; it is not to make it assured that every child on earth will have the equivalent of a quart of milk a day. All these things are desirable; all can enter into or derive from, the success of a foreign policy. But they are not its aim. Its aim is the security of the Nation.

The security of a nation such as ours rests on four axioms.

These are: Observe the advice of Washington—to have no "inveterate antipathies," and to cherish no "permanent passionate attachments" to any nation, but to seek to live on good, equal, and reciprocal terms with all. Reciprocity is the sine qua non of good relations.

Second. Friendly relations with other states cannot be based on their interior policies except as these affect their exterior policies, which alone determine the relations between powers. In foreign policy the first requirement is the ability to distinguish a friend from an enemy.

Third. A great power, like our own, which has no expansionist ambitions, can hold her place in the world only by using the weight of her diplomacy and power to support those nations who, through weakness, may easily become the prey of others who do have expansionist aims, and who, through the absorption of weaker nations may put themselves in a position successfully to challenge the United States.

Fourth. Prestige equals a reputation of absolute fidelity to commitments.

The objective to be achieved by these four axioms is to create, hold, and maintain such a world position that no foreign state can, at any time, venture to challenge the United States in war with any expectation of success. Never should the United States allow a situation to develop in which the preponderance of power is so decisively on the side of another state or combination of states that the United States is unable successfully to fight if challenged or defend herself if attacked. Once such a condition exists the choice is not between peace or war, but between slavery or suicide.

I speak in terms of power politics because there is no other form of politics existent. The time may come when all the states of the world, living in equal freedom for their interior development, may enjoy equal security through the rule of enforceable law. But if it comes it will only be because the overwhelming preponderance of power is on the side of the states desiring so to live. Assuming that such is the ultimate goal of the United States, the possibility diminishes with every loss of power to nations or states with other aims.

WHY WE FOUGHT THE AXIS

The aim of the German-Japanese Axis was to conquer Europe under one hegemony, and Asia under another, and isolate the United States in the Western Hemisphere. Had that succeeded the United States would have been compelled to live on the terms of others or fight at overwhelming disadvantage. Germany and Japan would have controlled the Atlantic and Pacific Oceans, and together have dominated the Eastern Hemisphere.

The geographic terms we use are misleading. A generation ago Sir Halford Mackinder, the British geographer, attempted to reeducate his countrymen in the realities of geo-politics, calling their attention to the fact that the terms Eastern and Western Hemisphere are incorrect; that the western half of the globe, if a circle be drawn around the poles, is mostly water; that what we call the Western Hemisphere are rather islands off the coast of the "great island," constituting only one twenty-sixth of the world's area, while the vast land mass of Europe, Asia, and Africa—Africa separated from the latter only by an inland sea: the Mediterranean—contains seven-eighths of the world's population and resources. In that land mass he saw Russia as occupying the central position, and he warned back in 1917 that a strong federation of states should be constructed to keep Russia separated from Germany. His thesis was: Who rules the heartland, can rule Eurasia, and who rules Eurasia is master of the globe. Mackinder's geo-political theories were adopted by the German general staff and by the Russian general staff as well.

We went to war against Japan and Germany precisely to prevent the establishment of a joint Japanese and German domination of Eurasia. The cause of the war with Japan lay in China. The framers of our foreign policy, under President Hoover and Mr. Stimson, and later under President Roosevelt and Mr. Hull, were clear that a free and independent China was essential to a world balance, in which the United States could continue to be secure. In those days all four of the axioms I have stated governed our attitude toward China. We could not afford to have an expansionist power, allied with another expanionist power, joining hands across Eurasia and the Middle East from ocean to ocean.

I know it is said that we went to war because we were attacked at Pearl Harbor. That is childish. The attack at Pearl Harbor did not precede but followed the breakdown of peace negotiations opened by the Japanese in Washington. We could have had peace with Japan had we been willing to recognize Japanese conquests in China. Japan drew the logical results from our refusal. I am no major prophet, nor minor prophet either, but I stated a full week before Pearl Harbor that we would be attacked by Japan, since the break-down of the Washington negotiations indicated war, and the predictable Axis tactic was undeclared attack.

Now, either we were justified, in 1941, or we were not justified. If we were justified, then we confront today the same situation and problem. If we were not justified, and are therefore justified today in reversing the policy of 1941, then our authorities owe the American people an explanation for the tens of thousands of casualties in the Pacific.

THE ALWAYS POTENTIAL DANGER FROM RUSSIA

Before the war the Russian Empire already embraced one-sixth of the surface of the globe, and over 160 nationalities, all ruled from the most centralized government on earth. The freedom and security of the United States and the premise of peace demanded that no one of the victorious belligerents should use the war to expand its imperium and unbalance the whole power-political structure. The Atlantic Charter was not, as it was afterward described, an idealistic document. It was the only realistic document put out in the whole course of the war. How could it conceivably be forgotten that the Soviet Union originally entered the war as a nonbelligerent ally of Hitler, and for imperialist reasons; that during this alliance the Soviet Union annexed part of Finland, part of Poland, part of the Baltic States, part of Rumania, and how could it have been accepted that these expansions made in cahoots with Hitler were to be recognized as permanent by the western allies?

The western allies must surely have asked themselves why the Russo-German pact broke up, for surely Hitler and his general staff desired least of all a two-front war. Obviously, the pact must have broken up because Hitler's imperialism was clashing with Stalin's. Now we know, from documents of the German foreign office, that the rupture came because Stalin was claiming the Balkans as his share of the loot. Yet it remained for the western allies to give Stalin not only what he had won together with Hitler but everything and more than he had ever asked of Hitler, and make him heir to all of eastern Europe from the Baltic to the Adriatic—the greatest expansion of power ever achieved by any state in any single war in the course of human history.

If, in this discussion of China, I speak of eastern Europe, it is because the Russian strategy is global and identical with the strategy of the Axis, except for the fact that in the Russian plans the Soviet Union is, itself, the entire axis. Here is no coalition, like the German-Japanese, in which the two imperialists might, at some future time, fall out. The Russian geographical position enables her to play the role of both Germany and Japan in subjecting Eurasia. She has a frontier on the whole eastern line of Europe, which has now been pushed some 100 miles west of the River Elbe. Behind this frontier the historic centers of European defense against the east have all fallen under Soviet control. The Baltic is a Soviet lake; Warsaw and Budapest, where, in the past, many an army has stood against eastern inroads, are gone. Italy is laid wide open on the Guilian Plain and there is no geographical hindrance to armies marching westward, short of the French Alps.

The Soviet Union, whose leaders are much smarter than Hitler, would never undertake a two-front war. For success in western Europe, the Soviets need a secure rear. And that rear is China, which covers the Soviet war industries in Siberia, and beyond China India, Afghanistan, and Iran. Therefore, in the long run, the safety of Europe depends on Asia, while the safety of the United States depends upon Europe and Asia, lying as we do between the Atlantic and Pacific.

These observations are banal to the point of being childish, but they do not seem to have been consistently taken into account in our policies.

THE PASSIONATE ATTACHMENT TO RUSSIA

We suffer—apropos axiom 1—from the fact that 30 yeras of international Communist propaganda have created in the minds of a certain number of people in all countries, a passionate attachment to the Soviet Union, as an especially privileged nation, the center and direction of a progressive social revolution, therefore the object of protection for all progressive-minded men. The extent to which this attachment has infected the minds of normally patriotic persons is quite immeasurable. That the picture they have built up of the Soviet Union has no correspondence to reality, is beside the point. That the Soviet Union is, in essence, a slave state, that its economic system is one of total monopoly state-capitalism, in which every human being is chained to the machine, the factory, or a specific spot of land, or subject at any time to transportation elsewhere, individually or en masse, in which all are reduced to the lowest proletarian status, or enjoy bureaucratic privileges constantly jeopardized by the chance of denunciations and purges—all this is, perhaps, beside the point. The greatest success of Soviet propaganda has been to present the Soviet Union as a peace-loving nation threatened by imperialists.

Russia, and the nations that constitute her empire, have been, through the whole of their history, expansionist. From the plains of Central Asia originated the armies of the Golden Horde of the Khans, that overran large parts of Europe and all Asia, subjected slavic Russia, and later were subjected to Moscovite Russia. Ideologically, Russia was always expansionist. Any study of Russian literature prior to the Bolshevik revolution reveals a mystical and messianic dream that some day all the world will be Russian. It was not a Bolshevist but Dostoevski who wrote, "The only God-begetting people in the world today are Russians, the only people destined to renew the world and save it in the name of a new God."

This concept creeps into most Russian political literature of the nineteenth century. The Russian mind is limitless, like the Russian steppes. Russian history is a history of ever-extended borders, gigantic colonizations moving outward from the center, never satisfied with what existed, nor troubling to build and create stable forms within accepted limitations. Indeed, without the acceptance of limitations no form-creating, culture-creating activity is possible. No one can go to Russia without being struck by the absence of anything that could properly be called a Russian culture—in the sense that we can speak of a British, French, Chinese, or Indian culture. In Leningrad one sees pure importation from western Europe; elsewhere one can trace, in buildings and architecture, a straight line to the Byzantine Greeks or non-Slavic peoples from central Asia. The Russian countryside is notable chiefly for filth and formlessness. What is Russian is precisely this unsettled nature of the country, the terrific biological vitality, the hordelike quality of the herd armies and herd organization, and the ever-present vision of an all-Russian world, which must be created by the smashing of all other cultures.

It is not a matter of mere chance that the Messianic dream and a dyspeptic Prussian, Karl Marx, should be kicked about in Europe for a century only to strike its first real roots in Russia and furnish her in the twentieth century with the long-awaited new god, destined to overthrow all previous religions, encompass the destruction of all previous social orders, and make the Soviet Union the arbiter of all men's destinies. Only in Russia could such a universally form-destroying idea find a natural reception.

THE COUNSEL OF PRUDENCE

All this is known to men with an historical sense. Prudence should have counseled our wartime leaders to keep ever in mind the danger that through the war victorious Russia might be tempted to spread in all directions. There was warning of this even during the war. The Partisan movements from Europe to China, their leaders trained in Russia and loyal to Russia, all fur-

nished abundant proof that the Soviets believed the time had come to apply the axiomatic tactics taught in Communist theory for over a generation: Every international war must be turned into a civil war. Nowhere—neither in China nor Albania nor Yugoslavia nor Greece nor Poland—did the Communist partisans loyally cooperate for the defense of the nation. For them the war was an opportunity to obtain arms to organize military cadres and to prepare for the seizure of total power. The absolute uniformity of the pattern, from Europe to the outermost islands of the Pacific, indicated a centrally directed discipline. Thus, civil wars started before the international war was won, and in every country the civil war was actually an international war of a new type. Russia's new war was begun against her western and Chinese allies with the cannon fodder of the populations of the allied nations.

THE INTELLECTUAL FAILURE OF ALLIED STATESMEN

Western statesmen failed to realize this and therefore failed to uphold what I have called the second axiom of foreign policy, namely, to be able to distinguish a certain friend from a probable enemy. Probably never has there been so colossal an intellectual failure. Every conceivable element was introduced by interest aided by ignorance to confuse this issue. American reformists demanded that every government of the resistance be measured according to some impossible standard. We must not support monarchy, so ran the argument. We must not support Fascists, cried the reformers, and swallowed whole hog the Marxian definition of fascism as merely a normal development of capitalism, chiefly distinguished by its opposition to communism. Like the Marxists, our reformers swept into a single kettle and labeled them Fascist, kings, conservatives, landowners, nobility, industrialists, practically the whole of the middle classes, in fact, all anti-Communists. They were all reactionaries. A crop of new kinds of Fascists were invented—crypto-Fascists, monarcho-Fascists, clerical Fascists.

By this process of confusion confounded, the Kings of Yugoslavia and Greece, the Chetnik leader Mihailovich, the Government in exile of Poland, pro-western resistance movements in Axis satellite nations, and the national Government of China all became Fascist. That these governments and movements were our proven friends, that there was no record of a lasting and profitable friendship between Communist and non-Communist governments; that communism is, by its own repeated declarations, the uncompromising enemy "of the whole bourgeoise world"—all this was overlooked.

By some strange wartime metamorphosis the future new era was to be based upon a permanent alliance of three great powers, dividing the world into spheres of influence, and setting up a series of coalitions with Communists in every single country to whom the Big Three could dictate. Thus Poland, Yugoslavia, Czechoslovakia, and the Axis satellites were all compelled by great power pressure to extend their governments to include Communists. Oddly enough, it did not occur to any of the Big Three to take their own prescription. Stalin did not "broaden" the government of the Soviet Union. On the contrary, a purge began in Russia. Neither President Roosevelt nor President Truman took their own medicine. Neither Mr. Churchill nor Mr. Attlee decided that peace necessitate the inclusion of Communists in the British Government.

In less than 3 years not a single one of these coalitions existed. Every government had fallen completely to the Communists and every one of these countries had become a political, economic, and military colony of the Soviet Union.

THE ERROR REPEATED IN CHINA

The same prescription was offered to Generalissimo Chiang Kai-shek, of China. To the merit of his intelligence, he refused to accept it. Chiang knew that there is no way of compromising with Communists nor of compromising a civil war backed by the Soviet Union. There is only one thing that can be done in a civil war, where one side, backed by a great power, is fighting for a totalitarian solution, and that is to win or lose.

The Chinese-Japanese War was the accepted moment for Russia to begin preparation for the victory that has been a Soviet aim since the Bolshevist Revolution, and for the realization, for that matter, of a goal of Russian foreign policy far older than the Bolshevists; as old, indeed, as modern Russian history. In Russian strategy North China and Manchuria, which furnished more than one-third of all Japanese war production, must become a Soviet appendage. For only from North China could a united China and her allies defend themselves from a position where the Soviets themselves were highly vulnerable.

There should, therefore, have been but one policy: to protect the freedom and independence of all China. But our wartime policy under Gen. Joseph Stilwell was less based on this concrete objective than on General Stilwell's likes and dislikes. When, however, General Wedemeyer succeeded him, the objective was firmly in his mind.

When Japan collapsed the generalissimo's armies were in south and western China, far from the vital ports and industrial centers held by the Japanese. But the United States provided the airlift that made it possible for the Nationalist armies to leap across the Communist forces in their path and occupy the key cities, while naval transports began moving Chinese national divisions to the Manchurian ports. According to Major General Chennault, General Wedemeyer worked out a complete plan for the defense of China and put it in a report to this country which has never seen the light of day.

When the civil war broke out in force in October of 1945 the generalissimo's armies still had American equipment, and with it they began mopping up Communist forces. The offensive was under way when General Marshall reached China a month later to carry out a policy set for him by the American Department of State. That policy was to end the civil war and stimulate a coalition government between the National Government and the Communists. The Marshall mission forced a truce in China, exactly when the nationalist forces were gaining the upper hand. The generalissimo balked but was compelled to it when military aid to China was suddenly cut off, including—according to General Chennault—war surpluses bought and paid for by the nationalists. At the same time an America-China agreement was scuttled, under which the United States had agreed to supply planes and equipment for an eight and one-third air force. The generalissimo was forced to agree not to use the existing air force against the Communists. And it was suggested that unless the truce were effected the loan promised China would not be forthcoming.

Tens of thousands of Communist troops who had been surrounded by nationalist armies—a pocket of 70,000 of them north of Hankow, and another pocket of 100,000 near Canton—were released from their traps by a truce commission headed by American generals. All these released Communist troops marched to Bias Bay and promptly embarked for Shantung.

Again, according to General Chennault, the worst catastrophe occurred at the Kalgan Pass, the gateway between China and Manchuria. When the war ended there were no Communist troops there; there were Russian troops. When the first Chinese Communists got there they found Manchuria stripped of its equipment, its industries scuttled, and the arsenals of the Japanese Kwantung Army empty.

Early in 1946 a Government offensive captured the Kalgan Pass, trapping nearly a million Communists who were moving into Manchuria from northwest China. These Communists wailed that they were merely attempting to return to their homes. General Marshall succeeded to persuade the generalissimo to open the pass. The Communists, having passed through, promptly fortified it—thus breaking the truce. And 6 months later these same Communists were again in battle, this time armed to the teeth with the entire equipment of the Kwantung Japanese Army, estimated as sufficient to keep a million men fighting for 10 years.

Meanwhile there had been a 10-months' American embargo on military supplies to nationalist China, and the great offensive into north China had begun its sweep, not halted to this day.

The apologists for this American policy maintain there is no evidence of Russian aid or intervention in China. But the Russians armed the entire Communist forces, while America disarmed the nationalist forces. It is said that the morale of the nationalist forces is low, that of the Communists high. The Communists know they have a great nation backing them. The nationalists know that a great nation has let them down. In the spring of 1948, Congress, belatedly alarmed, offered the nationalists $125,000,000 worth of aid but not until 7 months later did munitions even begin to trickle into Chiang. Meanwhile the Communists had all Manchuria and most of northern China. And in war success is nine-tenths of morale.

Now the attitude is—the attitude in the State Department—that it is too late anyhow, maybe the Chinese Communists will turn out to be Titos. Only the other day I read in an inspired article reflecting State Department views, that Mao Tse Tung never was a really indoctrinated Communist agent. I do not know who gives the State Department such remarkable information.

The central committee of the Chinese Communist Party, which Mao Tse Tung heads, is tied hand in glove with Soviet policy. For 25 years the Soviets have conducted a training school, military and political, for Chinese Communists in Moscow. At the seventh congress of the International Communist Party, greetings were brought to Moscow from Mao Tse Tung by his comrade of the central committee, Chow-Ho-Sin. These greetings said, among other things:

"The militant Chinese Red Army sends greetings to the all-union Communist Party of the U. S. S. R. and to the leader and teacher of the workers of the world, Comrade Stalin.

"This congress will facilitate the preparation for the decisive barricade fight for Soviet power throughout the entire world."

It is said, "Oh, well, the Communists also will be unable to organize China."

What wishful thinking. Certainly they will be unable to organize China as a settled culture, uniting the traditional concepts of Confucius with modern education and techniques. That is not their purpose. Their purpose is simpler—and easier.

They will cut off the heads of every Chinese patriot. They will tear up the population and move the people hither and yon, dragging them up from the roots that nourish Chinese culture. They will organize them as a militant horde, and herd. They will give the poorest peasants land but their ownership of every scrap of ground will be dependent on implicit obedience.

The analogy with Tito is false—even if we could predict the outcome of that story, which we cannot. Tito's quarrel with the

Cominform is possible because of his geographic position. Yugoslavia has no frontier on the Soviet Union and thus is not covered by Soviet Red armies. But China has a 4,000-mile frontier on the Soviets. When one considers the Russian pressures being brought now upon Yugoslavia, and asks what Russia would do in case of a revolt by Mao-Tse-Tung, the answer is obvious. Russia would pick another leader, and if necessary start another civil war. In that case what would be the policy of the United States? Would we arm one Tito-Communist army against another Communist army? Would we do for Mao what we will not do for the generalissimo?

OUR POLICY IS INCONSISTENT

It is said we must not and cannot intervene in a civil war. This despite the fact that we are intervening in the civil war in Greece, recognizing that that civil war is an international war, fought with domestic armies.

The guerrillas of Greece are fighting for a Russian Europe.

The Communist armies of China are equally fighting for the triumph of Russia in Asia.

True, these armies are not composed of Communists. But, as General Marshall testified before the foreign affairs committee of the Senate, a political commissar is attached to every cadre of troops. And these are thoroughly indoctrinated Communists.

Communist armies in China are impressed into service, trained in an iron discipline, and over the heads of every member hangs the threat of death for any breach of discipline—and the even worse threat that for the indiscipline of any individual his whole family may be exterminated. Russian officers and technicians are monitoring the Chinese Red armies. When the Nationalists withdrew from Mukden and the Communist armies moved in, they had with them 30 or 40 Russian advisers. Why should they not? There has been an unbroken military liaison between Moscow and the Chinese Communists for nearly a generation. It was active and visible in Moscow in 1928 when I was there.

Communist armies are everywhere the same, kept intact by unremitting indoctrination, the most effective propaganda machine the world has ever known, and a most effective combination of persuasion and terror. Their victories preface a systematic extermination, not only of the opposition but of all potential opposition. Thus, the Communists first spoke softly to the populations of Tientsin and Peiping, but when they were secure in these cities, thousands of persons were rounded up and disappeared. Refugees have reported that children were taken from their parents and sent to collective institutions—a first step in destroying the social unit of the family which is basic to Chinese civilization.

The Chinese Red army is, in fact, as much an instrument of Soviet power as any other Red army. It is well to remember that there is no single Red army of the U. S. S. R. Soviet military forces are a series of armies, physically decentralized to the peripheries of the Union and throughout the satellites, each force being trained for a specific tactic, each autonomous, but all under absolute central control, and all instruments of a global strategy.

The Soviets believe that war is inevitable. For 30 years the Soviets anticipated the Second World War—and the third. In Soviet theology there is no remote possibility that Communist and anti-Communist states can permanently live together in the same world. Were there time this afternoon, I could copiously prove this by quotations from Lenin to Stalin. Russian peace propaganda, like Hitler's peace propaganda, is merely a Russian defense measure to keep the victims asleep until the correct moment. The Soviets are not impulsive. They do not, like Hitler, indulge in clairvoyant visions. They are scientific—and systematic. Everything, they are convinced, will fall into their hands, but only by carefully calculated steps.

And at all times there is a complete integration of political and military strategy on a worldwide basis. The political effects of a total Communist victory in China will be immeasurable. Already India trembles, and the highly tolerant government of Pandit Nehru rounds up thousands of Communists, having discovered plots to sabotage Indian communications, disrupt public services, and establish liaison between Indian and Burmese Communists. Chinese colonies exist within all the nations of eastern and southern Asia, where, with a Chinese victory, they will become sources of agitation and sabotage. It is the wildest wishdream to believe that the conquest of China will not eventually fan the entire Far East into unquenchable flames.

THE UNITED STATES AND SOUTHERN CHINA

Therefore, the necessity to hold Southern China would seem patent * * * as well as the fact that the United States cannot forever go on throwing its friends to the dogs, if we want to keep a scrap of prestige. In place after place and time after time, the reward of our friends has been to be hanged as war criminals, while government after government whom we have originally backed, eats the bitter bread of exile if its members are lucky enough to have escaped the gallows or the slave camps of the Soviet Union. People draw deductions from this: It is unsafe to be a friend of the United States.

The Nationalists still hold China south of the Yangtze and to Formosa. To be sure, the present acting president, Li-Tsung-Yen, apparently wants peace at any price. To be sure, he has warned the Communists that if they cross the Yangtze or attempt to take Nanking, peace negotiations will be off. And, of course, the Chinese Red armies and their political leaders would prefer peace by negotiation to further bloodshed and would love to classify resistance after a negotiated peace as aggression. But if there is a real peace of compromise between the Nationalists and the Communists it will be the first time that has happened in history. The Russians may prefer to use Li-Tsung-Yen, rather than Mao. They also preferred to use Fierlinger in Czechoslovakia.

The Generalissimo, however, is in Feng Hwa, with part of his army. Other Nationalist forces are in Shenshi Province and Formosa. They are, to be sure, surrounded by enemies and traitors. So was George Washington at Valley Forge. Chiang is still willing to fight; in fact, itching to fight. He, and the few Nationalist military leaders left, cannot reconquer all China. But it is conceivable that they could hold southern China, provided they were given first-class equipment of all kinds and first-rate military advisers, as competent as General Wedemeyer and it is also likely that Communist brutality, as gains are consolidated, will inspire revolts, provided there is any force to revolt to, as eastern European cadres of soldiers would revolt to anti-Communist forces today if there were any left.

From a global viewpoint an Atlantic Alliance is preposterous. We should offer eastern-western alliances to all who will stand for their liberty.

Our foreign policy is theoretically to contain the Soviet Union. One may logically ask, at what point in the Pacific will we contain it? Where shall we encourage our friends to take a stand? In French or Dutch Indonesia? In southern Korea? In India? In disarmed Japan? Or shall we let Asia go entirely? And if so, why did we fight the Pacific war?

THE GLOBAL DANGER

Do we actually think that a Russian imperium in Asia would be less dangerous to America than a Japanese?

It would be more dangerous. The Russian geopolitical situation is more advantageous than the Japanese. The manpower and resources of Russia excel those of Germany and Japan combined, if we exempt the Japanese holdings in China, from which she drew a third of her war materials. Russia sits in the heart of Eurasia, with adequate internal resources to arm and equip her million-numbered armies, already distributed at all the peripheries and beyond. In Europe she is at the Danube and the Elbe; in Asia she is at the Yangtze. Everywhere her agents are spying and undermining morale. In some places their impudence is boundless. In France, Maurice Thorez, Communist member of the French Assembly, dares publicly to invite the Russian armies to enter France as liberators, in case of conflict with the Soviets, and to lay down the thesis that "by definition, the Soviets are never the aggressors." He is backed up by Togliatti in Italy. The French hesitate to try Thorez, twice a traitor, lest they make him a martyr. The Russians, however, are not afraid to make martyrs.

CONCLUSION

It would seem from the facts of our vast strength and wealth, in the service of a nation dedicated as no nation ever was to human liberty, that America's destiny was to lead the world. So the whole world has thought. But wealth and strength are not power. Power is will and direction.

And a nation not perpetually jealous of its own security cannot lead the world. In the end, it cannot even lead itself. Backing and filling, its leaders afraid, even, to tell their own people the truth, it will gradually find itself pushed off every political and military beachhead, until, at last, isolated, and without allies, it will be forced to take a stand as hazardous as any stand that might today be made by the Chinese Nationalists, risking its very life against the alternative of passing, for generations, and perhaps forever, out of history.

Every state that falls in Europe or Asia brings that terrible dilemma closer. And every state that falls brings closer, also, the danger that, having sacrificed the liberties of others for our own peace, we shall finally have to give up all our own liberties for the sake of our fundamental security.

Armistice Negotiations Between Egypt and Israel

EXTENSION OF REMARKS

OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, March 2 (legislative day of Monday, February 21), 1949

Mr. O'CONOR. Mr. President, the very able and successful part played in the recent armistice negotiations between Egypt and Israel by the American acting United Nations mediator, Dr. Ralph J. Bunche, deserves to be brought to the attention of all our people.

I ask, therefore, unanimous consent that the attached statement commending Dr. Bunche be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY HON. HERBERT R. O'CONOR, OF MARYLAND

The welcome news of the accord reached by Israel and Egypt, which marks a long step toward peace and progress in the Middle East,

is particularly gratifying to people of the United States because of the leading part played in the negotiations by Dr. Ralph J. Bunche, of this country, as acting United Nations mediator.

Too much praise cannot be given Dr. Bunche for his tact and diplomacy in thus bringing to a successful conclusion these negotiations which, now that Lebanon and Transjordan have indicated a willingness to confer, undoubtedly will be the forerunner of similar peace agreements with all the Arab states.

Taking over this diplomatic post almost at a moment's notice as he did following the assassination of Count Bernadotte, Dr. Bunche has exhibited the utmost statesmanship, patience, and persistence and is generally reputed to have been one of the leading factors in arriving at agreement proposals satisfactory to both Israel and Egypt.

Dr. Bunche deserves, and I am sure will be accorded, full recognition when the story of Israel's first troubled days is recorded. The agreement in which he figures so largely is one of the most significant achievements to date of the United Nations, and demonstrates the potentials for peace inherent in the objective efforts of this world organization when applied to any and all problems between states the world over.

Civil Functions of Army Engineers

EXTENSION OF REMARKS

OF

HON. RUSSELL B. LONG

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 2 (legislative day of Monday, February 21), 1949

Mr. LONG. Mr. President, I am very much opposed to the efforts now under way to remove the prosecution of our flood-control and river-and-harbor program from the capable hands of the Army engineers. I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have prepared on this question.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY HON. RUSSELL B. LONG, OF LOUISIANA, ON PROPOSED REORGANIZATION OF ARMY ENGINEERS

The Army engineers have been the leading engineering arm of our Government since the founding of this great Republic. For many years after their establishment by George Washington, they did all the engineering work for the Federal Establishment, since they constituted the only organized technical service in the Government.

In the early days of the nineteenth century, under congressional authority, they began to survey our great inland rivers for navigation purposes. A great city in Louisiana, Shreveport, is named for Captain Shreve, the originator of the snag boat, who worked on Red River before the Civil War in an effort to make it navigable.

Through the years, the Army engineers have remained true to their trust. They have, in war and peace, reflected the great traditions of honor and integrity which have been handed down to them by their distinguished predecessors—Robert E. Lee, George E. Meade, George B. McClellan, Joseph Johnston, and George W. Goethals.

In Louisiana, we like the Army engineers; our relationship has been harmonious through the years and particularly so since 1928, when, under congressional authority, the engineers began construction of the greatest engineering project in the world—the control of the lower Mississippi River. Since that work began, the great levees built by the Army engineers have not been breached by floodwaters. We still have many flood problems in Louisiana, since we must take the floodwaters of nearly one-half of the continental United States, and our State is coursed with several large and troublesome tributaries; but we believe we can solve our problem best working in cooperation with a group of men who know and sympathize with our problems, who are nonpolitical, who are able in their technical knowledge and who, above all, can be depended upon to go about their tasks with a high sense of honest devotion to duty.

We in Louisiana want no part of a grandiose, politicalized public-works agency. I shall work in the Committee on Expenditures in the Executive Departments, of which I am a member, to provide reorganization exemption for the Army engineers. I shall continue to fight to preserve their civil-functions activities from whatever quarter the attack might come.

Washington's Birthday Address by William E. Leahy

EXTENSION OF REMARKS

OF

HON. PAT McCARRAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 2 (legislative day of Monday, February 21), 1949

Mr. McCARRAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the very able address delivered by the Honorable William E. Leahy, of the Washington, D. C., bar, on the occasion of the celebration of Washington's Birthday at the annual meeting of the Society of the Oldest Inhabitants of the District of Columbia on February 22, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, members of the society, ladies and gentlemen; this gathering of the Society of Oldest Inhabitants of the District of Columbia, in thus joining with Americans everywhere to commemorate today—the birthday of George Washington—is a satisfying demonstration of the genuine patriotism of this organization. Characteristically, and in traditional habit, this Society has never failed carefully to notice those great spiritual events which, like gleaming beacons, light the highway of our progress and indent gloriously the paths our country has traveled from that quiet stream which flows so silently beneath the bridge at Concord to the present storm-tossed waters that lash so harshly now upon the shores of time and of nations. Congregations such as this cannot be summoned too frequently. Neither can our citizens be charged too often that still in eternal vigilance lies the security of our liberty and our happiness. Today we perpetuate the name of him whom we honor. We salute his memory in humble and in grateful tribute. Today we take added strength in that indefatigable determination which was the aegis of his strength, with which he so guided his course and compass that he never swerved from the objective pole he had set for his final achievement. Today we pledge our renewed devotion to the Republic he did so much to create. We cherish the unselfish leadership he assumed to make its existence an accomplished fact. Here and now we rededicate ourselves anew to the preservation of that nation and its ideals, a Nation and ideals to which he gave the promise of potential fellowship in the family of nations when at last he attained the victory he so richly deserved in the Cornwallis debacle at Yorktown. In spirit let us graciously give thanks that the sheer pertinacity of his uncompromising fortitude ultimately procured for a recipient posterity an inspired modification, if not a complete change, in the age-old materialistic conception of man's ability to govern himself, by giving place in man's government of himself to the recognition of the full stature of his dignity as man and his allegiance to Almighty God.

Volumes have been written of Washington. They are at one and the same time the undeniable assurance that he was great and the price he paid for being so. Some are good. They fairly evaluate the imprint he made upon that ribbon eternity drawn across the face of time and which men read. They call it history. Others in admiration of the man have dipped their pens deeply in wells of fancy, imagination or willing exaggeration. They have fallen before the image of their own creation. They kneel reverently in adulation, overwhelmed by their assessment of the tremendous credit he loaned a bankrupt revolution—in the stalwart courage he showed best when the hour was darkest and the burden most oppressive. One readily excuses their fault and accepts their unnecessary flattery. For Washington commanded respect always, almost a hushed respect of awe when he was present. But he was human. He was intensely human. Those frailties and foibles which, in lesser men, usually detract heavily from the heritage man's nature is heir to, he so caused to be submerged and controlled that, notwithstanding the commerce of his life lay in waters of unprecedented storm and its tonnage weighted with cargoes of the heaviest and most exacting responsibilities, he has come down to us in recollection and affection as a human man, one of us and for us, typically American and a human one, who fought, struggled, dreamed, hoped, planned, lost, but who always rose, to fight again, and struggle, to dream, hope and plan again, never once losing confidence in the sublime purpose which drove him on to create the United States of America. His method needs no adulation. The concept of his soul repels apotheosis. The profound love with which we embrace his memory is richer and purer because we know he was human, not just some Greek god, loaned to us by Olympus for a time in the critical decades of our difficult birth and tumultuous infancy. Young Americans will profit most when told the truth: that an insatiable thirst-demand for freedom and liberty molded this man in the frame of his greatness and that America supplied him with the opportunity to gain both. And all Americans can find inspiring courage to carry on in the lesson of his life and the persuasion of its constancy and its action. America holds open now and will continue always to hold open the opportunity for development of individual ambition just so long as we Americans maintain the institutions he helped to construct in the same shape he helped to make them, and just so long as we retain free enterprise and man's right to work beneath the sun in an atmosphere of free government and individual liberty.

Personal freedom was not won where the sun rises. At that horizon man lives in darkness. The darkness of degrading bondage, the night of dishonorable toil. Serfdom still presses heavily upon him and there seems little hope of a short termination to the regrettable condition of his servitude. Historically, the Far East has been the dark east for man in his struggle for life. There the human family has groveled long upon a lowly level. For a time, as the sun

rose, its rays reflected brightly against the white temples of Periclean grandeur that once crowned the Acropolis when Athens thought its people free. They fought valiantly in leadership against the enslaving hordes of Persian revenge and invasion. But they oiled the marble of Paros and liked best slabs riven from the thighs of Pentelicus. Nature had mellowed and yellowed their sheen. The pupil of the Grecian eye suffered in its inability to adjust to the glare of the sun. And night came again. Apollo passed on. Culture still mourns the episode. Now an occasional battle or a shot against guerrilla bands echoes a faint call for the freedom that was, a ghost call from mountains where once the pipes of Pan played joyous music and imperial Jove once hurled his roaring thunderbolt. Even the peace of Augustus was a compelled peace. The concept of the right in the individual to live within the law as he thought best and with'n the bosom of his family without obtrusion and in security, never burgeoned into the bloom of full enjoyment under Roman rule or the Roman invention of government by world conquest and municipal franchise. And when Rome fell the only light that shone through the almost absolute blackness of the ensuing centuries was that which came through the window of some monastery where monks still kept burning industriously for its emergence in the renaissance a flicker of that classical culture which survived the death gasp of Athens, which Rome never destroyed but which captured Rome and which, as a remnant all too small, finally took fire again in the rebirth of learning and the resurgent blessing of the teaching of the Sermon on the Mount. The sun had left the eastern horizon. It had risen. It was then when man began to rise erect to the full height of his manhood. It was then that the dignity God had put about him as a rich garment of his sonhood of God caught unwilling but demanded recognition. It was then man's exploitation of his fellow man engaged resistance and spiritual values found acceptance. They reached back to Golgotha and Calvary. They had been tempered in the blood bath of centuries. They had been asserted, preached, defended—but selfishness, greed, pride, ambition had denied them, ruthlessly relegated their possession and enjoyment to the forge of battle, death, disease, waste, want, poverty, and suffering. The anvil upon which man's liberty and freedom were fashioned was a hard anvil. Its ring, when struck, was the ring of justice. But mighty hands and sinews of superior strength struck often against the plane of its hard surface before form took shape and man became free. The sweat of ages has fallen on it. Bursting veins of drawn muscles in stout arms and legs have attested to the toughness of the job at hand. But rust never left a particle of stain upon it and blood only burnished it. The altar of man's liberty is the mountain of his hope. Its altar stone has been sanctified and made holy by the lives of those whose bones in death have whitened so many battlefields that little children at their knees might drink a sweeter cup when thirsty and eat of more bread when hungry.

The sun is still passing. Inexorably it follows the groove of its orbit. We are living in the beneficent splendor and benign invigoration of its recurring warmth and strength. Like Athens, will America lose its power of eye accommodation to the brightness and the glare? The answer is, Beware. Already upon the horizon there appears a curtain, a curtain of darkness, the darkness of the redegradation of man and the second night of his serfdom. A curtain is descending, again from the east, a curtain of iron. A curtain drawn by the relentless fist of a cruel beast, molded in the shape of a seductive philosophy. A philosophy of misrepresentation, deceit, avarice, and lust. Lust for power, lust for domination, complete domination, absolute power. Power over the lives, the thoughts, the hearts, the prayers of everyone, of every people, of every nation, of the world. It would take the glory of his God from the Jew; and the cross, the exemplification of his redemption, from the Christian. Its creed is hate. Its strength is deception. The virility of its motion is the insane obeisance of its adherents to tenets detested by freemen and destructive of all freedom. Already its teachings infect our colleges, universities, schools, our public and our private institutions, with the metastasis of its foul disease. It respects no man or principle. It condemns law and despises order. It breaches harmony, quiet, and peace. It thrives on confusion and promotes discontent. It rears its arrogant head in our legislative halls and insults the chosen representatives of our people in order to destroy the confidence of our people in the government of our choice. It insolently usurps the functions of our courts in order to make a mockery of justice. It knows no justice. It is a bullying throwback to the savagery of the Mongolian Steppes and it parades hypocritically as the friend of man. It is the reincarnation of the rape of civilization, intensified in the consuming heat of its passion because its passion admits no restraint. It cringes when caught, and suppliantly cries for the protection of those inalienable rights which it is determined to destroy—rights which it knows we recognize as inseparable and unseverable from freedom.

Its purpose is clear. There is no difficulty in prying off the thin veneer of its time-serving protestations. Its aim is against America—against us. Its goal is the complete destruction of our moral, economic, and governmental ideology. Its frontal attack is now aimed against religion—all religion. The Mindszenty conviction, in its sham and hypocrisy, not only followed the pattern long set for trials by minions of that philosophy but forecasts the sorrowful state of our other ministers of the cloth now incarcerated as criminals of the state. Unless saved, they, too, probably will gain each his crown of martyrdom for the only crime he ever committed—that of trying to bring the love of God into the hearts and the souls of a people. Once religion is destroyed, communism is then ready for its coup de grâce. Then the tools of that philosophy will begin their subtle operations as they have in every country they have enslaved, and the common man, whom communism brazenly pretends to protect, will find himself utterly expendable in a labor camp or on a battlefield, or wherever the ruthless clique of its sadistic leaders may capriciously wish his liquidation.

Today, then, as we foregather, we may just as well admit the fact that we, as Americans, are standing at another crossroads in the transition of dynamic forces. As Washington turned his face toward Cambridge, he knew that he could return to the Mount Vernon he loved only if he came back with victory and his work completed. He had to win liberty for us then in the blood and sorrow of a long war. Ours is the job now to maintain what he won for us. As he faced enemies from within, so we know that already agents of destruction are working secretly and subversively in every department of our National Government and economy to sabotage and break down the greatest measure of liberty and freedom man has ever devised or known in the annals of time. There is this difference, however, which signifies importantly between the revolution Washington successfully waged and this now being waged coldly against us: Washington knew his enemies. The loyalists were open in their loyalty. Washington called them the most despicable pests of society, but they were unorganized and undirected. We do not know the underground traitors now working against us. They are organized. They are directed. But we know this: When Washington dealt with those needing discipline, he knew how to administer it. And he administered it. When he faced mutiny, he put mutiny down and he made no silly excuses, either for the mutineer or for himself, in quelling the mutiny. When a slave or a soldier needed the lash for discipline, he ordered the lash. He was a stern disciplinarian, but a just one. He demanded obedience. He got it. He was the responsible leader in a critical fight to the end. He expected no quarter, but he courageously dealt with every crisis as it arose. The lesson of his conduct of the war and his assistance in the final formulation of the Constitution is a gospel for attention for us in the cold war which is now upon us and which lies ahead. This time we stand in leadership alone, as he did. But there is no cause for discouragement. Caution and prompt action, however, are indicated. Somehow, if we cooperate, there is a divine guidance which will bring us through. And that America will still continue to carry on as the last refuge of freemen under God, in the right as He gives us to see the right, is the benediction in which we all fervently join on this the birthday of George Washington.

Benton County Agricultural Conservation Association

EXTENSION OF REMARKS

OF

HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1949

Mr. TRIMBLE. Mr. Speaker, soil conservation is a basic problem of our economy and one of the greatest responsibilities of the Congress. We must preserve the fertility of the soil which still exists and replace the fertility which we have taken away by years and years of exploitation.

Among the leaders in soil-conservation work is the Benton County Agricultural Conservation Association. Under leave to extend my remarks in the RECORD. I wish to insert the annual report of that association for 1948. It follows:

ANNUAL REPORT OF THE BENTON COUNTY AGRICULTURAL CONSERVATION ASSOCIATION, 1948

INTRODUCTION

This report has been prepared in an effort to give you a better understanding of the aims and accomplishments of the Benton County Production and Marketing Administration, commonly known as triple A.

PMA embraces several programs of the Department of Agriculture such as price supports, marketing quotas, crop insurance, and the agricultural conservation program. Since the agricultural conservation program is the major program in this county more space has been devoted to the activities of this program.

As elected representatives of the farmers of Benton County we wish to express our appreciation to all persons who have helped make this program a success. We sincerely solicit your cooperation in future programs.

SCOTT EVANS,
C. R. BROADHURST,
D. B. BLAIR,
Members, Benton County Production and Marketing Administration Committee.

AGRICULTURAL CONSERVATION PROGRAM

The agricultural conservation program in Benton County is carried on through the

Benton County Agricultural Conservation Association. The conservation program is open to every farm operator or owner in the county and each and every one is invited to participate regardless of the size or type of farm.

This program is one of Government-farmer cooperation in the field of conservation. Each year Congress appropriates money to be paid out to farmers as an assistance in carrying out needed soil- and water-conservation practices on their farms. Money thus appropriated is allocated to States on the basis of conservation needs and on down to the counties and to the individual farms. It represents a public investment in the maintenance and restoration of our soil. In every instance the farmer has invested two or three dollars for every one received.

The agricultural conservation program provides for a national program of soil and water conservation under the direction of farmer-elected farmer committees. With local farmer committees directing the program the public is assured of getting the most conservation for the money spent. Local farmers acquainted with local needs and conditions see to it that money appropriated for payments is spent on practices adapted to their individual counties.

This national soil-conservation program not only concerns itself with the needs of individual farmers but with the needs of the Nation and the world as well. As the fertility of our farms is restored and maintained the entire Nation can be assured of a more plentiful supply of better quality farm products. Every individual, whether landowner or not, depends upon the products of the soil for the necessities of life and has a vital interest in maintaining its productivity.

Some of the things that have been accomplished by the triple-A conservation program in Benton County are pointed out in this report. Much progress has been made in the field of conservation but much more remains to be done.

PARTICIPATION

A total of 2,507 farmers participated in the 1948 triple-A conservation program. This means that at least one approved conservation practice was carried out on each of these farms and that 59 percent of the cropland in Benton County was included in the conservation program.

Fifty-eight thousand five hundred and forty-three dollars was available as assistance to farmers for carrying out conservation practices in 1948. The total value of all practices carried out was $103,751.59.

1948 CONSERVATION PRACTICES

Practices for which assistance was offered in Benton County in 1948 were recommended by the county committee and approved by the State committee on the basis of:

1. Those that would fill a definite need in the soil and water conservation for Benton County.

2. Those that were needed by a majority of the farmers in this county.

3. Those that would obtain the most conservation for the money spent.

4. Those that could be administered in a practical manner.

APPLICATION OF MINERALS

The application of limestone, potash, and superphosphate is an important triple-A practice. By promoting a rapid and heavier growth of grasses and legumes their application serves as a good conservation practice. At the same time they result in better nutrition by aiding in plant growth rich in body-building minerals.

In 1948 Benton County farmers applied 4,326 tons of ground limestone, 133,598 pounds of potash, and 4,638,482 pounds of 20-percent equivalent superphosphate to pastures, meadows, green manure, and cover crops.

PASTURE DEVELOPMENT

Farmers of Benton County established or improved 16,650 acres of pasture by seeding 333,127 pounds of adapted pasture grasses and legumes and controlled noxious weeds by mowing on 32,096 acres.

About 65 percent of the phosphate, limestone, and potash was used on permanent pastures.

COVER CROPS

In addition to preventing erosion and conserving water the use of legumes replaces nitrogen in the soil.

The triple-A program assisted farmers with this program by paying a part of the cost of such seeds as vetch, crimson clover, cowpeas, and soybeans.

In 1948 Benton County farmers seeded 61,032 pounds of winter legumes and 29,276 pounds of summer legume seed. This provided protective cover for approximately 4,500 acres.

PONDS FOR STOCK WATER

The construction of ponds for livestock water has been a big factor in developing the livestock program in Benton County. Much land that was of little use has become valuable as permanent pasture when water was provided.

Eighty ponds were constructed in 1948 bringing the total for the last 4 years to 438.

The amount of money available for assistance had a marked effect on the extent of practices for 1948. Compared with 1947 the value of practices carried out in 1948 was in proportion to the amount of assistance available.

FINANCIAL REPORT

Administrative funds

County and community committeemen	$1,375.80
Office and field personnel	6,577.40
Travel	250.94
Miscellaneous	296.93
Total operating expense, 1948	8,500.53

PRICE-SUPPORT PROGRAM

The price-support program is another branch of the Production and Marketing Administration and is administered by the same personnel responsible for the agricultural conservation program.

Price supports provide that the prices of farm products be supported at rates fair to both farmers and consumers because of the importance of good farm prices in maintaining national prosperity.

Support levels for various commodities are represented as a percentage of parity. Parity means that the prices farmers receive for their products are comparable to the prices they have to pay for the things they buy. This allows support prices to vary up or down depending on the price of nonfarm commodities.

Following is a brief summary of present price-support legislation:

1. The basic commodities—corn, wheat, rice, tobacco, cotton and peanuts—will be supported at 90 percent of parity through June 30, 1950.

2. The major nonbasic commodities will be supported at 60 to 90 percent of parity through December 31, 1949—except that milk and its products, hogs, chickens, and eggs are to be supported at 90 percent of parity for that period.

3. Beginning January 1, 1950, the provisions of the long-range price-support program will go into effect. It provides that the basic commodities will be supported at 60 to 90 percent of parity, depending on the level of supply. All other agricultural commodities (this includes eggs, milk, chickens, and hogs) may be supported at 0 to 90 percent of parity depending upon the importance of each commodity to the national economy, its degree of perishability, the level of supply, and other factors.

ACTIVITIES

Blanket of green program

The county triple-A committee cooperated 100 percent in the program to get Benton County covered with a blanket of green in the fall of 1948. Two of the 1949 practices approved during the latter part of 1948 were meant to encourage farmers in this program. They were the establishment of a cover of small grains or ryegrass for soil protection and improvement.

Educational program

The county committee cooperated with the county agent in carrying on an intensified educational program during 1948. Forty-five community meetings were held at which time motion pictures were shown and provisions of the triple-A program explained.

Radio programs

During the months of October, November, and December a total of twenty 15-minute radio programs were presented dealing with the various phases of the program.

Community committee meetings

During the year three county-wide meetings of community committeemen were held to discuss various problems having to do with the conservation and price-support programs.

Election of committeemen

The election of 1949 county and community committeemen was held during the months of November and December. Voting was carried on by mail and at 14 polling places throughout the county. A total of 950 votes were cast in the election.

PERSONNEL

County committee

A county convention, at which representative farmers from all sections of the county were present, met in December 1947 and elected the following men to serve as the county committee during 1948, C. R. Broadhurst, Pea Ridge, chairman; Scott Evans, Maysville, vice chairman; Dan B. Blair, Route 1, Bentonville, regular member; Joe Douglas, Route 2, Bentonville, first alternate; Orville Austin, Maysville, second alternate; P. R. Corley, county agent, ex officio member.

The county committee held two regular meetings each month and in addition several special meetings as the need arose. Each member was practically 100 percent in attendance.

The following list covers part of the duties performed by the committee during the year:

1. Recommended program practices, methods of establishing farm allowances and rates of payment for practices.

2. They designated the most-needed practices for the county and recommended the materials and services to be furnished on purchase order and the fair price for these materials.

3. They reviewed and passed upon farmers' performance reports and approved applications for payment.

4. They hired the necessary field and office personnel and set their salaries.

5. They approved association budgets and certified monthly expense accounts.

6. They cooperated with the Extension Service in holding educational meetings in an effort to keep farmers informed concerning the objectives, provisions, and progress of programs.

7. They arranged for the annual election of community and county committeemen and encouraged farmers to participate in the elections.

8. They put forth every effort to obtain an adequate supply of conservation materials such as lime, phosphate, and winter cover crop seed.

9. They kept the State committee informed on the progress of the work and on farm problems peculiar to Benton County.

Community committeemen

The community committeemen who served during 1948 were elected in November 1947. Fourteen polling places were open and every person who participated in the 1947 program was eligible to vote for these committeemen. Balloting was also carried on by mail. Regular ballots were provided and the election conducted and results certified by community committeemen. Benton County was divided into 14 communities for convenience in administering the program and three regular members and two alternates were elected from each community. The following committeemen served during 1948:

Community 1—Logan, Ball, Yell, and Hico Townships: C. M. Nokes, W. A. Braden, Walter Bruner, J. D. Mason, Ira Leach.

Community 2—Flint, Felker, Gentry Townships: Ernest Slocum, Harlan Wasson, Ernest Butler, M. O. Winningham, Vol Wasson.

Community 3—Round Prairie, Cherokee Townships: Cecil Hartley, Stanley Berridge, E. C. Scott, S. N. King, T. C. Barney.

Community 4—Beatie, Eldorado Townships: George Haley, John Rodgers, Maurice Loux, Raymond Tucker, Joe Rodgers.

Community 5—Decatur Township: Lee Shook, Fred Gilbert, E. C. Fairless, C. E. Reed, W. H. Bush.

Community 6—Apple Glen, Sulphur Springs, Wallace Dickson Townships: Paul Belts, Elmer J. Kelley, Nick Hendren, J. W. Kelley, Frank Edwards.

Community 7—Garland, Mason Valley, Anderson Townships: Joe Douglas, A. F. Weiser, Glen Rakes, Gid True, Horton Harral.

Community 8—Hoover, Wager Townships: W. B. Sullivan, Mac Givens, Barney Douglas, Hugh Evans, Frank Douglas.

Community 9—Colville, Washington, Big Springs Townships: Asa Garrett, Glen Johns, Glen Brainard, Harvey Graham, Feaster Carter.

Community 10—Exculapia, Brightwater Townships: Lawrence Brush, R. W. Davis, W. D. Hall, Jess Howell, E. N. Adams.

Community 11—Osage Township: Harley Featherston, Charles Follet, Don Cloe, Bill Gregory, Carl Tromble.

Community 12—Mount Vernon, Sugar Creek Townships: Mitchell Webb, John Schell, Finis Hall, Sam Evans, Herbert Ross.

Community 13—Rollers Ridge, Pine Log, Garfield Townships: Ted Schnitzer, Leland Gann, W. C. Allen, Ray Hurd, Mary McGaw.

Community 14—Walnut, War Eagle Townships: J. L. Agnew, R. G. Churchwell, E. L. Marrs, Arthur Bland, Green Sharp.

None of the farmer-elected committeemen, county or community, draw a salary but are simply paid for the time actually spent on business for the association. The pay they receive only serves to pay their travel and other expenses in connection with meetings they attend.

These farmer committeemen represent the grass-roots thinking in their community and are an important factor in keeping the control of the program in the hands of local people. Their biggest job is to keep the farmers in their own community informed about the program. In addition they make recommendations to the county committee concerning conservation needs and the practices and conservation materials necessary to meet these needs. They also assist in arranging for community elections and in holding the elections in their respective communities.

Office personnel

Carl T. Casand, County Administrative Officer, Bentonville; Virginia Jackson, clerk, Bentonville; Irene Webb, clerk, Pea Ridge; Dorothy Patterson, part-time clerk, Pea Ridge.

Persons who work in the county triple-A office are employed by the county committee. Two full-time clerks and an administrative officer were employed during 1948. One part-time clerk was employed for about 8 months.

These folks perform all of the office and field work and are directly responsible to the county triple-A committee.

Harry S. Truman, President; Man of the People—Man of the Year

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 2 (legislative day of Monday, February 21), 1949

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the North American Labor magazine for January 1949, by George M. Harrison, an outstanding American labor leader, grand president of the Brotherhood of Railway Clerks, who played an important part in the mobilization of organized labor in support of the Democratic ticket last November. The article is entitled "Harry S. Truman, President; Man of the People—Man of the Year."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HARRY S. TRUMAN, PRESIDENT; MAN OF THE PEOPLE—MAN OF THE YEAR

(By George M. Harrison, grand president, Brotherhood of Railway Clerks)

As a result of the election of President Harry S. Truman and a Democratic Congress, 1949 promises to be a banner year in general social and economic progress.

The great program of social reform launched by Franklin D. Roosevelt, which brought such great benefits to wage earners, farmers, and working people in general, was arrested by the war and then completely stymied by the reactionary Eightieth Congress, elected in the fall of 1946, when it appeared that progressivism had run its course. Confident that big business was again firmly in the saddle; that the people were tired of reform and once more willing to entrust their welfare to their economic overlords and their political hatchetmen, the Eightieth Congress not only blocked every effort toward further social reforms but narrowed the base of our social-security program, reduced taxes for the rich, turned its back on the problem of housing, got set for a raid by giant corporations upon our natural resources, tore up the National Labor Relations Act under which the labor movement had grown from less than 3,000,000 to 16,000,000, and imposed upon wage earners the iniquitous Taft-Hartley law.

But big business and its political stooges reckoned without their host—the labor movement. They made the mistake of assuming that a new and vigorous labor movement, a labor movement which is now in truth representative of the wage earners of this country, would take the political setback of 1946 lying down like they did in the early 1920's when their powers of resistance had all but been destroyed by the open-shop drive.

And they made another blunder. They thought Harry S. Truman was a "dead duck" politically. The election proved him to be one of the ablest political leaders of our times.

Rallying to the support of the President, because his program embodied the social reforms which it has stood for and fought for for a generation, the labor movement contributed mightily to bringing to the polls on November 2 a majority of over 47,000,000 like-minded people, and today the New Deal and all it stands for in social reform, in the use of the power of Government to provide economic security for the masses of the people, is again a vital, driving force in American political life.

President Truman's liberalism is grounded in the basic philosophy of the American people. He, in common with most Americans, holds the conviction that the purpose of government is, (1) to protect the weak against the strong; (2) to help the people accomplish those things which they cannot do for themselves; and (3) to channel individual activities for the achievement of generally agreed national objectives.

His domestic program concerns itself with matters close to the hearts of the people—repeal of the Taft-Hartley Act and returning to workers the right of self-help through free labor unions, the housing shortage, extension of social security, river valley developments, price support for farmers, Federal aid to education, and a system of taxation that will place the expense of government largely on those who profit most from our economic system.

His foreign program calls for the application of our collective wisdom to our collective problems. It includes among other things, a continuance of the European recovery program, the development of world trade through the Reciprocal Trade Agreements Act, and approval of the International Trade Organization and the International Wheat Agreement.

President Truman is the man of the year, because he confounded the cynics by proving he understood the willingness of the American people to act with daring in an attempt to solve the problems of our Nation.

He is the man of the year, because to him must go the credit, in a large measure, for the leadership that defeated so many reationary Congressmen.

He is the man of the year, because he has reversed the trend toward reactionary government in America and placed the Nation back on the path of liberalism—the only true course for a nation whose people are concerned with the extension of democracy and easing the burdens of humanity.

Assessment by American Medical Association To Combat Compulsory Health Insurance

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 2 (legislative day of Monday, February 21), 1949

Mr. MURRAY. Mr. President, I know that many Members of the Congress are receiving letters from physicians asking about their rights under the American Medical Association's compulsory $25 tax on its members. They are also receiving inquiries about the AMA's widely publicized so-called 12-point plan. I

do not want to comment on these matters at this time, but I ask unanimous consent to place in the RECORD at this point an article from the New York Herald Tribune and one from the Washington Post, which set forth the answer of one of the country's largest medical societies to these questions. I am sure the Congress will find them most enlightening and important.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of March 1, 1949]

The New York County Medical Society, largest member group of the American Medical Association, last night withdrew its support of the AMA's plan to combat compulsory health insurance. The AMA plan calls for a $25-a-member assessment to raise $3,000,000 for an additional campaign in behalf of various voluntary prepayment systems. At its last meeting on January 24, the society passed a resolution which approved the assessment and, in general, backed the AMA's stand on the matter. Approval was carried by a clear majority, but only after bitter debate. It was then voted to reconsider the motion at the next meeting.

That meeting was held last night and the resolution was defeated, 432 to 333. The meeting was held at the New York Academy of Medicine, 2 East One Hundred and Third Street. Also defeated in last night's session was another resolution offered by the society's executive committee to approve a 12-point program that has been offered by the AMA as a constructive answer to the Government's proposed compulsory insurance plan. This resolution, however, will be reconsidered at the next monthly meeting of the society, March 28, and could be adopted or amended at that time.

Opponents of the assessment accused the AMA of consistently fighting change and charged that the educational plan was merely propaganda for maintaining the status quo. Proponents answered that they were in favor of voluntary health insurance plans because they have proved workable. They said they were opposed to Government control of medicine because such a plan had been tried in other countries and had led to the demoralization of medicine. In some cases, the speakers resorted to invective, and often ill feeling was obvious. Both sides charged at least once that the other was trying to slip something through by unethical parliamentary procedure.

LARGEST UNIT QUITS AMA HEALTH PLAN—NEW YORK COUNTY MEDICAL SOCIETY WITHDRAWS ASSESSMENT SUPPORT

NEW YORK, March 1.—The largest member group of the American Medical Association has withdrawn its support of the AMA's plan to fight compulsory health insurance.

The New York County (Manhattan) Medical Society took the action last night.

The group also defeated a resolution, offered by the executive committee, to approve the 12-point program the AMA has offered as a constructive answer to the Government's proposed compulsory health-insurance plan.

This resolution, however, will be reconsidered at a meeting March 28.

The vote at last night's meeting was 432 to 333 against the AMA's $25 per member assessment to raise $3,000,000 for a campaign in behalf of voluntary health systems.

At its January 24 meeting, the county society adopted a resolution approving the assessment and generally backing the AMA stand. Approval at that time was by a clear majority after spirited debate, but reconsideration was scheduled for last night. Debate again was heavy.

The Role of Intelligent Politics in Party Triumphs

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 2 (legislative day of Monday, February 21), 1949

Mr. MYERS. Mr. President, the Harrisburg Patriot, published in the capital city of Pennsylvania, earlier this week published an editorial entitled "Smarter Politics," dealing with the failure of the Republican Eightieth Congress to provide adequate storage facilities for our farmers for periods of abundant harvest such as we had last year.

This editorial correctly points out that the Democratic Eighty-first Congress plans to "pick up the ball the Republicans of the Eightieth Congress muffed," and says this is typical of the smarter politics which has characterized Democratic activities.

If the science of government is administration of public affairs with a side line of intelligent politics, then there is no mystery in the recurring triumphs of the Democrats—

The editorial declares—

"Santa Claus" is not the only explanation for party triumphs.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD as a reminder to our Republican friends that good politics—the most effective politics—is government in the public interest.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SMARTER POLITICS

One reason why the Democrats have been topping the Republicans in national elections is because of smarter politics. If the science of government is administration of public affairs with a side line of intelligent politics, then there is no mystery in the recurring triumphs of the Democrats. "Santa Claus" is not the only explanation for party triumphs.

Right now, the Democrats in Congress are picking up the ball the Republicans of the Eightieth Congress muffed—adequate grain-storage facilities for the farmers. The present plan is to provide storage space for from 250,000,000 to 350,000,000 bushels of surplus grains.

That same situation was faced by the last Congress dominated by Republicans. Whether or not it was sound economics is another question but it is doubtful if that was an inhibition to a party which was yearning for the White House after 16 years in the barrens. Furthermore, the party leaders knew the farmers wanted this grain-storage program.

It is too much to think that conscience prevailed over political conquest which lay in the direction of wooing the farm vote. The Congress disregarded the plain political, if not economic, mandate of the hour, discarded the storage program and woke up the morning after election to find they had lost the great farm States.

Democrats do not intend to be guilty of that political blunder. Nor is it likely that the Republicans will be a second time.

Dogs and Children Not Wanted

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mrs. DOUGLAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article from the January, 1949, issue of the Woman's Home Companion:

DOGS AND CHILDREN NOT WANTED

I never realized how unpopular children are—how discriminated against, even how hated—until I went across America in search of apartments to rent. My mind still echoes with "No children," "Adults only," "No dogs or children." Discrimination against children would be bad enough any time. It's fantastic in the worst housing shortage in American history.

"They've made us feel it's a sin to have children," said a Detroit mother. "What do they want us to do, drown our kids?" asked a Boston father. "Maybe we wouldn't have them—if we could make the choice over again," said a young Pittsburgh couple.

It is reliably reported that three to five million families are desperately in need of places to live. How many could be housed if we used existing housing to full effectiveness—instead of filling five-room apartments and two-family houses with childless adults? Dr. Bryn J. Hovde, of the National Public Housing Conference, estimates 25 percent of all our rented housing space—especially in larger cities—is under-occupied due to discrimination against children.

Acting the house-hunter in cities throughout the Nation, I have felt the stab of child-discrimination a hundred times. In Detroit brusque voices said over the phone, "Sorry, no children," and clicked down the receiver. In Chicago, after dismal plodding, I was offered only two places to live—provided I boarded out the children. In a small Missouri town a professor's wife denied me even a trailer which she had advertised for adults only.

I spent hours over the classified ads—the blatant ones: "No children," "No pets or children"; the subtler ones: "Business couple preferred," "Suitable for adults." Out of 43 ads in a Cincinnati paper, 22 openly barred children. In a Pittsburgh paper, 17 of 26. In Columbus, Ohio, the total reached 87 percent—13 out of 15.

Discrimination often wears kid gloves. "The apartment is on the third floor. That's too much for children to climb," insisted a Philadelphia renting agent. A Brooklyn landlord refused to rent because there was no place to keep a baby carriage.

Solicitude for other tenants was remarkable. I was turned away from a dozen buildings "because we've got old people and you know how they are about children," or because "I owe it to the others to keep children out but I love children myself."

This bluff was repeated so often I finally said to a Pittsburgh landlord, "Suppose I give you a bonus—on account of my two children. Fifty dollars per child?" He hesitated. There was that electrician who worked nights and that invalid old lady. "All right," I said, "I'll make it a hundred a piece. Two hundred dollars for the children." The landlord began telling me what a nice place I was getting, how he liked to deal with a reasonable fellow like me and—to my disgust—how he was just crazy about kids and had three himself.

Worse than extortion was the indignity I was made to feel for all of us who have children. In a Boston suburb, a landlady said commiseratingly, "I'm so sorry you have children." I stopped being a journalist right there and answered, "I'm not sorry. I'm mighty glad I have children. I'm sorry for you," and walked away.

But I was aghast at the number of couples who have apparently been convinced that somehow it is a crime to have children these days. One father walked into the Los Angeles Housing Authority and said, "Every time I find a vacancy I know there is no use because I have two little children I shouldn't have had." In Columbus, Ohio, a Mrs. Healy plaintively advertised, "We have a 5-year-old daughter. Please don't hold that against us."

Many landlords try to evict couples who dare have babies after moving in. One landlord called it misrepresentation. The thinking is simple: If they're childless when they rent, they should stay childless. Today, to avoid being tricked, some landlords insist on observing the wife before closing the deal. They want to see if she is visibly pregnant. Mrs. Ruby Bower, of Madison, Wis., remarked, "The prejudice against my baby started even before he was born. I was honest. I admitted I was pregnant. In return I got, 'Sorry, no children.'"

How about smuggling children in? This is done, too. A Missouri woman became infuriated at a landlord who permitted dogs and banned children. She said she had only two nice little puppies. Then she moved in with her two children instead and defied the owner to evict her. Smuggling is commoner as the pinch gets tighter. "We hate to do it," said a Buffalo house-hunter. "But there is a temptation to say nothing about the children and move them in a few days later, after dark."

The New York City Housing Authority maintains a vacancy-listing bureau. In its sparse files 88 percent of the listings contain a ban against children. Many of those which admit children are either priced sky high or far removed from working centers.

Yet at this agency, virtually a last straw for discouraged parents, I watched a young man whose wife was pregnant. "We live in a furnished room. The landlady says the door gets locked when my wife goes to the hospital." A mother who had farmed out her 7-year-old daughter in North Carolina since 1946, "My child won't know me when we get together again," she sobbed.

I began to doubt that compassion exists after visiting Castle Shannon Borough, outside of Pittsburgh. There 45 families were living in condemned houses with smoldering slag fire eating its way through the slate heaps underneath. They received eviction notices a month before. But they could not move. They had children. And so they were still there, while smoke came up through the floors of their houses. "We've gone through card after card in our vacancy listings," said the Pittsburgh Housing Association, but inevitably the owners insist, "No children."

Compassion for a group might be too much to expect. How about an individual? In Chicago Mrs. Emelio had just buried her husband, killed in action on Leyte on October 28, 1944. Mrs. Emelio and her two children were being evicted at the very time his body was returned for reburial. "The landlord is remodeling the building," she explained. Mrs. Emelio had been looking for a long time. Once she choked up when she was pleading with a landlord and said, "You say no children, but do you realize that these are the children of a man who gave his life for you?" "I'm sorry, lady," he replied. "If I break my rule for you I'd have to break it for everybody."

And that's the story of compassion.

Why do they discriminate against children? The first answers are obvious: "Children are destructive." "They mark wallpaper." "They run up and down the stairs—they break the banisters." In these attitudes it is easy to see the vicious hallmark of all social discrimination. To slander a group, take the worst characteristic of any individual and smear the entire group.

What are the facts? The Federal Public Housing Authority conducted a damage survey in a hundred and seventy-three thousand housing units. Only two common types of damage could be attributed to children—the marring of doorways and baseboards by bicycles, scooters, and carriages; and the defacing of walls by smearing. Adults, on the other hand, were responsible for eight major damage categories. Grown-ups, concluded the Housing Authority, are the apartment wreckers—not children.

When stripped of masquerade the basis of child discrimination is largely a greedy axiom: Get the most money for the least occupancy. That philosophy certainly does not fit the American dream: the eager parents and the happy, bright-faced children.

What can we do about it? Can we legislate child discrimination off the face of the land? A few attempts have been made. The New York State Legislature in 1946 made it a penal offense for a landlord to demand by lease that the tenants shall remain childless. These laws attack only fragments of the problem. Most experts doubt that laws can do much more. As one of them put it, "You can't legislate decency." The landlord has too many ruses.

You and your neighbors can do more than all the fine print in legaldom. Let's have women's club resolutions, men's club campaigns, a proclamation by the mayor, editorials in the papers, speeches in the town hall, and lots of talk over the cracker barrel and back fence. No law in the world has the awesome power of honest public opinion. As one housing expert put it, "You don't have to drop a ton of bricks on the landlord. All you have to do is make him feel like a heel."

Real-estate boards can help. Small property owners seem to be the worst offenders. It is up to the real-estate boards to educate them. A few are doing it. A vice president of the Real Estate Board of New York, speaking for the large management company of which he is an executive, declares: "We have educated the owners of our 125 buildings not to discriminate. We have shown them that families with children stabilize a neighborhood, that in the long run they are more responsible tenants, healthier for community life."

We need a whale of a lot more of that kind of education. A small landlord can be painfully ignorant. He doesn't see his one or two buildings as part of the national housing scene. He hasn't been educated to the basic tenet of the free-enterprise system—a profit motive conditioned by the public good.

A young New York couple recently was being evicted because the wife was pregnant. A Christian minister, a Jewish rabbi, and a delegation of neighbors called on the landlord and helped him see the light. He let the family stay.

The ultimate problem is one of human decency and conscience. It is a sad civilization which throttles its own offspring. St. Matthew 18: verses 2, 5, and 6 read:

"And Jesus called a little child unto Him, and set him in the midst of them, and said * * * whoso shall receive one such little child in My name receiveth Me. But whoso shall offend one of these little ones which believe in Me, it were better for him that a millstone were hanged about his neck, and that he were drowned in the depth of the sea."

Social Security

EXTENSION OF REMARKS
OF
HON. JOHN A. CARROLL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1949

Mr. CARROLL. Mr. Speaker, no obligation on the Congress is more pressing than the need to fulfill our promises to make social security a reality for all people. It is especially important that we act at once to extend the old-age and survivors insurance program to all working people and to lift the benefit level. The agricultural States particularly have good cause to complain about the failure of past Congresses to extend this program since they are obliged to pay the cost of insuring industrial workers in the price of manufactured goods and then tax themselves heavily to support disproportionate assistance loads for their own people. It is little wonder that various segments of the American people are showing discouragement with the failure of Congress to provide real social insurance for their old age and seeking their security through other measures like veterans' pensions, old-age pensions, union health and welfare funds, and a wide-open assistance program. Our answer to these demands must be a real social insurance program affording to everybody the security that can only come with adequate benefits based on the equity rights resulting from individual contributions made by the worker and in his behalf by his employers throughout his working life.

The Washington Post of February 25 carries an editorial on social security which stresses this point. While I do not agree with the suggestion that the benefit level proposed by the Administration may be too high and certain other reservations indicated in this editorial, I believe its main contention deserves careful study by all the Members of Congress. I am, therefore, under leave granted me to extend my remarks, including this editorial at this point:

SOCIAL SECURITY

The administration's social-security program is tripartite: (1) Extension and liberalization of old-age insurance; (2) disability insurance; and (3) a liberalized system of Federal grants to supplement State outlays for the needy. The important thing to remember is that the welfare and insurance bills designed to carry out the administration's proposals are intimately related. Further increases in the size of Federal-aid contributions and use of Federal funds for general assistance purposes can be defended much more effectively if the Federal old-age insurance system is at the same time extended to cover millions of uninsured workers and if insurance benefits are increased to reasonable levels. For given an adequate system of social insurance covering most employed workers, the great majority of the people will be protected by their insurance benefits from becoming public charges. Comprehensive insurance coverage would reduce permanently and progressively the financial burdens of caring for the needy. And the Federal Government could, as a

result, gradually withdraw from the field and let the States assume full financial responsibility for the care of the needy.

Considered only as a temporary transitional means of assisting the States to discharge more effectively their obligation to take care of the needy, the administration's public-welfare bill has much to commend it. For many of our poorer States are at present extremely hard pressed. By varying the proportion of Federal aid contributed with reference to State per capita incomes, the poorer States will be encouraged and assisted to make more adequate relief payments. And by insisting on State compliance with certain minimum administrative standards the Federal Government can do a great deal to improve the efficiency of State-aid systems. Moreover, there is no logical reason for limiting Federal grants-in-aid to the aged, the blind, and dependent children. On the contrary, as the Advisory Council on Social Security says, the present limited system encourages some State and local governments to put an undue proportion of their own funds into those welfare programs that are augmented by Federal funds, with the result that other needy persons are deprived of adequate help from State and local funds.

Conceding the strength of these arguments, it would, nevertheless, be most unfortunate for Congress to step up the aid program at this juncture unless it acts at the same time to bring into the old-age insurance system millions of uncovered workers and to increase the scale of insurance benefits. For the present trend toward reliance on aid instead of insurance has already resulted in bringing the average level of relief payments to the aged far above the average of insurance payments. In an article appearing recently in a publication of the United States Chamber of Commerce, John J. Corson emphasized the dangers of this tendency. "The formula for Federal old-age assistance grants," he said, "has been increased three times since 1939. Meanwhile, every proposal for comparable liberalization of old-age and survivors insurance has been rejected. Simultaneously legislative action in various States, and changing administrative practices, outline a trend in old-age assistance away from precise case-work determinations of individual need and toward Townsendlike flat pensions determined by mass-production techniques."

Most Americans do not want that kind of prop for their old age. They prefer pensions which they have earned as a right, not doles based on evidence of need. Yet for the millions still denied rights of participation in the insurance system there will be no choice in the matter, unless Congress consents to bring them into the system. The longer action is delayed, the greater will be the number of the aged dependent on relief payments.

Objections to expansion of the insurance system on the ground of its cost to industry lose sight of the fact that relief payments are likewise costly and have to be met by taxes that also burden industry. Moreover, generous Federal participation in State relief programs carries with it the danger that State and local governments will become careless or unnecessarily lavish in disbursing relief funds. There is no such danger from an extension of an insurance system financed by contributions from employers and employees.

There are legitimate grounds of objection to the proposed payment of short-time sickness insurance benefits since this type of disability can best be determined by local organizations. The proposed scale of old-age and survivors insurance benefits may also be somewhat higher than warranted, in view of the cost of the insurance system. Insured workers not only have to meet part of that cost through direct contributions, but, as taxpayers, they may eventually have to supply the Government with funds to supplement contributions to the insurance trust fund. However, these are details; the administration program, viewed as a whole, involves no departures in principle from the system now in force. It merely aims to develop it along lines already laid down, and, above all else, to establish a comprehensive kind of insurance program that will reduce the need for public assistance while making relief payments in the poorer sections of the country more adequate than they now are.

Palisades Project of Idaho

EXTENSION OF REMARKS
OF
HON. JOHN SANBORN
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 2, 1949

Mr. SANBORN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorial from the Senate of the thirtieth session of the Legislature of the State of Idaho. This joint memorial by the irrigation and water resources committee calls attention to a serious problem in eastern Idaho. In 1941, Congress authorized the construction of what is known as the Palisades project to be built near the Idaho-Wyoming border on the Snake River. However, to date there has been little more than preliminary survey work done on this project. Eastern Idaho needs aditional water for irrigation, more power for industrial and commercial use, and urgently needs the Palisades to bring the devastating spring floods of the Snake River under control.

Senate Joint Memorial 6

A joint memorial to the Honorable Senators and Representatives of the United States of America in Congress assembled

We, your memorialists, the Legislature of the State of Idaho, respectfully represent, that:

Whereas millions of acre-feet of the water of Snake River are annually running to waste into the Columbia River and Pacific Ocean; and

Whereas such wasted waters are urgently needed: to supplement the water rights of water users of the Snake River Valley in Idaho; to irrigate new desert lands in the Snake River Valley of Idaho; and

Whereas the conservation and storing of such waters will control the flooding and washing of thousands of acres of valuable farm lands in the upper Snake River Valley and will provide water power for the production of hydroelectrical energy, which is urgently needed in the Intermountain States: Now, therefore, be it

Resolved by the Senate of the State of Idaho (the House of Representatives concurring), That we most respectfully urge upon the Congress of the United States of America that it appropriate the necessary funds and proceed at once with the early and speedy construction of the Palisade Dam project in Idaho; be it further

Resolved, That the secretary of state of the State of Idaho be authorized and he is hereby directed to forward certified copies of this memorial to the Senators and the Representatives in Congress from this State, and to the Senate and the House of Representatives of the United States of America.

This senate joint memorial passed the senate on the 5th day of February 1949.

DONALD S. WHITEHEAD,
President of the Senate.

This senate joint memorial passed the house of representatives on the 16th day of February 1949.

JOHN HOHNHORST,
Speaker of the House of Representatives.

I hereby certify that the within Senate Joint Memorial No. 6 originated in the senate during the thirtieth session of the Legislature of the State of Idaho.

JOHN C. PORTER,
Secretary of the Senate.

Facts About the National Health Insurance and Public Health Act

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mrs. DOUGLAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following:

FACTS ABOUT THE NATIONAL HEALTH INSURANCE AND PUBLIC HEALTH ACT (H. R. 783)

1. What is this act? This measure would provide health insurance for our people regardless of residence, race, creed, color, or economic status.

2. What medical care would I have? Preventive (check-ups, inoculations, etc., to keep you from getting sick unnecessarily); diagnostic (to find out what is wrong with you when you are sick); and curative (to cure you after you are sick).

This means services by a family physician, services of specialists when required, hospital care (60 days hospital care, except for tuberculosis and mental diseases); laboratory and X-ray services; unusually expensive medicines; special appliances and eyeglasses; dental care and home nursing to limited degree.

3. Will I be eligible? Yes; you and your dependents (wife or disabled husband, parents, children if dependent and under 18 years of age), if you are (a) employed or self-employed; (b) receiving old-age or survivors benefits; (c) receiving civil-service benefits; (d) a needy person whose contributions to the insurance fund are paid by a public agency.

4. How much will I have to pay for these services? One and one-half percent of your earnings up to $3,600; your employer would contribute another 1½ percent up to $3,600. If you are self-employed, you would pay 3 percent up to $3,600 of your own earnings.

5. Will I have free choice of doctor and hospital? Yes, you can choose your own doctor, hospital, group clinic, specialist, dentist, or nurse from among all the practitioners and institutions in your community that serve under the act.

6. Will doctors choose their own patients? Yes. Doctors will be free to accept or reject patients, just as they do now.

7. Must doctors serve under the act? No, not if they do not wish to. By merely declaring he does not want to serve patients under the National Health Insurance Act, a doctor can remain outside of it.

8. Will my medical records be open to public inspection? No, of course not. Your medical records must be held confidential, just as doctors hold such information confidential now. Statistics may be compiled from the records, but the identity of any individual may not be revealed.

9. How will doctors be paid? They will be paid by the method a majority of the doctors in a given area or locality prefer. Doctors will be paid by a fee-for-each-service, by salary, or on a per capita (so much for each person on the doctor's list) basis; or by a combination of these methods, as the majority may determine.

10. What happens if I belong to a voluntary health insurance plan? Voluntary health insurance plans could continue to provide you with services under this act, and be reimbursed from the Health Insurance Fund.

11. How will this act help me if I live in a rural community? You would have more doctors at your disposal. The act will make it possible, through added financial aid from the Insurance fund, for more doctors to go to rural areas. It will also help to expand local public health services, rural hospitals, and ambulance service.

12. How will this act be administered?

(a) The funds will be collected by the Federal Government along with other social-security payments.

(b) Each State government will divide the State into local service areas and appoint local committees and officers.

(c) Doctors and laymen in the localities where the services are rendered and received will run the program.

(d) The local set-up will consist either of a local administrative committee or of an administrative officer working with an advisory committee. Such local committees will include both lay and professional people, appointed by the State.

(e) National and State advisory councils will have similar representation.

(f) At the Federal level, administration will be by a board (within the Federal Security Agency) of five full-time officials.

13. How will the health of our country be improved?

(a) (1) Everybody will be able to get preventive medical services to keep away sickness.

(2) You will get all physican and hospital services when you are sick, without worry about expense. You pay as you go, a little every month, sick or well. When you get sick, you will have prepaid your doctor and hospital bills.

(b) Doctors will be able to practice in rural and poor areas with assurance of adequate income.

(c) There will be more money for more hospitals, needed now in many places.

(d) There will be funds for grants-in-aid to proper agencies for medical research, for better treatments and cures.

(e) Properly qualified persons will be able to get more and better professional training, ending the present shortage of doctors, nurses, and other medical workers.

Admission to United States of 2,500 European Physicians

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 2 (legislative day of Monday, February 21), 1949

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Hazleton Plain Speaker reporting the proposal of Pennsylvania Veterans of Foreign Wars officials that 2,500 European doctors, many of them in displaced persons camps, be invited to this country to help alleviate the shortage of medical personnel in this country, particularly in some of our veterans hospitals.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STATE VETS ASK FOR ADMISSION OF 2,500 EUROPEAN DOCTORS

HARRISBURG, February 5.—The State Veterans of Foreign Wars today urged relaxation of immigration restrictions so that 2,500 European doctors can come to America.

"Only our apparent disinterest and an entry permit separates thousands of displaced doctors and thousands of American war veterans and others who urgently need their skilled medical and surgical services," declared H. V. Hartman, State VFW commander.

Hartman made his plea after he said a survey showed that five hospitals for veterans in Pennsylvania "are jammed, have long waiting lists, and are understaffed."

He said that although 1,529 former servicemen are awaiting admission to the hospitals, 57 beds at the Lebanon Veterans Hospital "are unoccupied because the Government cannot find doctors and other hospital personnel to staff properly the institution."

Hartman added "someone in Washington should slash through the lengthy immigration procedures and invite hundreds of the 2,500 doctors now in displaced persons camps in Europe to start life anew in this promised land of ours.

"Let us give them priority, within the present quotas. It would give them new hope and at the same time alleviate our medical situation that is admittedly acute."

Newspapers, North and South, Endorse Arkansas Plan for Civil-Rights Legislation

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1949

Mr. HAYS of Arkansas. Mr. Speaker, I fear that the Eighty-first Congress is permitting the rapid dissipation of an atmosphere in which there can be a calm and judicious consideration of legislative proposals. The recapturing of this atmosphere would be the most effective way to inspire the people of the United States with greatest confidence in our ability to legislate wisely even in the midst of tension and disagreements. The fact that there are disagreements is not of itself significant, for that is an element in democracy, but the reluctance to make some sacrifices for the sake of national unity is something to give us all great concern.

The Congress cannot discharge its obligations by transferring responsibility to the President, even though the key to the difficulty is the civil-rights program sponsored by the President. All over the country there is a growing awareness of the need for finding common ground. Without reference to partisan advantage, editorial writers everywhere are beginning to point out the necessity for abandoning the unyielding positions which both sides have held. The Minneapolis Tribune, for example, commenting on the Gallup poll showing that in the United States only 27 percent of the people interrogated favor the program as a whole, with 22 percent replying in the negative, said:

The Truman program may run into serious difficulties if it is passed in its entirety, but a compromise plan embracing certain features of it is certainly desirable.

The Birmingham News, referring to the Tribune's statement, said:

This comment, coming from the far north of our country, typifies a developing sentiment in the Nation as a whole, in favor of new efforts to find a constructive common ground in this controversy. Failure to do so, of course, would work heavily against national unity and the general good.

In an editorial entitled "A Sane Compromise Would Clear the Air," the Louisville Courier-Journal pleads for the elimination of passion and confusion from current debates in the Congress and referring to my recent outline of logical concessions to be made by both sides, states:

It is obvious that Arkansas' Representative BROOKS HAYS has this in mind, among other considerations of national unity and accomplishment, when he pleads for a compromise of moderates on the civil-rights program.

The Need for National Health Insurance

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mrs. DOUGLAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following:

THE NEED FOR NATIONAL HEALTH INSURANCE

1. HOW MANY AMERICANS CANNOT MEET SERIOUS SICKNESS COSTS WITHOUT ASSISTANCE?

Four out of every 5 persons—about 117,824,000. In 1939, the American Medical Association estimated that families with incomes under $3,000 need help to meet the cost of serious illness. The present equivalent in purchasing power is about $5,000—nearly 80 percent of our families earn less than $5,000.

2. WHAT DO SICKNESS AND DISABILITY COST ANNUALLY?

In terms of production: More than one and one-half billion man-days are lost annually.

In terms of money: $27,000,000,000 annually is the total cost of sickness and disability, including direct wage losses, direct business costs, plus hidden costs of loss of future earnings because of premature death and disability.

3. HOW WOULD THE COST OF NATIONAL HEALTH INSURANCE COMPARE WITH PRESENT EXPENDITURES FOR MEDICAL CARE?

In 1946, over $5,600,000,000 were spent by the people of the United States for medical care, including medical and hospital services, medicines and supplies, and health and acci-

dent insurance. In 1941, the total amount spent on medical care was over $3,400,000,000.

The amount spent for medical care by families varies with the various income levels.

In 1941, the average family with a yearly income of $1,250 spent $43 for medical care.

In 1941, the average family with a yearly income of $2,500 spent $74 for medical care.

In 1941, the average family with a yearly income of $3,600 spent $143 for medical care.

(These figures exclude expenditures for dentistry and home nursing.)

The annual contribution proposed under national health insurance would be 3 percent of earnings, but in the case of employed persons half of this would be paid by the employer. Thus:

An employee earning $1,250 yearly would contribute $18.75.

An employee earning $2,500 yearly would contribute $37.50.

An employee earning $3,600 yearly would contribute $54.

Comparison with the above figures shows that the payments required of employed persons under national health insurance would be much less than these people spend at present for medical care.

4. DO AMERICANS WANT NATIONAL HEALTH INSURANCE?

A Nation-wide poll by the National Opinion Research Center in 1944 showed: 82 percent thought something should be done to help people pay for medical care; 85 percent thought social security should include doctor and hospital care; 58 percent were willing to pay a 2½-percent deduction for this care.

Histadrut, a New Force of Historical Impact

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 1, 1949

Mr. KLEIN. Mr. Speaker, my own city of New York is celebrating Histadrut Week, honoring an organization which has demonstrated a new cooperative force in contemporary history. To all Americans with faith in democratic processes, the role of Histadrut will be of deep interest; and to the Jewish community, whether Zionist or anti-Zionist, the miracle of Histadrut is crucial.

I am inserting in the RECORD with special pleasure a tribute to Histadrut, written by I. F. Stone, as it appeared in the New York Post and Home News dated Tuesday, March 1. I am sure, Mr. Speaker, that you and other members will find this column interesting, enlightening, and heart warming.

HISTADRUT WEEK
(By I. F. Stone)

Imagine the United States, if AFL, CIO, the railroad brotherhoods, the miners, and the machinists were united in one big union; if three-fourths of American mixed farming were done by cooperative and collective farmers who also belonged to this union; if this union's members and their families made up virtually half the population of the United States.

Imagine that this one big farmer-labor union through subsidiary cooperatives played a major role in the country's transport, banking, marketing, wholesaling, fishing, water supply, aviation, merchant marine, building, and publishing; owned in terms of output a tenth of the country's manufacturing industry; and was able to command the devotion and energies of American-style go-getting businessmen as executives of these enterprises but at moderate trade-union salaries.

Imagine that this one big union had just emerged successfully from a period in which its resources and members had played a major part in rescuing Americans abroad from a dangerous enemy; secretly helped train and arm a people's militia for resistance to an occupying power and mobilized the Nation's workers, farmers, and productive capacity in a successful war of independence against this power and neighboring enemies allied with it.

Imagine that the leading figure of this one big union, its John L. Lewis, had also become the country's Churchill, directing what had seemed a hopeless war effort to victorious conclusion as prime minister of the newly freed state.

Imagine this and you get some conception of what the Histadrut means in Israel; the one big Jewish farmer-labor union whose foremost leader, David Ben-Gurion, is also Israel's new chief of state.

The city of New York has declared this to be Histadrut Week. In so doing it is honoring the institution which more than any other explains Israel's ability to win its war of independence; the institution which gives Israel its fascination as a tiny laboratory experiment in a new kind of state, a mixed economy with a Socialist core based on trade-unionism and rural communes.

Ben-Gurion once said that the Histadrut was intended to be the workers' instrument for the founding of a state, for the building of a land, for the liberation of a people.

No other union trade movement anywhere has played so crucial a role as the Histadrut. The recruiting abroad of Zionist pioneers and the establishment of new collective and cooperative farm settlements in the battle against Palestine's malarial valleys, craggy hills, and lonely deserts are both among the functions of Histadrut.

Certain fundamental questions of our time may be answered by the Histadrut in Israel. How link worker and farmer together? How combine the collective and cooperative life with a maximum of freedom for development of the individual? How tap the creative possibilities of labor by giving its organizations something bigger than collective bargaining as their task? How build socialism without the often cruel and clumsy hand of an all-powerful centralized state?

Something of the free society of which Kropotkin dreamed, a network of collective and cooperative organizations based on the organized power of workers and farmers, held together by voluntary agreement rather than the state's compulsions—this is what one glimpses who has seen the Histadrut in Israel.

Slum Clearance and Housing Legislation

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 1, 1949

Mr. BIEMILLER. Mr. Speaker, in common with most other urban communities in our country, the city of Milwaukee faces a housing crisis which grows more serious every year. The city government and private enterprise are doing their utmost to meet the needs of the people, but they cannot approach success without Federal aid. The number of living units constructed in the past 40 years is 40,000 behind the number of new families in the community.

Under leave to extend my remarks I insert in the RECORD testimony by the Honorable Frank P. Zeidler, mayor of Milwaukee, before another body detailing the housing situation in Milwaukee, the efforts made by the city to meet it, and the great volume of needs which must remain unmet unless greatly increased Federal aid is forthcoming from the Federal Government:

STATEMENT OF FRANK P. ZEIDLER, MAYOR OF MILWAUKEE, BEFORE THE SUBCOMMITTEE OF THE SENATE ON BANKING AND CURRENCY

Seventeen thousand living units for veterans are needed in the city of Milwaukee. This is the number of unduplicated applications of veterans for homes now on file with the Red Cross Housing Bureau in Milwaukee. How many nonveteran families are in need of living units, Milwaukee authorities have no way of knowing, but the real-estate department of the city of Milwaukee, which department handles temporary units for the city, tells me that the usual day brings 50 to 70 telephone requests for housing which have to be turned down. The personal distress of the applicants faced with the impending break-up of their families is no easy sight to observe, and it has stirred our city to action of its own to meet the continuing crisis.

Before describing what actions both the city and county of Milwaukee have taken to meet the housing needs, let me say that records of the Milwaukee building inspector reveal that the number of living units constructed in the past 40 years has been nearly 40,000 behind the number of new families created and that the greatest lag has occurred in this respect since 1929. For obvious reasons, first the depression and then the war and now high costs have curtailed home construction.

The city's building department also estimates that approximately 40,000 families in Milwaukee now live in substandard homes ranging from badly blighted structures to homes in grave need of repair and upkeep.

In common with other cities and counties, both the city and county of Milwaukee attempted to meet the housing shortages by taking people out from under the cold sky and putting a temporary roof over their heads.

Some 2,500 temporary structures were provided in the form of prefabricated houses, 24-by-20-foot "Wingfoot Homes," about 240 square feet, quonsets, trailers, barracks, and converted public buildings. The facilities are far from adequate for growing families and some of the temporary structures have undue fire hazards. These conditions, plus the rentals charged, are potentially demoralizing to the veterans' families living in them. All of these families are in hopes of finding better quarters, but what started as a temporary expedient for these people promises to become a permanent part of community life unless our city gets Federal assistance for housing these people.

About 1946 the city of Milwaukee bought 100 demountable houses from a war project in Indiana, placed them on basements and gave them permanent siding, and sold them at cost to veterans for around $6,000. We now wish we had bought 1,000 instead of 100.

In 1947 the city took the first steps to eliminate blight by a two-block project of 232 low-rent slum-clearance units. One hundred and thirty-three units are in the final stages of completion; the next 99 will be under way shortly. One million dollars of the city's funds are already invested, and the 1949 budget includes an item of $432,000

more to meet the cost of building which has risen since the contract for the first 133 was let.

Incidentally, to give you some standard of measurement by which to judge our achievements, we are a city one-tenth the size of New York. Two hundred and thirty-two units in our city would be approximately 2,300 in New York.

In April of 1948 the voters of Milwaukee voted to provide $3,500,000 for veterans' housing; $2,500,000 for blight elimination. On the basis of the $3,500,000 the city of Milwaukee developed a plan of financing 580 units, the so-called "Neewaukee" plan. The city provides toward a project one-third of the capital cost as a grant and the Milwaukee Housing Authority receives two-thirds on the sale of its lands. In this way an average rental charge of $55 a month is obtained.

The 580 units are in two projects called Northlawn and Southlawn, and first units are well under way toward occupancy. Architects' drawings of the projects are submitted herewith.

A third project of 380 units called Berryland is ready for the letting of bids. Hence nearly a thousand units will be under way by spring.

In addition to this building done by the city of Milwaukee without Federal aid, the city taxpayers raised $1,000,000 more in the 1949 budget. Three hundred thousand dollars is committed toward a cooperative housing association organized by veterans. The rest of the $700,000 will be used in 1949 for an addition of an undetermined number of units which may number as much as 560.

The Milwaukee Housing Authority now has scheduled an additional 6,750 units for building over a few years' period, but this program needs Federal aid.

It is obvious, however, that our scheduled program is tackling but a small chunk of our housing needs considering that 2,500 units of the program must take in veterans' temporary housing.

The observation may be made that somewhere along the line that some veterans should take care of their own housing. This is true in part, but the continued high cost of dwelling units and the fact that serious lay-offs are occurring will not make the problem of veterans' self-help any easier.

Tied up with the problems of low-rent veterans' housing and slum clearance is the need for community development. The Milwaukee Housing Authority in its 7,260-unit program intends to build 3,500 units on new land in order to relieve population pressure in the blighted areas. A program of this size, supplemented, we hope by private builders, calls for community development.

Community development means costs for new schools, roads, sewers, water lines, fire stations, and similar structures. Federal aid contemplated for community development might well also consider these factors. Unplanned and uncontrolled growth of the American city is the principal factor in urban blight.

We in Milwaukee, on the basis of our past experience, believe therefore that we have some estimation of the housing situation. Our experience summed up leads to the following conclusions:

1. Federal aid must be forthcoming to help cities since the housing situation is not nearly met.

2. Federal aid must be forthcoming for both low-rent and middle-group housing. The low-rent group need must be met with Federal grants; the middle-income group need through cheaper loans.

3. Both low-rent housing and middle-income housing require Federal assistance for clearing of blighted land. Clearing of blighted land calls for assistance for community development in order to have some place to move relocated persons. Community development in turn calls for assistance for utilities and public buildings.

4. Housing authority lands should be tax exempt.

5. Payments by federally owned projects to cities in lieu of taxes should equal 10 percent of shelter rent.

6. Construction on housing projects must be of such soundness as to attract private investing capital. Sound construction is the cheapest construction even if initial costs are higher.

In conclusion, let me say the hopes of many hundreds of thousands Americans for decent homes are tied up with this Congress. I am confident, personally, they will not be disappointed.

James A. Farley

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 2, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article which appeared in the Lynn Telegram-News, Sunday, February 27, 1949:

JAMES FARLEY'S POLITICAL PHILOSOPHY TOLD IN ADDRESS

FOREWORD BY CHARLES H. M'GLUE

Recently I received a letter from my old friend and political associate, the Honorable James A. Farley, of New York. In the letter there was a copy of a speech made by former National Democratic Committee Chairman Farley. Naturally I read it, as I like Farley and delight in his political concepts. However, this article on government, politics, and people was so fascinating and intriguing that I felt more persons should have the opportunity to get a better picture of the importance of politics in their daily lives.

Publisher Frederick W. Enwright, of the Lynn Telegram-News, agreed with me and kindly offered to publish this speech by the "Old Master" himself. So today you should avail yourself of the opportunity to find out just what politics is all about from one of America's best loved citizens as well as one of America's outstanding businessmen, the Honorable James A. Farley, chairman of the board of the Coca-Cola Export Corp. This address was delivered by him at Colgate University, Hamilton, N. Y., at the opening of the university's 1948 series of lectures in human relations.

For more than a quarter of a century I have carried in my pockets a definition of politics which has been an inspiration and a comfort in hours of striving and stress. I am not certain of the identity of the author beyond the fact that his name is Oliver. I believe that the sentences are the product of Andrew Oliver, the younger, scholar and founder of the Political Journal, rather than of his father, Andrew Oliver, the colonial political leader, who was hanged in effigy on his appointment as stamp officer for the Crown, at whose grave in Boston 1774 patriots cheered when his coffin was lowered into the ground. Both father and son had postgraduate courses in the hard school of practical experience, which would have given either of them the background for the lines I quote:

"POLITICS MOST HAZARDOUS

"Politics is the most hazardous of all professions. There is not another in which a man can hope to do so much good to his fellow creatures, neither is there any in which by a mere loss of nerve he may do widespread harm—nor is there another in which he may so easily lose his own soul—nor is there another in which a positive and strict veracity is so difficult. But danger is the inseparable companion of honor. With all the temptations and degradations that beset it, politics is still the noblest career that any man can choose."

As they say in the precise language of academic halls, Mr. Oliver said a mouthful. I can attest to that out of instructive, if at times trying, experience gathered in 35 years of active political life. For the past 4 years I have been an interested observer on the side lines where I have learned much that escaped me when I was in the rough and tumble of town, county, State, and National arenas. In these later years I have been urged, now and then, to expound my political philosophy. While I am not a philosopher, except as the passage of years promotes contemplation and reflection on one's way of life, I do have some knowledge of politics.

KNOW-HOW OF POLITICS

If you would know politics, look about you. I do not entirely subscribe to the dictum that the proper study of mankind is man; I would raise our eyes higher to the contemplation of a divine and beneficent providence, but for the politician there is no study more rewarding than the cultivation of his fellow men in each and every walk of life. Only through knowledge of his fellows can a man hope to lead or influence them. A love of his fellow men helps, but it is to be regretted is not essential since it can be so readily simulated.

THE HAZARDS OF POLITICS

The hazards of politics, I have often thought, are not campaigns and elections, as might be commonly supposed, but rather the human element, the very nature of the animal that engages in politics. Ambition, love, jealousy, hate, and the many emotions and reactions man is heir to frequently affect the course of the Nation and of the world more than principles or circumstances or events. This was so from the dawn of time, is true today, and will ever be in the history of man's search for perfection.

MOSES A GREAT LEADER

Moses, first of the great leaders, had the wisdom of a statesman and was perhaps the only political leader who kept all his campaign promises, as Pharaoh learned to his sorrow. Yet, he was not without opposition even from within his own family. Miriam and Aaron, his sister and his brother, spoke against him. He saw other tribes bitter with jealousy against his tribe and his own tribe envious of his preeminence. He knew the worldly considerations by which some of his followers were moved as told in the story of the children of Reuben and Gad, who sought permission to remain in the land of Gilead because the country was well suited for the raising of cattle, instead of passing over the Jordan, into the promised land with other children of Israel. He was disturbed over the lack of faith in the people and their readiness to lapse into idolatrous ways. Frequently he meditated on these weaknesses and pondered on ways of combatting these threats to national existence. One of his ways was the preparation of a farewell address, which precedent undoubtedly influenced that great Moses of the west, George Washington, when he closed his career by offering a political valedictory for the instruction of his countrymen.

MAIN WEAKNESS OF MOSES

Moses was not without weakness of his own, not the least of which was vanity. It will be remembered that at the encampment at Kadesh, where Moses and Aaron were bidden by God to speak to the rock, Moses said to the murmuring people, "Here

now, ye rebels: shall we bring forth water out of this rock?" and he smote the rock twice with his staff so that it gushed forth water. Like many a politician who has followed them, the brothers failed to recognize their subordinate position. At that moment they felt they were the leaders of the people, forgetful that it was God who led the tribes out of Egyptian bondage and fed them in the wilderness for 40 years. Moses and Aaron paid dearly for his sin, being denied the honor and privilege of leading the children of Israel into the promised land.

POLITICIANS AND VANITY

Vanity, the insatiable sixth sense common to man but most highly developed in politicians, has ruined many a political career, as the vaulting ambition. Reluctance to relinquish power, particularly where the hand is feeble and the mind is tried is fraught with danger to parties and to the Nation. This weakness is often the salvation of courtiers and coat-tail riders. In the vital relay of politics, every lap of which measures the progress of man, the torch of leaders must be passed on to trained younger men. If younger men are not trained to take over leadership, the party and the Nation are weakened, with the danger that the race may be lost.

POLITICS NOT FOR TIMID

Politics is no place for the timid man; he who hesitates will lose the election. Frequently the man in public life who is called upon to make split-second decisions too long finds his career crushed by the weight of the accumulated heap. And politics is no place for the corrupt or dishonest. Sooner or later, evil deeds rise to confound the guilty. In my time I have been criticized for helping men who have betrayed their trust. Somehow I could never feel anything but pity for them. I have no capacity for hate and but little for censure. I feel that a man found wanting in political honesty suffers enough in standing revealed as a weakling, unworthy of the reliance placed in him by his friends and the electorate. I have sympathy for him as one has a sympathy for the afflicted, but without any trace of the admiration that goes for the latter.

THE VALUE OF VERACITY

In the final analysis, the politician has nothing to offer but his word. If he tells the truth and keeps his word, he gains the devotion of his friends and the respect of his enemies. Men may and do have honest differences. More often than not there is something to be said on both sides of a question. Compromise is the usual measure of political progress. This does not mean that principles or ideals are to be raised or lowered in any skirmish; they can and should be nailed to the mast.

The man who does not tell the truth is distrusted and shunned, and rightfully so. There are those whose first instinct is not to tell the truth even when it best serves their own purposes just as there are those in whom the dog of ambition is pursued by a rabbit of conscience. Truth is by far the easier as well as the most respected course.

TAMMANY LEADER MURPHY

I had an early lesson in this from Charles E. Murphy, leader of the Tammany Hall, whom many of you might regard as a strange preceptor. I approached him after Alfred E. Smith was first elected Governor of New York, after a campaign in which I played a small part. I felt entitled to the post of secretary to the State Industrial Commission. My sights were not, I modestly felt, fixed too high. Mr. Murphy told me that while he was impressed by my earnestness and ability, he felt I lacked experience for the place, and that it should go to someone else. I was a bit bitter for a time, but as disappointment died, the more reasonable Mr. Murphy's attitude seemed to me. As a result I have never concealed the truth from an applicant for a position. In the end I always found him grateful as I was.

In the rare instances where one cannot tell the truth, because he is bound by his word not to reveal confidence or advance information, it is not necessary to become involved in complicated evasions or falsehoods. Again the easier method is to acknowledge that you are sorry but just can't answer the questions. The passing of one's word is the execution of a sacred bond. It is so with most men in political life as it is with the great majority of men everywhere.

TECHNIQUE OF POLITICS

In politics, it is well to start at the very bottom rung of the ladder, because each rung gained has its delights, and the loftier the climb, the more gratifying the view from above. The usual first step is bringing voters to the polls. There is no better way to meet people in the district than by offering them a favor. This develops courtesy and ability to most people. The second step is ringing doorbells to solicit votes for a candidate or party. Here salesmanship and personality are developed. If the young man attracts the notice of his superiors he is given greater responsibilities either within the party organization or in public service or both. He may rise in responsible but appointive administrative posts; he may work into the ranks of the king makers, or he may travel by the elective rung to the highest office in his city, county, State or Nation. In mention of the highest office within the gift of our fellow countrymen, I am glad that each passing year brings us nearer to the ideal where any American mother, regardless of race or creed, can look into the crib holding her child and say to herself, "Some day he may be President of the United States."

SERVICE SOURCE OF JOY

Where the opportunities are limitless so are the capacities for service. Nothing has given me greater pleasure in my years in politics than the services I was able to do for the people as a whole or as individuals. To this day I find, wherever I go, someone is always taking my hand to thank me for a service I have usually forgotten. The services I have given will ever be a source of pride to me. Those in academic life among you know too well that money is not the highest reward; that the metal of service outshines gold.

INDIVIDUAL VERSUS PARTIES

Heretofore, for the most part, I have confined myself to approaching politics from the viewpoint of the individual. I now propose to consider politics from the viewpoint of groups of individuals or parties. From the dawn of self-government in Greece it was natural that political parties should vie for the management of the government.

It is not surprising that parties should take color and appeal from their leadership. However, it should not be forgotten that parties have basic principles which differ sharply. These basic principles are constantly being renovated by the play of social and economic forces and by the interplay of conditions and events within the party and within the country.

UNITED STATES HAS TWO-PARTY SYSTEM

In our country we have two parties with more or less fixed ranks of the party faithful and a large number of independent voters who swing from party to party under the attraction of personalities or party platforms, or the pressure of forces or events, but often out of disappointment with the performances of the party in power. This is, I am convinced, as it should be. As a lifelong Democrat, I am a firm b liever in the two-party system and feel it would be a tragedy if either the Democratic or the Republican Party were to pass from the national scene.

PARTY VERSUS PERSONALITY

I believe that men and women should seek to correct what they dislike in the party from within the party. In my case I strongly opposed the majority of my party on the issue of a third term. I am still opposed to a third term. But I am not opposed to the Democratic Party. I participated in the national convention that voted for a third term and by that participation bound myself to accept the will of the majority. While I resigned from the Cabinet, not wishing to embarrass the administration by remaining in a high position, I voted the Democratic ticket. Again in 1944, when my opposition had increased rather than lessened, I voted the Democratic ticket because I had once more participated in the national convention where I and others like me were overwhelmingly voted down.

NO ROOM FOR THIRD PARTY

I was not then happy in the Democratic Party, but I could not bring myself to enter the Republican Party for the sole purpose of defeating the party to which I owed so much and which I had helped to put in power. Nor could I form a third party merely to have a yard of my own to play in because the big boys wouldn't play my way. We have a third party today, formed by one who wouldn't play according to the rules in the Republican or the Democratic Parties. I, for one, don't want a third party in this country. The two great political parties help our Nation by promoting minority rule and tend to leave the country the prey of demagogs and malcontents.

CYNICISM AND ITS DANGERS

Disappointment and discontent should not promote cynicism, for the bitter cynic loses his friends and damages his soul. Not all aspirants can win nomination and only one candidate can win the election. While defeat is not pleasant, it is seldom fatal and there is always another election on the horizon. Those disappointed over failure to gain an appointment should remember office-holders are mortal.

I am reminded of the story of the persistent office seeker who rushed to former Senator, the late Pat McCarran, on learning of the death of an official "Can I take Flanagan's place?" he pleaded. The Senator, wearied by previous entreaties, snapped, "It's all right with me if you can square it with the undertaker."

DISCONTENT BAD DISEASE

Discontent is a more virulent disease. Its invasion of the pride is far more serious. Often it is the harder to bear because it entails ostracism of a sort. Once a man strips himself, or is divested of the powers of his office, he frequently finds those he regarded as friends pass him by and those for whom he did most know him not. It is not a pleasant experience, although there are some who hold it to be a great developer of character. In my own case I was saved from cynicism by the firm knowledge I was right and by the kind words of the many who sought me out in my travels to commend my action or to give thanks for services I had rendered, I shall ever be grateful to them.

PARTY SERVANT NOT MASTER

As I favor the two-party system, so am I opposed to the one-party system in vogue in some nations where it is proclaimed as true democracy. I do not want to confine my participation in government to voting "ya," "yes," "aye," or "da" to the whim of any totalitarian overlord. The party should be the servant of its members, not their master. It should be open to all who wish to join it, not exclusive society of assassins. And it should be competing for national good will, not dictating the way of life.

JIM FARLEY'S PHILOSOPHY

In concluding I should like to dwell on Oliver's statement that politics, with all its

faults, is still the noblest of careers. It may appear, as Robert Louis Stevenson said, "Politics is perhaps the only profession for which no preparation is thought necessary." Yet no other is so essential for the distribution of temporal happiness and the preservation of the freedoms and liberties that make our way of life.

POLS, PLATO, AND ARISTOTLE

Plato and after him Aristotle held the good politician in high esteem. In fact, the latter placed him at the topmost step of a graduated sort of heaven. It may be that the highest step is not crowded or even empty as has been suggested to me. If so, then let it be said of us we are reaching for the ideal state and coming ever nearer. I am supremely confident man will solve his problem; that the future is bright though the day be dark.

FARLEY'S FINALE ON FAME

He who chooses politics as a career will have the experience of ages to guide him in reaching for higher if unattainable goals. In extending his grasp he may give his name to an age where it may shine brightly for all time. For those to whom such fame is denied, there is comfort in knowing that we are providing experience to be drawn upon by those to come. We are the progenitors of the perfect rulers of the future, men in whom thought and action are delicately balanced and from whose rule political blessings will flow.

Protest Against Treatment of Josef Cardinal Mindszenty

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 2, 1949

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter of protest of Assumption Circle No. 74, Daughters of Isabella, of Fall River, Mass., against the treatment accorded Josef Cardinal Mindszenty:

ASSUMPTION CIRCLE NO. 74,
DAUGHTERS OF ISABELLA,
Fall River, Mass., February 23, 1949.

Hon. JOSEPH W. MARTIN, Jr.,
House of Representatives,
Washington, D. C.

DEAR MR. MARTIN: As representative of 250 members of Assumption Circle, No. 74, Fall River, Mass., National Circle, Daughters of Isabella, I should like to urge you to protest against the treatment of Josef Cardinal Mindszenty.

Cardinal Mindszenty, Primate of Hungary, follows another outstanding prelate, Archbishop Stepinac of Yugoslavia, into the gates of prison by orders of the Soviet Union. It appears that because he would not submit meekly to the absolute rule of a tyrannical government under which no man dares call his soul his own, this cardinal is to be a living example of death to any one who would dare reproach those who claim that man has no inherent rights granted to him under the laws of Almighty God.

If true freedom is to remain in the world, if the rights of man are to be recognized and respected, then every free voice must be raised, every free voice must speak up now to condemn this latest Soviet atrocity that strikes at the very heart and soul of freedom. Therefore, we believe that the President of the United States, the Secretary of State, and Congress use their full force of diplomatic pressure and our influence in the United Nations be used to demand and obtain the immediate release of Cardinal Mindszenty and the other clergy unjustly imprisoned.

Yours very truly,

MARY I. RIGBY,
Regent, Assumption Circle No. 74.

Suggested One-Man Defense Control Seen Leading to Disunity

EXTENSION OF REMARKS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 2, 1949

Mr. COLE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article of David Lawrence appearing in the Washington Evening Star of March 1, 1949, entitled "Suggested One-Man Defense Control Seen Leading to Disunity":

SUGGESTED ONE-MAN DEFENSE CONTROL SEEN LEADING TO DISUNITY—WRITER BELIEVES IT WOULD GIVE TOO MUCH POWER TO NONELECTIVE OFFICIAL

(By David Lawrence)

The proposal by the Hoover Commission to do away with the Secretaries of the Army, Navy, and Air Force, respectively, and concentrate full power in the Secretary of Defense clears the air and puts before the American people concretely the issue that supposedly has been retarding the much-talked-of unification of the armed services.

If adopted, it could make the President a figurehead and put the exercise of all military and economic power into the hands of one man who is not directly responsible to the people at the polls.

The argument is advanced that, as long as the President has the power to remove a Cabinet officer, a sufficient check has been applied. But the experience of history shows that in a national crisis whoever controls the Army and Navy—to which nowadays must be added the Air Force—in any country, that individual has the potential authority to maintain himself in power.

The proposal is one of those curious rationalizations which emanate from the passion for organization-chart efficiency. It is not one that has been thought through. Far from promoting unity in the armed services, it is likely to bring disunity.

Again and again in a democracy it has been demonstrated that where there are honest differences of opinion, the best results toward agreement or a compromise formula are not obtained by the presumably simple device of knocking heads together. It is much better to devise a way for differences to be aired, for the conflicting viewpoints to be thoroughly explored.

ASTONISHING ARGUMENTS

With recollections fresh as to how the last war was fought, it is astonishing to find zealous advocates of one-man control implying, in effect, that the American system lost the last war and Germany won it. For the Nazis had the one-man system and the United States, as well as Great Britain, had Joint Chiefs of Staff.

The Hoover Commission has heard a good deal of testimony from all sides and has come up with the same solution that the War Department and the Air Force advocated shortly after the ending of the war. The Navy viewpoint, which was expressed by Secretary Forrestal at the time, has now been sidetracked and Mr. Forrestal is recommending a one-man control.

This no doubt proceeds from his exasperating experiences with bureau chiefs and primarily from the fact that the Air Force went over his head to Congress to ask for more appropriations than had been stipulated by the Secretary of Defense. Instead of defining more closely the responsibilities of the heads of the three armed services and instead of putting an end to the lobbying that goes on for congressional appropriations for the armed services, it is unfortunate that a solution is sought by means of a system of one-man discipline.

There are good reasons why the Army, Navy, and Air Force viewpoints differ. Each service knows its own history and accomplishments best. To superimpose a new Department of National Defense, with an Under Secretary and a host of staff officers, would mean a new bureaucracy and further confusion.

PRESIDENT HELD RESPONSIBLE

The recommendation that a chairman for the three-man Joint Chiefs of Staff be appointed is not as good as the plan that was in effect during the war when the Chief of Staff to the President acted as presiding officer. The President must at all times retain control of both the military and civilian agencies related to preparations for war. It is far better that the President appoint a Chief of Staff to sit with the Joint Chiefs than to make the chairman of a staff of three responsible to the Secretary of Defense.

If it is decided to have three top men from the Army, Navy, and Air Force constituting the Joint Chiefs of Staff, it is better that they select their own presiding officer and that all three have direct access to the President in the event that they cannot agree or in the event that the mediation services of the Secretary of Defense are of no avail.

The American people must always be in a position to hold the President of the United States responsible for any errors that could conceivably imperil the safety of the United States. He is the Commander in Chief under the Constitution. He cannot delegate that responsibility to anyone.

The Congress of Labor

REMARKS
OF
HON. THURMAN C. CROOK
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 2, 1949

Mr. CROOK. Mr. Speaker, on this particular occasion, it is my desire to speak on the principal problems in the field of labor that have so much to do with our economic welfare and well-being.

Working men and women who constitute America's labor force of some sixty million have three principal concerns in their lives, namely:

First. Their standard of living.

Second. The security of their jobs.

Third. The dignity of their place in the community.

Whether a worker's standard of living is fair or not depends on the relation of his standard to that of the community as a whole. Over the long haul, the American standard of living has been rising steadily, and working people expect to see their standards rise at least accordingly. Hence, their concern for their right to organize and bargain collectively with their employers, for fair labor

standards, for measures to secure economic stability, for old-age pensions, unemployment compensation, health insurance, sick benefits and for fair employment practices.

Job security is the prime concern of people who make a living by working for somebody else and not by having someone else work for them. Hence, their concern for being protected against arbitrary dismissal from a job they hold, and for being able to find another job if the one they hold is wiped out by economic forces beyond their control. If private enterprise cannot provide jobs, they expect the Government to take remedial action.

For centuries workers were treated as a commodity—not as human beings. Existence and growth of trade-unions cannot be explained by economic reasons alone.

People will not stand for being excluded permanently from determining what shapes their daily lives. Twentieth century mass production methods make it impossible for individual workers to participate in directing the economic operations in which they are engaged. But as a group, acting through representatives of their own choosing, they expect to have some influence on decisions which affect their lives and those of their families. Hence, their concern for the position which their organizations occupy in the economy of the country and in the community as a whole. To be forced on relief, to fall back on charity in times of economic adversity hurts the pride of every American worker. He despises the means test; he wants to have a legal right to minimum subsistence during unemployment or sickness. Hence, his concern for systems of social insurance as opposed to public relief.

Because of the magnitude of the group—almost half of the entire population—the well-being of the wage earner is of paramount importance to the Nation as a whole. Last year wages and salaries constituted 63 percent of our total national income. Wages and salaries which our working men and women receive are the purchasing power which buys the output of our industries and the produce of our farms. We cannot maintain full production and full employment on the luxury expenditures of a few wealthy families. When working people strive constantly to improve their standard of living, they serve not only their own interests but serve, at the same time, those of the Nation as a whole.

When the Democratic Administration moved into Washington in 1933, it found the country in the depths of the worst depression in American history. As in every depression, labor was bearing the brunt of the economic collapse. Out of the total labor force of 51,000,000, only 39,000,000 were gainfully employed. Over 12,000,000 were unemployed. Average hourly earnings were 45 cents; average weekly earnings were $17.05. There was no floor under wages. The laborer who sold himself for the lowest wage got the job.

And labor was not able to fight back. The Republican administration of the 1920's fought labor. Theirs had been an era of the open shop and the yellow-dog contract. The embattled labor unions had a mere 3,000,000 uncertain members. Less than 1 worker out of 25 was organized. There was no unemployment compensation, no public assistance, and no work relief program. There were soup kitchens and Hoovervilles.

To provide the Nation with the means to recover from the depression, the Democrats went to work on many fronts. They reopened the banks of America and created the Federal Deposit Insurance Corporation to guarantee the deposits of the people. Homes were rescued through the Home Owner's Loan Corporation. The farmers were rescued from bankruptcy by the passage of the Agricultural Adjustment Act.

The youth of the Nation were taken out of the loafing joints and off the box cars and put to healthy, useful work in the Civilian Conservation Corps. Business was saved from ruin by the expansion and the intelligent administration of the Reconstruction Finance Corporation. The unemployed were taken out of the soup lines and given constructive employment under the Public Works Administration. These, my friends, were the foundations of our recovery—as vital to labor as to the entire Nation.

Prior to 1933, and under the Republican regime, no laws were in existence safeguarding the right of workers to organize and bargain collectively and providing orderly procedures for workers to exercise this right. As an emergency measure, the Democratic Congress passed, on June 16, 1933, the National Industrial Recovery Act. The act provided that each industry, through its trade association, would write for itself a "code" prescribing maximum and minimum wages and rules of fair competition for that industry, subject to the approval of the Government. The codes were exempted from the provisions of the Sherman Antitrust Act and, once approved, enforced by appropriate penalties. Thus, under the symbol of the Blue Eagle, the first steps were taken to eliminate the ruinous competition of sweatshop wages which had been primarily responsible for the destruction of the workers' purchasing power under Republican rule.

In order to give employees of industry a proper share in the drawing up of these codes, Congress, at the recommendation of the Department of Labor, wrote into the act the famous section 7A, which stated:

> Employees shall have the right to organize and bargain collectively through representatives of their own choosing and shall be free from the interference, coercion, or restraint of employers of labor or their agents.

This section had to be included in every industry code before the code could be approved by the Government. The Democratic Party believed in preserving the integrity of the human soul.

On July 5, 1935, Congress passed the National Labor Relations Act, popularly known as the Wagner Act. This statute became the Magna Carta of labor in the United States. It guarantees the right of workers to organize and to bargain collectively with their employers and sets up procedures to enable them to exercise these rights. The act was specifically designed to protect workers against unfair labor practices. Under this act came the National Relations Board, which the NAM and the United States Chamber of Commerce fought against every inch of the way. Passage of the act did not end the fight of big business against the recognition of bona fide trade unions. Gigantic efforts on the part of the labor organizations were needed before General Motors recognized the UAW and before U. S. Steel recognized the Steelworkers Organizing Committee in February and March of 1937. Throughout the Democratic regime up until the notorious Eightieth Congress went into action, organized labor has grown and made many desirable gains. The dignity of labor has been enhanced and respected. The laborer has been privileged to respect and a fair share of the wealth he creates, and he does not propose to go back to the conditions that prevailed under the "old deal."

In 1946 only 32 percent of the eligible voters went to the polls to vote. And we may safely say that 20 percent of the people gave us the Republican controlled Eightieth Congress to rule the other 80 percent. Big business, special interests, power trusts, and the adversaries of organized labor took over. Pressure government came into action and the policy designers of the Republican Party started their senseless drive against both labor and farmer. They voted for reduction in appropriations for the Departments of Interior and Agriculture, soil conservation, flood control, rural electrification, and started destructive action on farm organizations. They partially butchered the Labor Department and, if they had been given another chance at stewardship, they would have completely liquidated it. They ushered in the Taft-Hartley Act of 20,000 words moulded into ambiguous phrases and clauses in their desperate drive to deprive the workingman of his inalienable rights under the Constitution of the United States. The Taft-Hartley Act is the most confusing, deceptive, atrocious, and abominable piece of class legislation that has ever been placed upon our statute books. It is so designed that no two men of legal talent will agree as to the exact meaning of any portion of it. Anything can be read into its implications. We may say that it is a "Full Employment Act for Labor Attorneys" and we can safely say that it was designed to break the backbone of organized labor so the agents of exploitation may once again take over, also to liquidate the Department of Labor.

This Congress is not just an ordinary one; it is a crucial session. It is a session to restore representative democracy to the people. The prosperity of our Nation depends upon the economic security of the farmer, labor, and small business. Their many gains under Democratic rule must be sustained, reinforced, and supplemented. We must not permit the common man to be sacrificed on the altar of special privilege. The Labor Department must be rebuilt

and strengthened, restoring to it the units, including the Federal Mediation and Conciliation Service and the United States Employment Service, which the Republican Eightieth Congress stripped from it over the veto of President Truman.

The only way to save our gains and assure continuous prosperity, American economy, and the integrity of the human soul is to carry the Truman program to an early and successful conclusion. Every Democrat in this Congress well knows the past action of his party saved our country in times of grave emergencies and it stands ever ready to further promote similar programs dedicated to the general welfare of all our fine people. May we never falter in our sacred obligations. Let us discard our selfish interest and grow more concerned with the welfare of our citizens and Nation.

Social-Security Program

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 1, 1949

Mr. BIEMILLER. Mr. Speaker, some people have expressed concern over the heavy burden of taxation which they fear the administration's social-security program will fasten upon the people. I want to call your attention to an article from the Milwaukee Journal of February 23, which points out that passage of this act, instead of increasing the tax burden on the individual, will actually decrease it in many cases, by easing of the realty tax which now goes in many places to meet costs of relief and welfare. Under leave to extend my remarks I include this article in the RECORD:

BIG BENEFITS SEEN HERE IF TRUMAN PLAN WINS—EASING OF REALTY TAX HELD POSSIBLE—100,000 WOULD BE ADDED TO SOCIAL-SECURITY ROLL

President Truman's request for an expanded social-security program, including a home relief system, could result in lower property taxes to the Milwaukee home owner and definitely would bring social-security benefits to thousands of additional persons.

County and Federal officials generally expressed approval and interest in the proposals. They explained, however, that in the absence of specific legislation, it was impossible to predict all the results of such a program.

About 100,000 workers in Milwaukee County would be added to the approximately 250,000 now covered by Federal social security if the expanded program proposal were adopted, according to Karl A. Albrecht, manager of the Milwaukee field office of the Social Security Administration.

FIFTEEN THOUSAND DRAW BENEFITS

There now are slightly more than 15,000 receiving benefits under Federal social security in Milwaukee County. Albrecht said that the number probably would increase to 50,000 in 10 years if the present law were unchanged and to 75,000 if the proposed changes were made by Congress. The President suggested, among other things, that many lines of work not now covered be included under the social-security program.

Individual benefits would jump considerably under President Truman's program, but so would the pay-roll deductions to pay for them. The average worker's benefit in Milwaukee is about $26.70 a month now, Albrecht said. It is higher, however, in the cases of workers now becoming eligible because they have worked longer under the act's coverage than did those who reached the age of 65 soon after the act became effective. Those retiring now are getting between $35 and $37 a month, Albrecht reported.

LIMIT NOW IS $85

The maximum that anyone can now receive is $85 a month. That amount is paid a worker if he has a wife at least 65 and two minor children. President Truman's proposal calls for upping that maximum to $150 and the present $10 minimum to $25.

To pay for social-security benefits, a 1 percent tax is being levied on the salary of covered employees and on the pay rolls of the employer. That tax amounted to exactly $34,662,372 in Wisconsin during the fiscal year ended last June 30, Albrecht said. It amounted to approximately $10,250,000 in Milwaukee County. The amounts would be much greater under the President's proposal for expanded coverage and an increase in the tax to 1½ percent next July 1 and 2 percent each next January 1.

The amount of income taxed would be increased from $3,000 to $4,800.

TAX RELIEF POSSIBLE

The saving to the Milwaukee home owner would come in a reduction in the amount of property taxes which the county board would have to raise to pay its relief bills. The 1949 budget for general public assistance to the needy is $1,576,000 in Milwaukee County. The county's share of the cost of old age, blind and dependent children aids will be roughly about $1,400,000 this year according to Joseph E. Baldwin, director of the county's public-welfare department.

If the Federal and State governments were to assume the entire cost of those relief items, as some observers believe they may as a result of the President's proposals, the burden on the Milwaukee property taxpayer would be greatly alleviated.

For example, the owner of a home assessed by the city of Milwaukee for $5,000 conceivably could save about $10 in taxes if the county were relieved of the burden of raising taxes for general relief and its share of aids for the blind, aged, and dependent children, according to Robert Boos, acting county auditor.

The saving may even be more, if the general relief load increases. January's cost for general assistance to the needy was $122,459, an increase of 3.6 percent over December and of 33.1 percent over January 1948 according to Stanley White, acting superintendent of the department of public assistance.

DIFFERENCE IN RATES

The theory is that every million dollars added to or removed from the tax levy makes a difference in the tax rate of 68 cents for each $1,000 of assessed valuation, Boos explained.

It is questionable whether the President's program would result in any higher payments to persons on relief here. The amount received from the Department of Public Assistance depends upon many factors, such as rent, utilities, heating, and food costs, WHITE explained.

He said, however, that the average paid last year to a man and his wife was $55.74. Some couples, nevertheless, received as much as $100 a month, which is the amount suggested in the President's program.

The President also suggested an additional $20 for each child. In Milwaukee County, the standard budget for a child of 10 years is $25.50 a month, WHITE pointed. It is $13.35 for a child 1 to 3 years old, he said.

SAVINGS IN DEPRESSION

Tremendous savings to the county might result if a major depression were to strike. Milwaukee County had a peak relief load of 41,394 cases, involving 168,684 persons, in March 1933. The relief load last month, despite a large increase over 1 year ago, was only 2,197 cases, involving 5,446 persons, White reported.

The President's proposals were endorsed by Baldwin. He said that the extension of social-security coverage is very important and is the answer to the problem of how to handle the aged successfully. He asserted that this would be a better system than the pension boons that have been set up in some Western States.

The theory of including all needy persons in the national public welfare program instead of just the blind, aged, and dependent children is sound, Baldwin declared.

At present the Federal and State Governments contribute about 80 percent of the cost in Milwaukee County of benefits to the aged, blind, and dependent children. The county raises the balance.

Essence of Current Crisis Is Political, Not Economic

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Wednesday, March 2 (legislative day of Monday, February 21), 1949

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an able article entitled "Essence of Current Crisis Is Political, Not Economic," written by William J. Carleton, professor of political science at the University of Florida, and published in the December 1, 1948, issue of Vital Speeches of the Day.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ESSENCE OF CURRENT CRISIS IS POLITICAL, NOT ECONOMIC—SPECIFIC MEASURES TO STRENGTHEN OURSELVES IN THE CURRENT DUEL

(By William G. Carleton, professor of political science, University of Florida)

I

Tonight I am going to do what some will consider a rather bold thing. I am going to attempt in a public address to deal with the most important issue of our time in a realistic, in perhaps even a philosophic, spirit. The spirit in which I shall approach this rather terrifying subject will not be the spirit of Gov. George H. Earle or William C. Bullitt or even James Burnham. Neither will it be the spirit of Henry A. Wallace.

The most important issue of today, of course, is the diplomatic duel between the United States and the Soviet Union. Every other issue—political and economic, domestic and international—is subordinate to this world-wide conflict.

We are in the midst of a Presidential campaign, yet what the Presidential candidates are saying about the United Nations, about atomic energy, about armaments, about universal service, about labor-management relations, about inflation, about how to prevent a depression, about taxation, and so forth has a ring of unreality and irrelevancy about it—as though these things had come to be

outside our control. For in truth every one of the questions of today is dependent upon the outcome of our duel with the Soviet, and at the moment no living man knows what that outcome is to be.

There are only two great powers left in the world today—the United States and the Soviet Union. These two great powers are busy dividing the world into two great spheres—two distinct worlds—and they face each other in a mood of growing suspicion and hostility.

What is the basis for this gigantic duel between the United States and the Soviet Union? What has produced it? Let us examine the causes, both from the point of view of the Soviet Union and from the point of view of the United States.

II

The Soviet Union fears that the United States will upset the balance of power. It fears that the United States wishes to impose its own political and economic system on the rest of the world. For years now the Russians have been taught the Marx-Lenin doctrine that capitalism is predatory and imperialistic and that capitalism will attempt to uproot communism everywhere in the world. The interventionist policies of the western powers during the Russian Revolution, the appeasement of fascism during the 1930's, and today's encouragement of reactionary governments in Greece, in Spain, and in China are used to give point to this contention. Moreover, the Soviet believes that the American plans to restore economic life to Europe—the Marshall plan and its accompanying measures—are attempts to restore an international economy based upon capitalism and free enterprise, an economy into which Communist nations feel they could fit themselves only with the greatest difficulty. Again, the Soviet suspects that the United States, having the majority of votes in the United Nations, is using the United Nations for its own national purposes. So the Soviet answers by using the veto. (Those in the minority are always the ones to avail themselves of a veto; after all, in the days preceding our Civil War, it was South Carolina, not New York, which availed itself of nullification, the veto of that day.) Finally, the Soviet fears the American plan of international atomic control, fears that since the Soviet Union would be in a minority inside the international control agency that it could not trust inspection by that agency or that agency's judgment and fairness in locating atomic plants.

On the other hand, the United States fears that Russia plans to upset the balance of power. Americans fear that the dynamic revolutionary character of the Soviet state constantly makes for Soviet aggression. They fear that the Russians want to force their economic and political system on the rest of the world. They see in Communist parties the world over powerful fifth-column instruments of Soviet imperialism. They view Communist opposition to the Marshall plan as a Soviet plot to sabotage economic reconstruction and produce economic collapse—and thus prepare the way for Communist revolution in the west. They view repeated Soviet opposition to United Nations measures and to the American plan for the international control of atomic energy as premeditated designs to the same end—to bring confusion and chaos to the west and thus facilitate Communist revolution.

These fundamental conflicts are frequently localized in certain geographical places—in the Middle East, in Iran, in Constantinople and the Straits, in Greece, in Trieste, in Austria, in Germany, in Korea, in China—particularly in Germany and China, for Germany is the pivot of the balance of power in Europe, and China is the pivot of the balance of power in Asia. The current struggle over Berlin is a symbol, a symbol of the deeper conflict over the future of Germany.

At bottom, then, the basic conflict between the United States and the Soviet Union is political, not economic. There is no economic reason why the United States and the Soviet Union should not get along in this world. American production and Soviet production could cooperate economically to put the world back on its feet. True, it might be difficult for countries with free economies to trade with countries with controlled economies, for American private firms to trade with the huge Government trusts and syndicates of Communist lands. But the trading could be done. We must not confuse the mechanics of trade with the flow of trade; we must not confuse the methods of trade with the volume of trade. (Indeed, some of the same difficulties also exist between capitalist and socialist countries, but capitalist and socialist countries do not find these difficulties insuperable because there is the will to trade, because there is an absence of political differences. In his celebrated London speech, Secretary of State Marshall pointed out that capitalism and socialism were quite compatible and could get along together in the same world.) If on the part of the United States and Russia there was a mutual desire and a will to trade, the trading could be done, and the world would benefit by the increased flow of goods and services. But trading communications, like other communications, are closed by political fears—fears over the balance of power, fears on the part of each of the two big powers that the other wishes to force its economic and political system on all countries and to dominate the world.

III

Let us not minimize the strength of the Soviet Union. It is a vast land with vast resources. It is in a feverish state of industrial development. It bestrides the great Eurasian land mass, sending out its influences to both Europe and Asia. Its resources are concentrated in one vast area, and not scattered over the ends of the earth. It has tremendous distances and space, well adapted for defensive warfare; it was sheer space that defeated both Napoleon and Hitler. It appears to possess a high degree of ideological unity. It has the advantages autocracy always has in time of crisis—the capacity for secret, swift, and decisive action. Communist parties in countries widely scattered over the world, even where their primary purpose is to help their own peoples, in effect are frequently the fifth-column allies of the Soviet Union. And then there is the attraction of communism to the colored, the colonial, the backward peoples of Asia. In the struggle over the balance of power, this may become the most significant factor of all.

Why do the oppressed peoples of Asia—of China, of Burma, of Malaya, of Indonesia—turn to communism? Because these backward peoples want modern technology and the standard of living modern technology brings. They want modern technology now—in a hurry—and they want to own it and to derive its benefits for themselves when once it is built. They do not have a sufficiently large native middle class or native capitalist class to build this modern technology. They do not want its benefits syphoned off by foreign capitalists. Therefore, they increasingly desire to build it collectively, to raise themselves by their own bootstraps like the Russians appear to have done, to move from medieval feudalism to twentieth century industrialism in a single generation. It is no answer to say that under such a system they will have no freedom. They reply that they have never had either bread or freedom, and at least they intend to have bread, immediate bread, bread that they can make themselves. They will admit that they would like the American standard of living, but that standard of living seems beyond them. (The American system is the product of many generations of growth, and its free enterprise way of development had its origin in the period before the expensive technology of today.) But the Russian way seems within their reach—now—in this generation.

But we Americans have tremendous advantages, too, and a wise policy on our part will maximize them. We have modern technology developed to its highest level and we have a phenomenal capacity to produce goods and services. We have the atomic bomb. We have superiority in the air. We can draw upon the scientists and the scientific thinking of western Europe, where theoretical science is most highly developed. We control the seas and most of the strategic ocean narrows throughout the world. We have access to the world's strategic materials. We are in alliance with the world's third power, Britain, and with the peoples of western Europe. We have the majority support in the United Nations. We have behind us the cultural heritage of the west with its spiritual appeal to Europe and to the Americas. And most important of all, we have behind us the yearning of modern men to be free.

Except among backward peoples who have experienced neither bread nor freedom, this magnetic appeal of freedom should be an unbeatable one. The fear of the west is the fear of totalitarianism, the fear of a police state, the fear that freedom from arbitrary arrest, freedom of movement, freedom of the mind, freedom of expression, freedom of religion, and freedom of elections will be suppressed and superseded by a self-imposed and self-perpetuating dictatorship. This fear is shared by all who are not Fascists and Communists—by the vast majority of the peoples of the west. It is shared by capitalists and Socialists. It is shared by conservatives, by liberals, by social-democrats. Indeed, the Socialists of Britain and western Europe—those ardent believers in democratic socialism—are among the most outspoken foes of totalitarianism in all its forms. The battle cry of the west is not capitalism; the battle cry of the west is freedom. The supreme issue of our time is not economic; it is political. What divides and unites men is not the economic conflict of capitalism versus collectivism; what divides and unites them is the political conflict of freedom versus totalitarianism. It is this will to freedom which is uniting the peoples of the west behind the United States.

IV

Will there be war? No living man knows the answer to that question. Those of the west who think war is inevitable say the sooner war comes the better. Time, they say, gives Russia opportunity to recover, to grow strong technologically, to acquire the atomic bomb, to win the peoples of Asia to the cause of communism. We of the west are relatively stronger now than we shall ever be, observe those of this school of thought. On the other hand, we are dealing with some imponderables, and war may not be inevitable. Those who would precipitate a preventive war and unloose the horrors of atomic warfare on the world are on shaky moral ground and they are underestimating the moral feelings of the peoples of the world. A war that appeared aggressive could not be justified morally, it would be a hard war to win, it would be followed by a difficult and an unresponsive peace.

Yet war may come. It may come because those who favor a preventive war may get the upper hand in our counsels. Or, more probable, it may come because of the aggressions—the dynamic revolutionary nature—of the Soviet state.

A Soviet-American war could have three possible outcomes. It could result in a Soviet victory to be followed by some kind of a Soviet world empire, which might or might not evolve into genuine international communism. Far more probable, it could result in an American victory, to be followed by some kind of an American empire, which might or might not evolve into genuine United Nations internationalism. Finally, it might result in a stalemate of exhaustion, in a hopeless situation in which neither side could win, in a long drawn out purgatory for suffering humanity—a kind of Thirty Years' War. The glib ones say this might be a desirable outcome, but wise men know better. Do you remember back in the 1930's when in some circles it was fashionable to predict knowingly that Germans and Russians would be at each others' throats and that such a situation would be a good thing because a war in which Germans and Russians killed each other off would be beneficial to the west? Well, that was always pretty specious doctrine, even though in that case there would have been an America to pick up the pieces and proceed with the game of life. Today, a war in which east and west killed each other off would leave the world maimed and helpless. There would literally be no nations left strong enough to pick up the pieces and proceed with the game.

V

War, of course, may be avoided. The chances are still that it will be. How? By a counterrevolution winning in Russia and reestablishing a capitalist regime, thus giving the United States a victory without war. This is not likely. By communism sweeping over the west, thus giving Russia a victory without war. This, too, is not likely. The high tide of communism seems to have been reached in Europe, and even a prolonged economic depression would not bring communism to Britain or the United States. How, then, may war be avoided? By stabilizing the American and Russian spheres now being built. By frankly recognizing the existence of two worlds. And what are the forces making for the peaceful stabilization of these two worlds?

First, physical limitations and fears: The devastation of the last war, from which Russia has not recovered; the sense of war weariness in all parts of the world; mutual fears of the atomic bomb and the other cataclysmic weapons of our day.

Second, the growing sense of unity in the Western World and rising determination not to appease the Soviet.

Third, the need of western Europe for the raw materials of eastern Europe, and the need of eastern Europe for the manufactured goods of western Europe. There is a growing realization that the peoples of the Balkans must have the tools, the implements, the machines, and the clothing of the west, while the peoples of western Europe must have the food and raw stuffs of the East. Trade has a way of breaking down political and ideological barriers.

Fourth, the probability that time will accustom us to the strange and novel political situation existing in the world today—the existence of only two great powers with widely different political and economic systems. As each reaches the more apparent limits of its expansion, as the probings of each encounters firmer resistance, as communism reaches its crest and comes to be contained, as the borders are more closely drawn, as the spheres of the two great powers are more clearly delimited, then the United States and Russia may settle into a modus vivendi, into a long period of uneasy but growing stability. Time may teach each that the world is big enough for both the United States and Russia, for both capitalism and communism.

Fifth, if once some sort of stability is reached—even an uneasy stability—there may be some relaxing of tensions in the Soviet Union. This relaxing of tensions may lead to some increase in freedom within the Soviet Union and may also lead to the raising of the iron curtain, not much but some. If western Europe should move in the direction of more socialism and the Soviet Union in the direction of greater freedom, the vast differences between east and west might gradually be bridged. In any event, this is a long-time development and may not come soon enough to help appreciably in the achievement of peace during the current critical period.

Sixth, and most important, communism might turn out to be nationalistic, independent of Communist internationalism and Russian imperialism. Up until this time we have been taking communism at the valuation of its own thinkers and leaders. We have assumed that it would be internationalistic. We have thought of it as an appendage of Russia, the first Communist state; as the possible basis of a world Union of Soviet Socialist Republics. This is what has made us fear it so much. We saw it as a gigantic instrument for the upsetting of the balance of power. But what if it should turn out that the wishes and predictions of Communist thinkers and leaders were mistaken? What if it should turn out that a country's going Communist did not necessarily link it with Russia? What if even Communist countries had to yield to other historic circumstances, to nationalist traditions, to economic needs different from those of Russia? We have seen the Communist leaders of little Yugoslavia identify their national interests as different from those of Russia. Many Polish Communists are taking a similar position. If the Communists of little countries like Yugoslavia and Poland take such a position, might not the Communist leaders of big Germany and big China do the same, should communism win in their countries? Now if communism turns out to be nationalistic and no mere adjunct of Russian policy, then our fears will relax. Russia might become less interested in pushing communism in other countries, and we certainly would be much less fearful of the balance of power being upset. Instead of dealing with an ever expanding Russia (or an ever expanding Union of Soviet Socialist Republics) we would be faced with the infinitely easier task of dealing with a new, a multiple, a more divided, a more flexible balance of power. We are here considering one of the most important historical possibilities of our time: Will communism turn out nationalistic or internationalistic, independent of Russia or dependent upon Russia? We do not yet know the answer. It involves imponderables, and only time and subsequent history can supply the answer. But if we wait long enough (being firm and vigilant all the while), if we gain sufficient time, we may know the answer, and the answer may mitigate our fears. But will we be allowed the time?

VI

Meantime, what can we do to strengthen ourselves in our current duel with the Soviet Union? Let us enumerate some of the specific measures.

First, let us strengthen the United Nations as best we can and continue in our attempts to weaken the veto. Constitutions and written charters have a way of developing organically and in actual practice of obviating and amplifying the written words.

Second, let us continue economic aid to the stricken peoples of Europe—until those peoples restore a working economy.

Third, let us reconsider our tariff policies with the view to providing markets for the goods of western Europe which formely found markets behind the iron curtain.

Fourth, let us help western Europe coordinate its currencies, its monetary systems, its transportation, its industrial production. Let us encourage the development of across-the-border industrial concerns in western Europe. In this connection, Barbara Ward's recent The West At Bay has many valuable suggestions. Incidentally, such measures will also help merge the economy and the industry of western Germany into a general European economy, thus making a future Germany less dangerous.

Fifth, let us encourage the nations of western Europe to build a military and a political federation.

Sixth, let us by all means avoid a major depression in the United States. A major depression in the United States would pull down the entire economy of the west. The resulting economic misery would lead to a renewed spread of communism in western Europe. A renewed spread of communism would lead to civil wars in western Europe. Civil wars in western Europe would lead to intervention by Russia on one side and by the United States on the other. Out of these interventions would come a third world war.

Seventh. Let us take care that we do not alienate the liberals, the social democrats, and the democratic socialists of western Europe by encouraging reactionary and crypto-Fascist groups in Europe. Let us be realistic and recognize frankly that the democratic socialism of western Europe may represent the middle way for Europe, the middle way between fascism and communism.

Eighth. Let us take measures to build a people's program in Asia that can match in mass attraction the promises of communism. Let us use every opportunity and every non-Communist movement of a genuinely popular kind to build a middle way in Asia, a way between feudalism and communism. The democratic socialism of Nehru may represent such a way.

Ninth. Let us never forget that we no longer speak merely for America, that we speak for the entire non-Soviet world. The public utterances of too many of our leaders are still provincial, narrow, shrill, where they ought to be broad, inclusive, urbane. We are thinking of democracy and freedom too often in terms of the American system—in terms of a written constitution, federalism, separation of powers, a two-party system. We must remember that many of our allies and associates have found democracy and freedom in unwritten constitutions, in unitary governments, in cabinet and parliamentary governments, in multiple-party systems. Again, we are talking of democracy and freedom too often in terms of American capitalism and American free enterprise. We must remember that many of our allies and associates are finding democracy and freedom in economic cooperatives, in social democracy, in democratic socialism. In this great duel with the Soviet Union we speak for the conservatives, yes; but we also speak for liberals, for social-democrats, for democratic socialists. We speak for the world of Winston Churchill, yes; but we also speak for the world of Attlee, Bevin, Cripps, Morrison, Laski, Crossman, Blum, Negrin, Prieto, and Nehru. We speak for America, yes; but we also speak for all of western civilization of which America is only a part. More, we speak for all men everywhere who seek both freedom and the social security modern technology ought to provide.

No modern nation has ever been called upon to give direction to such a widely gaged mission. We have yet to prove that we possess the breadth and the maturity and the wisdom to measure up to that mission.

Georgia Catfish and Hush Puppies

REMARKS
OF
HON. HENDERSON LANHAM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 2, 1949

Mr. LANHAM. Mr. Speaker, on February 7 in the course of a speech which I made to the House while H. R. 2361 was being read for amendments, I referred incidentally to a southern dish, fit for the gods, to wit, catfish and hush puppies.

I later received from a Connecticut Yankee, Mr. N. Farmer Murphy, a letter admitting that they were frightfully ignorant in his part of Connecticut and asking for more light on the question of hush puppies.

With the collaboration of my good friend, Bill Edens, secretary to my colleague, Congressman JAMES C. DAVIS, of Georgia, and my secretary, Mrs. John D. Penn, I sent this Connecticut Yankee a recipe for the making of hush puppies.

The correspondence with Mr. Murphy caused quite a bit of comment in the newspapers. The result was that my good friend, Judge James Maddox, of Rome, Ga., sent me for Mr. Murphy, ready-prepared ingredients for hush puppies which I have in turn sent to Mr. Murphy.

In the belief that many other Members of Congress are as unenlightened on the epicurean delights to be gotten from the eating of the succulent catfish and savory hush puppies, I am including with the extension of my remarks a recipe for the preparing and cooking of this southern delicacy.

I am including also an editorial on the subject which appeared in the Atlanta Journal on Sunday, February 27, and another from the Atlanta Constitution on Monday, February 28:

RECIPE FOR HUSH PUPPIES

Three cups of corn meal.
One cup of plain flour.
One very finely chopped onion of medium size for each cup of dry ingredients.
One-quarter teaspoon salt to each cup.
One teaspoon baking powder to each cup.
Enough sweet milk to make the batter about as stiff as putty. It is very important that the batter be stiff.
(I am told that you can substitute beer for milk and leave the baking powder out.)
When mixture has been thoroughly mixed, drop from a spoon in very hot, deep fat where the fish have been fried.

[From the Atlanta Journal of February 27, 1949]

NOW MORE PEOPLE MAY LEARN HOW TO LIVE

Georgia owes a deep debt of gratitude to its zealous Congressman HENDERSON LANHAM and to Judge James Maddox, of Rome. Those gentlemen have cooperated to perform a public service calculated to make life happier for a lot of people in the culinary hinterlands who otherwise might never have known what they missed. On instructions from Judge Maddox, Congressman LANHAM is dispatching to a Connecticut Yankee who asked how to make hush puppies, not only the recipe but a box of ready-mixed ingredients.

The whole matter arose after Mr. LANHAM had told his colleagues in the House of Representatives a few days ago that a man who has never eaten hush puppies with channel catfish has never lived. Truer words were never spoken. You can have your pompano gracing an elegant table. You can delight in your flounder and cast aside worries about getting a bone stuck in your throat. But, together with Congressman LANHAM, we proclaim that unless you've eaten channel "cat" and Georgia hush puppies, you don't know what good eating is!

If, as a result of Mr. LANHAM'S remark and Judge Maddox's gracious gesture, this delectable combination of hush puppies and channel "cat" attains the publicity it deserves, then a lot of Americans may learn how to "live," and the fame of the soul-satisfying Georgia dish may attain the proportions it deserves.

[From the Atlanta Constitution of February 28, 1949]

CONGRESSMAN LANHAM TO RESCUE

HENDERSON L. LANHAM, of Rome, is an estimable gentleman who as Congressman from Georgia's Seventh District is serving well both his constituency and his country.

On more than one occasion he has risen above party and provincial levels to vote for what he believed was the national good.

Recently, before the House, Representative LANHAM declared that a man has never really lived until he has eaten channel catfish and hush puppies.

Thereupon a Connecticut resident wrote asking the Georgia solon to "describe those hush puppies which are so good with catfish."

"We are frightfully ignorant up here," the man added.

Whereupon Representative LANHAM got busy toward sending the hush-puppy recipe to this poor man who "hadn't lived."

In thus sharing this southern secret with a Connecticut Yankee, the gentleman from Georgia's Seventh has furnished further proof that as a Representative he can be unselfish and unsectional.

National Health Insurance

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 2, 1949

Mr. YATES. Mr. Speaker, the Journal of the American Medical Association, edited by Morris Fishbein, is largely responsible for the fact that so many physicians have a complete misconception of the proposed national health-insurance legislation, and the issues surrounding that legislation.

One of the misconceptions that Mr. Fishbein has planted in the minds of most doctors is that the British medical program is a complete failure and that its failure proves what would happen in this country if we adopted President Truman's health-insurance plan.

This line of propaganda has two errors. First is the fact that there are fundamental differences between the British plan and the American proposal. The second is that the British plan is far from the failure it has been pictured by the AMA.

The AMA Journal has constantly tried to persuade American doctors that the British program has resulted in deterioration of medical service. Last September, for instance, it said that doctors in Great Britain were compelled to write formulas and prescriptions and reports many hours in advance of the time when they see the patients.

It is interesting to note in the Journal dated January 22, 1949, a letter from Charles Hill, Secretary of the British Medical Association, flatly denying this charge. Apparently Mr. Hill has had some difficulty getting the Journal to print his denial, as an editor's note indicates it was only printed after Hill had repeated his request for its publication.

Dr. Hill, as secretary of the British Medical Association, could not be expected to be a partisan of the British medical program. But his letter to the Journal said that the Journal's charge about the practice of medicine under the British program was untrue and could be described as a libel on a profession which is proud of its traditions of service to its patients.

That the AMA Journal has constantly misrepresented the British program and the way it is working is indicated by many independent reports from American journalists who have submitted much more favorable reactions to the plan. One such report came recently from Frederick Kuh, London correspondent of the Chicago Sun-Times. Under unanimous consent, I include Kuh's two recent articles printed in the RECORD to show doctors and the public generally, that the British program is working much more successfully, despite growing pains, than the AMA Journal would have you believe.

BRITISH MEDICAL PLAN AIDS POOR
(By Frederick Kuh)

LONDON, January 14.—Legends have been spun around socialized medicine in Britain since its introduction on a nation-wide scale 6 months ago. It is as untrue to suggest that the scheme has been running without a hitch as to infer that it is breaking down.

Even more misleading are reports in American newspapers, describing this immense venture as communistic. The facts refute such propaganda. Doctors remain free to engage in private practice. Every citizen is at liberty to choose his own physician, dentist or oculist.

Only a foolish commentator at this early stage would label the national health service a success or failure. It has shown some defects and abuses, which will be discussed later in these articles. Considering its vast scope, it is working more smoothly than expected.

There has been a temptation to judge results more from the standpoint of a comparative handful of doctors than from the impact on 50 million Britons. An honest effort to sum up the effects on the British public leads to these conclusions:

The poorer people have gained. Besides free maternity care, free dentistry, free spectacles, they can now also obtain medical appliances, surgical shoes, wheelchairs, artificial limbs, and in exceptional cases even wigs—all for nothing.

POSITION OF RICH UNCHANGED

It should be remembered that before the health service began last July 5 almost 20 million British, in return for small insurance payments, were given gratis state medical treatment and sickness benefits in cash. Everyone who earned less than $34 a week was compelled to join the state insurance scheme and enjoyed most of the advantages which the new health service has now extended to a much broader section of the population.

The lower middle-class people with weekly incomes between $35 and $80, who did not come within the state insurance system, now get free medical and dental treatment, free medicines and are shielded against heavy hospital costs.

The health service has left the position of the rich unchanged. By paying high fees they can still go privately to specialists, summon them, or occupy private rooms at hospitals or sanitariums.

Considering the truly national size of the health service it is astonishing that it has been working so well in its first half year. More than 95 percent of the population of 50,000,000 are getting free medical service. The state has taken over 2,587 hospitals with 288,000 staffed beds. Of a total of about 23,339 general practitioners, approximately 20,400 have entered the health service. Of 10,000 practicing dentists, 8,750 have joined the service.

On visiting the head offices of the British Medical Association, which bitterly fought the scheme before it was launched, I was surprised to learn on talking to the association's spokesman that the BMA has turned strongly in favor of the national health service.

DOCTOR A FREEMAN

"The doctor has remained a freeman," the BMA said. "He is not a state employee. He treats the patient as he likes, while the public keeps its right to select its own doctor."

Some stories published in America suggest that droves of British people have turned into hypochondriacs since they can visit doctors and let the state foot the bill. There are such cases. A woman with a scratched finger may, without payment, enlist a physician's attention. A man with a headache, instead of buying aspirin at the local drugstore, can run to a doctor.

This nuisance aspect of the doctor's life existed before and has been slightly worsened. Most hypochondriacs in former days, however, were willing to pay $2 or $3 for the pleasure of a trivial or imaginary ailment.

Against this the doctors themselves say that socialized medicine has made the public health-conscious rather than disease-conscious. Poverty or modest means used to deter many, especially housewives, from calling a physician. Such neglect is disappearing. People are now going to their doctors earlier than formerly and, in such illnesses as tuberculosis, this improves the chance of swifter diagnosis and prompter treatment.

Mothers nowadays tend to make calls on the doctor more of a family affair.

"While I'm here, please look at Willie and Nellie."

However, doctors agree that it aids medical care if they are able to treat the family as a unit.

BRITISH HEALTH PLAN PROVING ITSELF DESPITE FLAWS

(By Frederich Kuh)

LONDON, January 16.—The first months of the new national health service have disclosed weaknesses in the system along with many advantages. Problems of optical care and dentistry have been especially worrisome.

For instance, there has been a nationwide rush for free spectacles. The Government estimated a demand for 4,000,000 spectacles a year, but the claims are running at the rate of 7,000,000. British industry lacks the capacity to manufacture enough spectacle frames. Before Christmas, 4,000,000 persons had had their eyes tested under the new scheme and 1,500,000 spectacles have been supplied gratis.

Many people who needed glasses are getting them. Poor persons who wore "specs" without ever having had their eyes examined are receiving tardy care. Others who wore the same spectacles for 10 to 20 years are obtaining new, adjusted lenses without paying for them. The run on opticians often means a delay of eight or more weeks before delivery and, worst of all where a doctor's certificate is required, much time is being lost in paper work.

It ought to be said at once, however, the tales of an enormous bureaucratic apparatus to cope with the new health service are untrue. Administration of the whole service has involved a Ministry of Health staff of a little over 800, including clerks and typists.

Doctors have been complaining, with reason, that they are obliged to waste too much time in form filling. A good deal of paper work has been added to the physicians' occasional issuance of birth, death, or lunacy certificates. A Government committee has been set up to reduce this evil.

It is in the field of dentistry that the Government is having unexpected teething troubles. Dental health in Britain has been notoriously bad. Now, it is said, too many teeth are chasing too few drills. About 1 in 10 persons regularly went to the dentist. Today, frequency has risen to 1 in 6.

The Government has decided that it erred in overgenerosity in fixing state fees to dentists for their treatment of patients. A Government committee had calculated that a dentist, spending 33 hours weekly at the chairside, would earn $15,200 gross, or $7,600 net a year. Many dentists, working overtime or shortening the time allowed each patient, have been earning far too much to suit the Government. Some are making $48,000 gross, or $24,000 annually, besides their private practice.

AID FOR RURAL DOCTORS

One unwanted result is that the state's fees are attracting dentists from public clinics to their private surgeries, and that has meant less care for the teeth of school children and expectant mothers.

The Government has ruled that the state shall tax away half the dentist's income over a gross of $19,200 yearly.

From the profession's viewpoint, the most conspicuous hardship has fallen upon country doctors. Distances to be covered limit their number of patients and lower their earnings. Few attain the legal upper limit of 4,000 patients on their lists. The Government is preparing to ease the rural doctors' dilemma by granting them a larger mileage allowance to pay transportation.

The entire health service is more expensive than the Government had supposed. The original estimate of $608,000,000 for the first year was raised to $960,000,000 before the scheme was launched in July. It may reach $1,120,000,000, a large part of which goes to run state-owned hospitals.

Are doctors better or worse off financially? Some say worse. But the Ministry of Health says general practitioners have won a 60-percent rise in their total income, compared with prewar years.

Whether the British doctor is overworked under socialized medicine varies from doctor to doctor and dentist to dentist.

Many physicians are overburdened; this was true of some in pre-health-service times. Partly because more people are getting medical care and partly because others now run to a physician to obtain free attention, the strain on the profession has grown.

Under the former state sick-insurance system only the insured person, usually the man at the head of the family, benefited. Now state-insured people have been absorbed in the national health service. Mothers and children, often neglected under the old scheme, are receiving more medical care and the whole family now normally gets attention from the same physician.

Shortage of doctors in Britain (there is 1 for every 2,000 inhabitants) remains.

Overcrowding of hospitals was a sore spot in Britain and it has not been relieved; in some instances it is aggravated. This affects maternity cases among others.

Britain's birth rate has risen from 14.8 per 1,000 in 1939 to 20.6 in 1947 without a corresponding increase in hospital accommodation. Before the war 1 of 3 babies was born in a hospital; now it is 1 of two.

Britain needs a big investment program for building new hospitals and modernizing old ones. Yet any such enterprise is out of sight, owing to shortage of building materials.

PURCHASE OF PRACTICE ILLEGAL

Introduction of the health service seems to be attracting more students into medical colleges, indeed too many to be accepted. Before the era of socialized medicine, the young doctor usually began by buying a practice for about $12,000 from another physician who was retiring or moving elsewhere. Purchase of practices is now illegal.

After their earlier fight against socialized medicine, doctors have been showing remarkable good will toward the new system and cooperating fully. Of course, there are complaints, some reasonable, others exaggerated or unfounded.

When allowance is made for the health service's own infancy, an ample balance remains in favor of the system.

Socialized medicine here has not yet met the test of a hard winter with its familiar increase in illness. Nor has it had to cope with a severe flu or other epidemic. In the short experience of its first half year, however, it has been accepted as a desirable addition to the British way of life.

National Children's Dental Health Day

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1949

Mr. FEIGHAN. Mr. Speaker, today I have introduced a House joint resolution authorizing and directing the President of the United States to issue annually a proclamation setting aside the first Monday of February as National Children's Dental Health Day and to invite all agencies and organizations interested in child welfare to unite upon that day in the observance of such exercises as will call to the attention of the people of the United States the fundamental necessity of a continuous program for the protection and development of the dental health of the Nation's children.

We recognize that a higher level of dental health for the entire population can best be achieved by concentrating on the needs of children. Many communities have observed a Children's Dental Health Day for as long as 8 years, with scientific meetings for dentists and edu-

cational activities for the public. These observances have resulted in a great deal of public good and provide convincing proof that a National Children's Dental Health Day will greatly multiply the benefits of dental health for children. All State and component dental organizations, together with civic, educational, and health groups, have expressed their willingness wholeheartedly to support this program.

A proclamation by the President of the United States designating the first Monday in February as National Children's Dental Health Day would contribute immeasurably in focusing public attention on the need for a higher level of dental health for our children and would, indeed, be beneficial to the health and welfare of our Nation.

State Library Service Bill

EXTENSION OF REMARKS
OF
HON. PAUL J. KILDAY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1949

Mr. KILDAY. Mr. Speaker, under leave to extend my remarks I include an editorial which appeared in the San Antonio Express of March 1, entitled "State Library Service Bill Before the Legislature," The Express has been a consistent supporter of the library program embodied in a number of bills pending before the Congress. This editorial indicates its support of State legislation on the same subject designed to implement the program outlined in the bills pending before us:

STATE LIBRARY SERVICE BILL BEFORE THE LEGISLATURE

Though the Texan may point boastfully to his State's thriving cities, paved roads, oil fields, pedigreed cattle and sheep, and the giant industries rising along the Gulf coast, he cannot say much for the State's rank in public libraries.

The latest tabulation showed Texas standing thirty-sixth among the States in per capita expenditure of public revenue for library service. What is worse, Texas has to report more persons than any other State (3,500,000, or about half its population) who entirely lack such book-borrowing privileges.

Thus Texas spends many millions annually on its schools, State colleges and university—and, under the Gilmer-Aiken plan, would spend added millions—in teaching its future citizens how to use books, and yet, by contrast, provides but a pittance for supplying those citizens with the books they need for guidance and after-school self-education.

A bill before the legislature, if enacted, would represent an important step toward remedying that anomaly. At its hearing in Austin today, a house appropriations subcommittee will hear appeals by State Librarian Francis H. Henshaw and other friends to the libraries for a $200,000 grant to be used during the next fiscal year for taking books to the people.

The money thus voted would extend library service to those communities whose need of it is greatest. For demonstration purposes, it would establish five regional libraries—each comprising a bookmobile, driver, and librarian—each to serve 10 or 15 counties. The State would spend $25,000 on each outfit, or $125,000 on the five units. With the other $75,000, the funds would create a model library on wheels to go anywhere in the State where it could be of service to local libraries and, at the same time, increase the State library's stock of books to lend.

What the State library proposes is essentially such a demonstration program as the Hill-Madden and Patman bills pending in Congress contemplate.

In that regard, Milton E. Lord, president-elect of American Library Association, has a commendatory word for the Texas State Library's extension program. Mr. Lord—who directs Boston Public Library, one of the world's greatest, that is rich in gifts from men and women whom it has served—points out that the Texas proposals fit in well with the Federal Library Demonstration bill.

Should both the Federal and State bills become law, Texas would be in line for an outright Government grant of $40,000 a year plus $100,000 a year to be matched by State funds. Maintained through 4 years, such a program would go far toward giving Texas public library service. When the people discovered what books could do for them, they would carry on from there.

California Faces Drought Conditions as Serious as Those of a Year Ago

EXTENSION OF REMARKS
OF
HON. RICHARD J. WELCH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1949

Mr. WELCH of California. Mr. Speaker, pursuant to unanimous consent granted me to insert in the RECORD a United Press story from the California State Capitol at Sacramento, I desire to refer to the fact that there is a critical shortage of water and power from one end of the State of California to the other. The Shasta Dam reservoir is the principal water storage for the great Central Valley. It has a capacity of 3,714,000 acre-feet. On Tuesday, February 22, 1949, there was only 2,257,000 acre-feet of water in the reservoir compared to 2,802,000 acre-feet a year ago or 245,000 acre-feet less than at this time in 1948.

The article follows:

STATE FACING DROUGHT CONDITIONS AS SERIOUS AS THOSE OF A YEAR AGO

SACRAMENTO, February 24.—California faces as serious a drought situation now as it did a year ago, State and Federal officials warned today.

E. L. Christian, assistant Central Valley project water master, declared the situation was "now getting to the point where it should be viewed with quite a bit of concern." He said rainfall throughout the State generally was below normal and in many cases was lagging behind last year.

George A. Scott, chief of the State crop and livestock reporting service, warned that unless spring rains and snows are heavy and well distributed, agriculture may suffer for lack of sufficient water. He added:

"Below-normal seasonal rainfall this year, following recent successive dry years, would present a serious situation for agriculture in parts of the State."

Mr. Christian said he was in complete agreement. "Prospects of a drought at this time are just about as serious now as a year ago," he declared.

On rainfall, Mr. Christian pointed out that precipitation in the northern Sacramento Valley area was only slightly better than 50 percent of normal. Seasonal rainfall at Shasta Dam, he said, was only 14.47 inches on February 1, compared with 26.29 inches at the same time a year ago. He said February rains had made up a few inches of the difference but still were considerably behind the 28.95 inches recorded at Shasta March 1 last year.

The situation was not much better in the San Joaquin Valley and mountain areas, the water expert said. He reported rainfall in the Fresno area was only about 60 percent of normal and mountain precipitation which will produce summer flows for irrigation purposes is not much over 60 percent.

Summer run-off, he explained, normally is slightly below the rainfall level.

Fred Paget, engineer in charge of State water resources snow surveys, already reported that the mountain snow pack was deficient as of February 1.

"From the Yuba River to the southern end of the Sierra, the water content of the snow pack averaged 75 percent of normal; while to the north, in the watersheds of the Feather, Pit, and upper Sacramento Rivers, it averaged 60 percent of normal," his report stated.

On the brighter side Mr. Christian said water storage in several of the State's reservoirs was slightly above last year, but still presented no reason for optimism. The 520,000 acre-feet Millerton Reservoir behind Friant Dam on the San Joaquin River contained 186,000 acre-feet of water compared with 140,000 acre-feet this time last year, he said. Most Pacific Gas & Electric Co. reservoirs also were a little fuller than a year ago.

On the other hand, Mr. Christian pointed out that water stored in the reservoir behind Shasta Dam was far below last year's level. He said, as of midnight Tuesday, there was only 2,257,000 acre-feet of water in the reservoir compared with 2,802,000 acre-feet a year ago. The dam's capacity is 3,714,000 acre-feet.

Fortify Alaska Now

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1949

Mr. BARTLETT. Mr. Speaker, despite all our wartime building in Alaska, despite the postwar building there, our guard on the Nation's front is weak. It must be fortified. This must be done quickly. To do half a job, as we have done, is perhaps worse than to have done nothing at all because the war installations which have been constructed make Alaska a greater prize than ever. Only a few days ago a press dispatch from Tokyo contained an evaluation estimating that Alaska and the Aleutians might be captured but that would not mean an enemy power could descend upon the States. That is nonsense. Once the airfields of Alaska were in enemy hands the industrial heart of the United States could be bombed from bases there.

Last summer following publication throughout the Hearst press of articles in which Fergus Hoffman, Alaska expert of the Seattle Post-Intelligencer, described the neglected Alaska defenses at Kodiak and Adak, he made a tour at Mr.

Hearst's direction of the entire Territory and reported at length on conditions relating to national defense.

That report showed that any base in the Territory could swiftly be taken by a surprise military attack. This did not come under the heading of news to informed military men—including those of the Red Army—but it awakened Nationwide response from civilians throughout the United States who had assumed that Alaska, after World War II, was a vast and well-armed fortress capable of immediate defense or offense.

Following this series, Fergus Hoffman wrote a summarizing series of the five articles presented here. Of particular importance at this time when a radar picket line is being considered for the continental United States is his disclosure of how easily an enemy could slip undetected into Alaska without radar warning.

Mr. Hoffman has a wide experience in Alaska, dating from World War I days when he and his twin sister were the only white children in the copper-mining camp of Latouche, on the island of the same name in the Gulf of Alaska. He has worked for Alaska newspapers, three of the largest in the Territory, from time to time; covered Alaska in World War II for a national newspaper, and has been a frequent visitor there since VJ-day.

His report follows:

(By Fergus Hoffman, Post-Intelligencer staff writer)

Alaska, the obvious prime target of America's only obvious opponent, today is almost as vulnerable to a surprise attack as it was before Pearl Harbor.

The most casual traveler in the northland cannot help but recognize the ease with which any of the skeletonized sub-Arctic, coastal, and Aleutian bases could be taken by a determined attack.

The situation is closely parallel to the pre-Pearl Harbor days, when 300 soldiers manned the Army's sole northern outpost and the Navy's defenses consisted of a small base at Sitka and two other bases under construction.

MILLIONS OF DOLLARS POURED INTO ALASKA DEFENSE PROJECTS

War's impetus saw millions of dollars poured into Alaskan defense construction. Landing fields were constructed; hastily selected islands were occupied in secrecy and swiftly converted into supply bases, depots, garrison centers.

The concrete airstrips are still there. The Quonset huts are still there. On many a base long rows of wartime living quarters stand vacant, racked by weather and quickly deteriorating. Entire installations, built in haste with war materials, are useless today. The military has even sold many airfield hangars as surplus because they cannot qualify for permanent use.

But the chief difficulty faced by the present planners of Alaska's defenses is that the wartime installations not only were designed for temporary use—but also were put in the wrong places for present purposes.

That is why the Army engineers estimate it will require at least $1,000,000,000 to make the northland impregnable.

That is why the Eighty-first Congress will face renewed pleas from Alaskans and their military leaders for increased construction appropriations for the Territory.

Although there is not complete agreement among the various military services as to the relative importance of the huge variety of needed additions to our Alaskan defenses, this is the primary objective: A fortified Alaska ready to challenge any enemy seeking to strike at the United States by striking down Alaska.

In World War II, Alaska served two purposes. It provided the route by which Russia was supplied with American warplanes and it provided the northern pincer of the iron claw which finally dragged Japan down to defeat.

All wartime military construction was aimed at these objectives. As a result, when VJ-day arrived, the Russian Air Force had a thorough knowledge and complete experience of Alaskan flying conditions and America had a northern bastion oriented only against a defeated enemy.

Today, with only one dangerous enemy on the globe, Alaska must be refitted with an armor impervious to transpolar stabs, to Bering Strait attack or to island-hopping tactics which might originate in bases as far away as Communist-occupied China. Realization of these objectives simultaneously will give America the offensive bases it would need to retaliate against attack.

Alaskan military commanders point out the armor cannot be provided overnight.

WEATHER CONTROLS WORKING SEASON

The annual construction season, at best, lasts only from March to November.

However, if Congress will guarantee the money, the military planners can establish a progressive construction program which will implement the defense needs. The big trouble is the one faced by many Government agencies at every session of Congress—wavering congressional policies. The military would like to see Congress commit itself to fulfillment of a long-range Alaskan defense blueprint, thus enabling the engineers to sign contracts with civilian builders for long-term projects.

Instead, Alaska's defenses are being rebuilt piecemeal as Congress doles out reluctant annual appropriations. Such was the pattern in the pre-Pearl Harbor years, with the result that on December 7, 1941, the entire Territory of Alaska was defended by less than 10 fighter planes. If the Japs had elected to strike to the north instead of the south, Kodiak probably would have become the Corregidor of the North Pacific and Jap bombers would have raked the United States from mainland Alaskan bases.

Dutch Harbor, the first base the Navy built in the Aleutians and the first one the Japs attacked, has been quietly abandoned by the United States.

Theoretically, the huge air and submarine base is on stand-by status.

Its only defense consists of a handful of marines, too few to repel an attack of any kind.

NAVY, ARMY, AND AIR FORCE UNITS WITHDRAWN FROM MANY OTHER ISLANDS

Typical of the postwar fate which has befallen most of America's defenses in the long Aleutian chain, Dutch Harbor is a virtual ghost town.

The tiny leatherneck garrison is provisioned once or twice a month by a Coast Guard patrol bomber from Kodiak which lands at the deserted air base en route to supply a Coast Guard detachment on the Pribilof Islands in Bering Sea.

Navy, Army, and Air Force units likewise have been withdrawn from many of the other islands which played so important a part in the Aleutian campaign. Many islands which supported full military bases in wartime are now nothing but weather-observation posts or airways communications centers manned by a few technical troops.

Even bloody Attu, at the tip of the curving Aleutian barricade, is virtually useless for either defensive or offensive purposes now. Only a small naval weather-observation crew and maintenance outfit is stationed there. A Navy transport plane wings its way from Adak twice a week to supply Attu.

In the middle of the chain is Adak, the only remaining major installation still operating in the Aleutians. Even this base, established originally to give Uncle Sam's bombers a base for bombing Jap-occupied Attu and Kiska, is a grim monument to the reluctance of American taxpayers to maintain military protection in peacetime.

The Navy at Adak has only one permanent building unit—a group of barracks for enlisted men.

Neither the Army nor the Air Force has any permanent construction under way on Adak. Army engineers responsible for their post say they will be grateful if they can retain their civilian maintenance workmen The Army budget for Adak has been pared so much that little attractive overtime pay can be offered to workmen who can just as readily find employment elsewhere.

HOUSING AT ADAK IS MAJOR PROBLEM

Except for the fortunate enlisted men slated for the new Navy barracks, housing is a major problem for every officer, enlisted man, and civilian on Adak. The huts and shed-like dormitories erected during the war were not built to last; they are falling to pieces almost as fast as they were constructed.

Due to hasty, faulty electrical wiring with inferior substitute materials, fires are in almost daily occurrence on Adak in the wartime buildings. Blasted by gusts of wind that sometimes exceed 100 miles an hour tarpaper peels from roofs like ribbon.

Nevertheless, by utilizing material from unoccupied buildings, the garrison manages to keep itself housed. Men with dependents exercise plenty of ingenuity in off-duty adaptation of wartime supplies to the housing needs of the moment. There are no troops to spare for domestic carpenter work or other repairs, but each man does what he can for himself.

SUPPLY MAINTENANCE CALLED DIFFICULT

Yet from Dutch Harbor to Attu, along the entire island route followed by America's trans-Pacific commercial air liners and military transport planes flying between Japan and the United States, Adak is the chief defense base—in temporary quarters.

There is a definite clique of military men who question the value of maintaining heavy static defense bases in the Aleutians, contending that such bases might easily be cut off and isolated in case of a widespread attack against the United States. They emphasize the difficulty of maintaining a supply line to such a distant, isolated point as Adak in wartime.

The answer, of course, is that without defenses in the Aleutians, the rimlike guardians of the North Pacific simply would be occupied by the enemy and used for stepping-stone supply and bomber bases against inland Alaska itself. Once established in the Aleutians, the enemy could control both surface and air operations in the North Pacific.

Russia's military machine, vastly more experienced in Arctic maneuvers ashore and afloat than is America's northernmost garrison, undoubtedly has complete information about the location and strength of all United States forces in Alaska.

By the same token, American knowledge of what goes on in the mushrooming Siberian towns and defense bases across the narrow Bering Strait from Alaska is almost nil.

Until last autumn, when a long-standing agreement between the two countries was repudiated, Siberian Eskimos crossed the strait annually to visit relatives in Alaskan coastal villages and on the American islands. American Eskimos frequently reported the curiosity displayed by the visitors, particularly about military matters.

When the American Eskimos journeyed in their skin boats to visit their Siberian cousins, they frequently met with harsh, abrupt greetings by Russians living at the Siberian coastal villages. Frequently, the Russians demanded that the visitors surrender their hunting equipment and other gear during their visit.

Growing hostility to the visiting American Eskimos, which included confiscation of their goods on several occasions, finally led many of the Eskimos to forego their annual trips. The entire system by which the Eskimos were permitted to exchange visits ended with repudiation of the international agreement.

Word of the repudiation, however, failed to reach a group of American Eskimos on Little Diomede Island, in the throat of Bering Strait, and they sailed the 3 miles to Big Diomede Island to pay their usual summer calls.

LANDING FIELD FOUND ON BIG DIOMEDE

They found a Russian landing field in operation on Big Diomede—and "hospitality" in close arrest.

Held for more than 2 weeks, during which they were grilled in detail about Americans and American activity, the Eskimos finally were released and allowed to return home.

Other Eskimos on St. Lawrence Island told this reporter of Russian activity along the Siberian coast, including icebreakers and merchant ships making their way north to the Russian settlements in the Arctic. A missionary said she was awakened one night by Eskimos who reported finding the wheel tracks of a heavy airplane on a flat plateau on the island.

Two boatloads of St. Lawrence Eskimos, hunting seal, reported to American intelligence officials that they sighted a submarine near St. Lawrence Island.

"We thought it must be an American submarine and we paddled toward it, but it went down below the water right away," they said. "The men on deck saw us and run below and it went away."

A veteran white ice pilot who traded in Siberia for several years following World War I said there is no doubt that Siberia is now being fortified as fast as the Russians can build.

Many of the best sites for air bases in Siberia are within easy bombing distance of Alaska's two major Air Force bases—Fort Richardson at Anchorage and Ladd and Eielson Fields near Fairbanks.

Persistent Russian effort to gather data about Alaska probably began long before World War II. In the summer of 1941, a Coast Guard patrol plane reported Russian merchant ships operating on the American side of the Bering Sea.

Then, when the United States entered the war, the Russians were given a virtually formal tour of Alaska by our own armed forces.

RUSSIANS HAD FREE ACCESS TO UNITED STATES PORTS

The Russians operated many of their own merchant ships between Siberian ports and the west coast of the United States, as well as calling regularly at an American base on the Alaska peninsula to receive ships being turned over to them under lend-lease agreements.

Refusing to let American mariners get a glimpse of their Siberian activities, the Russians not only boarded their new, American-made vessels in American waters—they also insisted on ferrying the thousands of American warplanes which were turned over to them in Alaska. American pilots flew the planes to Alaska and the Russians took them over to Siberia.

If the Russians don't have a complete picture of Alaskan defenses now, it is only because they didn't use the American cameras they purchased so avidly wherever they could find them on their Alaskan visits.

From the ice packs of the Arctic to the jagged green fjords of the inside passage, the territory of Alaska is the perfect objective for an enemy looking for attack bases.

And unless Alaska is fortified to protect every potential base, the United States should abandon military effort in the north, establishing defenses farther south.

So says Ray Petersen, one of the veteran, Alaska-wise civilian bush pilots, who time and again saved the military's bacon in the north in the early days of World War II.

Petersen, heading his flying service with headquarters at Anchorage, is a typical young American businessman—with this exception: His business is in Alaska.

HE WANTS SECURITY FOR HIS FAMILY

It is a thriving business, a combination of four bush air lines now operating on scheduled service as Northern Consolidated Airlines. It will make Petersen and his associates wealthy.

But money isn't enough for Petersen.

"I want security for my children," he said during a Seattle visit. "Security for them and all Alaskans will come when every piece of concrete runway which is more than 3,000 feet is either blown up or adequately defended."

The map of Alaska, the flyer pointed out, is dotted with big, now useless, airdromes constructed during World War II. Many of them are on stand-by status, not a plane on the field.

In all Alaska this winter, for that matter, the Air Force has only 75 fighters and 5 B–50s.

"We poured millions of dollars into building big fields throughout Alaska during the war," Petersen pointed out, "but now those fields are abandoned. Those big vacant bases are just sitting there, undefended, an open invitation for an enemy to sneak in, base his bombers there, and launch sudden surprise attacks on the United States."

SAYS ALASKA LIKE SITTING DUCK

"The people at headquarters of the Alaskan command realize this, but they don't have the money to do the job. They won't get the money until the American people realize exactly that Alaska is as vulnerable today as a sitting duck."

Describing Alaska as the "No. 1 military target in the world," Petersen said there is little doubt in his mind that the Territory would fall before a well-planned attack if the enemy moved now.

"We ought to blow up all the attractive military fields if we aren't going to defend them," he said. "It would take thousands of tons of steel and concrete to rebuild them, and that would block any enemy eyeing Alaska.

"The economical, strategic move, of course, is to man these bases and equip them with fighters and bombers. No enemy on the face of the earth would dare jump us in Alaska if the word got around that our bases were defended."

The actual picture today is almost the exact opposite—almost an identical situation to that which found Alaska unbelievably defenseless on Pearl Harbor day. Petersen has grim cause to remember those days, because he, like other civilian pilots, had to do the military's job.

"They didn't have the planes to spare, so we flew missions throughout Alaska," he recalled. "On December 10, 1941, I flew the first antiaircraft equipment to Kodiak. Our biggest navy base had no antiaircraft devices until the bush pilots arrived."

As Petersen taxied to a hangar he counted six slow Navy patrol bombers on the field. That was Kodiak's air armada. The Navy pilots came running to his plane, clamoring for information about the fighter protection they had been promised.

"They were certain that Fort Richardson, on the mainland, was flying patrols and would protect Kodiak from attack if the Japs moved in," the bush pilot said. "I patted one of those young Navy boys on the shoulder and told him, 'Don't worry about it—Fort Richardson will protect you.'"

COULDN'T PUT SIX FIGHTERS IN AIR

That's what Petersen said. But he knew that Fort Richardson, headquarters for all Alaska, couldn't put six fighters into the air. A full colonel at Kodiak asked Petersen not to discuss the poor Kodiak situation when he returned to Fort Richardson. This would keep the civil population from alarm, Petersen was instructed.

"I didn't want to alarm the military!" Petersen exclaimed. "I didn't dare tell Fort Richardson that Kodiak could offer no assistance."

Today, the flyer emphasized, the picture in Alaska is little different.

"Alaska is vulnerable again," Petersen noted. "The American people have been warned; I hope they act while time enough remains."

Alaska, an open door to aggression could be penetrated almost anywhere along the 30,000 miles of coast line before American defenders could detect the invader.

So poorly defended is our huge northern rampart that the armed services cannot spare patrol planes for regular surveys of some of the most vital sections where an invader might land.

Some easily accessible landing areas are so remote and seldom visited by American reconnaissance planes that days might pass before the presence of any enemy there could be reported.

RADAR POSTS SCANT

Despite the pleadings of military authorities, radar installations are so scant that an enemy could filter into a number of bases without the slightest chance of being discovered.

All this, says E. L. (BOB) BARTLETT, Alaska delegate to Congress, adds up to almost total unpreparedness for war in Alaska.

BARTLETT has warned the Congress persistently of Alaska's inadequate defenses, pointing out that even vital Point Barrow where millions are being spent in a Navy search for oil is without defenses of any sort.

Essentially an Air Force command, with Army and Navy components theoretically subsidiary to Lt. Gen. Nathan F. Twining, Alaskan commander, Alaska is supposed to be one huge defensive-offensive air base for the next war.

At mile 26, near Fairbanks, the Air Force has recently completed construction of Eielson Field, capable of taking the biggest bombers known to the United States. Here transpolar flights could be serviced and launched in case of war.

But Eielson Field is undefended.

The troops at the field are crew men, clerks, maintenance workers.

COMBAT TROOPS LACKING

The combat troops necessary to defend an installation such as Eielson are not present—anywhere in Alaska. Not a single Army, Navy, or Air Force unit in the territory has enough combat forces to drive off an air attack and quell enemy ground troops landing by parachute or glider.

General Twining has ordered integration of all units at every installation. Every typist and every carpenter has his assigned combat post in case of emergency. Further, practice alerts have been held frequently to train the garrison troops and instruct the civilian populace in emergency measures.

"Our last alert was like a dress rehearsal for disaster," one Alaskan flyer commented recently. "It is a mockery to think we could repel any kind of attack these days. I'm just going to load my family in my plane and take off pronto when war comes to Alaska."

TERRITORY STRIPPED

With Alaska an obvious base for our own attacks across the top of the world, it is essential that America keep her guard up, up North.

Instead, the territory has been stripped of military manpower. This winter at Alaskan headquarters at Fort Richardson, bare, unfinished barracks rear against the skies. Other barracks at other bases are only in the blueprint stage, while troops live in flimsy wood and tarpaper huts built for short wartime use.

And these troops are only a remnant of Alaska's military manpower. The combat troops who should be in winter training are in the States because of the lack of housing.

TO BUILD IN SPRING

This spring construction will start on several more permanent barracks.

Then, if work goes according to schedule, there will be housing for approximately one-third of the troops necessary to defend Alaska. This will be, at the earliest, about Christmas of 1950.

In the meantime, America's attic door is open.

St. Lawrence Seaway Action Urged by Unions

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 1, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article that appeared in the Michigan CIO News of February 24, 1949:

ST. LAWRENCE SEAWAY ACTION URGED BY UNIONS

WASHINGTON.—Urging immediate congressional action on the proposed St. Lawrence seaway and power project, Walter Reuther, UAW-CIO president, and Emil Rieve, chief of the Textile Workers Union-CIO, stressed the necessity of such a plan for national full employment programs.

Addressing the St. Lawrence Association last week, both union heads told members that the entire northeast was losing out by not having low-cost power and would continue to do so unless the proposal now before Congress was passed.

Pointing out the effect of a power shortage on aluminum and steel production, Reuther urged congressional passage so that the shortages might be relieved within 4 years.

In describing the situation, the TWU head declared that New England needs at least 20 percent more electrical power to win new industries.

"No industrialist in his right mind could expand his operations under the present scarcity conditions," and "a good reason is provided for existing plants to move out of New England," he added.

Asking the association to "give the same help to other projects when the St. Lawrence project has been won, not as substitutes but as supplements to it," Rieve indicated the Connecticut River development as a possible project.

At the same time Reuther expressed the need of the Central West for a waterway to the Atlantic.

"The whole Midwest industrial region is threatened by exhaustion of ore resources in the Mesabi Range. Ore from newly discovered deposits in Labrador and elsewhere could be moved to steel centers at a cost approximately one-tenth of rail," he stated.

States' Rights

EXTENSION OF REMARKS
OF
HON. JOHN SANBORN
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 2, 1949

Mr. SANBORN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the February 6 issue of the Idaho Statesman. This editorial points up the threat of an overpowering authority of the Federal Government to take away the fundamental rights of the State of Idaho.

I urge my colleagues to consider this editorial and remember that who controls the water in the State of Idaho controls the land and who controls the land controls the people.

IDAHOANS MUST REMAIN EVERLASTINGLY ON GUARD AGAINST FORMATION OF AUTHORITY POWER OVER STATE

In Washington last week they held hearings on the Columbia Valley Authority. The Senate Interior Affairs Committee was studying the plans of the Interior Department. A bunch of trained seals were attempting to lay the groundwork for the establishment of CVA.

C. Girard Davidson, an assistant secretary of the Interior, answering a direct question of whether or not he favored an extension of the principles of the Tennessee Valley Authority to the Columbia Basin, said "(it) would be of great benefit to that area."

No one would expect anyone connected with the Interior Department to say anything else, unless we are to forget the activities and statements of Secretary of the Interior Krug when he came to Idaho during a recent political campaign. Mr. Krug came to Idaho ostensibly on Department business, but he ended up exposed on a purely political mission, at Government expense, and in behalf of CVA.

The important matter to all Idahoans, and to all residents of the Northwest for that matter, is that we do not have an authority established for the development of the Columbia River Basin or any other part of the Northwest. Certainly we want the Columbia River Basin developed, but we want it done the American way, done without any supergovernmental authority which can tell our courts to go bury their heads in the sand.

In the past Idahoans have been successful in assisting the opposition to the establishment of this authority. One election, when the matter was termed the only issue by Senator GLEN TAYLOR, Idahoans voted overwhelmingly against candidates who made CVA their platform. But one election, several years ago, will not carry the battle in the era of another New Deal. Opponents of the authority form of local government must bombard their Congressmen with vigorous statements in opposition to Columbia River Basin development under an authority.

And Idaho's congressmen, all of them, if they are to represent the will of the people of their home State, will fight the establishment of an authority over the State to the last ditch. There is no hope of Senator TAYLOR giving any consideration to the fact that Idahoans voted against an authority. He is not the kind of man to follow public opinion in his home State. He has no regard for an obligation to follow the wishes of the majority of Idahoans. But, fortunately, our other three representatives in Congress, Senator BERT MILLER and Congressmen COMPTON I. WHITE and JOHN SANBORN are men of higher honor and better caliber.

These three men, we are sure, will hold fast to their obligation—the respect for Idaho opinion that it opposes, without qualification, the authority form of government.

The Late Very Reverend Lawrence M. Cyman

EXTENSION OF REMARKS
OF
HON. FOSTER FURCOLO
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 2, 1949

Mr. FURCOLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Springfield (Mass.) Union of March 1, 1949:

TRIBUTE TO A PRIEST

The city of Chicopee has just paid a stirring and significant tribute to the memory of Very Rev. Lawrence M. Cyman, provincial of the Province of St. Anthony of Padua of the Friars Minor Conventuals, whose death was a severe loss to the community which he served so long and well.

Before Father Cyman's elevation to the important position which he held in recent years, he was for more than a quarter of a century pastor of St. Stanislaus Church in Chicopee, during which time his splendid personal qualities, no less than his excellence as a spiritual leader, endeared him to thousands of people throughout this region, including many persons not affiliated with the Roman Catholic Church.

The affection which this servant of God inspired in the hearts of all who knew him received eloquent testimony in the large outpouring of people who took part in the solemn memorial exercises of Sunday and yesterday. Yet, in a sense, this impressive demonstration was even more than merely a tribute to Father Cyman as an individual. It was a spontaneous public acknowledgment of the great influence for the common welfare which clergymen of many creeds exercise in our democracy.

Dedicated to the service of God and humanity, denying themselves the material pleasures of life in order that they may more dynamically devote themselves to leadership in the spiritual realm, these self-sacrificing men and women in religious orders all too often fail to receive the public recognition which they so richly deserve. In the hustle and bustle of modern times, we are too prone to overlook their vital contribution toward keeping vigorously alive the forces of faith, hope, and charity which form the very foundation of our democratic freedoms.

It is scarcely too much to say that Chicopee's municipal manifestation of love and esteem for a former parish priest was, in its essence, symbolic of a spirit that has an important world-wide application at the present time. It was an impressive public demonstration of the fact that here in America, as in all lands where people are yet free to give expression to their innermost feelings, mankind still holds most precious the principles of simple faith, human kindness and brotherly love which were so well exemplified in the career of Father Cyman.

Far across the sea, in lands from which so much of America's present strength has been drawn, people who dare to confess their faith in God are being savagely persecuted by a gang of civilization-wreckers whose object is worldwide extinction of all human freedoms—religious, political, and economic. But between the Reds and their satanic goal there is interposed a barrier that they never will

be able to surmount. It is a wall of divinely inspired men and women, including many religious leaders of the creed which Father Cyman served so devotedly throughout his life. Armored only in righteousness and armed simply with their faith, these heroic followers of Christ stand as a mighty fortress, against which the diabolic minions of atheistic communism will dash themselves in vain.

As long as our country, and the world at large, has spiritual leaders like Father Cyman, and as long as we truly follow with courage and devotion the pathway that they illuminate for us, we need have little doubt of our ultimate triumph against the evil forces that seek to tear down the foundations of human decency in all quarters of the globe.

To the Victors Belong the Spoils

EXTENSION OF REMARKS
OF
HON. EDWARD T. MILLER
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 2, 1949

Mr. MILLER of Maryland. Mr. Speaker, in spite of the protestations of liberalism and progress that one hears on all sides these days, as a matter of fact we seem, in many ways, to be slipping back rather than carrying forward. The following editorial which appeared yesterday in the Baltimore Sun touches upon another example of progress backwards:

GOOD-BY TO THE IDEA OF A CAREER SERVICE FOR CONGRESSIONAL EXPERTS

Mr. J. C. Shanks, a disbursing clerk of the House of Representatives, has just been fired after 21 years of excellent service because a Buffalo carpenter with more political influence coveted his job. Here is a painful exercise in the seamier kind of patronage politics.

But it is not the only offense of the kind attributable to the Democratic leadership of the Eighty-first Congress. For this Congress has already wrecked the promising new plan to work up a permanent corps of disinterested congressional experts able to release Congress from its long dependence on experts from the executive branch.

The rise of the executive branch brain trusts was just one detail of the long process of executive aggrandizement over the years. Congress' reliance on these executive-branch people did not help the Legislature in its effort to retain the coordinate authority set out in the Constitution.

So in the Legislative Reorganization Act an attempt was made to establish a congressional brain trust. Tenure was to be assured, and good salaries, so that sound men would be attracted to these jobs as a lifetime career in the public service.

Because of the date of the Reorganization Act, this particular reform happened to begin in the Eightieth Congress, which was under Republican control. But no one would have been bold enough to say that all the very good men recruited for the infant congressional corps of experts were Republicans. So it was hoped that the new Congress would preserve the new system.

But that hope has been dashed. There have been wholesale firings of the first crop of experts.

Trained men in economics, in the law, in the sciences are thus put on notice that a job in the new congressional corps is just another political job, subject to the fate which always menaces patronage takers. Only last Monday the Senate completed one of the legislative details needed to rip the original idea out of the Reorganization Act.

It was not a pleasant spectacle to those who see how many modern tendencies threaten the Legislature in its historic effort to represent the whole people in all its shades and nuances of opinions against the Executive and his friends.

Why We Face State Medicine—AMA Hierarchy Rebuffs the Progressive Doctors

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 1, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a most interesting editorial that appeared in the Detroit Free Press of February 28, 1949:

WHY WE FACE STATE MEDICINE—AMA HIERARCHY REBUFFS THE PROGRESSIVE DOCTORS

Is the United States to be saddled with a system of Government-controlled, bureaucracy-operated socialized medicine?

Is this country, by adopting the scheme being offered by the Truman administration, to go one step further along the road to economic and political serfdom which has been blazed by totalitarian countries, and followed by Great Britain?

Our future course in this respect depends upon the answer to one big question which the man in the street is asking. The question is:

"How can I obtain for myself and family adequate medical care at a cost which my circumstances permit me to pay?"

Up until now, he has listened in vain for a satisfactory reply from the medical profession.

The issue of socialized medicine was projected by Federal Security Administrator Oscar Ewing. As spokesman for the Truman Administration, he proposed a 10-year plan, based on compulsory health insurance, to provide not only increased medical facilities, but full medical care and hospitalization to be paid for out of a joint employee-employer tax and Federal subsidy.

Actually, Ewing's health program is a cleverly camouflaged blueprint for State socialism.

But it has a plausible ring to it. The average person, harassed by rising medical care costs, is unable to analyze it carefully. He will see in it only a way to relief from his difficulties. Therein lies its danger.

No reasonable or workable substitute has been offered to counteract the Ewing plan in terms which will appeal to the people, and which they can understand.

Economists of the Brookings Institution have successfully demolished all of Ewing's fallacies. This was done by a coldly analytical study based on scientific observations. But it offers no comprehensive alternative.

The mother, desperate for a physician to attend her sick child in the middle of the night, or the wage earner, watching his lifetime savings vanish under a long siege of illness, will not be impressed by the impersonal statistics which Brookings has compiled.

We face the threat of getting socialized medicine in lieu of something better.

The medical profession, through the American Medical Association, has failed in counterattacking the Ewing plan with a positive program of its own.

All that the AMA has offered is a 12-point, "me too," policy which admits the faults which Ewing purportedly would correct. Reactionary leadership within the AMA says, in effect, "Give us the Federal money and let us, in our own way, do what Ewing says he can do."

That is not an acceptable alternative to the American people. Large numbers of AMA members are spurning the program of their association's heavy-footed leaders.

On Saturday, February 12, the AMA called a meeting of representatives of State medical societies at its headquarters in Chicago to define its 12-point program.

Officers of the Michigan State Medical Society attended, armed with a list of questions, forthright answers to which would have clarified the AMA's position.

The Michigan society's queries would have done more than that.

Although propounded as questions, they were in reality the outline for a positive program. Translated into action, they would allay the demand for socialized medicine.

It was entirely fitting and proper that such an outline for action should emanate from this State where the leadership provided by the State Medical Society and the Wayne County Medical Society is nationally recognized by the medical profession.

It has been said that in formulating policies pertaining to scientific and economic aspects of medical practice, the Michigan societies have generally been from 5 to 7 years in advance of the AMA.

It was Michigan which pioneered the Blue Cross and Blue Shield systems of prepaid health and hospital insurance when the AMA frowned upon anything so radical.

It was the profession of this State which first established rheumatic fever control centers to combat one of the most distressing afflictions of childhood. It was Michigan which first took postgraduate facilities to the doctors in their own communities; which pioneered in the care and treatment of epileptic children; which set up the first central blood bank to make plasma available to communities which had no facilities for storing it.

It is no wonder, then, that professional ears pricked up at the Chicago meeting when the Michigan delegation offered its list of questions.

Pointing to the lack of a positive program under the AMA, the Michigan State Medical Society called for a statement of policy to settle the following questions:

1. Should voluntary health and hospital insurance premiums be paid by Government during periods of unemployment?

2. What is our policy for financial assistance to families during sickness of the wage-earner? Should he have insurance? If so, who is to pay for it, and for how long?

3. What is the policy for medical care to areas unable to support a physician? Are we in favor of assigning doctors to these areas?

4. Do we favor building of health centers for treatment in blighted areas?

5. Do we favor State financing for building small health centers and hospital facilities in areas unable to attract a doctor? To what extent do we favor Federal assistance?

6. Do we favor medical benefits for the aged and chronically ill, in addition to old-age benefits?

7. Do we favor home-town care of the medically indigent by physicians of their own choice, using the same technique for care as the Blue Cross and Blue Shield have used with veterans?

8. Do we favor return to an individual of all money spent for medical and hospital care, which exceeded 10 percent of his net income, same to come from the general fund, thus guaranteeing that no man would be forced to spend more than 10 percent of his income for catastrophic illness?

Here was the outline for a humane, liberal, and workable national health program.

How did the hierarchy of the AMA receive it?

It refused to allow the Michigan delegates to explain it, or to permit discussion from the floor, although a majority of those in attendance signified their desire to discuss it.

Asked if the AMA hall could be available the following day for a meeting for that purpose, AMA officials curtly stated that their building was closed on Sundays.

Despite that rebuff, however, the general membership was so eager to talk over the Michigan program that 46 delegates from 22 States canceled their train reservations and stayed over in Chicago to attend a discussion meeting in a crowded hotel room on Sunday.

The autocratic leadership of the AMA has its eyes and ears closed to new ideas to strengthen the strained relationship between doctors and the public.

The practice of medicine in the United States, the advancement of medical science, is without equal in the world.

But the slow-moving, slow-thinking AMA, which has been delegated the sole voice of medicine, has been unable to keep up, either with public opinion or the progressiveness of its own rank-and-file.

It bitterly resents any suggestion of change which does not originate in the hoary councils of its own hierarchy.

That is why the aggressive, pioneering leadership of the medical profession in Michigan finds no favor in its eyes.

It is the reason that the United States is being pushed toward socialized medicine.

The AMA has given the people of the United States no other choice.

If the practice of medicine is to continue a part of the private-enterprise system, with the privilege of the patient to choose his own physician, and of the physician to choose his own patients, America must turn to the progressive elements of the profession for guidance.

The big question is still unanswered by the AMA.

Michigan has shown that the doctors themselves can furnish a satisfactory answer.

Will they now be permitted to take the lead which the AMA has so dismally failed to provide?

Mr. Speaker, it is also interesting to note that the largest member group of the American Medical Association has withdrawn its support of the AMA's plan to fight compulsory health insurance. The New York County—Manhattan—Medical Society took that action, and it also defeated a resolution offered by the executive committee to approve the 12-point AMA program. At the meeting of the New York County Medical Society held on February 28, the vote was 432 to 333 against the AMA's $25-per-member assessment to raise $3,000,000 for a campaign in behalf of the AMA program.

Something About Special Interests

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 2, 1949

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an article by Dorothy Thompson appearing in the Washington Evening Star yesterday, March 1, 1949. It is refreshing to anyone who desires the truth.

The President's attack on special interests was just as unfounded as his socialistic program is dangerous.

The article follows:

TRUMAN SEEN USING OLDEST DEMAGOGIC FORMULA IN ATTACKING SPECIAL INTERESTS

(By Dorothy Thompson)

The oldest demagogic formula is to present the Nation as divided into special interests, representing the privileged few—and wickedness—and the people, representing everybody else and virtue.

The President, who is encountering in Congress opposition to uncritical acceptance of his legislative proposals, pulled out this formula at the Jefferson-Jackson Day dinner.

"The special interests are fighting us just as if they never heard of November 2. For them campaigns and elections are just preliminary * * * matches—the fight in the Congress is the main issue with them. These special interests * * * work through their lobbies and pressure groups, through the editorial pages and columnists and commentators they control, while all we have on our side is the people."

When, however, one tries to identify these special interests versus the people, a few facts interfere with so simple an alinement. The people didn't speak in unanimous chorus November 2. In fact, not quite half of them voted for President Truman and the Democratic Party—to be exact, 49½ percent—and 44.11 percent voted for Governor Dewey, while the rest voted for minor candidates. There is nothing in the American governmental system which disfranchises for 4 years the people whose candidates and parties lost in the election.

TOTALITARIAN PATTERN

The disfranchisement of political minorities is a pattern, not for democratic government but for totalitarianism. In the American system, campaigns and elections are preliminary matches. The legislative power remains in Congress, where alone the people are more or less proportionately represented. And since all the people did not vote for the President, his party, or his program, it is not likely that in Congress, where they are proportionately represented, his program will go through without modification.

The special interests boil down to those people who don't agree with the President.

Actually, the President waged his campaign by as calculated an appeal to special interests as we have ever seen. Organized labor, which also maintains powerful lobbies (or are we misinformed?) and also prints full-page ads (or have our eyes deceived us?) voted for President Truman in order to have all definitions of the rights and responsibilities of trade-unions repealed. That is not the attitude of the people, but of a powerful and numerous section of them.

The farmers, by and large, voted for the President because under a system of supported prices they are enjoying exceptional prosperity. They, too, voted according to a special interest.

All groups identify the national welfare with their own interests and democracy works out as the balance between pressures. Nobody ever quite gets his own way.

CONTROLLED EDITORIALISTS?

The concept of controlled editorialists also fits in with no picture I recognize from nearly a generation of journalism. The President has just had a run-in with Drew Pearson. What special interests control Mr. Pearson? What special interests appear at the editorial conferences daily held in every newspaper?

Actually, of the pressure on the political writer—apart from his own limitations, convictions, and prejudices—the greatest is the risk of unpopularity. In an age of organized pressure on newspapers from groups in the public, the temptation to the columnist or commentator is to intellectual and moral timidity. Offend a single powerful group, oppose some popular fallacy, and the ax will fall. The people are the arbiters, but the people, in effective action, are by no means disinterested.

Nor is the Government disinterested. Its interest is to turn writers into its own propagandists, and break the necks of its critics by exposing them as instruments of special interests.

These interests, however, are always curiously, unnamed. They, too, have votes.

Congress Has a Mandate, Too

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 28, 1949

Mr. HÉBERT. Mr. Speaker, once again from the facile pen of Hermann B. Deutsch, associate editor of the New Orleans Item, has come a forceful editorial.

Mr. Deutsch's ability to put on the printed page what so many million Americans are already thinking, is an important contribution to our times.

There will be nobody to dispute the fact that I know from personal experience the desire and determination on the part of some individuals in the present administration to eliminate any contrary opinions, no matter how honest and sincere those opinions happen to be. My arbitrary removal from the Committee on Un-American Activities because I dared speak out my convictions is an example at point. There is not a day that passes that the repercussions of this action are not heard by me. The condemnation of this punitive action is just as vigorous today as the day on which the conspiracy was spawned in the minds of the vindictive and given an indecent birth through means of collective anonymity.

It seems rather strange that individuals who never miss an opportunity to say how much they believe in fair play and who welcome each chance to announce to the world that they believe in free and open discussion, by their actions live contrary to their sanctimonious mouthings. This administration cries from the mountain top the necessity of protecting the rights of minorities. They want to protect the rights of the minority only if the minority agrees to their way of thinking, but heaven help the minority if it disagrees. That's a different proposition.

I would still be on the Committee on Un-American Activities if I had meekly and weakly kowtowed to the whims and directions of individuals who place party discipline above personal principle. If I had done that it would not have mattered whether I was a lawyer, a butcher, or a candlestick maker. If I had remained silent and followed in the direction of

least resistance everything would have been peace and harmony and nothing would have been said about only lawyers being able to serve on the Committee on Un-American Activities.

The entire Congress is now getting a taste of this philosophy of conduct from no less a person than the President of the United States himself. It is this philosophy of thinking which Mr. Deutsch so ably discusses in this editorial which appeared in the New Orleans Item today. It is this policy of damnation against those who dare disagree that Mr. Deutsch exposes in this editorial.

It is a policy of you either do as I say or I will not let you do anything at all. It is a policy of you either take your orders from me or I will beat your brains out. It is a policy of absolute submission to the will of the self-annointed master or be subject to public chastisement and tongue lashing.

There's an old saying that none of us realize the effect of death until our own home is visited by death. The same thought can be applied in this game of reprisals and denouncements. I had my own taste of it early in the session. Others are starting to get it now when it becomes apparent that they are determined to think for themselves and will not be whipped into line by threats and intimidation.

I agree with Mr. Deutsch in his editorial to the dotting of the last "i" and the crossing of the last "t."

To hark back to the days when courageous men were not only preaching liberty and the right of free expression but also practicing and respecting it: "If this be treason—make the most of it."

I hope everybody in this body, on both sides of the aisle, takes the time to read this editorial from the New Orleans Item:

CONGRESS HAS A MANDATE, TOO
